**HISTORY.** Newfoundland during 1932 experienced a series of violent political disorders as a result of the acute economic and financial crisis which in 1931 led to the establishment of a semi-receivership by a syndicate of Canadian banks (see 1931 YEAR BOOK). A mob of 900 unemployed, aroused by a reduction of the monthly food ration, smashed its way into a meeting of the Executive Council on February 11, wrecked the council chamber, and was restrained from violent assault upon the Prime Minister only by his promise to increase the food ration. Shortly afterward, Peter J. Cashin, Minister of Finance and Customs, resigned. On February 14 and 16 he charged in the Assembly that the Prime Minister had falsified minutes of the Council and manipulated public funds. He also accused two other members of the Squires Government of financial irregularities.

The government sidetracked the Opposition's demand for an investigation by referring some of the charges to the Governor. Public unrest increased, however, and numerous public meetings reiterated the demand for investigation of the ministry's alleged financial misconduct. There followed on April 5 a demonstration of some 10,000 men and women of all classes before Parliament building. Angered by police clubbing and by delay in securing a hearing, the crowd stormed the building, wrecked its offices and furniture, and roughly handled the Prime Minister. While war veterans, enrolled as civil guards, prevented further trouble, the Governor sent to Bermuda for a British warship and on April 7 announced that a royal commission would be appointed to investigate the entire affair.

The Squires Government later dissolved the Legislature and called a new election for June 11, at which it was decisively defeated. Former Prime Minister F. C. Alderdice of the United Newfoundland party and his supporters won 21 out of the 27 seats contested. Both Sir Richard

Squires and his wife were defeated; only two of his Liberal followers were returned to office. Mr. Alderdice had pledged himself to appoint a committee to inquire into the desirability of placing Newfoundland under a form of commission government for a term of years. On June 29, he formed a new ministry, in which he held the Finance and Customs portfolio as well as the Premiership. Other members were: Secretary of State, J. C. Puddester; Justice, L. E. Emerson; Public Works, H. W. Quinton; Posts and Telegraphs, William C. Winsor; Lands and Fisheries, William J. Walsh.

Despite the change of government, there was a new outburst of rioting and looting on July 25 and 26. This was ended when the syndicate of Canadian banks announced that they would advance a loan of \$100,000 for a programme of unemployment relief works. The rioting occurred while Prime Minister Alderdice and J. H. Pen-son, Controller of the Treasury, were attending the Ottawa sessions of the Imperial Economic Conference. There they secured a British promise to purchase increased quantities of iron ore from the Belle Island mines in return for preferential tariff rates on British imports.

The financial control of Newfoundland by Canadian interests was further increased in connection with a \$2,500,000 loan raised by the Alderdice Government on July 2. The Imperial Oil Company of Canada subscribed for \$1,750,000 of the bonds in return for a monopoly of the oil business in Newfoundland. Despite these loans and drastic economies, the government found it impossible to raise funds to meet interest payments on the public debt falling due Jan. 1, 1933. Accordingly the British and Canadian governments intervened to prevent default. On December 29, Prime Minister Alderdice announced that each had agreed to advance half of a \$1,250,000 loan. In return, Newfoundland agreed to the appointment of another commission, consisting of two members nominated by Great Britain and one by Newfoundland, to overhaul the Dominion's fiscal system. The resignation of Sir John Middleton as Governor and Commander-in-Chief as accepted by the King in August, took effect in November.

**NEW GUINEA**, g'n'ē. The name applied to both an island in the East Indies and to those territories in the western Pacific, including a portion of the island, which were transferred from Germany to Australia, under mandate of the League of Nations, by the Treaty of Versailles. The area of the island of New Guinea, which ranks after Australia and Greenland as the third island in size in the world, is estimated at from 310,000 to 335,000 square miles, and the population at slightly below 1,000,000. The northeastern portion, formerly Kaiser Wilhelmsland, is included in the Australian mandated area; the section west of 141° E. longitude belongs to Netherland India; and the southeastern part constitutes the colony of Papua, or British Guinea, also administered by Australia. See **NETHERLAND INDIA**; **PAPUA**.

**TERRITORY OF NEW GUINEA**. The Territory of New Guinea, under Australian mandate, consists of that section of the island known as North Eastern New Guinea, the Bismarck Archipelago (New Britain, New Ireland, Lavongai, Admiralty Islands, and North-Western Islands), and part of the Solomon Island group. Area, 91,000 square miles. The estimated native population

was 520,000 and the non-indigenous population on June 30, 1930, numbered about 4155. In 1930-31 imports totaled £782,765 (less specie); exports, £919,420; total revenue, £290,234; expenditure, £293,378; public debt, £101,740. The territory is administered by an Australian official from the seat of government at Rabaul, New Britain. Administrator in 1932, Brig.-Gen. E. A. Wisdom.

**NEW HAMPSHIRE**. **POPULATION**. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 465,293, as against 443,083 in 1920. Manchester, the most populous city, had (1930) 78,384 inhabitants; Concord, the capital, 25,228.

**AGRICULTURE**. The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu.	Value
Hay	1932	340,000	306,000*	\$3,968,000
	1931	348,000	381,000*	4,477,000
Potatoes	1932	8,000	1,320,000	686,000
	1931	9,000	1,485,000	906,000
Corn	1932	14,000	560,000	246,000
	1931	13,000	598,000	347,000

\* Tons

**MINERAL PRODUCTION**. Stone, largely of superior grade, furnished nearly one-half of the State's mineral production of 1930, as reckoned by value. The production of stone rose to 150,800 short tons (1930), from 135,640 (1929); by value, to \$1,540,591 (1930), from \$1,153,465 (1929). The value of the State's clay products (brick and tile) was \$928,138 for 1930; for 1929, \$900,388. There was a diminished production of crude feldspar, attaining 16,517 long tons for 1930, as against 30,964 for 1929; and a value of \$132,342 for 1930, as against \$231,810 for 1929. The total value of the State's mineral product was \$3,337,169 for 1930; for 1929, \$3,725,951.

**TRANSPORTATION**. The total number of miles of railroad line under operation on Jan. 1, 1932, was 1165.46.

**EDUCATION**. While salaries of teachers were reduced in 1932 among some of the school districts, and while increases of salary were quite generally suspended, it was reported that economies were limited to such measures as would not directly reduce the educational activity of the public schools.

**FINANCE**. State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$10,440,179 (of which \$599,557 was for local education); for interest on debt, \$273,701; for permanent improvements, \$2,340,426; total, \$13,054,306 (of which \$7,444,522 was for highways, \$5,393,964 being for maintenance and \$2,050,558 for construction). Revenues were \$11,397,977. Of these, property and special taxes furnished 28.8 per cent; departmental earnings and compensation to the State for officers' services, 10.5; sale of licenses, 48.9 (in which was included a gasoline sale tax that produced \$2,819,760). Funded debt outstanding on June 30, 1931, totaled \$6,515,636, of which \$3,500,000 was for highways. Net of sinking-fund assets, the debt was \$6,005,130. On an assessed valuation of \$679,523,243 the State levied in the year ad valorem taxes of \$2,998,073.

**CHARITIES AND CORRECTIONS**. A State Board of Public Welfare, under the system operating in 1932, was the chief administrative organization

of the State in matters affecting the care or custody of persons. This board consisted of two ex-officio members, who were the Governor and the secretary of the State Board of Health, and of five other members, of whom one each year was appointed by the Governor and Council. The board, serving without compensation, had for its executive aid a paid secretary, with a staff. Its duties included the supervision of neglected, delinquent, and defective children; assistance in the enforcement of laws to protect children; inspection of charitable and of correctional institutions of the State and of the counties; and functions relative to mothers' aid, probation, parole, prevention of the marriage of mental defectives, and special statutory aid to the deaf, the blind, and the aged. An effort to reorganize the State's system of probation was in progress, but was impeded by the need for economy in the State's accounts. A statute providing for the public assistance of the needy aged, which went into operation on September 1, 1931, operated in 1932 in a limited way, without the aid of special county appropriations, these having been previously made. The State-conducted institutions of care or custody were: New Hampshire State Hospital (mental patients), at Concord; Laconia State School (feeble-minded children), at Laconia; New Hampshire State Industrial School (committed minors), Manchester; New Hampshire State Prison, Concord; New Hampshire Soldiers' Home, Tilton; New Hampshire State Sanatorium (tuberculosis), Glenciff. The State maintained sufferers from tuberculosis in other institutions, besides its own. The employment of State prisoners by a company manufacturing chairs was reported in 1932 to have ceased, by reason of the Federal restrictions against convict-made goods in interstate commerce.

**POLITICAL AND OTHER EVENTS.** To succeed the late Fletcher Hale, Republican Representative from the first Congress district, who had died in 1931, that district elected on January 5 William N. Rogers, Democrat. Rogers, who had been elected in 1922 and had served one term, ran as an opponent of prohibition, and of Republican National policies, and defeated former Governor John H. Bartlett. The State maintained its credit at a high rating, being able to issue \$1,200,000 of its highway and general improvement notes in June to yield less than 4¼ per cent. The nominating primaries on September 13 resulted in the Republican renomination of Senator Moses and Governor Winant, and in the Democratic choice of former Governor Frank H. Brown and of Henri T. Ledoux as candidates, respectively, for Senator and Governor.

**ELECTIONS.** The State remained Republican by a narrow margin on November 8 in its vote for the National candidates. The totals were: for Hoover (Rep.), 103,629; for Roosevelt, (Dem.), 100,608. United States Senator George H. Moses, Republican and prominent Senate figure, was defeated for reelection, former Governor Fred H. Brown, Democrat, winning the seat. John G. Winant (Rep.), was reelected Governor, defeating Henri T. Ledoux (Dem.). One Republican and one Democrat were elected Representatives to the Seventy-third Congress.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, John G. Winant; Secretary of State, Enoch D. Fuller; Treasurer, Charles T. Patten; Attorney-General, Francis

W. Johnston; Commissioner of Education, James N. Pringle.

**Supreme Court:** Chief Justice, Robert J. Peaslee; Associate Justices, Leslie P. Snow, John E. Allen, Thomas L. Marble, Oliver W. Branch.

**NEW HAMPSHIRE, UNIVERSITY OF.** A co-educational State institution of higher learning in Durham, N. H., founded in 1866 in Hanover, N. H., and operated as coequal with Dartmouth College, transferred to Durham as State College in 1893, and made State university in 1923. It consists of a college of liberal arts, a college of agriculture, a college of technology, a graduate school, an agricultural experiment station, and an extension service in agriculture and home economics. The 1932-33 enrollment was 1655 of whom 1207 were men and 448 women. The summer session had a registration of 428. The faculty and research and extension staff totaled 237. The endowment amounted to \$1,209,079 and the income for the year was \$1,682,125. There were completed and occupied Scott Hall, a dormitory accommodating 119 women, and Hood House, a well-equipped and home-like infirmary given by Charles H. Hood, '80. The administration of and instruction in the college of agriculture were re-organized, and upperclassmen requirements were amended with a view to securing improvement in the quality of scholastic effort in the junior and senior years. The library contained 73,195 volumes. President, Edward Morgan Lewis, A.M., LL.D., Litt.D.

**NEW HEBRIDES,** hēb'ri-dez. A group of islands about 1400 miles east of Australia and 700 miles west of the Fiji Islands, including Espiritu Santo, Malekula, Efate or Sandwich Island, Epi, Erromanga, Tanna, and Aneityūm. The group is under the joint administration of France and Great Britain, according to the convention of 1906. The area is approximately 5700 square miles and the population in 1930 was 45,808 including 1205 whites (951 French and 254 British), and 4603 Asiatics. Port Vila, the capital had 1200 inhabitants.

**NEWHOUSE GALLERIES.** See ART EXHIBITIONS.

**NEW IRELAND.** See BISMARCK ARCHIPELAGO.

**NEW JERSEY. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 4,041,334, as against 3,155,900 in 1920. Newark had (1930) 442,337 inhabitants; Jersey City, 316,715; Paterson, 138,513; Trenton, the capital, 123,356.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes . . . .	1932	45,000	7,155,000	\$3,508,000
	1931	41,000	7,831,000	4,699,000
Hay . . . . .	1932	214,000	332,000*	4,232,000
	1931	220,000	366,000*	5,181,000
Corn . . . . .	1932	165,000	6,930,000	2,633,000
	1931	170,000	6,970,000	3,485,000
Peaches . . . . .	1932	1,776,000	1,243,000	1,450,000
	1931	2,230,000	1,450,000	1,030,000
Sweet potatoes	1932	12,000	1,560,000	1,404,000
	1931	13,000	1,950,000	3,021,000
Apples . . . . .	1932	3,640,000	8,264,000	
	1931	3,400,000		

\* Tons.

**MINERAL PRODUCTION.** The State's chief mineral industry, the output of clay products, re-

mained in 1930 almost evenly divided between the production of brick and tile and that of pottery; the latter classification, however, yielded the lead to brick and tile, in point of total value of the year's product. Both suffered much diminution, pottery more particularly. The value of the clay products as a whole fell to \$29,098,326 for 1930, from \$39,417,968 for 1929. The coking industry, operating by the by-product process with coal from outside the State, but not wholly dependent upon the iron-and-steel industries, was well maintained in 1931, the quantity of coke produced in that year being 930,912 short tons, as against 918,814 for 1930; the totals by value, not tabulated by the Federal Bureau of Mines, approximated or exceeded \$5,000,000 for either year. The zinc mines produced 97,626 short tons of zinc in 1930, as against 103,740 in 1929; while the value of the State's yearly product of zinc was not separately tabulated by the Bureau of Mines, the New Jersey product approximated for 1930 one-fifth of the total by quantity for the Union, for which total the value was stated to be \$46,979,000. Activity in the extensive iron-ore deposits of New Jersey declined, for 1931, though not more severely than for the Union as a whole. The quantity of iron ore produced fell to 239,722 long tons (1931) from 391,528 (1930); the value, to \$984,021 (1931), from \$1,632,827 (1930). The production of stone, chiefly of the less expensive grades, attained 2,702,420 short tons for 1930, and the value of \$3,907,281. The total value of the State's mineral product, duplications eliminated, was \$57,206,357 for 1930; for 1929, \$71,891,861.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$60,921,047 (of which \$21,280,628 was for local education); for conducting public-service enterprises, \$768,579; for interest on debt, \$3,830,310; for permanent improvements, \$43,300,527; total, \$108,820,463 (of which \$44,216,301 was for highways, \$8,527,304 being for maintenance and \$35,688,997 for construction). Revenues were \$97,544,770. Of these, property and special taxes furnished 54.4 per cent; departmental earnings and compensation to the State for officers' services, 5.9; sale of licenses, 26.4 (in which was included a gasoline sale tax that produced \$7,191,710). Funded debt outstanding on June 30, 1931, totaled \$118,216,000, of which \$70,000,000 was for highways. Net of sinking-fund assets, the debt was \$56,872,086. On an assessed valuation of \$6,818,586,547 the State levied in the year ad valorem taxes of \$37,413,015.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2284.96. During the year previous, 13.86 miles had been abandoned.

**EDUCATION.** There were enrolled in the public day schools of the State, in the academic year 1931-1932, 812,891 pupils. Of these, 45,267 were in kindergartens, 585,301 in elementary schools, 41,752 in junior high schools, 22,797 in senior high schools, 108,989 in four-year high schools, and 8785 in special classes. The year's expenditures for public-school education totaled \$114,975,575, of which \$18,036,410 was for debt service. The total did not include capital outlays to the aggregate of \$11,516,355, defrayed chiefly from issues of bonds, nor \$4,269,587 paid out by districts to other districts for tuition. The sal-

aries of 28,496 teachers averaged \$2,155.21 a year. The requirement, for those applying in 1932 for certificates to teach in elementary schools was that they should have had three years training in normal school.

**CHARITIES AND CORRECTIONS.** Central functions of the State with regard to dependents, defectives, and delinquents, were performed in 1932 by the Department of Institutions and Agencies, organized in 1918. Its duties included coordination of the work of welfare institutions and agencies, establishment of general policies for them, supervision of their management and expenditure, preparation of their budget requests, the furnishing of expert staffs' services to local institutions, and inspection, when deemed desirable, of private, municipal, and county institutions. The Department included a non-political Board of Control composed of nine non-salaried members, chosen by Governor's appointment to serve terms of nine years expiring in rotation. This board held the power to appoint boards of managers for the several State institutions, subject to the Governor's approval, and to name the commissioner of the department. Examination and classification of persons in State institutions, charge of paroles, medical matters, inspection of non-State institutions, relief for the aged, and other functions were distributed respectively among divisions of the department.

The institutions directed by the department, with their populations of Sept. 30, 1932, were: for the insane, Greystone Park State Hospital (4164), Trenton State Hospital (2676), Holmdel (1058); for the feeble-minded, State School at Vineland (females, 1216), State Colony at New Lisbon (males, 743), State Colony at Woodbine (males, 527), North Jersey Training School at Totowa (females, 515); State Village for Epileptics, at Skillman (1252); Sanatorium for Tuberculous Diseases, Glen Gardner (462), State Prison, Trenton (1439), and State Prison farms at Leesburg (234), and Bordentown (225); reformatories, at Rahway (males, 791), Annandale (males, 386), and Clinton (females, 221); for juvenile delinquents, State Home for Boys at Jamesburg (548), and at Trenton (285); Home for Disabled Soldiers, Menlo Park (72); Home for Disabled Soldiers, Sailors, Marines, and Their Wives and Widows, Vineland (224). The State Board of Children's Guardians had charge of 30,317 cases.

**LEGISLATION.** The State Legislature convened in regular annual session on January 12 and adjourned on June 12, having broken its session by a recess for the greater part of May. It was occupied chiefly with measures to meet exceptional conditions and needs in public finance. The budget, as passed, carried only a little over \$25,000,000 for the ensuing year. Power was given the Governor to limit actual expenditures from departmental appropriations according to his judgment and to reduce or stagger public employment. The sum of \$10,000,000, to be reimbursed to the State as its share in the outlay for the Camden-Philadelphia Bridge, was converted into funds for the relief of the needy. The power was given to all municipalities to grant discounts on payments of taxes received in advance of the dates when due, at the rate of  $\frac{1}{2}$  per cent a month. Municipalities were likewise empowered, for one year, to sell their bonds at retail "over the counter" in cases where they

could not find purchasers for entire offerings. Instead of providing the full \$18,000,000 to be allowed yearly to the State Highway Commission for authorized construction, the Legislature authorized the issue of \$7,500,000, in State bonds, to raise money to be used by the commission specifically for work on the viaduct between Jersey City and Newark. A reciprocity measure, allowing unlimited duration of the use of the roads to cars from States allowing a like privilege, was enacted. The ratification of the proposed Federal Constitutional amendment to change the dates of inaugurations and sessions of Congress was voted.

**POLITICAL AND OTHER EVENTS.** A. Harry Moore was inaugurated as Governor on January 19. He immediately initiated a set of plans, legislative and administrative, for meeting the difficulties in the finances of the State and its political subdivisions. Among these were: Surrender to the local governments of large funds acquired by the State for special purposes; the abolition or merging of some 129 State governmental agencies; and the postponement of State projects of construction, with the purpose of temporarily avoiding many millions in State outlay. These proposals were adopted by the Legislature only in part. The receipt of over \$1,000,000 in payment of the inheritance tax on the estate of Dwight W. Morrow wiped out a slight prospective deficit in the State's own budget and left it with a credit balance at the end of the fiscal year on June 30. Extensive State aid was provided in the latter part of 1932 to municipalities, to enable them to meet expenditure for the provision made for their destitute, under regulations announced by a State Director of Emergency Relief.

Because it was alleged that a receiver appointed by him for the affairs of the Earl Radio Corporation had embezzled funds of that concern, the resignation of Vice Chancellor Alonzo Church from the State bench was demanded by Chancellor Walker in April; Church later resigned, on September 16. The system of assigning employment according to a card index of members of the Newark local of the Ironworkers' Union, by authority of union officials, was enjoined by Vice Chancellor Berry on March 28 as having been used to the oppression of members. The city of Newark met with financial difficulty because of deficient tax receipts early in the year. It obtained loans in excess of \$5,000,000 from bankers, but only on condition of reducing its budget. This required the cutting of city salaries. The city commission accordingly passed on July 3 an ordinance reducing salaries from 1 to 15 per cent, according to a schedule to operate until the end of 1933.

A crime that drew nation-wide attention was committed in the State. The infant son of Col. Charles A. Lindbergh, the aviator, was kidnapped from the Lindbergh residence near Hopewell on the evening of March 1. No trace of the criminal was found, despite a search in many States. The body of the child was found on May 12 in woods some 5 miles from the spot from which it had been taken.

**ELECTIONS.** The vote of the State on November 8 was cast for the Democratic National ticket by a moderate margin. For President, the totals were: Roosevelt (Dem.), 806,394; Hoover (Rep.), 775,406. W. Warren Barbour (Rep.), interim appointee member of the United States Senate,

was elected Senator for the balance of the term expiring March 4, 1937, defeating Percy H. Stewart (Dem.). Eleven Republicans and three Democrats were elected as Representatives to the Seventy-third Congress. Approval was given by popular referendum to proposals that the State act for the enforcement of prohibition be repealed, that an authorized total of bonds that might be issued for the construction of roads be reduced by \$20,000,000, and that a like sum of \$20,000,000 in bonds be issued to provide means for State relief to the destitute. No State officers were elected.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, A. Harry Moore; Secretary of State, Thomas A. Mathis; Treasurer, Albert C. Middleton; Comptroller, John McCutcheon; Attorney-General, William A. Stevens; Commissioner of Education, Charles H. Elliott.

**Judiciary:** Chancellor, Edwin R. Walker (died), Luther A. Campbell (succeeded by appointment); Supreme Court, William S. Gummere (Chief Justice), Thomas W. Trenchard, Charles W. Parker, Luther A. Campbell (until appointed Chancellor), Frank T. Lloyd, (Clarence E. Case, Joseph L. Bodine, Ralph W. E. Donges, Thomas J. Brogan, Harry Heher.

**NEW JERUSALEM, CHURCH OF THE.** An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem, while in Great Britain the General Conference of the New Church corresponds to the General Convention in the United States.

**THE GENERAL CHURCH OF THE NEW JERUSALEM.** This body was organized in 1897 under episcopal government with headquarters in Bryn Athyn, Pa., where the church maintains a cathedral church of unusual architectural interest; the Academy of the New Church, with departments from kindergarten to junior college; and theological and normal schools, with an enrollment of 318 in 1932. The General Church, at the beginning of 1932, had a world-wide membership of 2047, with 3 bishops 36 pastors, 2 ministers, and 24 societies, 15 of which were in the United States and Canada, 2 in England, and others in France, Belgium, Holland, Sweden, Natal, New South Wales, and Brazil. A native mission was maintained in South Africa. Among the periodicals published by the General Church are *New Church Life*, its official monthly magazine; *New Church Sermons*, *The Journal of Education*, and the *Bulletin*.

**THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA.** In 1932, the General Convention consisted of about 6000 communicant members. Educational institutions included a theological school in Cambridge, Mass., a junior college in Urbana, Ohio, and the Waltham School for Girls in Waltham, Mass. Periodicals included the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *Swedenborg Student*, monthly, New York City; the *New-Church League Journal*, monthly, Boston, Mass.; *The Helper*, weekly, Philadelphia, Pa.; and *Sun-*

*day Afternoons*, weekly, Boston, Mass. The convention held its 111th annual meeting at its church in Chautauqua, N. Y., June 20-23, 1932. Officers elected were: President, the Rev. Fred Sidney Mayer, Baltimore, Md.; vice-president, Ezra Hyde Alden, Philadelphia, Pa.; treasurer, Albert P. Carter, Boston, Mass.; and secretaries, B. A. Whittemore, Boston, and J. Woodruff Saul, Chicago, Ill.

**NEW MEXICO. POPULATION.** According to the Fifteenth Census, the population of the State on April 1, 1930, was 423,317, as against 360,350 in 1920. Santa Fe, the capital, had (1930) 11,176 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu.	Value
Cotton	1932	112,000	76,000 <sup>a</sup>	\$2,470,000
	1931	117,000	101,000 <sup>a</sup>	2,909,000
Hay	1932	190,000	339,000 <sup>b</sup>	2,525,000
	1931	185,000	884,000 <sup>b</sup>	4,161,000
Corn	1932	297,000	3,267,000	1,045,000
	1931	283,000	4,528,000	1,766,000
Wheat	1932	251,000	1,754,000	614,000
	1931	387,000	6,966,000	2,488,000
Grainsorghums	1932	392,000	3,763,000	677,000
	1931	356,000	7,832,000	1,723,000
Dry beans	1932	168,000	408,000 <sup>c</sup>	691,000
	1931	161,000	644,000 <sup>c</sup>	947,000

<sup>a</sup> Bales. <sup>b</sup> Tons. <sup>c</sup> 100-lb. bags.

**MINERAL PRODUCTION.** Diminished production of the normal chief minerals, copper and coal, was offset to some extent in 1931 by increased production of petroleum. The output of petroleum rose to 15,227,000 barrels, for 1931, from 10,189,000 for 1930, which in turn represented a heavy increase over 1929; because of a fall in petroleum prices the total for 1931 attained a value of but \$6,490,000, as against \$9,180,000 for 1930. Petroleum nevertheless increased its lead in 1931 as the greatest single component of the yearly total of the State's mineral product by value. The production of natural gas, while not yet available as to 1931 in the tables of the Federal Bureau of Mines, had increased greatly to 9,497,000 M cubic feet for 1930, from 3,054,000 M for 1929, and by value to \$1,273,000 for 1930, from \$536,000 for 1929. A heavy increase in the quantity of gasoline derived from natural gas, to 17,775,000 gallons for 1931, from 3,663,000 for 1930, afforded favorable indication as to the activity of the natural-gas industry in 1931. The production of coal, on the contrary, declined to 1,520,000 short tons (estimated) for 1931, from 1,969,433 for 1930, in which year the value of coal produced attained \$6,017,000.

The copper output of the smelters declined to 66,776,267 pounds for 1931, from 74,187,966 for 1930. It exceeded the estimated mine production of copper, which for 1930 attained 65,150,000 pounds, in value \$8,469,500; totals of which in 1931 fell short as to quantity (approximately 61,503,100 pounds) and, because of lower prices for the metal, still farther short as to value. For 1932, the mine production of copper (estimated in part) was about 30,704,000 lbs.; by value, \$1,872,944.

Gold production was well maintained at 31,161 fine ounces for 1931 as against 31,589 for 1930, but dropped to 25,407 ounces (estimated) for 1932; in value it was \$661,100 for 1931 and \$653,000 for 1930. Silver production fell to 1,070,452 ounces (1931), from 1,160,374 (1930); by value, to \$310,431 (1931), from \$446,744

(1930). The mine production of lead was estimated, for 1932, as 21,550,000 pounds, in value, \$603,400; that of zinc, 50,958,000 pounds, \$1,579,698. The total value of the State's mineral product was \$31,850,263 for 1930; for 1929, \$37,127,621.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$7,077,009 (of which \$1,441,217 was for local education); for interest on debt, \$562,954; for permanent improvements, \$6,524,498; total, \$14,164,561 (of which \$7,889,364 was for highways, \$1,911,494 being for maintenance and \$5,977,870 for construction). Revenues were \$13,526,921. Of these, property and special taxes furnished 15.5 per cent; departmental earnings and compensation to the State for officers' services, 8.0; sale of licenses, 28.4 (in which was included a gasoline sale tax that produced \$2,722,105). Funded debt outstanding on June 30, 1931, totaled \$10,331,000, of which \$9,162,000 was for highways. Net of sinking-fund assets, the debt was \$9,490,966. On an assessed valuation of \$344,671,212 the State levied in the year ad valorem taxes of \$2,087,663.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 3008.89. During the year previous, 48.48 miles had been put in operation; 12.40 miles abandoned.

**EDUCATION.** Moves were reported to be under way for the reorganization of the State and county bodies of authority over the public schools with a view to improving the system of State apportionment for support of the schools and their financial support in general. The number of persons of school age in the State was reported as 144,990. For the academic year 1931-1932 there were enrolled in the public schools 109,525 pupils. Of these, 94,479 were in common schools or elementary grades and 15,046 were in high schools. The year's expenditure for public-school education was \$7,334,709. Salaries of teachers averaged \$1057 a year.

**CHARITIES AND CORRECTIONS.** The central authority of the State, with regard to the care and custody of persons, as exercised in 1932, did not rest in a single body. Penal and eleemosynary institutions were directed by separate boards of officers. The State Penitentiary was conducted by a superintendent; its inmates, as reported in December, numbered 555. A Board of Penitentiary Commissioners, composed of five appointees and of the superintendent, *ex officio*, made recommendations for pardons or paroles to the Governor.

**ELECTIONS.** The State's vote of November 8 was cast for the Democratic National ticket by somewhat less than 2 to 1. Gov. Arthur Seligman (Dem.), was reelected, defeating R. C. Dillon (Rep.). L. D. Chavez, Democrat, was reelected Representative-at-Large. For President, the total vote of the State was: Roosevelt (Dem.), 95,089; Hoover (Rep.), 54,217.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Arthur Seligman; Lieutenant-Governor, A. W. Hockenbuhl; Secretary of State, Mrs. Marguerite P. Baca; Treasurer, Warren R. Graham; Attorney-General, E. K. Neumann; Superintendent of Public Instruction, Mrs. Georgia L. Lusk.

*Supreme Court:* Chief Justice, Howard L.

Bickley; Associate Justices, John C. Watson, A. L. Zinn, A. H. Hudspeth, Daniel K. Sadler.

**NEW SOUTH WALES.** One of the six original states of the Commonwealth of Australia, located in the southeastern part of the continent. Area, exclusive of the Federal Territory (q.v.), 309,432 square miles; population, 2,526,345 on Mar. 31, 1932 (2,100,371 at 1921 census). Sydney, the capital, had a population in 1921, of 905,047; estimated Jan. 1, 1932, at 1,030,750. Other towns with their populations in 1930 were: Newcastle and suburbs, 104,640; Broken Hill, 23,260; Auburn, 18,530. Births in 1931 numbered 47,721; deaths, 21,270; marriages, 15,377. The natural increase of population for the year was 26,451, while the decrease through the excess of emigrants over immigrants was 9179, leaving a net increase for the year of 17,272.

**PRODUCTION, ETC.** Wheat is the principal crop. The estimated production for the 1931-32 season was 54,140,000 bushels from 3,625,000 acres, compared with 65,877,000 bushels from 5,134,960 acres in the previous year. Other cereals, oranges, and various citrus fruits, potatoes, tobacco, sugar cane, bananas, grapes, and apples are raised. Wool production for 1931-32 was estimated at 950,000,000 pounds, as in the grease, as against 428,752,210 pounds in the year ended June 30, 1931. Livestock in 1930 included 53,366,000 sheep, 2,840,473 cattle, 524,512 horses, and 334,311 swine. Production of all minerals in 1931 was valued at £6,786,869 (£8,504,034 in 1930), of which coal was valued at £4,607,343. Factories in operation in 1930-31 totaled 7544, with 127,591 employees and a total output valued at £118,483,536, of which £49,523,773 represented the value added in process of manufacture. As compared with 1929-30, the number of factories declined 8 per cent, the number of employed by 35,308, or 21.6 per cent, and wages paid by nearly 28 per cent.

The budget for the fiscal year ending June 30, 1933, estimated revenue at £45,185,000, and expenditure at £49,535,000, leaving a deficit of £4,350,000. The budget returns for the 1931-32 fiscal year were: Revenue, £45,607,700; expenditure, £59,834,538; deficit £14,226,808. The state railways, extending 6044 miles in 1930-31, incurred a deficit of £4,555,000 in 1931-32; the estimated deficit for 1932-33 was £1,976,000. The net state debt on June 30, 1932, was £305,147,665 (£270,485,109 on June 30, 1930). A £12,000,000 New South Wales conversion loan was floated in London Oct. 4, 1932, on which the nominal interest was 3½ per cent against 5¼ per cent on the former loan. For the year ended June 30, 1931, a total of 2547 vessels, of 7,938,000 net tons, entered New South Wales ports in the Australian interstate and overseas trade, and 2568 vessels, of 8,801,000 tons, cleared.

**GOVERNMENT.** Executive power is vested in a governor appointed by the British Government, who delegates his authority to a responsible ministry. Legislative authority is vested in a bicameral legislature, consisting of a legislative council of not less than 21 members (86 in 1931), appointed by the crown for life, and a legislative assembly of 115 members elected by universal suffrage. A bill for the reform of the Legislative Council was passed in 1932. It provided for a chamber of 60 members to be elected by the members of both houses of Parliament under proportional representation. Premier at the beginning of 1932, J. T. Lang, who was succeeded

on May 13, 1932, by B. S. B. Stevens. Governor, Sir Philip Game (appointed January, 1930). For the state election in 1932, see *AUSTRALIA* under *History*.

**NEW YORK. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 12,588,066, as against 10,385,227 in 1920. New York City had (1930) 6,930,446 inhabitants; Buffalo, 573,076; Rochester, 328,132; Syracuse, 209,326; Albany, the capital, 127,412.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1932	4,068,000	4,954,000 <sup>a</sup>	\$35,589,000
	1931	4,028,000	5,328,000 <sup>a</sup>	46,769,000
Potatoes	1932	210,000	28,850,000	11,624,000
	1931	202,000	28,684,000	13,481,000
Corn	1932	594,000	20,790,000	8,524,000
	1931	566,000	22,074,000	11,478,000
Apples	1932	.....	22,197,000	11,986,000
	1931	.....	17,902,000	14,680,000
Oats	1932	872,000	27,032,000	7,299,000
	1931	863,000	24,596,000	7,871,000
Wheat	1932	201,000	4,086,000	2,084,000
	1931	211,000	5,311,000	3,027,000
Barley	1932	154,000	4,004,000	1,481,000
	1931	173,000	4,325,000	1,860,000
Buckwheat	1932	149,000	2,458,000	959,000
	1931	158,000	2,844,000	1,166,000
Dry beans	1932	114,000	855,000 <sup>b</sup>	1,409,000
	1931	120,000	1,296,000 <sup>b</sup>	2,861,000

<sup>a</sup> Tons. <sup>b</sup> 100-lb. bags.

**MINERAL PRODUCTION.** Production of coke and of pig iron, that depended wholly or almost wholly on minerals from outside the State, were the chief mineral industries as judged by value of yearly output. Coke obtained by the by-product process attained 3,578,311 short tons for 1931 and 3,849,563 for 1930; by value, \$22,115,932 (1931), and \$24,657,090 (1930). Production of pig iron fell to 1,014,320 long tons (1931), from 1,638,323 (1930); in value, to \$15,568,275 (1931), from \$29,160,894 (1930). Ferro-alloys were produced in important quantity: 143,269 long tons (1930), by value \$11,526,887. The relatively small production of native iron ore decreased to 259,184 long tons (1931), from 755,074 (1930), and in value to \$1,067,489 (1931) from \$3,663,155 (1930).

Among the indigenous mineral products, cement declined to total producers' shipments of 9,833,048 barrels (1931), from 10,256,086 (1930); in value, to \$10,638,066 (1931) from \$15,380,703 (1930). Clay products attained the value of \$14,837,430 for 1930, as against \$17,661,711 for 1929. The production of stone of all sorts except slate totaled 12,915,190 short tons for 1930, in value \$18,141,668. Petroleum production fell slightly to 3,363,000 barrels (1931), from 3,647,000 (1930); and in value to \$6,800,000 (1931), from \$9,850,000 (1930). The output of natural gas increased to 9,624,000 M cubic feet (1930), from 8,387,000 M for 1929, and to \$6,433,000 (1930), from \$5,538,000 (1929). Exploitation of new wells tended further to increase production in 1931. Production of salt diminished to 1,788,940 short tons (1931), from 2,009,280 (1930); in value to \$5,293,470 (1931), from \$5,837,103 (1930). Gypsum was produced to the quantity of 912,070 short tons (1930) and 1,284,338 (1929); in value, to \$7,059,108 (1930), and \$8,339,852 (1929). The total value of the State's mineral product, duplications eliminated and

coke, pig iron, and ferro-alloys excluded, was \$99,022,368 for 1930; for 1929, \$109,361,349.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$224,430,664 (of which \$98,817,803 was for local education); for interest on debt, \$15,907,409; for permanent improvements, \$91,283,040; total, \$331,652,812 (of which \$77,509,030 was for highways, \$34,871,527 being for maintenance and \$42,637,503 for construction). Revenues were \$269,317,498. Of these, property and special taxes furnished 42.2 per cent; departmental earnings and compensation to the State for officers' services, 3.4; sale of licenses, 43.1 (in which was included a gasoline sale tax that produced \$22,864,060). Funded debt outstanding on June 30, 1931, totaled \$420,076,576, of which \$257,671,811 was for highways and canals. Net of sinking-fund assets, the debt was \$307,284,133. On an assessed valuation of \$29,513,043,980 the State levied in the year ad valorem taxes of \$2,205,371. The only general State tax levied on property was for revenue applied to judicial and military purposes.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 8282.08. During the year previous, about 30 miles of line had been abandoned.

**EDUCATION.** While economies were made in some directions in 1932, the level of teachers' salaries was generally maintained for the academic year. It was later affected by legislation of December, to reduce teachers' salaries thereafter, in New York City (see *Legislation*, below). For the academic year 1930-31, the latest for which statistics were obtainable, the number of persons of school age in the State was reported as 4,060,874. There were enrolled in the public schools 2,189,799 pupils. Of these, 1,718,242 were in elementary grades; in high-school grades, 471,557. The year's expenditures for public-school education totaled (exclusive of loans that were both borrowed and paid back during the year) \$369,035,300. Of this total, \$266,969,038 was for current expense and \$55,818,774 for capital outlay, while debt service required \$46,247,488. Salaries of teachers, by the year, averaged \$2407.66.

**CHARITIES AND CORRECTIONS.** Central authority over a great part of the State's institutional work was exercised in 1932 by the Department of Social Welfare, which was essentially the former Department of Charities, renamed by a statute ratified by popular vote in 1931. The authority of the department rested in a Board of Social Welfare, composed of 12 appointees, serving terms of eight years at per-diem compensation, and in an executive chief, the Commissioner of Social Welfare, an appointee of the board. This department administered a number of special schools for delinquents and others: the State Training School for Girls, Hudson; State Agricultural and Industrial School (delinquent boys), at Industry; the Thomas Indian School (Indian children), at Iroquois; the State Training School for Boys (delinquent), Warwick; also, the State Women's Relief Corps Home (soldiers' and sailors' mothers, wives, widows, and daughters), Oxford. It supervised 1054 charitable, correctional, and reformatory institutions and agencies that received public financial support; supervised children placed or boarded out, local boards of child welfare, and the distribution of

State relief to the aged; and directed Indian affairs.

Under the Department of Correction's management were State prisons, reformatories, institutions for defective delinquents, hospitals for the criminal insane, and a house of refuge. It included a Commission of Correction, composed of seven appointees and of the Commissioner of Correction, which was charged with the inspection of all institutions in the State, in which sane adults were confined or detained for crime or other cause. A separate Board of Parole, of three salaried full-time appointees, created in 1930, dealt with paroles. The State was developing, in 1932, a prison of special type, the Medium Security Prison, at Walkkill, to harbor convicts of the tractable sort; also, at Woodbourne, an institution for male defective delinquents. Apart from these, the institutions under the department, with their populations as reported in December, were: Dannemora State Hospital, Dannemora, 796; Matteawan State Hospital, Beacon, 1229; Albion State Training School, Albion, 153; Westfield State Farm (branch prison for Women), Bedford Hills, 248; Reformatory, Elmira, 1281; Institution for Male Defective Delinquents, Napanoch, 961; Attica Prison, Attica, 842; Auburn Prison, Auburn, 1852 men and 127 women; Clinton Prison, Dannemora, 1576; Great Meadow Prison, Comstock, 1113; Sing Sing Prison, Ossining, 2453; House of Refuge, Randall's Island, 457.

Under control of a Department of Mental Hygiene were State mental hospitals at Brooklyn, Binghamton, Buffalo, Central Islip, Helmsuth, Wingdale, Poughkeepsie, Kings Park, New York, Marcy, Middletown, Brentwood, Rochester, Orangeburg, Ogdensburg, Utica, and Willard; also, six schools and other institutions for mental defectives and for epileptics. The number of the insane in State hospitals or out on parole on June 30, 1931, was 53,914.

A number of other institutions were connected with the Department of Health. In the course of the year a special body known as the State Temporary Emergency Relief Administration, made grants to subdivisions, out of State funds, to help them to meet the widespread destitution of the time, and supervised the disposal of the funds.

**LEGISLATION.** The State Legislature assembled in regular annual session on January 6 and adjourned on March 11. Its principal task was to make the financial provisions necessitated by a great increase in State expenditure, occasioned by appropriations for the relief of the needy and by shrinkage in the State's revenues. It provided new or increased taxes designed to produce revenue at the rate of \$112,000,000 a year. The State tax on sales of gasoline was raised to 3 cents a gallon, from 2 cents, to yield an intended additional \$21,000,000 a year. The State tax on transfers of shares of stock was increased to 4 cents a share, from 2 cents. The rates of the State income tax were made, for incomes of 1932, double what they had been under the old law, and upon incomes of 1931 a second special increase of 50 per cent, additional to the like increase imposed in the autumn of 1931, was retroactively imposed. By these two income-tax provisions alone it was designed to raise \$55,000,000. The license tax on motorbuses and heavy trucks was raised by 65 per cent, with certain exceptions, to produce an anticipated additional

\$6,700,000. The budget, as passed after cuts of some \$20,000,000 made by the Legislature against Governor Roosevelt's protest, totaled \$270,361,619, exclusive of \$5,000,000 for immediate relief of the unemployed, of minor appropriations outside the budget, of \$30,000,000 of regular permanent improvements to be defrayed from bond issues, and of \$30,000,000 of funds for relief of the needy, to be raised by bond issue. The \$30,000,000 measure for the latter purpose was submitted to the people, to be voted at the general election.

**Banking Laws.** Troubles in the State's banking system, particularly the failure of the Bank of United States, having roused a widespread demand for revision of the laws, the Legislature enacted a measure to create a banking commission with advisory powers, which was to influence the course of the Superintendent of Banks. The measure contained a provision sought by banking interests but opposed in other quarters, that a minority of the board must be men of banking experience, and a further provision that the board must express itself by a two-thirds vote. The Legislature failed to pass a proposed measure to compel State banks to segregate their so-called thrift accounts. The savings banks of the State were allowed, by special enactment, to maintain their investments in previously legal railroad bonds that had sunk below the required qualifications for these banks' investments but that the banks, as matters stood, were unable to sell in quantity.

**Governmental Organization and Powers.** A measure for the reclassification of some 13,000 of the 35,000 persons, more or less, in the State's classified service, was enacted, with a view to removing inequalities and extravagance in State employment and pay. The power to name a Supreme Court Justice to preside at a special term of that court was transferred from the Governor to the presiding Judge of the Appellate Division. The practice, brought to view in the investigation of officers in New York City, of a public official's personally retaining the interest money earned by funds left in his custody and placed by him on deposit, was forbidden by statute. Authority was given municipalities incurring deficits at the time to spread such deficits over a period of five years. The Federal Constitutional Amendment proposed by Congress, to change the dates of inauguration and of initial sessions of Congress, was ratified.

**Criminal Laws.** The provision of the Baumes laws requiring a sentence of life imprisonment for fourth offenders was modified, so as to place it within the discretion of sentencing judges to make the terms of imprisonment for such offenders a minimum of 15 years. The law against the possession of pistols was modified, so as not to require the photographing and fingerprinting of applicants for pistol permits, save in New York City. The law against stock-selling frauds was strengthened, particularly by a provision to permit placing offenders under permanent injunction not to resume the selling of securities in the State. The investigation of the Hofstadter Committee into the practices of officials in New York City was continued, and an appropriation was made for its expenses.

After a conference with Mayor McKee of New York City, which faced inability to meet obligations on December 15, Lieutenant Governor Lehman (Governor Roosevelt being at the mo-

ment absent from the State), issued on December 2 an order convening the Legislature in extraordinary session, to meet on December 9. The prime purpose of this session was to repeal laws of the State fixing the salaries of a great part of the employees of New York City, and thus to make it possible for the city to reduce these salaries, thus effecting economies requisite to the city's obtaining further loans for its immediate needs. Measures were enacted authorizing New York City to reopen and reduce its budget; reducing the State-controlled salaries of the city's teachers, above \$2000, by from 5 per cent upward on a sliding scale; and empowering the city to reduce the pay of its police, firemen, and most other employees, for a "temporary" period not stated, where pay exceeded \$2000 a year. A legislative committee was charged with outlining a revision of the charter of New York City, a step sought by Governor Roosevelt, ex-Governor Smith, and Mayor McKee.

**POLITICAL AND OTHER EVENTS.** The statutory board known as the State Power Authority, empowered to use its own credit and to develop the hydroelectric sites of the northern part of the State, was organized early in the year. Its members and its chairman, Frank P. Walsh, were confirmed by the State Senate on January 26, as nominated by Governor Roosevelt. The Power Authority came into conflict with the Federal Administration (see UNITED STATES under *Administration*) over the execution of the St. Lawrence Waterway Treaty with Canada, as to which the Federal authorities had not arranged with the State regarding its own hydroelectric plans, which were affected.

A measure passed by the Legislature in 1931, as a concurrent resolution without the Governor's signature, to redistrict the State for the election of 45 Federal Representatives in place of the actual 43, was declared invalid by the State Court of Appeals on February 9, on the ground that the Governor's signature was essential to a measure of this character. The Legislature, though in session, failed to pass any substitute bill. The case was appealed to the Federal Supreme Court, which on April 11 (opinion by Chief Justice Hughes) likewise held that the State Legislature had no constitutional power to redistrict without the concurrence of the Governor. The State Legislature had then adjourned, and no special session for redistricting was called. Consequently election of Representatives in the State in 1932 was by the old 43 districts save for two Representatives, who were elected at large. Chief Judge Cardozo resigned from the State Court of Appeals by reason of his appointment on February 15 to the United States Supreme Court; in his place Associate Judge Cuthbert W. Pound was elevated to the Chief Judgeship on March 9. The State's "public enemy" law, providing imprisonment for criminals associating with other criminals and intended to break up gangs, was virtually invalidated by a decision of the Appellate Term of Special Sessions, reversing on June 8 a conviction under the act.

**State Investigation of New York City.** The investigation of officials in New York City by the Hofstadter legislative committee brought about during the year disclosures and State disciplinary measures adverse to Tammany and allied interests controlling the city's affairs. Samuel Seabury, counsel to the Hofstadter committee, hav-

ing sent to Governor Roosevelt late in 1931 charges against Sheriff Thomas M. Farley, sheriff of New York County, the Governor summoned Farley and examined him on Feb. 17, 1932, issuing at the same time a public statement that a public official must be able to give "credible explanation" of bank deposits and a scale of living exceeding his salary. Farley failed to explain the source of bank deposits, substantially in excess of his known income, to the satisfaction of the Governor, who removed him from office on February 24.

The committee's investigation dealt in April with the connection of State Senator John A. Hastings of Brooklyn with promoters who sought in and after 1925 to obtain for the Equitable Coach Company a city-wide franchise to operate motorbuses. Testimony was brought out to the purport that Hastings had received \$1000 a month as a political contact man for the promoters, that he had acquired without payment a large block of the incipient company's shares, and that one of his associates in the company had made payments to help finance a trip of Mayor Walker to Europe in 1927. It was testified on May 12 by J. A. Sisto, a broker, that his concern had delivered to Mayor Walker bonds to the value of \$26,535.51, ostensibly in payment of the proceeds of a transaction conducted for the Mayor in the security market, but without evidence that the Mayor's own money had been employed, and shortly before the municipal assembly had created a municipal board of taxicab control for which certain interests had been active. It was further brought out that Walker had accepted benefits of a monetary nature from Paul Block, represented as having been granted because of personal friendship.

The committee also sought in vain to procure the presence of R. T. Sherwood, described as Walker's financial agent, who had disappeared when the investigation was started, and to get possession of the Mayor's old check stubs. Charges based on these and other matters were transmitted to Governor Roosevelt on June 8. He summoned Walker before him to answer them on June 21. Hearings before the Governor were drawn out until the end of August. An attempt of the Mayor's counsel to obtain a court decree to prevent removal by the Governor having failed, Mayor Walker resigned on September 1. He was succeeded by Joseph V. McKee, President of the Board of Aldermen.

A separate investigation conducted by Seabury, at the order of the Appellate Division, into the lower courts of New York City resulted in his recommending on March 27 the consolidation of the Magistrates', Special Sessions, and Children's Courts into a unified court; a State constitutional amendment to permit appointment of the members of this court by the Appellate Division, for terms of two years; and reforms in the court's administrative system and arrangements for bail. A State Legislative committee undertook on April 13 an inquiry into means for economies in the State government.

*Prosecutions in Banking Failure.* State Superintendent of Banks Broderick was tried in April and May on a charge of neglect of duty in failure to close the Bank of United States, which had failed disastrously, late in 1930. Governor Roosevelt testified on his behalf. Broderick was acquitted on May 27. Isidor I. Kresel, tried for perjury in connection with proceedings relating to

the bank's failure, was acquitted on June 22. Bernard K. Marcus and Saul and Herbert Singer, convicted officials of the bank, carried appeals of their cases to the higher courts.

*Public Finances.* The State had no trouble in borrowing the great sums necessitated by its contributions to the local relief of the needy. It issued a loan of \$50,000,000 of its 3½ per cent notes in April, and was one of the States not obliged to apply for a loan to the Reconstruction Finance Corporation to cover its relief needs.

The City of New York was twice in financial difficulty during the year. Saved from a cash deficiency by the advance payment in January of the State's contribution to the city school system's receipts, it was nevertheless obliged to seek bank loans later in the month. It was able to place \$100,000,000 of its corporate stock only at the high interest rate of 6 per cent and on condition that it defer the execution of a list of costly public works. An act to permit the city to issue such corporate stock, maturing in not over five years, and exempt from the ordinary debt limitations, was rushed through the Legislature on January 20.

The city was again troubled by deficient receipts in the autumn. Mayor Walker made a fruitless appeal on August 4 to the civil-service employees to consent to a reduction of one-twelfth in their salaries for 1933. This refusal and the drawing of a tentative budget for the following year only slightly below that of 1932 caused bankers to refuse new credit to the city when its cash again became low in October. The bankers at that time insisted that more substantial economies be effected.

Acting Mayor McKee made an effort to effect municipal economies, but budgetary reductions that he proposed were overruled by the majority in the Board of Estimate. The State Court of Appeals ruled that his tenure of office must be only until the election of a successor at the next regular date of election, which was November 8. Surrogate John P. O'Brien was nominated by a city Democratic convention for Mayor on October 6, and McKee refused to consider an independent nomination. Lewis H. Pounds was nominated Republican candidate for Mayor on October 8. In the Democratic convention an intention of the particular partisans of ex-Mayor Walker to renominate him and run him in a "vindication" campaign was abandoned.

*Economic Conditions.* Unemployment in the State was more prevalent than it appeared to be for the country as a whole. This was due in great part to the high percentage of factory workers among the people of the State and to the great recession of factory employment. The proportion of factory employment was reported, for June, to be only 55.7 per cent of the average for the period 1925-1927; the June payroll total was but 42.7 of the average for that period. The June level of factory employment indicated unemployment to the approximate number of 500,000 factory workers. The total of all the unemployed in the State during the summer was commonly estimated in the neighborhood of 1,000,000, exclusive of their dependents. The greater part of them were estimated to be in New York City, where inactivity in the construction trades tended to raise the total. In addition to the totally unemployed, there were great numbers working on part time or for reduced compensation or under both handicaps. These conditions

necessitated the dispensation of State aid on a huge scale, to alleviate destitution. This aid was dispensed through the State Temporary Relief Administration, and was financed by an appropriation of \$5,000,000 early in the year, supplemented by a bond issue of \$30,000,000 approved by popular referendum in November.

Local aid to the poor, apart from State contributions, was on a great scale. In New York City the Board of Estimate voted \$5,000,000 for the workless and \$1,000,000 for the relief of veterans in special, on April 29. The city's chief voluntary organization for the purpose, the Citizens' Unemployment Relief Committee, had raised approximately \$18,000,000 for relief by a drive started late in 1931, under the direction of Harvey D. Gibson. About half of this sum was spent in providing work on tasks of public benefit, until late in 1932, to an average of some 33,000 unemployed heads of families and unattached women. The same organization started an appeal in the autumn for \$20,000,000 in contributions to carry on its activities during the ensuing winter and spring. The total cost of relief in the State, from all sources, for the year beginning November 1, was estimated at \$150,000,000.

*Transportation in New York City.* The independent municipally owned third subway system built by the Board of Transportation having been completed in its central portion, the city sought in April to let the completed portion to a private operating agency. Neither of the existing rapid-transit companies undertook to make an operating contract. The Board of Transportation consequently undertook to operate the line itself and began operation on September 9. A general though moderate decline in transit traffic and the apprehended competition of the new subway worked adversely for the Interborough Rapid Transit system, which entered receivership on August 27, with a capitalization of some \$248,000,000, ceasing payment of rentals to the Manhattan Elevated. The Whitestone branch of the Long Island Railroad was abandoned in the spring, by a permissive decree of the Interstate Commerce Commission, sustained by the courts despite the railroad's being entirely within New York State. A project of the Port of New York Authority to construct at Thirty-fourth Street, Manhattan, a second vehicular tube under the Hudson River, was postponed in March, owing to credit difficulties, but was revived in September, with hope for financing from the Reconstruction Finance Corporation.

*ELECTIONS.* The popular vote of November 8 was cast for the Democratic National ticket in the proportion of more than 5 to 4. The totals, for President, as officially reported, were: Roosevelt (Dem.), 2,534,959; Hoover (Rep.), 1,937,963. New York City gave Roosevelt a plurality of some 862,200, while the remainder of the State, with the exception of five counties, was prevailingly Republican. United States Senator Robert F. Wagner (Dem.), was reelected, defeating George Z. Medalie (Rep.). There were elected as Representatives to the Seventy-third Congress 29 Democrats, of whom 2 were Representatives-at-Large, and 16 Republicans. Lieutenant-Governor Herbert H. Lehman (Dem.) was elected Governor, defeating William J. Donovan (Rep.) of Buffalo, and the three other contested State offices went to Democrats. Elections to the State Senate gave the Democratic group control by a majority of one; in the Assembly

the Republicans obtained a majority of four. A referendum proposing an issue of State bonds to the total of \$30,000,000 for the relief of the destitute was approved. A proposal to amend the State constitution so as to permit of legislation to create recreational facilities in the State's forest preserve was defeated; it had been opposed as intended to open the way to undesirable amusement concessions.

*OFFICERS.* The chief officers of the State, serving in 1932, were: Governor, Franklin D. Roosevelt; Lieutenant-Governor, Herbert H. Lehman; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney-General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

*Court of Appeals.* Chief Judge, Benjamin N. Cardozo (resigned), Cuthbert W. Pound (succeeded by appointment); Associate Judges, Cuthbert W. Pound (advanced to Chief Judge), Frederick E. Crane, Irving Lehman, Henry T. Kellogg, John F. O'Brien, Irving G. Hubbs, and Leonard C. Crouch (appointed).

**NEW YORK CITY.** See CRIME; NEW YORK under *Political and Other Events*; UNEMPLOYMENT; MUNICIPAL GOVERNMENT; MUNICIPAL OWNERSHIP; WATER SUPPLY.

**NEW YORK CITY REGIONAL PLAN.** See CITY AND REGIONAL PLANNING.

**NEW YORK CITY WATER SUPPLY.** See WATER SUPPLY; TUNNELS.

**NEW YORK STATE BARGE CANAL.** See CANALS.

**NEW YORK UNIVERSITY.** A nonsectarian institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim School of Aeronautics; at Washington Square, the graduate school, school of law, school of commerce, accounts, and finance, Washington Square college, school of education, school of retailing, university extension division, and the institute of education; at the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The medical college is on East Twenty-sixth Street, the dental college on East Twenty-third Street, and the college of fine arts on East Forty-third Street.

The enrollment for the year 1931-32 in all divisions of the university, after deducting all duplications, was 38,823. The enrollment in the different degree-conferring units was as follows: University college of arts and pure science, 1253; school of law, 1268; University and Bellevue Hospital Medical College, 504; college of engineering, 967; graduate school, 876; school of education, including both graduate and undergraduate divisions, 8269; school of commerce, accounts, and finance, including the Wall Street division, 8068; Washington Square college, 6079; graduate school of business administration, 957; school of retailing, 830; college of fine arts, 1259; and college of dentistry, 495. In other divisions the enrollment was as follows: Summer school, 4293; extension, 1881; institute of education, 2209; life insurance training courses, 119; public health (correspondence) courses, 332; and evening engineering courses, 1128. The faculty of the university numbered 1788.

The productive funds for the year 1931-32 amounted to \$7,861,997, and the income was

\$307,049. The total income of \$7,754,309 was derived as follows: Student fees, \$6,788,997; dormitory rents, \$19,843; gifts, \$250,754; other income, \$387,664; and income from endowments, \$307,049. The libraries contained 416,858 volumes. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

**NEW ZEALAND.** A self-governing British dominion in the South Pacific, situated about 1200 miles southeast of Australia. Capital, Wellington.

**AREA AND POPULATION.** New Zealand consists of two main islands, North and South Islands, and various outlying and annexed islands. The total area is 104,015 square miles, including about 600 square miles of outlying islands, and the population on Apr. 1, 1932, was estimated at 1,511,360, including Maoris, as compared with 1,508,760 on Sept. 1, 1931. The Maoris, or aborigines, totaled 68,196 on Sept. 1, 1931. The 1926 census population of the chief cities, with 1931 estimates in parentheses, was: Wellington, 98,661 (111,260); Auckland, 87,829 (104,750); Christchurch, 83,114 (89,400); Dunedin, 67,544 (68,120). For the five years 1927 to 1931, births averaged 27,049 annually and deaths 11,997, the excess of births being 15,052. The average birth rate per 1000 inhabitants was 19.2 and the death rate 8.5.

**EDUCATION.** Education is compulsory for children from 7 to 14 years of age. In 1930 there were 254,162 pupils in primary schools, 31,869 in secondary schools, 11,829 in technical schools, and 5077 in universities. The four universities are at Dunedin, Christchurch, and Wellington (two).

**PRODUCTION.** Animal husbandry is the principal industry. In 1929-30 there were 16,872,000 acres of permanent meadow and pastures, 1,961,000 acres of arable land (about 3 per cent of the total area), 389,000 acres of trees, shrubs, and bushes; and about 13,000,000 acres of forests. Livestock in 1931 included 29,793,000 sheep, 4,081,000 cattle, 476,000 swine, and 296,000 horses. The output of the chief animal products in 1930-31 was (in thousands of pounds): factory butter, 258,366; cheese, 208,079; pork, bacon, and ham, 60,200; mutton and lamb, 550,924; beef and veal, 290,260; wool, 217,131. Exports of frozen meats increased from 452,618,000 pounds in 1930 to 463,547,000 pounds in 1931, but the value received declined about 30 per cent. For the season ended Sept. 30, 1932, shipments of frozen animal carcasses to Great Britain reached a record high level; shipments of mutton and lamb carcasses numbered 11,805,490, or 1,500,000 more than in 1930-31. Wheat production in 1931-32 was 6,660,000 bushels; barley, 662,000 bushels; oats, 3,473,000 bushels. For the year ended Mar. 31, 1931, the value of factory output was £80,745,000 (\$376,288,000) and the value added in process of manufacture was £31,561,000 (\$147,080,000). There were 5203 industrial establishments, employing 80,829 workers and distributing £16,398,000 (\$76,418,000) in wages and salaries. Coal, gold, and silver are the chief minerals mined. The number of registered unemployed on Apr. 30, 1932, numbered 50,093; the total number of unemployed was estimated at from 90,000 to 100,000, or one out of every three employable persons.

**COMMERCE.** New Zealand's foreign trade suffered a drastic decline in 1931, the reduction in imports reaching almost 50 per cent. Imports were valued at £24,813,000 (\$113,904,000), as against £43,026,000 (\$209,386,000) in 1930. Ex-

ports amounted to £34,319,000 (\$145,066,000), as compared with £44,209,000 (\$215,145,000) in 1930. (The pound values represent New Zealand pounds.) In spite of larger shipments, exports of wool and butter declined 38 per cent and 22 per cent, respectively, from the 1930 values. The leading exports in 1931 were: butter, \$45,016,000; frozen meats, \$37,589,000; wool, \$23,313,000; cheese, \$18,858,000. The United Kingdom supplied 51 per cent of the total imports in 1931 (47.3 per cent in 1930); the United States, 14.9 (17.6); and Australia, 10.8 (7.7). The mother country also took 88 per cent of the total exports (80.2 per cent in 1930); as against 3.3 per cent purchased by Australia and 2.6 per cent by the United States. New Zealand's imports from the United States in 1931 were valued at \$16,979,000 (\$36,847,000 in 1930); exports to the United States were \$3,894,000 (\$10,301,000 in 1930). United States statistics for 1932 showed imports from New Zealand of \$2,157,953 and exports to New Zealand of \$9,232,606.

**FINANCE.** The revised budget estimates for the fiscal year ended Mar. 31, 1932, placed ordinary revenues at £24,666,000 and ordinary expenditures at £24,628,000. Actual returns for 1931-32 showed revenues of £22,719,733, of which £5,904,348 were received from customs and £4,447,814 from the income tax. Expenditures were £24,860,552, of which £10,456,776 represented interest and amortization on the national debt. The deficit was £2,140,819. This compared with actual receipts of £23,069,000 and expenditures of £24,708,000 in 1930-31. The sums are in New Zealand pounds.

The gross public debt on Mar. 31, 1931, amounted to £276,033,000 (\$1,343,342,000) and the sinking fund to £2,313,000 (\$11,256,000). With the exception of £4,175,000 redeemable in Australia, the entire foreign debt was redeemable in London. On Mar. 31, 1932, the public debt totaled £281,942,800, or £184 per head of population, including Maoris.

**COMMUNICATIONS.** Railways in 1931 had 3322 miles of line, of which all except 116 miles were state owned. For the fiscal year ended Mar. 31, 1932, the state lines reported revenues of £6,509,000 and expenditures of £5,671,000; the surplus of £838,000 compared with a surplus of £689,000 in 1930-31. Highways extended about 48,433 miles, including 30,629 miles of macadam. Vessels entering the ports in foreign trade in 1931 numbered 564, of 2,156,000 net registered tons. Tonnage entered at Auckland was 1,214,453 and at Wellington 545,386. The merchant marine on Dec. 31, 1930, comprised 531 vessels (all sizes), of 201,650 gross tons capacity.

**GOVERNMENT.** Executive power rests with a Governor-General appointed by the Crown on recommendation of the Dominion government, and legislative power in the Governor-General and a general assembly of two houses, namely, the Legislative Council of 41 members, appointed by the Governor-General for seven years, and the House of Representatives of 80 members, elected for three years by direct suffrage. Governor-General in 1932, Lord Bledisloe (Charles Bathurst), appointed in 1929. The coalition ministry formed Sept. 19, 1931, and confirmed in office by the election of Dec. 2, 1931, was composed as follows: Prime Minister, External Affairs, and Railways, G. W. Forbes (leader of the United party); Public Works, Transport and Unemployment, J. G. Coates (leader of the Reform

party); Finance, Customs, and Attorney-General, W. D. Stewart (Reform party); Education, Industries, Commerce, and leader of the Legislative Council, R. Masters (United party); Lands, E. A. Ransom (United party); Native Affairs, Sir Apirana Ngata (United party); Justice and Defense, J. G. Cobbe (United); Postmaster General, Labor, and Internal Affairs, A. Hamilton (Reform); Health, J. A. Young (Reform).

**HISTORY.** The policy of rigid economy followed by Premier Forbes's coalition government led to serious disorders in Auckland on Apr. 14-16, 1932. Earlier in the month, Parliament voted to reduce expenditures in the 1932-33 budget by £4,000,000, thus increasing to £10,000,000 the savings effected during the three years of the depression. The new economies included a further 10 per cent cut in civil service salaries and the restriction of unemployment relief. On May 7, the Labor party introduced a no-confidence motion in Parliament upon this issue, but it was defeated. Four days later a protest demonstration of the unemployed and others at Auckland developed into a serious riot. It was two days before the sporadic outbursts of window-smashing and looting was checked. More than 100 civilians and many policemen and bluejackets were injured in the fighting, in which more than 300 arrests were made.

A primary cause of discontent was the government's policy of concentrating unemployed single men in camps and refusing any relief to those who refused to enter the camps. Conditions in the camps were reported to be so undesirable that many of the men deserted. The government also persisted in its refusal to grant relief to women, although women wage earners were taxed for the unemployment insurance fund on the same basis as men, or to provide any other form of relief than payment for manual labor. In an effort to prevent a repetition of the Auckland riots, the government passed a public safety act, which prohibited public meetings or demonstrations. The Auckland riots coincided with the adjournment of an emergency session of Parliament. A measure passed during the session extended to four years the term of office of members of the House of Representatives.

At the Ottawa Conference (see CANADA and GREAT BRITAIN under *History*) New Zealand agreed to increase the tariff preference accorded British goods in return for the free entry into the British market of the Dominion's agricultural and dairy products. The British tariff act of 1932 gave New Zealand a privileged position by increasing the duties on imports of butter, cheese, eggs, etc., from non-Empire countries and by placing a quota upon non-Empire imports of beef, mutton, lamb, and pork products. The Ottawa agreement concluded with the mother country was ratified by the New Zealand Parliament on October 21 and by the British Parliament November 15, going into effect November 17. On January 9, the 1931 rupture of commercial relations with Canada was healed by the signing of a new trade convention by representatives of the two countries, who met at Honolulu, Hawaii. This agreement became effective May 24.

In September, Foreign Minister Stewart and Secretary of the Treasury Parks visited London in an effort to negotiate a loan for the conversion of New Zealand's overseas indebtedness into bonds bearing a lower rate of interest. They were apparently unsuccessful, as no further move to-

ward conversion was made during the year. The government's financial condition improved, however, as a result of economies, and the National Expenditure Commission toward the end of the year reported that a balanced budget was in sight for 1933-34. Government finances were greatly aided by the continuance of the moratorium on Dominion war debt payments to the British government, despite the fact that Great Britain resumed payment on its war debt to the United States. New Zealand voluntarily offered to make the war debt payment to Great Britain, but the offer was declined.

In the regular session of Parliament, which adjourned early in December to Jan. 26, 1933, the farming interests exerted pressure upon the government to allow the New Zealand pound to depreciate with relation to the pound sterling in order to stimulate exports of farm products. The government and the banks had arbitrarily held the New Zealand pound at a 9 or 10 per cent discount from sterling, while the Australian pound was at a discount of about 25 per cent. At the end of the year the ministry was considering a revision of its exchange policy.

When Parliament adjourned, it left the government with virtually dictatorial powers. According to the Wellington correspondent of the *New York Times*, the entire national life was ruled by cabinet decrees. Decrees controlled the rate of interest paid on mortgages, wage levels and conditions, land tenure, motor traffic, electrical installations, the content of movie posters, the construction of additional movie theatres, the raising of chickens, and many other conditions of life.

**NICARAGUA**, nĭk'ā-rā'gwā. The largest of the Central American republics, Nicaragua is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

**AREA AND POPULATION.** With an area of about 49,500 square miles, Nicaragua had an estimated population in 1929 of 750,000, as compared with 638,119 at the census of 1920. Three-fourths of the inhabitants live in Western Nicaragua and are chiefly of Spanish and Indian blood; the remainder, including many West Indian negroes, inhabit the east coast, where banana cultivation is the leading industry. The population of Managua, which was almost completely destroyed by an earthquake in 1931, declined from 50,000 in 1929 to approximately 45,000 in September, 1932. The estimated population of the other leading cities was: León, 50,000; Granada, 25,000; Masaya, 18,000; and Matagalpa, 7000.

**EDUCATION.** It is estimated that 62 per cent of the population are illiterate. There were 50,000 children of school age (6 to 14 years) in 1929, of whom 23,495 were enrolled in elementary schools.

**PRODUCTION.** Agriculture, the leading industry, is supplemented by lumbering, cattle raising, and mining. Bananas, coffee, sugar, and coconuts are the chief crops, others being cotton, corn, rice, and beans. Coffee normally accounts for about one-half the value of all exports; in 1931 exports from Corinto were 34,474,000 pounds (34,032,000 in 1930). Banana exports in 1931 totaled 2,212,000 bunches (3,861,000 in 1930); coconuts exported to the United States, 2,244,000 (2,197,000 in 1930). Lumbering (dyewoods, gums, ma-

hogany, and cedar) and mining (gold and silver) are of decreasing importance.

**COMMERCE.** The Managua earthquake of 1931 destroyed all of the foreign trade records and Nicaraguan statistics are not available for the years since 1930. In 1930 imports were valued at \$8,172,000 (\$11,797,000 in 1929) and exports at \$8,343,000 (\$10,873,000 in 1929). The United States ordinarily furnishes about 60 per cent of the total imports; the United Kingdom, 10 per cent; and Germany, 9 per cent. About half the total exports go to the United States; 12 per cent to Germany, and 3 per cent to the United Kingdom. For the fiscal year ended June 30, 1932, United States statistics show exports to Nicaragua of \$4,652,000 (\$6,712,000 in 1930-31) and imports from Nicaragua of \$1,871,000 (\$2,627,000). Bananas and coffee are the chief exports and cotton manufactures the leading import commodity.

**FINANCE.** The government's financial position was adversely affected by low coffee prices and the virtual destruction of Managua, which formerly contributed 40 per cent of the total revenues. Results of 1931 budgetary operations were not available at the end of 1932, but customs receipts for 1931 decreased to 1,562,138 cordobas from 2,014,295 cordobas in 1930 (cordoba equals \$1 at par). The government was obliged to suspend the amortization service on the external debt Jan. 1, 1932. The government's financial position was then reported to be unsatisfactory, with salary payments in arrears.

The bonded debt of the state on Feb. 28, 1932, stood at 3,943,746 cordobas (2,580,996 cordobas in external bonds of 1909 and 1,362,750 cordobas in internal guaranteed customs bonds). Government control of foreign exchange transactions was established by a decree of Nov. 13, 1931.

**COMMUNICATIONS.** The principal railway line is the government-owned Pacific Railroad connecting the port of Corinto with Managua, León, Granada, and Diriamba. The total main line mileage in 1931 was about 166 (147 miles of state line). There were 350 miles of motor roads, 2824 miles of telegraph wire, and 3485 miles of private and state telephone wire. Steam vessels entering the ports in foreign trade in 1929 numbered 593, of 894,622 net registered tons. There are virtually no transport facilities between the east and west coasts. A 50-mile stretch of railway from León to El Sauce was placed in operation on Dec. 30, 1932.

**GOVERNMENT.** The Constitution of 1913 vests executive power in a president, acting through a responsible ministry, and legislative power in a congress of two chambers, the Senate of 24 members, elected for six years, and the Chamber of Deputies of 43 members, elected for four years by universal male suffrage. The President is elected for four years. President at the beginning of 1932, Gen. José María Moncada (Liberal), elected Nov. 4, 1928. For changes in 1932, see *History*.

### HISTORY

**ELECTION OF SACASA.** The third Nicaraguan election held under the supervision of the United States took place on Nov. 6, 1932. It resulted in the election of Dr. Juan B. Sacasa and Dr. Rodolfo Espinosa, the Liberal candidates for President and Vice President, respectively. They defeated the Conservative nominees, ex-Presidents Adolfo Díaz and Emiliano Chamorro, by a majority of

22,552 votes, the Liberals polling 76,030 votes to 53,478 for their opponents. The Liberals also elected 6 Senators and 14 Deputies, giving them majorities in both houses of Congress. After the elections, the Senate included 16 Liberals and 8 Conservatives; the Chamber of Deputies, 29 Liberals and 14 Conservatives. The inauguration of Drs. Sacasa and Espinosa was set for Jan. 1, 1933.

The election was supervised by a board headed by Rear Admiral Clark H. Woodward, U.S.N., which established 429 local electoral boards—247 presided over by Nicaraguans and 182 by U. S. Marines—to insure a free and fair election. Four hundred marines assisted in the election. The fairness of the election was believed to have been demonstrated by the election of Dr. Sacasa, head of the 1916 Nicaraguan government which the American State Department refused to recognize, and the defeat of Díaz, an "Americanista" candidate, who attained the Presidency in 1911 and again in 1926 largely as a result of the State Department's support. *La Nueva Prensa*, leading Conservative organ, declared that the voting had been "free, just, and honest" and praised the "honor and impartiality" of Rear Admiral Woodward.

Early in the year various developments threatened to prevent the holding of the election as scheduled. In March the Liberal and Conservative parties each sent a representative to Washington to discuss with Secretary of State Stimson the question of constitutional reform. They proposed that the autumn elections be altered to provide for the election of a president and a constituent assembly, the latter to revise the Nicaraguan Constitution. Mr. Stimson, in a statement issued March 23, declared that the United States government would refuse to supervise the election if the proposed change were made. In some quarters the proposal for constitutional reform was attributed to the desire of President Moncada to continue in office for a six-year instead of a four-year term. In the summer, the Liberal party split into two factions supporting Dr. Sacasa and Dr. Leonardo Argüello, respectively, for the Presidency. On Admiral Woodward's insistence that only one Liberal candidate be selected, both factions on September 27 united in support of Dr. Sacasa.

**EVACUATION OF THE MARINES.** In accordance with its previously announced policy, the United States government soon after the election commenced the evacuation of its forces in Nicaragua. Of the 1408 officers and enlisted men in the country, the first detachment left on November 29 and virtually all had been withdrawn by the end of the year. Thus the United States brought to a close a six-year period of intervention, during which time it had organized and trained a non-partisan constabulary, supervised three elections, and carried on an intermittent guerrilla warfare with Augusto Sandino. The insurgent general refused to lay down his arms when the United States intervened in December, 1926, and Colonel Stimson negotiated a truce between the bulk of the Liberal and Conservative forces then engaged in civil warfare. At the peak of the intervention, in 1928, there were 5365 marines and 465 naval officers and men in Nicaragua. During the entire period of the intervention, the American forces lost five officers and 29 men killed in action against insurgents and bandits and 14 officers and 85 men fatally wounded. The cost of the in-

tervention was officially estimated at about \$1,000,000 more than the cost of maintaining the same forces in the United States. With the withdrawal of the marines, the task of maintaining order in Nicaragua was left to the Guardia Nacional, the constabulary of between 2500 and 3000 men, partly officered by marines. Only the collection of customs still remained under American supervision.

**HOSTILITIES DURING 1932.** Over a period of several years, the Guardia had gradually taken over the major share in the campaign against Sandino and his guerrillas. During 1932 it faced a major test of its efficiency in the form of increased insurgent activities. Beginning in April, the Guardia patrols encountered rebel bands of from 150 to 200 men well equipped with rifles, machine guns, and bombs. In a clash near Ocotal on April 21 three marine officers of the Guardia were killed. On April 4 a Guardia patrol mutinied and killed its marine lieutenant. On April 25, 45 guardsmen, commanded by three United States Marine officers, attacked Sandino's main camp. They reported the killing of Florencio Silva, Sandino's chief aide, and nine other rebels. Two days later insurgent activities caused the imposition of martial law in a number of departments. In the month from August 29 to September 24, the Guardia reported 17 engagements with insurgents. The village of San Francisco del Carnicero, 20 miles from Managua, was sacked on October 1. On October 20, 100 insurgents ambushed a Guardia patrol of 38 men, which escaped with the loss of 12 men after inflicting heavy casualties upon the enemy. Twenty-two rebels and three guardsmen were killed on December 26, when a Guardia detachment drove off an insurgent band which attacked a troop train near Santa Lucia. In all of their encounters, the Guardia patrols gave a good account of themselves. At the end of the year peace negotiations were reported in progress between Sandino and General Sacasa, who was Sandino's commanding officer previous to the United States' intervention.

**OTHER DEVELOPMENTS.** Following the presidential elections, the Liberal and Conservative parties made public three agreements, which had been ratified November 5, to insure the "patriotic cooperation" of both groups in maintaining a stable peace. One agreement, relating to the pacification of the country, was kept secret. A second committed both parties to constitutional reform establishing proportional representation in the national Congress, in the judiciary, and in municipal government. Two bi-partisan commissions, each composed of a cabinet minister and a Liberal and Conservative representative, were to approve all important decisions in the fields of finance and foreign affairs. In case of disagreement, the minority member was authorized to submit to Congress the reasons for his opposition. The third agreement provided for provisional inauguration of these reforms pending revision of the Constitution.

On August 10, Congress authorized the government to borrow \$1,500,000 from the National Bank of Nicaragua to provide funds for railway and highway construction, the expenses of the American election mission, and to meet the budget deficit. The net revenues of the National Railway, the Corinto and San Juan del Sur wharves, the road taxes, and the customs duties on luxuries were pledged as security for the loan. Congress

on September 3 approved a 25 to 100 per cent general increase in tariff rates, effective immediately, to prevent the importation of luxuries and to protect home industries. The destruction of Managua by an earthquake in 1931 and the continued low price of coffee caused an acute depression in Nicaraguan business and finance and payment of the principal on the foreign debt was partially suspended during 1932. In December, Irving A. Lindberg, American Collector General of Customs, applied to the Council of Foreign Bondholders in London for authority to suspend amortization payments on the foreign debt, part of the 1909 bonds being held by Europeans. It was indicated that interest payments would be continued. Nicaragua was several years ahead of schedule in her payments on both external and internal debts.

**NICHOLS MEDAL.** See **CHEMISTRY, INDUSTRIAL.**

**NICKEL.** Nickel production from Canada, including refined nickel, nickel in matte exported and in nickel oxide, at 30,327,968 pounds valued at \$7,179,862, was considerably less than in 1931, according to the preliminary report of the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The largest nickel company curtailed output below sales, thus reducing stocks, and it is reported that towards the end of the year a strengthening demand for material led to an increase in production by this company. The Falconbridge Nickel Mines, Ltd., commenced construction of a 250-ton concentrator, sintering plant, and other additions to their plant in September, and at the end of the year construction was being carried on at their Norwegian refinery which will increase its output by 1000 metric tons annually. Credit is due the International Nickel Company for the research work which led to a number of new peacetime uses for this metal. The year 1932 witnessed increased use of four nickel alloys, two in the nickel cast iron alloy group, one in nickel-clad steel plate, and the other in the stainless corrosion resistant high nickel content.

**NICOTINE, NEO.** See **CHEMISTRY, INDUSTRIAL.**

**NIEMEYER, JOHN HENRY.** An American painter and educator, died in New Haven, Conn., Dec. 7, 1932. He was born in Bremen, Germany, June 25, 1839, and was brought to the United States at the age of four. He received his art education at the Ecole des Beaux Arts under Gérôme and Yvon and studied also in Paris under Jacquesson de la Chevreuse and Cornu. On his return to the United States in 1871 he was appointed professor of drawing at the Yale School of Fine Arts, where he remained until his retirement as professor emeritus in 1908. Among his distinguished students were the sculptors, Augustus Saint-Gaudens and Bela Lyon Pratt, and the painter, Frederic Remington. He was elected a member of the Society of American Artists in 1882 and an associate member of the National Academy of Design in 1906. His paintings included a great variety of subject-matter, with genre scenes and landscapes predominating. Among his portraits were those of John Burroughs and Theodore Dwight Woolsey, a former president of Yale. He was represented in the Smith College Art Gallery and the gallery of the Yale School of Fine Arts.

**NIGER, COLONY OF THE.** A colony in the interior of French West Africa (q.v.), lying east of

the upper Niger and north of British Nigeria. Lieutenant-Governor in 1932, M. Tellier.

**NIGERIA, COLONY AND PROTECTORATE OF.** A West African territory, belonging to Great Britain; divided into the Northern and Southern Provinces and including for administrative purposes the British mandated territory in the Cameroon. Total area and population, including the British Cameroons (1931 census), 372,674 square miles; 20,762,083 inhabitants. The seat of the government is Lagos, population (1931), 140,000. In 1929, there were about 2985 primary and elementary schools, with 194,700 pupils, and 30,203 Mohammedan schools with 300,500 pupils. The chief products and exports are: palm oil and kernels, cotton lint, cacao, and mahogany. Nigeria ranks sixth among tin-producing countries. Imports in 1930 were valued at £12,700,037 and exports at £15,174,315. Trade was chiefly with the British Empire, which supplied £8,978,419 of imports in 1930. Revenue of the entire colony and protectorate in 1930-31 totaled £7,190,054 including £1,567,854 repaid from loan works; and the total expenditure £6,329,668. The public debt was £28,350,582 on Mar. 31, 1931. The two main railways lines, with their branches, aggregated 1743 miles of line in 1930. There is an extensive network of motor highways, but the numerous rivers and creeks form the principal routes of transportation.

The Northern Provinces and Southern Provinces are each administered by a lieutenant-governor appointed by the King but subject to the authority of the Governor. The Governor is assisted by an executive council and by a partly elective legislative council, which legislates for the Southern Provinces only. Laws affecting the Northern Provinces are promulgated directly by the Governor. Governor in 1932, Sir Donald C. Cameron, appointed December, 1930.

**NINEVEH.** See ARCHÆOLOGY.

**NITRATE.** See GEOLOGY; CHILE under *Production and History*.

**NITROGEN.** See FERTILIZERS.

**NOBEL PRIZES.** The Nobel prizes for 1932 were presented in Stockholm on December 10 by King Gustaf to, or in behalf of, the following persons who, in accordance with the will of the Swedish inventor and philanthropist, Alfred B. Nobel, were deemed to have made the greatest contributions toward the progress of the world and the welfare of mankind: Sir Charles Scott Sherrington and Edgar Douglas Adrian (medicine and physiology), John Galsworthy (literature), and Dr. Irving Langmuir (chemistry). There were no awards announced for the year in physics or in world peace. The awards in medicine and physiology are determined by the Royal Caroline Medico-Surgical Institute of Stockholm; the award in literature by the Royal Swedish Academy; the awards in chemistry and physics by the Royal (Swedish) Academy of Science; and the peace award by a committee of five which is elected by the Norwegian Storting. In addition to medals and diplomas, a financial award from funds of the \$9,000,000 left for the purpose by the founder is distributed to the prize winners. In 1932 the value of the prizes totaled about 172,000 kroner each which, through the depreciation of Swedish currency amounted to about \$30,900.

The award of the prize in medicine and physiology to Sir Charles Sherrington and Professor Adrian was due to their joint discoveries in con-

nection with the function of the neurons, or nerve cells. Sherrington is known to physiologists as the propounder of the law, bearing his name, that "every posterior spinal nerve root supplies a special region of the skin, although fibres from adjacent spinal segments may invade such a region." Educated at Caius College, Cambridge, he served as professor of physiology in the University of Liverpool from 1895 to 1913, when he resigned to become Waynflete professor of physiology at Oxford University. He has been honored by degrees from leading universities in England, France, Germany, Belgium, Ireland, Scotland, Wales, the United States, and Canada, and subsequent to the announcement of the Nobel prize, it was announced that the University of Uppsala would also confer upon him the degree of Honorary Doctor of Medicine.

Professor Adrian, co-recipient of the prize in medicine and physiology, is known most widely for his outstanding work in connection with the functions of the brain and nervous system. He was educated at Westminster and at Trinity College, Cambridge, and has been a Fellow of Trinity College since 1913, and is also Foulerton Professor of the Royal Society. In addition to papers appearing in technical journals, he is the author of *The Basis of Sensation*, published in 1928.

John Galsworthy, the recipient of the year's award in literature, was unable to appear at the ceremony in Stockholm because of illness. The literary works of Mr. Galsworthy are too well known to require any special comment here. In the fields of drama and of fiction there will be few to deny the justice of the award. The long line of meritorious works in either field is a tribute to his genius and ability.

The award in chemistry to Dr. Irving Langmuir for his discoveries in surface chemistry was not unexpected, as he is one of the most distinguished research scientists of the period. Dr. Langmuir was educated at Columbia University and at the University of Göttingen, Germany, and has been given honorary degrees by a number of the leading colleges in the United States, and also by Edinburgh University and the Deutsche Ingenieur Technische Hochschule, Berlin. For a short time he served as instructor in chemistry at Stevens Institute, but since 1909 has been connected with the research laboratory of the General Electric Company at Schenectady. In 1915, he was awarded the Nichols Medal by the American Chemical Society for his researches on chemical reactions at low pressures; in 1918 the Royal Society of London awarded him the Hughes Medal for researches in molecular physics; in 1920 he received the Nichols Medal for researches on atomic structure, and also the Rumley Medal from the American Academy of Arts and Sciences for his researches on thermionic phenomena; in 1925 the Royal Academy of Lincei (Rome) gave him the Cannizzaro prize, and in 1928 he received the Perkin medal. His inventions include the nitrogen-filled incandescent electric light, the atomic hydrogen welding arc, and many types and improvements of vacuum tubes and radio tubes. See the NEW INTERNATIONAL ENCYCLOPÆDIA, vol. xvii, pp. 184-185.

**NON-FEDERATED MALAY STATES.** See UNFEDERATED MALAY STATES.

**NORDENSKIÖLD, NILS ERLAND HERBERT, BARON.** A Swedish ethnologist, died in Göteborg July 4, 1932. He was born in Stockholm July 19,

1877, and attended the University of Uppsala. He was connected with the Stockholm Museum of Natural History from 1906 to 1908, and in 1913 became director of the ethnographic division of the Göteborg Museum. After 1914 he was professor of ethnology at the University of Göteborg. He made journeys of discovery in Patagonia (1899), Argentina and Bolivia (1901-02), Peru and Bolivia (1904-05), Bolivia (1908-09), Bolivia and Brazil (1913-14), and Panama and Colombia (1927), from each of which he brought back large collections for the Swedish museums. In 1912 he was awarded the Loubat prize for American research by the Royal Swedish Academy, and in 1924 was secretary-general of the International Congress of Americanists at its meeting in Stockholm. His works, which were concerned largely with the collation of data from the whole South American continent, especially its material culture, include: *Från hogfjäll och urskogar* (1902); *Indianlif i El Gran Chaco* (1910); *Indianer och hvita i nordöstra Bolivia* (1911); *De sydamerikanska indianernas kulturhistoria* (1912); *Forskningar och äventyr i Sydamerika, 1913-14* (1915); *Dromsagor från Anderna* (1916); *De geografiska upptäckternas historia: Sydamerika* (1919); and *Comparative Ethnographical Studies*, dealing with the South American Indians (6 vols., 1919-25).

**NORTH AUSTRALIA.** See NORTHERN TERRITORY.

**NORTH CAROLINA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,170,276, as against 2,559,123 in 1920. Charlotte, the most populous city, had (1930) 82,675 inhabitants; Raleigh, the capital, 37,379.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931.

Crop	Year	Acreage	Prod Bu	Value
Tobacco	1932	476,000	280,840,000 <sup>a</sup>	\$33,701,000
	1931	698,000	479,526,000 <sup>a</sup>	42,198,000
Cotton	1932	1,373,000	640,000 <sup>b</sup>	21,120,000
	1931	1,333,000	756,000 <sup>b</sup>	22,567,000
Corn	1932	2,322,000	34,830,000	15,674,000
	1931	2,345,000	48,072,000	19,710,000
Hay	1932	764,000	580,000 <sup>c</sup>	6,516,000
	1931	745,000	705,000 <sup>c</sup>	9,074,000
Peanuts	1932	294,000	276,360,000 <sup>a</sup>	3,593,000
	1931	281,000	323,150,000 <sup>a</sup>	5,494,000
Potatoes	1932	68,000	6,596,000	4,485,000
	1931	79,000	8,532,000	4,778,000
Sweet potatoes	1932	94,000	7,990,000	4,794,000
	1931	80,000	6,560,000	4,592,000
Wheat	1932	376,000	3,572,000	2,322,000
	1931	339,000	4,407,000	3,129,000
Oats	1932	205,000	3,690,000	1,292,000
	1931	197,000	4,531,000	1,722,000

<sup>a</sup> Pounds. <sup>b</sup> Bales. <sup>c</sup> Tons

**MINERAL PRODUCTION.** Stone, the chief mineral product, fell to a total production of 1,099,960 short tons (1930), from 1,607,670 (1929); by value, to \$2,456,887 (1930), from \$3,880,113 (1929). The yearly total of the value of clay products likewise declined, to \$1,714,304 (1930), from \$3,196,830 (1929). The chief source of crude feldspar within the Union, North Carolina produced 103,163 long tons of feldspar in 1930 and 103,273 in 1929; by value, \$593,552 in 1930, and \$598,938 in 1929. There was also a considerable yearly total by value of minor products, which included sand and gravel, mica, coal, copper, and iron ore. The total value of the

State's mineral product, duplications eliminated, was \$7,462,450 for 1930; for 1929, \$10,963,896.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$23,229,304 (of which \$6,502,618 was for local education); for interest on debt, \$7,940,843; for permanent improvements, \$13,274,854; total, \$44,469,174 (of which \$14,558,800 was for highways, \$3,523,577 being for maintenance and \$11,035,223 for construction). Revenues were \$40,427,133. Of these, property and special taxes furnished 20.2 per cent; departmental earnings and compensation to the State for officers' services, 11.7; sale of licenses, 52.5 (in which was included a gasoline sale tax that produced \$9,767,374). Funded debt outstanding on June 30, 1931, totaled \$179,091,400, of which \$110,249,000 was for highways. Net of sinking-fund assets, the debt was \$169,400,309. The State levied in the year no general ad valorem taxes on property.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 5057.70. In the year previous, 104.96 miles of line had been abandoned; 1.31 miles put in operation.

**EDUCATION.** Difficulty in obtaining the revenue requisite to the support of the public schools was acute in 1932. However, the *Journal* of the National Education Association stated at the end of the year that a six-month school term was operated, as a minimum, in every district of the State. Teachers were somewhat commonly subjected to reduction of the yearly pay and to heavier teacher-loads. For the academic year 1931-1932, the number of persons of school age in the State was reported as 1,058,365. There were enrolled in the public schools 865,681 pupils. Of these, 746,450 were in common schools or elementary grades, and 110,231 were in high schools. The year's expenditures for public-school education were: current, \$28,515,583; total (including capital outlay), \$32,420,485. The salaries of teachers averaged, by the year, \$744.10. The action taken by the Legislature in 1931, to assure the six months' minimum term through State aid to districts requiring it for this purpose, had much influence in 1932 toward preventing curtailment of the school year.

**CHARITIES AND CORRECTIONS.** In order to administer the use of money borrowed for purposes of relief, from the Reconstruction Finance Corporation, the Governor's Office of Relief was organized, with a director of its own. The Commissioner of Public Welfare was made an advisory assistant to this director. Ten district supervisors were appointed, to direct the expenditure of State aid for the relief of the destitute, among the counties; but the actual disbursement of the money rested largely with county superintendents of public welfare. State aid for the county welfare offices began in 1931, when the State, undertaking to maintain school terms at the minimum of six months a year, also assumed the share of expense previously borne by county boards of education for welfare officers as school truant officers. This course brought the number of counties employing paid welfare officers, by the end of 1932, up to 62 out of the total 100.

The regular permanent organization exercising the central authority over the State's institutions for the care and custody of persons con-

tinued in 1932 to be the State Board of Charities and Public Welfare. It was composed of seven unpaid members and employed an executive staff headed by a commissioner of public welfare. It supervised the State's eleemosynary and penal institutions, supervised the welfare work of counties, and carried on work in mental health and hygiene, child welfare and Negro welfare, respectively, through five executive divisions. The institutionalized population under State control was reported at the end of the year as approximately 18,000.

**POLITICAL AND OTHER EVENTS.** Appeals of Luke Lea, his son, and his former associate Wallace B. Davis, from convictions carrying long prison sentences for misapplication of funds in connection with the calamitous failure of the Central Bank and Trust Company in 1930, were carried to the Federal Supreme Court, which denied review on October 24. Some \$40,000,000 of debts of Asheville and of Buncombe County, which had gone into default after the failure, remained for the most part in default in 1932. A local-government commission created by the Legislature in 1931, exerted control over the bond issues of local governing bodies and restricted these to less than \$1,000,000 for the first year of its existence, as against \$6,147,412 for the last year previous. The Democratic primary election on June 3 gave the lead to Robert R. Reynolds, an advocate of the repeal of prohibition, over Cameron Morrison as candidate for Senator. In a run-off primary on July 2 Reynolds decisively defeated Morrison, a supporter of prohibition.

**ELECTIONS.** The State's popular vote of November 8 was cast for the Democratic National ticket in a proportion somewhat less than  $2\frac{1}{2}$  to 1. For President the totals were reported: Roosevelt (Dem.), 497,566; Hoover (Rep.), 208,344. Robert R. Reynolds, Democrat and opponent of prohibition, was elected to the United States Senate both for the full ensuing term and for the remainder, terminating March 4, 1933, of the unexpired term for the seat previously held by the interim appointee, Cameron Morrison. Eleven Democrats, all but one being the actual incumbents, were elected as Representatives to the Seventy-third Congress. John C. B. Ehringhaus, Democrat, was elected Governor, defeating Clifford B. Frazier, Republican, and the entire Democratic State ticket was likewise elected.

**OFFICIALS.** The chief officials of the State, serving in 1932, were: Governor, O. Max Gardner; Lieutenant-Governor, R. T. Fountain; Secretary of State, J. A. Hartness; Treasurer, John Stedman; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

**Supreme Court:** Chief Justice, Walter P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

**NORTH CAROLINA, THE UNIVERSITY OF.** A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1932 was 2617 regular students, with 2499 in extension courses. There were 1446 registered for the 1932 summer session. The faculty had 215 members. The endowment amounted to \$2,000,000, and the total budget for the year was \$1,316,458. The library contained 250,000 volumes. President, Frank Porter Graham, M.A., LL.D., D.C.L., Litt.D.

**NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE.** A coeducational institution of higher learning in Naperville, Ill., founded in 1861. In the autumn of 1932 there was an enrollment of 469 students, of whom 303 were men and 166 women. There were 36 members on the faculty. The productive funds of the college amounted to \$1,090,480.58, and the current income for the year was \$265,561.30. The library contained 20,000 volumes. The Merner Gymnasium and Field House, costing \$350,000, was dedicated in January, 1931. President, Edward Everett Rall, Ph.D.

**NORTH DAKOTA. POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 680,845, as against 646,872 in 1920. Bismarck, the capital, had (1930) 11,090 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat ...	1932	10,325,000	107,156,000	\$34,290,000
	1931	6,295,000	40,216,000	18,499,000
Hay ....	1932	3,228,000	8,198,000 <sup>a</sup>	11,763,000
	1931	3,390,000	2,238,000 <sup>a</sup>	12,466,000
Flaxseed ..	1932	930,000	3,720,000	3,162,000
	1931	1,057,000	4,017,000	4,499,000
Barley ..	1932	2,265,000	39,638,000	4,757,000
	1931	1,812,000	18,482,000	4,251,000
Corn ....	1932	1,404,000	26,676,000	4,001,000
	1931	1,190,000	22,015,000	6,604,000
Oats ....	1932	2,112,000	44,352,000	3,282,000
	1931	1,498,000	18,276,000	2,741,000
Potatoes ..	1932	161,000	9,338,000	1,961,000
	1931	121,000	8,954,000	2,955,000
Rye ..	1932	1,040,000	11,440,000	1,716,000
	1931	770,000	4,620,000	1,016,000

<sup>a</sup> Tons.

**MINERAL PRODUCTION.** The production of coal continued to constitute about nine-tenths of the mineral industry of the State, in point of annual values attained. There were mined in 1931 about 1,610,000 short tons of coal, only slightly less than the 1,700,157 mined in 1930. The value of coal mined in 1930 was \$2,768,000. There was a minor industry in clay products, which totaled \$160,838 for 1930. The remainder of the yearly mineral total was chiefly contributed by the value of the production of sand and gravel. The total value of the State's mineral product was \$3,056,493 for 1930; for 1929, \$3,465,563.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$8,813,420 (of which \$1,290,953 was for local education); for conducting public-service enterprises, \$3,101,475; for interest on debt, \$2,012,926; for permanent improvements, \$3,493,166; total, \$17,420,987 (of which \$4,385,782 was for highways, \$1,352,797 being for maintenance and \$3,032,985 for construction). Revenues were \$17,642,274. Of these, property and special taxes furnished 19.2 per cent; departmental earnings and compensation to the State for officers' services, 10.3; sale of licenses, 17.6 (in which was included a gasoline sale tax that produced \$1,315,000). Funded debt outstanding on June 30, 1931, totaled \$40,357,200. The entirety of this amount was consequent to divers loans made by the State; these were to the Grand Forks Mill and Elevator Association, to borrowers upon real estate, and to the Bank of North Dakota. Net of sinking-fund assets, the debt was \$2,693,394. On an assessed

valuation of \$998,981,981 the State levied in the year ad valorem taxes of \$3,206,732.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 5275.01.

**EDUCATION.** A health programme was put in operation during the year, through schools in all the counties. It included demonstration conferences and the introduction of a new course of study in physical education and health; also aid in the preparation of hot noon lunches. The scheme was guided by an aim to shift teaching from simple knowledge about principles of health to the inculcation of healthful habits. For the academic year 1931-32 the number of persons of school age in the State was reported as 224,118. There were enrolled in the public schools 165,008 pupils. Of these, 133,519 were in common schools or elementary grades; in high schools, 32,089. The expenditures of the year for education in public schools totaled \$14,211,084. Salaries of teachers, by the month, averaged \$106.57.

**CHARITIES AND CORRECTIONS.** The State Board of Administration, under the system in force in 1932, had jurisdiction over the State's seven institutions for the care or custody of persons. The board was composed of three appointed members and two members *ex officio*. Its duties were not restricted to the penal and eleemosynary field; it had charge also of the State educational institutions, the State Capitol, and other State property, over which it exercised general administrative powers. Through a superintendent, it conducted the Child Welfare Department of the State. The aggregate population of the State's seven welfare institutions, as stated in December, 1932, was about 3300.

**POLITICAL AND OTHER EVENTS.** In the State primaries of June 29 the nominees of the Non-Partisan League won the Republican nominations, the regular Republicans being defeated; Senator Nye was renominated. The credit of the State was depressed by the submission of a referendum proposal, backed by the Farmers' Union, to be voted at the November election, calling for a suspension for three years of all existing indebtedness except that of corporations. This proposal was initiated by petition. It included unpaid taxes. In consequence of apprehension that the moratorium might be ratified by popular vote the Reconstruction Finance Corporation refused to lend to the State, and the State banking institution, the Bank of North Dakota became unable to grant loans to farmers on the accustomed scale, or to find takers for farm loan bonds. These difficulties tended to diminish after election.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion of about  $2\frac{1}{2}$  to 1. For President the officially reported totals were: Roosevelt (Dem.), 178,350; Hoover (Rep.), 71,722. Sen. Gerald P. Nye, Republican, was none the less reelected, and the Republicans elected their State ticket, including William Langer, candidate for Governor, who defeated H. C. De Puy, Democrat. The State elected two Republican Representatives-at-Large. A constitutional amendment to repeal the provision for State prohibition was adopted by popular vote. The initiated proposal to establish a moratorium of three years on non-corporate private debts was defeated by a popular majority of 50,000 or more.

Another initiated proposal, to cut by 20 per cent, and in some cases more, the pay of all State employees from the Governor down, obtained a majority of the popular vote and, under the terms of the State's initiative system, gained the force of a law.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, George F. Shafer; Lieutenant-Governor, John W. Carr; Secretary of State, Robert Byrne; State Treasurer, Berta E. Baker; Auditor, John Steen; Attorney-General, James Morris; Superintendent of Public Instruction, Bertha R. Palmer.

**Supreme Court:** Chief Justice, W. L. Nuessle; Associate Justices, Luther E. Birdzell, A. G. Burr, John Burke, A. M. Christianson.

**NORTH DAKOTA, UNIVERSITY OF.** A State institution of higher education at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1932 was 1473, classified as follows: College of Liberal Arts, 426 men, 211 women; School of Commerce, 84 men, 14 women; School of Education, 97 men, 208 women; College of Engineering, 175 men; School of Law, 60 men, 4 women; School of Medicine, 57 men. Summer session 1932, enrollment, 518. The faculty numbered 120 (full-time teaching staff). The income for 1932 was derived as follows: State appropriation, maintenance, \$449,506; land grant funds, \$116,758; student fees, \$61,000; income from dormitories, athletics, etc., \$18,850; extension and correspondence fees, \$4400; miscellaneous local income, \$8000. Grounds, buildings, and equipment were valued at \$2,400,000. Value of gifts, 1931-32, \$5000. The library contained 89,333 catalogued volumes. President, Thomas Franklin Kane, Ph.D., LL.D.

**NORTH EASTERN NEW GUINEA.** See NEW GUINEA, TERRITORY OF.

**NORTHERN AUSTRALIA.** See NORTHERN TERRITORY.

**NORTHERN RHODESIA.** See RHODESIA.

**NORTHERN TERRITORIES.** See under GOLD COAST.

**NORTHERN TERRITORY OF AUSTRALIA.** A territory of the Commonwealth of Australia, bounded on the north by the Arafura Sea, south by South Australia, east by Queensland, and west by Western Australia. The two administrative divisions (North Australia and Central Australia) of the Northern Territory of Australia were abolished on June 12, 1931, when the Northern Australia Act 1926 was repealed by the Northern Territory (Administration) Act 1931, and the whole was placed under the control of an administrator. Area, 523,620 square miles; estimated mean population for 1932 was 4504 exclusive of full-blood aboriginals. Aboriginals including half castes numbered about 21,824. Principal town and port, Darwin, population about 1000. Administrator in 1932, R. H. Weddell.

**NORTHWESTERN UNIVERSITY.** A co-educational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech in Evanston; and schools of law, medicine, dentistry, commerce, and journalism in Chicago. For the autumn term of 1932 there was an enrollment of 5952 full-time and 4298 part-time students. In the 1932 summer session 2210 students were enrolled. The faculty included 684 persons of the rank of instructor or above. The endowment as

of June 30, 1932, was \$24,450,000, yielding \$1,118,000 in income; the total income for the fiscal year was \$4,600,000. In the various libraries of the university there were approximately 387,000 bound volumes and 200,000 pamphlets. President, Walter Dill Scott, Ph.D., LL.D.

**NORTHWEST TERRITORIES.** A vast area in northern Canada, largely uninhabited and only partially explored, lying north and west of Hudson Bay and Strait, north of the Prairie Provinces, and east of Yukon Territory. Total area, 1,309,682 square miles (1,258,217 square miles of land and 51,465 of water). Population (1931 census), 9763. Most of the inhabitants were Eskimos and Indians. Furs were valued at \$1,632,446 in 1929-30 and numbered 219,604. The division of the Territories into three provisional districts of Mackenzie, Keewatin, and Franklin became effective on Jan. 1, 1920. They are administered from Ottawa, the capital of the Dominion, by a commissioner, deputy commissioner, and five councilors appointed by the Governor-General. Commissioner in 1932, H. H. Rowatt.

**NORWAY.** A constitutional monarchy, occupying the western and northern half of the Scandinavian peninsula. Capital, Oslo; reigning king in 1932, Haakon VII.

**AREA AND POPULATION.** With an area of 124,587 square miles. Norway reported a census population of 2,814,194 on Dec. 31, 1930, as compared with 2,649,775 at the census of 1920. The urban population in 1930 was 800,514, or 28.4 per cent of the total. For the five years 1927 to 1931, births averaged 48,961 annually and deaths 30,589, the excess of births being 18,372. The birth rate in 1931 was 16.7 per 1000 inhabitants and the death rate 10.9. Overseas emigrants for the period 1927-31 averaged 6649 annually. The population of the chief cities in 1930 was: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,456; Stavanger, 46,780.

**EDUCATION.** Elementary education is compulsory for children from 7 to 14 years of age. Enrollment in elementary schools was 399,421 in 1928-29; in secondary schools, 24,791. The University of Oslo enrolled 3476 students in 1930.

**PRODUCTION.** Norway is largely a barren and mountainous country, only 1,952,000 acres, or 2.6 per cent of the land area, being cultivable in 1931. There were 526,000 acres of permanent meadows and 18,531,000 acres of forests. Livestock in 1931 included 1,310,000 cattle, 1,692,000 sheep, 317,000 swine, and 177,000 horses. In October, 1931, there were 4900 silver-fox farms, with about 120,000 foxes, valued at 60,000,000 crowns (crown equals \$0.2680 at par). Cereals, potatoes, fodder roots, and hay are the chief crops. The fish catch in 1931 was estimated at 60,000,000 crowns (\$15,030,000 at average exchange rates), as against 76,500,000 crowns (\$20,502,000) in 1930. Whaling companies suspended operations during 1931, due to previous overproduction. The output of cod-liver oil was about 1,557,000 gallons (2,069,000 in 1930).

Mineral production in 1930 was valued at 30,470,000 crowns (\$8,166,000) and that of smelted metals at 99,958,000 crowns (\$26,789,000). Labor trouble and reduced demand lowered the mineral output in 1931; iron ore exports declined 42 per cent and pyrite exports 45 per cent. Lumber, pulp and paper, chemicals, and metallurgical products are the chief industrial products. Of a total potential hydro-electric horse power estimated at 12,-

500,000, about 1,195,000 horse power were developed. The number of registered unemployed reached a peak of 38,000 in the winter of 1931-32 and declined to 28,000 at the end of June, 1932.

**COMMERCE.** Both imports and exports showed sharp declines in value in 1931. Imports amounted to 856,599,000 crowns (\$214,664,000), against 1,065,012,000 crowns (\$285,423,000) in 1930. Exports totaled 459,935,000 crowns (\$114,018,000), as compared with 674,729,000 (\$180,827,000) in 1930. The decline was reflected in practically all categories of imports and exports, particularly in paper and pulp exports. Ships, iron and steel, textile fabrics, and coal were the leading imports and fish, wood pulp, Norway salt-petre, and paper were the chief exports, in order of value. In 1930, the United Kingdom furnished 25.8 per cent of the total imports, Germany 21.5 per cent, Denmark and Sweden 15.3 per cent, and the United States 9.7 per cent. The United Kingdom took 25.3 per cent of the general exports, Germany 12 per cent, Denmark and Sweden 11.8 per cent, and the United States 8.1 per cent.

**FINANCE.** Closed accounts for the fiscal year ended June 30, 1931, showed a final deficit of 6,200,000 crowns. The budget estimates for the year balanced at 373,747,000 crowns (about \$100,164,000). The budget estimates for 1931-32 balanced at 355,582,000 crowns (\$95,296,000), but revenues declined sharply during the year, leaving another deficit. As originally balanced in January, 1932, the budget for 1932-33 balanced at 352,634,000 crowns (\$94,505,912 at par). In July, the budget was revised by reducing estimated revenues and expenditures by 3,300,000 crowns each.

The public debt on June 30, 1931, stood at 1,518,054,000 crowns (\$406,838,000), of which 757,625,000 crowns (\$203,043,000) represented the external debt.

**COMMUNICATIONS.** Railway lines reported a total of 2406 miles of line on June 30, 1931, of which 2177 miles were state and 229 miles private lines. Highways, mostly graded earth or gravel, extended 23,343 miles. The Norwegian merchant fleet ranked fourth among the fleets of the world in 1932, and was the most modern. It consisted on July 1, 1932, of 1582 steamships of 2,410,000 gross tons, 419 motor ships of 1,748,000 tons, and 7 sailing ships of 3000 tons, or a total of 2008 vessels of 4,167,000 gross tons. This was an increase of about 100,000 tons since July 1, 1931. Gross earning of the merchant marine were estimated at 370,000,000 crowns (\$92,685,000) for 1931, as against 411,500,000 crowns (\$111,220,000) in 1930. Vessels entering the ports in 1930 numbered 10,025, of 7,601,000 net registered tons. The telegraph and most of the telephone lines are owned by the state.

**GOVERNMENT.** Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament or Storting of 150 members, elected for three years by universal suffrage without distinction as to sex. When assembled, the Storting divides itself into the Lagting and Odelsting, comprising one-fourth and three-fourths of the membership of the Storting, respectively. The two sections function much as the upper and lower houses of bicameral Parliaments. As a result of the elections held Oct. 20, 1930, the composition of the Storting was as follows: Labor, 47; Conservative, 41; Radical, 33; Agrarian, 25; Independent Liberal, 3; Radical People's party, 1. The Cabinet at the beginning of 1932 was headed by P. L.

Kolstad (Agrarian), who assumed office May 12, 1931.

**HISTORY.** The year 1932 in Norway was rather uneventful, except for the growing intensity of the economic depression. The decline in world trade severely curtailed the activities of Norway's great merchant marine. Taxes on customs, railway incomes, personal incomes, and beer all fell below estimates and late in 1932 the Ministry of Finance estimated that the 1932-33 budget would show a deficit of about 35,000,000 kroner (about \$9,380,000). On December 11, the cabinet proposed a turnover tax on all retail trade except milk, cream, and certain kinds of bread, a project which aroused the vigorous opposition of commercial interests. The number of applicants registered at the employment exchanges in October, 1932, was 35,082.

Having an extensive trade with Great Britain and being one of the few countries to purchase more from than she sold to Britain, Norway was greatly concerned by the Ottawa commercial treaties (see CANADA and GREAT BRITAIN under *History*). Practically all of Norway's exports to the United Kingdom were adversely affected by the new British tariff. The growing economic and political coöperation among the Scandinavian countries was further stimulated by the mutual danger to their prosperity presented by the Ottawa treaties. On January 6-7 the Foreign Ministers of Norway, Sweden, and Denmark met in Copenhagen to discuss methods of safeguarding their common interests. They again consulted one another before commencing, late in November, separate conversations with the British government for the purpose of adjusting their commercial relations to the conditions created by the Ottawa pacts. These negotiations were under way at the end of the year. At a meeting of Scandinavian industrialists at Oslo on October 25, sentiment in favor of establishing a Scandinavian bloc in the negotiations with Great Britain was expressed.

For Norway's controversy with Denmark over territory in Greenland, see GREENLAND under *History*. Also see SVALBARD; NETHERLANDS, THE, under *History*.

**NORWEGIAN LITERATURE.** See SCANDINAVIAN LITERATURE.

**NORWOOD, ROBERT.** An American clergyman, died in New York City, Sept. 28, 1932. He was born in New Ross, N. S., Canada, Mar. 27, 1874, and was graduated from the University of King's College, Windsor, N. S., in 1897. Ordained a deacon in the Church of England in 1907 and a priest the following year, he served as missionary at St. Andrew's Church, Neil's Harbor, Cape Breton, during 1898-99, as curate of St. Luke's Church, Hubbards, N. S., during 1899-1901, and as rector of Trinity Church, Bridgewater, N. S., during 1901-07 and of All Saints Church, Spring Hill, N. S., during 1908-10. After acting as assistant rector of Trinity Church, Montreal, for two years he became rector of Memorial Church, London, Ont. In 1917 he came to the United States, serving as rector of St. Paul's Church, Overbrook, Philadelphia, until 1925 and thereafter as rector of St. Bartholomew's Church, New York City. He was the author of *His Lady of the Sonnets* (1915), *The Witch of Endor* (1916), *The Piper and the Reed* (1917), *The Modernists* (1918), *The Man of Kerioth* (1919), *Bill Boram* (1921), *Mother and Son* (1925), *The Heresy of Antioch* (1928), *The Steep Ascent* (1928), *The Man Who*

*Dared to be God* (1929), *His Glorious Body* (1930), and *Issa* (1931).

**NOTRE DAME, UNIVERSITY OF.** A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The university consists of the colleges of arts and letters, science, engineering, law, and commerce. The enrollment in the summer session of 1932 was 763, of which number 477 were religious, sisters of religious communities also being permitted to attend the summer session. The enrollment for the first semester of 1932-33 was 2780. The faculty numbered 188. The endowment amounted to \$1,000,000, while the income for 1931-32, including student fees and departmental income, was \$1,387,319. The library contains 155,465 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

**NOVA SCOTIA, nō'vā skō'shā.** The easternmost of the Maritime Provinces of Canada; area, 21,428 square miles; population (1931 census), 512,846 (523,837 in 1921). Chief cities, with (1931 census) populations: Halifax, the capital, 59,275; Sydney, 23,089; Glace Bay, 20,706. In 1930 births totaled 11,346; deaths, 6206; marriages, 3451. There were 113,860 students in the 3191 public schools in 1930.

Agriculture is the chief occupation with fruit growing (chiefly apples) one of the important branches. The estimated total value of agricultural production for 1931 was \$27,335,000 including: field crops harvested from 508,296 acres valued at \$10,087,000; dairy products, \$9,541,000; fruits and vegetables, \$3,671,000; poultry and eggs, \$1,351,000; fur farming, \$275,000; wool, \$111,000. Mineral production, 1931, including the small production from Prince Edward Island, was valued at \$21,065,891, compared with \$27,019,367 for 1930. Coal production in 1931 totaled 4,952,182 (preliminary figure) short tons (6,252,552 in 1929); gold, gypsum, and salt are other products. The value of lumber and other sawmill products in 1930 was \$3,238,847.

In 1930, there were 1302 manufacturing establishments, with an invested capital of \$133,671,163, a total of 21,069 employees, and an output valued at \$85,802,921 of which \$41,296,743 represented the value added in process of production. The fish catch in 1930 was valued at \$10,411,200; about 16,000 men were engaged in the industry. There are approximately 1451 miles of railway and 18,000 miles of highway. The Sir A. R. Duncan Commission, appointed on Jan. 25, 1932, to investigate coal-mining conditions in Nova Scotia made its report on Feb. 18, 1932. A summary of this report will be found in the May, 1932, issue of the *Monthly Labor Review*, U. S. Dept. of Labor.

Executive power is vested in a lieutenant-governor appointed by the Dominion Government and a legislative assembly of 38 members elected for five years by popular vote. The province sends 10 members to the Senate and 14 (the representation in the lower house was to be reduced to 12 as a result of redistribution based on the 1931 census) members to the House of Commons at Ottawa. Lieutenant-Governor in 1932, W. H. Covert, appointed October, 1931.

**NOVELS.** See FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN; SPANISH AMERICAN LITERATURE; SPANISH LITERATURE; SCANDINAVIAN LITERATURE.

**NUTRITION.** See FOOD AND NUTRITION.

**NYASALAND**, nyá'sá-lánd', **PROTECTORATE.** A British protectorate in south central Africa, occupying the southern and western shores of Lake Nyasa. Land area, 37,596 square miles; population on Jan. 1, 1931, 1,392,742 natives, 1905 Europeans, and 1599 Asiatics. Zomba is the seat of government and Blantyre and Limbe in the Shiré Highlands are the chief white settlements. In 1930 native schools numbered 2685 with an average attendance of 73,290. Coffee, tobacco, cotton, and tea are the chief crops. In 1931, imports were valued at £726,550 and exports at £537,887. Government revenue totaled £442,663 and expenditures £428,899 in 1930. Governor and Commander-in-Chief in 1932, H. W. Young.

**OATS.** The production of 1932 of 33 countries not including the Soviet Republics and countries of the southern hemisphere as reported to the International Institute of Agriculture was placed at 3,494,891,000 bushels, or nearly 12 per cent above the yield of the preceding year and 2.7 per cent above the annual average for the five years 1926-1930. The area devoted to the crop, 99,633,000 acres, was 1.1 per cent above the acreage of 1931 and about equal to the five-year average. The production of the leading countries other than the United States was reported as follows: Germany 458,160,000 bushels, Canada 419,556,000 bushels, France 353,383,000 bushels, Poland 183,963,000 bushels, Czechoslovakia 114,628,000 bushels, and England and Wales 87,570,000 bushels. The Soviet Republics reported an average annual production of 1,070,531,000 bushels for the five years 1926-1930. Argentina, where the crop is harvested in December, reported a yield of 69,280,000 bushels for the crop year 1931-1932, an average annual yield of 60,949,000 bushels and an acreage of 3,652,000 acres for the crop year 1932-1933. The Canadian crop of 1932 was 20.3 per cent above the crop of the preceding year and about equal to the annual average for the five year period.

The production of the United States in 1932 as reported by the Department of Agriculture was 1,242,437,000 bushels harvested on an area of 41,224,000 acres, or at an average yield of 30.1 bushels per acre. The total production was 11 per cent, the area 3.6 per cent, and the yield per acre 7 per cent greater than in 1931. As compared with the preceding year the acreage was increased in the Western and West North Central States, held at the same level in the South-eastern States and reduced about 10 per cent in the South Central States. Yields above the average were secured in the Pacific Northwest, in the area from South Dakota and Nebraska to Illinois, and in New York and the New England States.

Oats were produced in all the States and the yield of the leading ones was reported as follows: Iowa 223,632,000 bushels, Minnesota 164,700,000 bushels, Illinois 161,512,000 bushels, and Wisconsin 88,655,000 bushels. The areas devoted to the crop in these States were 6,212,000; 4,575,000; 4,307,000, and 2,533,000 acres respectively. The average yield per acre was 37.5 bushels in Illinois, 36 bushels in Iowa and Minnesota, and 35 bushels in Wisconsin. These States accounted for 42 per cent of the acreage and 52 per cent of the production of the country.

The exports of oats and oat products of the United States for the fiscal year ended June 30,

1932 were reported as 2,479,000 bushels of grain and 35,255,000 pounds of oatmeal of which 15,981,000 pounds were shipped in cases or cartons and the rest in sacks. In the preceding fiscal year 907,000 bushels of grain and 39,886,000 pounds of oatmeal were shipped abroad. The imports for the fiscal year 1932 amounted to 65,000 bushels of grain.

**OBERLIN COLLEGE.** A nonsectarian institution for the higher education of men and women in Oberlin, founded in 1833. The registration for the first semester of 1932-33 was 1542, while that for the summer session of 1932 was 143. The faculty had 203 members in 1931-32. The productive funds of the institution as of Aug. 31, 1932, amounted to \$18,208,622, and the income for the year was \$1,463,111. During the year a new dormitory for men was erected, named Andrew H. Noah Hall in honor of Mr. A. H. Noah of Akron, O., who gave \$100,000 towards its construction. The library contained 343,815 bound and 211,638 unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

**OBITUARY RECORD FOR THE YEAR.** See NECROLOGY.

**OCCUPATIONAL DISEASES.** See WORKMEN'S COMPENSATION.

**O'BRIEN, FREDERICK.** An American author, died in Sausalito, Calif., Jan. 9, 1932. Born in Baltimore, Md., in 1869, he attended the Jesuit College there and also for a short time the University of Maryland. At the age of 18 he went to sea, and for many years thereafter traveled extensively. After 1894 he was connected at various times with newspapers in New York, San Francisco, Honolulu, Manila, and Paris. From 1903 to 1909 he was correspondent in the Orient for the New York *Herald*, his principal assignment being the Russo-Japanese War. He also published during this period the Manila *Cablenews*. During the World War he served with the Food Administration in California and in Washington, D. C. As a result of a sojourn in the islands of the South Seas he published *White Shadows in the South Seas* (1919), which was largely responsible for the flurry of interest in that region. It was followed by *Mystic Isles of the South Seas* (1921) and *Atolls of the Sun* (1922). He was a fellow of the American Geographical Society.

**OCEANIA**, ó'shē-ān'ā, **FRENCH ESTABLISHMENTS IN.** A French colonial possession consisting of groups of small islands scattered throughout a wide area of the eastern Pacific. The total area of the Establishments is estimated at 1520 square miles; population in 1929, 35,782, of whom 29,600 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 5569, of whom 2126 were French. Tahiti forms a part of the Society Islands. The other groups are the Marquesas Islands, Tuamotu Islands, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. The budget for 1931 was balanced at 18,867,000 francs (franc = \$0.0392 at par); imports were valued at 45,291,000 francs and exports at 37,702,000 francs. The preparation of copra, sugar, and rum are the chief industries. The principal exports were copra, mother-of-pearl, vanilla, coconuts, and phosphates; the chief imports were wheat, flour, metal work. Governor in 1932, Léonce Joré.

**OCEANS.** See METEOROLOGY.

**OGLETHORPE UNIVERSITY.** An institution for higher education, founded under the

auspices of the Presbyterian Church in the United States in 1913. A university of the same name was in existence in Atlanta, Ga., from 1835 to 1872, being recognized as one of the famous educational institutions of the South. The enrollment for the autumn term of 1932 was 500; 185 persons attended the 1932 summer session. The faculty numbered 31. The income for the year amounted to \$60,000; other donations totaled \$15,000. The library contained 50,000 volumes. President, Thornwell Jacobs, LL.D., Litt.D.

**OHIO. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 6,646,697, as against 5,759,394 in 1920. Cleveland, the most populous city, had (1930) 900,429 inhabitants; Cincinnati, 451,160; Toledo, 290,718; Akron, 255,040; Columbus, the capital, 290,564.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1932	8,433,000	121,872,000	\$24,374,000
	1931	3,576,000	160,920,000	48,276,000
Hay	1932	2,887,000	2,499,000 <sup>a</sup>	11,743,000
	1931	2,524,000	3,200,000 <sup>a</sup>	21,116,000
Wheat	1932	1,585,000	32,456,000	13,956,000
	1931	1,723,000	50,744,000	22,835,000
Oats	1932	1,591,000	45,344,000	7,255,000
	1931	1,657,000	62,138,000	12,428,000
Potatoes	1932	117,000	11,583,000	5,560,000
	1931	110,000	11,220,000	6,956,000
Tobacco	1932	45,000	32,940,000 <sup>b</sup>	2,503,000
	1931	55,000	54,615,000 <sup>b</sup>	3,550,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MINERAL PRODUCTION.** The production of coal by mines in Ohio suffered further decline, to about 21,440,000 short tons for 1931, from the already curtailed total of 22,551,978 tons for 1930; it declined also as to value from the \$31,643,000 of 1930. The output of the by-product coke-producers fell more severely, by quantity to 3,932,939 short tons for 1931, from 6,163,324 for 1930; by value, to \$17,588,581 (1931), from \$26,706,788 (1930). In much the same proportion as coke, the production of pig iron declined to 4,290,669 long tons (1931), from 6,541,212 (1930); and in value, to \$89,001,692 (1931), from \$111,529,209 (1930). Allied with the iron and steel industry was a substantial production of ferro-alloys, which though somewhat curtailed for 1930 attained for that year the quantity of 78,746 long tons and the value of \$2,365,006. Ohio continued in 1930 to lead the Union in the total of clay products. Its total of these, by value, was \$61,449,555 for 1930; for 1929, \$81,797,495. Clay products formed, in either year, the greatest component of the State's yearly total of native mineral production. The clay products of 1930 were brick and tile to the extent of \$36,107,758; pottery to that of \$25,341,797; each of these totals was some \$10,000,000 behind that for 1929. Cement producers' shipments fell to 6,211,789 barrels (1931), from 8,185,077 (1930); by value, to \$6,066,068 (1931), from \$11,965,038 (1930). For 1930 the production of natural gas was 63,394,000 M cubic feet; in value, \$36,491,000. The yield of petroleum fell to 5,327,000 barrels (1931), from 6,486,000 (1930); by value to \$5,610,000 (1931), from \$11,960,000 (1930). That of lime, to 695,000 short tons (estimated, 1931), from 736,305 (1930); by value to \$4,222,000 (estimated, 1931), from \$5,711,855 (1930). That of salt rose

to 1,398,000 short tons (1931), from 1,311,440 (1930); but as to value fell to \$2,526,952 (1931), from \$3,015,206 (1930). That of gypsum was 255,337 short tons (1930), in value \$3,094,495. Sand and gravel and stone of inexpensive grades were each produced to a large aggregate yearly value. The total value of the mineral product of the State (coke, ferro-alloys, pig iron, and certain duplications eliminated) was \$186,971,555 for 1930; for 1929, \$220,061,343.

**FINANCE.** State expenditures in the year ended December 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$50,003,693 (of which \$5,351,822 was for local education); for interest on debt, \$526,382; for permanent improvements, \$26,370,936; total, \$76,976,804 (of which \$31,657,522 was for highways, \$11,949,697 being for maintenance and \$19,707,825 for construction). Revenues were \$88,327,713. Of these, property and special taxes furnished 16.3 per cent; departmental earnings and compensation to the State for officers' services, 6.9; sale of licenses, 56.3 (in which was included a gasoline sale tax that produced \$23,973,005). Funded debt outstanding on December 31, 1931, totaled \$8,046,049. Net of sinking-fund assets, the debt was \$6,207,791.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 8732.61. In the previous year 85.6 miles had been abandoned; 13.71 miles put in operation.

**EDUCATION.** The financial situation of public schools in the State was submitted, for study, to a commission appointed by State Director of Education Skinner. The number of persons of school age in the State in 1931 was reported as 1,557,819. There were enrolled in the public schools, in the academic year 1931-1932, 1,299,212 persons. Of these, 831,319 were in common schools or elementary grades; in high schools, 308,267; kindergartens, 33,749; special classes, 26,941; junior high school, 95,373. The year's current expenditures for public-school education were computed, provisionally, as \$101,280,760. Salaries of teachers averaged about \$1500 a year.

**CHARITIES AND CORRECTIONS.** The Department of Public Welfare, which had become operative in 1921, continued in 1932 to exercise the State's strongly centralized direction of activities affecting the care and custody of persons. It had as its head a director (John McSweeney). Its functions included the administration of 22 State institutions, with an aggregate population (December 1) of 34,917; administration of a pay-patient law; examination and classification of prisoners and work of criminal identification and investigation; the conduct of prison industries supplying public departments and institutions; duties in the prevention of blindness and the occupation of the adult blind; through a Board of Parole, and a Division of Probation and Parole, the granting of paroles from penal and reformatory institutions, the supervision of the paroled, and the encouragement of adult probation among the counties; through a Division of Charities, extensive duties as to safeguarding unprotected children, inspecting county jails and workhouses, licensing agencies for the care of children, and hospitalizing crippled children.

State institutions controlled by the department were: for the mentally afflicted, State hospitals at Athens, Cleveland, Columbus, Dayton, Lima, Cincinnati, Toledo, and Massillon; Ohio

Hospital for Epileptics, Gallipolis; Institutions for the Feeble-minded, Columbus, Orient, and Apple Creek; Ohio State Sanatorium, Mount Vernon; Ohio Soldiers' and Sailors' Home, Sandusky; Madison Home, Madison; Boys' Industrial School, Lancaster; Girls' Industrial School, Delaware; Ohio Penitentiary, Columbus; Prison Farm, London; Ohio State Reformatory, Mansfield; Ohio Reformatory for Women, Marysville; Bureau of Juvenile Research, Columbus.

**LEGISLATION.** The eighty-ninth General Assembly was twice convened in brief special sessions. A session, adjourned on April 1, passed a series of measures recommended by Governor White, to provide State relief for the needy to the extent of some \$23,500,000. Money for the purpose was in part made available by an act authorizing the diversion, to the purpose of county and city relief work, of receipts from the taxes on gasoline and on motor vehicles. A State Relief Committee, of five members to be appointed by the Governor, was created, to dispense funds. The authority of school boards was extended to enable them to relieve the needs of school children. The excise taxes on public utilities, railroads and pipe lines excepted, was raised by 1 per cent, for the period of five years, to provide money for relief needs. Counties were authorized to issue bonds under specified conditions for the relief of their poor, against State moneys to be allocated to the counties. A one-day special session, held on May 16, rendered lawful the borrowing of funds when this was needful in order to bring about the liquidation, merging, or reopening of suspended State banks. The session also authorized the State Building Commission to pay not more than \$750,000, to be obtained if necessary by sale of bonds, in order to defray the cost of completing the State office building. The building had been damaged by an explosion when almost complete and the contractors had refused to make good the damage at their own expense, thus throwing the matter into litigation.

**POLITICAL AND OTHER EVENTS.** Owing to radical reductions in State expenditure effected in 1931 Ohio was able to enter 1932 in sound financial condition. The State and its subdivisions found themselves obliged in the course of the year to make heavy provisions for the destitute unemployed. The State's share was met largely from the temporary diversion of special State funds and by the imposition of new taxes (see *Legislation*). Some of the counties, backed by Governor White, applied to the Reconstruction Finance Corporation and obtained loans from it to defray their relief expenditures. The occupational tax imposed by Cincinnati in 1919 was repealed in September; it had been a subject of protracted litigation, and the State Supreme Court had decided that corporations, being taxed already by the State, were exempt from this local tax. The State's new tax-classification code was fought in the courts during the year, being sustained in the 7th District Court of Appeals on April 9. In a case involving Allen County the State Supreme Court held in June that all property in the country could be taxed for the service of county bonds originally issued against special assessment on part of the property in the county; this decision, which the Federal Supreme Court refused later to review, settled the validity of bond issues in numerous counties, as chargeable against counties' revenues.

At Columbus on April 14 the State Office Building, a \$5,000,000 structure nearing completion, was partly wrecked by an explosion, followed by a fire, with loss of five lives. The explosion was first laid to a dynamite plot, but after investigation, State Attorney General Bettman reported it to have been caused by leakage from a gas main. In the Hocking Valley coal field the mine operators reduced wages in February to \$3 a day for laborers. This caused about 12,000 men employed in the mines to strike, and the number was increased late in March by a strike order of the United Mine Workers. A fatal clash at the Somers mine on April 14 caused forces of the National Guard to be sent into the area. The troops were attacked while guarding the Somers mine on April 18 and fired on their adversaries, wounding three. Disorders rendered it necessary for operators to close the mines altogether for a time. Governor White, finally, negotiated in May a year's truce in the coal mining field, upon terms that included a labor rate of \$3.28 in wages a day, payment in currency instead of company scrip current at company stores, and settlement of minor points of difference.

At Cleveland Ray T. Miller, Democrat, was elected Mayor on February 16, at a special election, defeating Daniel E. Morgan, former City Manager, who was the Republican candidate. The election followed upon the abandonment of the city-manager plan of administration in November, 1931, and was the city's first mayoral election in eight years. At Akron the Daniel Guggenheim Airship Institute, providing 5000 square feet of laboratories for the study of matters connected with the development of the airship, was built with \$250,000 from the Daniel Guggenheim Foundation and a contribution from the city of Akron.

The State primaries on May 10 resulted in the nomination, for Governor, of David S. Ingalls, an advocate of the repeal of prohibition; on the Democratic side, in the renomination of Governor White. For Senator the Republicans nominated State Attorney General Gilbert Bettman and the Democrats renominated Senator Robert J. Bulkley; both men held views opposed to prohibition.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket by a plurality of some 74,000. For President, the officially reported totals were: Roosevelt (Dem.), 1,301,695; Hoover (Rep.), 1,227,679. Sen. Robert J. Bulkley, Democrat, was reelected, defeating Gilbert Bettman, Republican. Gov. George White (Dem.) was reelected, attaining over his opponent, David S. Ingalls (Rep.), a greater plurality than that of Roosevelt. Both houses of the State's General Assembly passed into the hands of Democratic majorities and the Democratic State ticket was elected. The number of Democrats from Ohio in the House of Representatives was increased to 17; 7 Republican Representatives were elected.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, George White; Lieutenant Governor, William G. Pickeral; Secretary of State, Clarence J. Brown; Treasurer, Harry S. Day; Auditor, Joseph T. Tracy; Attorney-General, Gilbert Bettman; Director of Education, J. L. Clifton.

**Supreme Court:** Chief Justice, Carrington T. Marshall; Associate Judges, Thomas A. Jones,

Edward S. Matthias, Robert H. Day, Florence E. Allen, Reynolds R. Kinkade, Will P. Stephenson.

**OHIO NORTHERN UNIVERSITY.** An institution for the higher education of men and women in Ada, O., founded in 1871, and under the direction of the Methodist Episcopal Church. There were 514 students in the fall quarter of 1932, and in the summer quarter of 1932, 311 students. The faculty consisted of 42 members. The productive endowment of the institution amounted to \$504,740, and the income for the year to \$196,682. The library consisted of 10,900 volumes. The law library totaled approximately 8000 volumes. Engineering shops have been added to the campus buildings. President, Robert Williams, A.M., D.D., LL.D.

**OHIO STATE UNIVERSITY.** A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn term of 1932 totaled 10,179, distributed as follows: Graduate School 1296; Agriculture 810; Applied Optics 60; Arts and Sciences 1938; Arts-education 64; Commerce and Administration 1647; Dentistry 191; Education 1756; Engineering 1404; Law 260; Medicine 365; Nursing 61; Pharmacy 129; Veterinary Medicine 198. There were in addition 4447 students registered in the Summer Quarter of 1932. The faculty numbered 950, a decrease of 50 under 1931. The endowment amounted to \$1,165,622. The total income for the year was \$7,955,063 while the total expenditures were \$7,900,428. The buildings and equipment were valued at \$22,081,674. The library contained 395,000 volumes. President George W. Rightmire, LL.D.

**OHIO UNIVERSITY.** A State university for the higher education of men and women, founded in Athens, Ohio, in 1804. The student enrollment for the first semester of 1932 was 2546, of whom 1317 were in the College of Liberal Arts, and 1229 were in the College of Education. The enrollment for the 1932 summer session was 1195, of whom 246 were in the College of Liberal Arts, and 949 were in the College of Education. The income for 1931 was \$1,529,586. The faculty numbered 214. The library contained more than 80,000 bound volumes. President, Elmer Burritt Bryan, LL.D., L.H.D.

**OHIO WESLEYAN UNIVERSITY.** An institution for the higher education of men and women in Delaware, O., under the control of the Methodist Episcopal Church, founded in 1844. For the autumn semester of 1932 the total enrollment was 1444. The faculty numbered 126. The productive endowment of the university amounted to \$3,486,000 and the income for the year 1931-32 for educational enterprises was \$540,860 and for auxiliary enterprises \$308,534. The library contained 137,088 volumes. President, Edmund D. Soper, D.D., LL.D.

**OIL.** See PETROLEUM.

**OIL CONSERVATION.** See PETROLEUM.

**OKLAHOMA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,396,040, as against 2,028,283 in 1920. Oklahoma City, the capital, had (1930) 185,389 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** About nine-tenths of the yearly value (1930) of the State's mineral

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1932	3,128,000	1,080,000*	\$30,780,000
	1931	3,395,000	1,261,000*	31,908,000
Corn	1932	3,288,000	65,760,000	11,897,000
	1931	3,321,000	51,808,000	18,988,000
Wheat	1932	3,966,000	43,626,000	18,088,000
	1931	4,407,000	74,919,000	24,723,000
Hay	1932	1,041,000	1,197,000 <sup>b</sup>	5,809,000
	1931	956,000	992,000 <sup>b</sup>	5,926,000
Grainsorghum	1932	1,602,000	15,219,000	2,739,000
	1931	1,443,000	14,480,000	3,463,000
Oats	1932	1,834,000	24,012,000	2,881,000
	1931	1,516,000	43,206,000	7,777,000
Potatoes	1932	42,000	8,108,000	1,647,000
	1931	45,000	8,240,000	1,912,000
Sweet potatoes	1932	22,000	1,584,000	729,000
	1931	18,000	1,260,000	882,000

\* Bales. <sup>b</sup> Tons.

product was contributed by petroleum, natural gas, and the gasoline derived from the latter; over two-thirds, by petroleum alone. The course of the State's petroleum industry in 1931 was singular; it was affected to a great degree by two influences: glut production in the East Texas field not far away, and the establishment of fairly rigid State limitation of output from the wells of Oklahoma itself. There resulted a fall in the petroleum production of 1931 to 180,574,000 barrels, from 216,486,000 for 1930; and a much sharper fall by total value to \$119,200,000 (1931), from \$279,250,000 (1930). As prices and, consequently, production by value varied abnormally for different parts of the year, the total by value for 1931, entire, could not be taken as fairly reflecting the result of the State's course in restricting production.

The production of natural gas, for which totals covering 1931 were not yet tabulated by the Federal Bureau of Mines, was 348,116,000 M cubic feet for 1930 and 357,893,000 M cubic feet for 1929; in value \$47,632,000 for 1930, and \$53,528,000 for 1929. The quantity of gasoline derived from natural gas fell sharply to 454,886,000 gallons for 1931, from 591,194,000 for 1930; but the yearly total was not strictly proportionate to the production of natural gas, and the decline for 1931 could not be taken as indicating any like decline in natural-gas production. The value of natural-gas gasoline for 1930 was \$29,148,000. The production of zinc attained 136,153 short tons, in value \$13,070,688 for 1930. That of coal, about 1,880,000 short tons for 1931, and 2,793,954 tons, in value \$7,768,000, for 1930. That of stone, \$1,631,477 for 1930. The total value of the State's mineral product, duplications eliminated, was \$390,170,991 for 1930; for 1929, \$516,685,232.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$26,048,448 (of which \$4,295,270 was for local education); for interest on debt, \$305,434; for permanent improvements, \$16,906,829; total, \$43,260,711 (of which \$19,260,440 was for highways, \$3,713,229 being for maintenance and \$15,547,211 for construction). Revenues were \$39,674,786. Of these, property and special taxes furnished 14.5 per cent; departmental earnings and compensation to the State for officers' services, 11.0; sale of licenses, 44.9 (in which was included a gasoline sale tax that produced \$8,824,406). Funded debt outstanding on June 30, 1931, totaled \$1,672,500. Net of sinking-fund assets, the debt was \$1,578,403. On an assessed valuation of

\$1,851,602,105 the State levied in the year ad valorem taxes of \$6,480,818.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 6741.62. In the year previous, 72.96 miles of new line had been put in operation; 9.49 miles abandoned.

**EDUCATION.** Reduction of teachers' salaries was widespread in the public schools in 1932, by reason of the insufficiency of collections of revenue for educational use, due to the impoverishment of taxpayers. It was reported, however, at the close of the year, that public schools had been kept open throughout the State, on the average basis of an academic year of eight months.

**CHARITIES AND CORRECTIONS.** Public activity in the care and custody of persons, under the system in force in 1932, was conducted by separately directed State and subdivisional institutions and by a Department of Charities and Corrections, the powers of which were chiefly limited to supervision. This department, established by provision of the State constitution, had as its head an elected Commissioner (in 1932, Mabel Bassett). It was required to make yearly inspection of State correctional and eleemosynary institutions and of similar institutions of counties and municipalities; to make special inquiries in case of complaint and on demand of the Governor; to inspect and to license, year by year, such institutions, not run by public authorities, as hospitals and orphanages.

**POLITICAL AND OTHER EVENTS.** A contest in the courts over the validity of the State's oil-conservation law ended on May 16 in a decision of the Federal Supreme Court, refusing the demand of the Champlain Refining Company for an injunction against the enforcement of State curtailment of the production of petroleum. The operation of the law with the aid of militia was continued by Governor Murray. During Murray's absence in the East on a speaking tour Acting Governor Burns ordered the end of "martial law" in the oil fields, but Murray ordered the troops back. The effort of the State Corporation Commission to subject manufacturers of ice to licensing and regulation was defeated in litigation carried to the Federal Supreme Court, which, on March 21, held the ice industry a private business not subject to regulation in the manner of an ordinary public utility. The State's general revenue fund was impaired during the year by reason of deficiency in tax collections in the counties. Governor Murray was active in the spring as one of the minor candidates for the Democratic Presidential nomination. He made at the same time an effort to carry out ambitious policies in his own State, causing a referendum vote to be held in July on three measures that he favored. These were the creation of an unemployment relief commission, a limitation of the ad valorem tax and State control of the cotton and wheat crops. All three were defeated by popular vote.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic ticket in a proportion somewhat less than 3 to 1. For President the officially reported totals were: Roosevelt (Dem.), 516,468; Hoover (Rep.), 188,165. Elmer Thomas (Dem.) was reelected United States Senator, defeating Wirt Franklin (Rep.). The eight incumbents, all Democrats, were reelected as Representatives to the Seventy-third Congress.

An adverse popular vote was cast on a proposal, favored by Governor Murray, to lay an income tax with heavy rates on high incomes.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, William H. Murray; Lieutenant-Governor, Robert Burns; Secretary of State, R. A. Sneed; Treasurer, Ray O. Weems; Auditor, Frank C. Carter; Attorney-General, J. Berry King; Superintendent of Public Instruction, John Vaughan.

**Supreme Court:** Chief Justice, E. F. Lester; Associate Justices, J. Howard Langley, James B. Cullison, Charles Swindall, Robert A. Hefner, Edwin R. McNeill, Thomas G. Andrews, J. W. Clark, Fletcher Riley.

**OKLAHOMA, UNIVERSITY OF.** A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1932 totaled 5211. For the summer session of 1932, 2199 students were registered. There were 304 faculty members. The productive funds of the university amounted to \$3,200,000 and the income for 1932-33 was \$2,013,324 (including two hospitals operated by school of medicine). The library contained 134,000 volumes, President, William Bennett Bizzell, Ph.D., LL.D.

**OLCOTT, CHAUNCEY (CHANCELLOR JOHN).** An American actor, singer, and ballad writer, died in Monte Carlo, Monaco, Mar. 18, 1932. He was born in Buffalo, N. Y., July 21, 1860, and made his first stage appearance as a ballad singer in that city in 1880. Coming to New York City six years later, he appeared as Pablo in *Pepita*, or *the Girl with the Glass Eyes*. In 1888 he appeared as Frank Hopkins in *The Old Homestead*, in which he continued to play until 1890. He then turned to musical comedy and comic opera, appearing in several Gilbert and Sullivan operettas, and in London in *Miss Decima* (1891) and *Blue Eyed Susan* (1892). His successful tour in *Mavoureen* on his return to the United States led to his appearance in such Irish musical dramas as *The Irish Artist* (1894), *The Minstrel of Clare* (1896), *Sweet Inniscarra* (1897), *A Romance of Athlone* (1899), *Garret O'Magh* (1901), *Old Limerick Town* (1902), and *Terence* (1904). He subsequently appeared in *Edmund Burke* (1905), *Eileen Ashore* (1906), *O'Neill of Derry* (1907), *Ragged Robin* (1908), *Barry of Barrymore* (1911), *Macushla* (1911), *The Isle of Dreams* (1912), *Shameen Dhu* (1913), *The Heart of Paddy Whack* (1914), *Honest John O'Brien* (1916), *Once Upon a Time* (1917), and *The Voice of McConnell* (1918). His career closed with a successful revival of *Macushla*, in which he appeared as Sir Brian Fitzgerald during 1919-21. After 1925 he lived most of the time in Europe. He composed *My Wild Irish Rose*, *Mother Machree* (with Ernest Ball), and either words or music of *Katy Malone*, *Look in My Heart*, *My Beautiful Irish Maid*, *Olcott's Irish Serenade*, *Kate O'Donoghue*, *Sweet Inniscarra*, *The Old Fashioned Mother*, and *Love Remains the Same*.

**OLD AGE PENSIONS.** The *Monthly Labor Review* of June, 1932, printed a résumé of the status of public old age pension systems in the United States at the end of 1931. It was there reported that laws had been enacted in seventeen States, five of them (Delaware, Idaho, New Hampshire, New Jersey, and West Virginia), having created old age systems during the year. In the States of California, Delaware, Massachusetts, and New York the operation of the

old age pension system was practically State-wide. Of 681 counties in the fifteen States in which the pension system was in operation to some extent at the end of 1931, reports were received from 645, or 95 per cent. Of these 645 counties, 268 or about 42 per cent, had adopted the system and were caring for 76,349 needy aged persons. The total expenditures for old age pensions during 1931 were \$16,173,207. Of the fifteen States represented, 75 per cent of the total number of pensioners and almost 90 per cent of the total expenditures were accounted for in the States of California and New York. The year 1931 marked a great step forward in the progress of old age pension activity in that within a single year the number of aged receiving assistance increased from 10,307 to 76,349 while the annual amount spent for their support increased from \$1,714,388 to \$16,173,207. Undoubtedly the continuance of the depression played an important part in this great increase. The administrative authorities in New York

chusetts, New Hampshire, New York, Utah, and Wyoming.

The average annual amount disbursed per pensioner varies, of course, from State to State due, in many instances, to the statutory provisions prescribed by the separate laws. The largest average amounts spent were those of California, Maryland, and New York where the annual figures per pensioner were respectively \$248.81, \$333.33, and \$255.33. The annual amount disbursed per pensioner for the whole group of 15 States was \$227.42. Table II shows in summary form the spread of the pension system since 1928. It will be observed that in 1928 financial relief to the aged affected but 87 of the population in those States having pension laws; by the end of 1930 the percentage had mounted to 55.6; and by 1931 to 76.3 per cent. Table III indicates in summary form the provisions of old age pension laws on the statute books of the seventeen American States at the end of 1931.

TABLE I—SUMMARY OF OPERATIONS UNDER STATE OLD AGE PENSION LAWS, 1931

State	Year of passage of law	Counties in State		Counties having pension system		Amount paid in pensions, 1931
		Total	Number reported for	Number	Number of pensioners	
California	1929	58	58	57	9,887 <sup>a</sup>	\$2,460,000 <sup>b</sup>
Colorado	1927	63	54	7	50	2,190
Delaware	1931	3	3	3	1,497	66,568 <sup>c</sup>
Idaho	1931	44	38	31 <sup>d</sup>	698 <sup>d</sup>	4,224
Kentucky	1926	120	120	1	10	1,000
Maryland	1927	24	24	1	150	50,000
Massachusetts	1930	14 <sup>e</sup>	14 <sup>e</sup>	14 <sup>e</sup>	11,076	904,939 <sup>c</sup>
Minnesota	1929	87	87	4	1,227 <sup>f</sup>	94,068 <sup>f</sup>
Montana	1923	56	56	45	1,130	178,934
Nevada	1925	17	13	2	34	7,360
New Hampshire	1931	10	6	5	246	3,614 <sup>g</sup>
New York	1930	62	62	62	47,585	12,007,352
Utah	1929	29	22	12	873	92,305
Wisconsin	1925	71	71	9	1,597	283,848
Wyoming	1929	23	17	15	289	16,805
Total		681	645	268	76,349	16,173,207

<sup>a</sup> As of Jan. 31, 1932

<sup>b</sup> Estimate, based on reports for June, 1931, and January, 1932.

<sup>c</sup> Six months

<sup>d</sup> But only two of these counties, with 143 pensioners, actually paid any pensions during 1931.

<sup>e</sup> System is not, however, a county system, but a city-and-town system, of 335 cities and towns in the State all were reported for, but 22 (of which only one was large enough to have its population figures shown separately in the population census) had not put the pension system into effect

<sup>f</sup> Three counties.

<sup>g</sup> Three months.

and Massachusetts indicated that the number of pensioners had been increased by 30 per cent and 35 per cent respectively from this cause alone. Table I presents a summary of the operations in 1931 in the various States. The survey notes that in the following States the pension system is voluntary, that is to say, election is optional with the counties: Kentucky, Maryland, Minnesota, Montana, Nevada, and Wisconsin. The result has been that in this group only a comparatively small number of counties have elected to participate. Thus, of Kentucky's 120 counties, but one makes provision for its aged; the county in which Baltimore is located is the only one of the 24 Maryland counties to participate, though it is to be noted that it has almost 50 per cent of the State's population; in Minnesota four out of 87 counties participate; in Montana 45 out of 56 counties participate; in Nevada, two out of 17 counties participate; and in Wisconsin nine out of 71 counties participate. In the following States the system is mandatory, in other words, counties are required to join with the State in the care of the aged: California, Colorado, Delaware, Idaho, Massa-

TABLE II—PROGRESS IN OLD AGE PENSION MOVEMENT, 1928 TO 1931

Item	1928	1930	1931

CALIFORNIA. A study made of the two years' pension experience of the State of California,

TABLE III—PROVISIONS OF OLD AGE PENSION LAWS

State	Year of passage	Date effective (original act)	ELIGIBILITY REQUIREMENTS					Required period of—		Funds furnished by—
			Type of law	Maximum pension	Age	Citizen-ship	Residence	Maximum property limit		
									Years	
							Years	Years		
California	1929	Jan. 1, 1930	Mandatory \$1 a day	.....	70	15	15	1	Assets, \$3,000	County or city, half; State, half.
Colorado	1927	Mar. 19, 1927	... do	.. do	... 65	15	15	15	... do	County.
Delaware	1931	July 1, 1931	... do	... \$25 a month	.. 65	15 <sup>b</sup>	5	..	.....	State.
Idaho	1931	Feb. 12, 1931	... do	... do	..... 65	15	10	3	Income, \$300 a year.	County.
Kentucky	1926	Mar. 25, 1926	Voluntary \$250 a year	..	70	15	10	10	Income, \$400 a year; assets, \$2,500.	Do.
Maryland	1927	Apr. 26, 1927	... do	... \$1 a day	..... 65	15	10	10	.....	County (or city of Baltimore).
Massachusetts	1930	July 1, 1931	Mandatory No limit	.....	70	( <sup>c</sup> )	20	..	.....	City or county, two-thirds; State, one-third. <sup>d</sup>
Minnesota	1929	Mar. 1, 1929	Voluntary \$1 a day	.....	70	15 <sup>b</sup>	15	15	Assets, \$3,000	Payments by county. <sup>f</sup>
Montana	1923	Mar. 5, 1923	... do	... \$25 a month	.. 70	15	15	..	Income, \$300 a year.	County.
Nevada	1925	Mar. 18, 1925	... do	... \$1 a day	..... 65	15	10	..	Assets, \$3,000	Do.
New Hampshire	1931	Sept. 1, 1931	Mandatory \$7 50 a week	..	70	15	15	15	Assets, \$2,000	Payments by county. <sup>f</sup>
New Jersey	1931	Jan. 2, 1932	... do	... \$1 a day	..... 70	( <sup>c</sup> )	15	1	Assets, \$3,000	County, one-fourth; State, three-fourths.
New York	1930	Apr. 10, 1930	... do	... No limit	... 70	( <sup>c</sup> )	10	1	Unable to support self	City or county, half; State, half.
Utah	1929	May 14, 1929	... do	... \$25 a month	.. 65	15	15	5	Annual income, \$300.	County.
West Virginia	1931	June 11, 1931	Voluntary \$1 a day	..	65	15	10	10	Any property or income.	Do.
Wisconsin	1925	May 12, 1925	... do	... do	... 70	15	15	15	Assets, \$3,000	County, two-thirds; <sup>f</sup> State, one-third.
Wyoming	1929	June 1, 1930	Mandatory \$30 a month	..	65	15	15	5	Income, \$360	County.

<sup>a</sup> Became mandatory Jan. 1, 1932. <sup>b</sup> Required period of residence in United States. <sup>c</sup> Citizenship required but no period specified. <sup>d</sup> Provision of original law, but State bears whole cost during 1931 and 1932, by ruling of State attorney general on 1931 amendment. <sup>e</sup> Becomes mandatory July 1, 1933. <sup>f</sup> Reimbursed by cities, towns, etc.

whose law has been in operation longer than any other State-wide mandatory pension system, by Mr. Abraham Epstein, the secretary of the American Association for Old Age Security, indicated that this social insurance scheme had met with unqualified success. The California act for State aid to the needy aged went into operation on Jan. 1, 1930. Its chief provisions were: 70 years of age; a resident of the State for 15 years; citizen of the United States for the same period; resident of the county for one year; an income not in excess of \$1 a day or not over \$3000 in real property or not having immediate relatives able or responsible under the law for the support of the aged person. The amount of aid was fixed with due regard to the conditions in each case but was not to exceed \$30 per month, the cost being shared equally by the State and the county of residence. During the first two years of operation of the law, 11,307 pension grants were made; the average pension for these first two years was \$22.93 per month. The total amount paid in pensions by the State and counties together was \$2,927,000. Figures collected for the group of pensioners throw important light on the incidence of indigence among aged persons. Of every 100 persons 65 years of age and over in the State, 2.75 were in receipt of pensions. The discrepancy between urban and rural places was marked. As against 1.45 pensioners for every 100 persons 65 years of age and over in Los Angeles and 3.1 persons in San Francisco, eleven rural counties had rates running from 8 to 15. The average for the four most populous counties was 2.03 as compared with 4 for the rest of the State. The comparison between the costs for the care of the aged in almshouses and by the pension system showed that in 1925 in thirty-one of the State's fifty-five city and county almshouses, the average annual cost ranged from \$600 to \$750 per inmate. Thus, provisions for the aged by pensions was at least \$25 cheaper a month than by the method of almshouse maintenance. According to Mr. Epstein State and county officials have been unanimous in their praise of the State's old age pension act. Mr. Epstein quotes Miss Miley M. Pope, acting director of the department, as declaring: "The immediate effects of the law are most plainly seen in the lives of the recipients and their families. Already, county workers tell us, a marked improvement in health due to better living conditions, and greater peace of mind has been noticed." Mr. Epstein's inquiry divulged the fact that 500 almshouse inmates, or 15 per cent of the almshouse population 70 years of age and over, left the institutions to live their own lives with the aid of pension grants. Mr. Epstein closes his survey with these words:

The benefits of an extensive old age pension system are clearly demonstrated in this study of the two years' experience in California—the longest experience of any State. The results of the actual operation have exceeded the boldest prophecies of the proponents of this legislation. Not only are administrative costs kept at a minimum but the pension payments are only half the costs of institutional maintenance. The cost to the taxpayers is insignificant. While few persons are taking undue advantage of the law, thousands of lives have been rejuvenated and cheered.

**NEW YORK STATE.** During the first year of the operation of the New York State Old Age Security Law 51,168 aged persons were granted pensions and when the year ended on Dec. 31,

1931, 47,585 persons were actually already receiving assistance. A total of 81,936 applications had been filed, of which 3093 were voluntarily withdrawn or as a result of death, the remaining being disallowed because of non-compliance with the provisions of the New York law. By Jan. 15, 1932, 38,815 applications were filed in New York City. On that date 37,354 investigations had been completed, 24,318 grants had been approved and 23,279 pensions had actually been ordered. For the whole State, in October, 1932, 53,504 aged persons were receiving pensions, the cost to the State, counties, and cities for the month being \$1,293,722. The average allowance for the State per month was \$24.18; New York City's average grant came to \$29.42 per person per month.

**NEW JERSEY.** On July 1 New Jersey put into effect its old age security law which had been passed by the 1931 legislature and provided for payment of pensions to citizens over 70 years of age who had been resident in the State for 15 years and had no children able or responsible for their support. The maximum grant was fixed at \$30 a month with the State bearing three-fourths of the costs of the pensions and the counties one-fourth. By the end of July a total of 14,193 applications had been received and by Aug. 1, 7413 investigations had been completed, and 4254 pensions granted. The average pension grant was \$15.14 at the end of the first months of the law's operation.

**MISSOURI.** In the November election the voters of Missouri, in many areas by overwhelming majorities, adopted a constitutional amendment authorizing the legislature to enact a pension law for persons 70 years of age and over. Incomplete returns indicated that the amendment had been carried by a four-to-one majority; in the city of St. Louis the vote was 260,567 for, and 48,327 against; in Kansas City the vote was 96,693 for, and 26,500 against. The election of a governor and legislature pledged to the enactment of an old age security law pointed to the early enrollment of Missouri among the American commonwealths already furnishing this form of social protection.

**CANADA.** The latest report of the operation of the old age pension in Canada showed that in the whole Dominion 63,285 aged persons were recipients of old age relief. Since the inauguration of the system in 1927—and five provinces now have pension legislation on their statute books—there has been expended for old age pensions by the Dominion government, the provinces, and Canadian municipalities more than \$26,000,000. Toward the end of 1931 federal contributions to the cost of pensions were raised from 50 per cent to 75 per cent; the 25 per cent local contribution was to be made up jointly by the provincial and municipal governments.

**NEW ZEALAND.** The thirty-third annual Report of the Pensions Department of New Zealand, covering the period Apr. 1, 1930, to Mar. 31, 1931, indicated that a total of 28,995 aged persons were receiving pensions amounting to an annual total of 1,158,788 pounds sterling. During the year in question, 4640 new pensions were granted from a total of 5918 claims lodged. Of the pensioned aged, 1040 were in homes and hospitals and 130 in mental hospitals. Since the establishment of the old age security system the New Zealand pensions department has received

a total of 113,038 applications and has approved 88,551 pension requests.

**OLDENBURG**, ől'den-bóork. A State of the German Republic. See GERMANY under *Area and Population, History*.

**OLDS**, ROBERT EDWIN. An American lawyer, died in Paris, Nov. 24, 1932. Born in Duluth, Minn., Oct. 22, 1875, he attended Harvard University, from which he was graduated with the A.B. degree in 1897 and the LL.B. degree in 1900. Admitted to the Minnesota bar in the latter year, he began his long association with Frank B. Kellogg, Secretary of State in President Coolidge's cabinet, being successively a member of the firms of Davis, Kellogg & Severance and Davis, Severance & Olds in St. Paul. On the entry of the United States into the World War he was sent to France as counselor of the American Red Cross Commission, and during 1919-21 was European commissioner in charge of American Red Cross operations abroad. In 1923 he was named member for North America of the commission appointed by the Twelfth International Conference at Geneva to report a plan of world organization for the Red Cross. He was also a member during 1923-25 of the arbitration tribunal to adjust pecuniary claims between the United States and Great Britain under the treaty of 1910, and during 1924-25 of the League of Nations commission to report a plan of international cooperation for disaster relief. In 1925 he succeeded John V. A. MacMurray as Assistant Secretary of State, and in 1927 Joseph C. Grew as Under Secretary of State. On his resignation in 1928 he became French representative of the New York law firm of Sullivan & Cromwell. In 1925 he supervised the negotiations of the United States with Mexico in regard to alien land and petroleum legislation. He was also appointed American member of the Permanent International Commission provided by the Treaty of Conciliation between the United States and Finland and of the Economic Consultative Committee of the League of Nations. After 1929 he was American citizen member of the Reparation Commission and after 1931 a member of the Permanent Court of Arbitration at The Hague.

**OLYMPIC GAMES.** The Tenth Olympic games were held in the United States in 1932. These games, staged every four years, patterned after the Greek games of that name, are competitions in almost every conceivable sport among the nations of the world. The Olympic games proper were held at Los Angeles, Calif., in August and the Third Winter Olympics were held at Lake Placid, N. Y., in February.

**WINTER OLYMPICS.** The Third Winter Olympic games were held at Lake Placid, N. Y., in February, 1932, and 364 athletes, wearing the shields of 17 different nations competed for honors. Again, although there is no official scoring, the United States carried off the laurels. The United States took six of the fourteen first places. In the speed skating, the United States made a surprising showing, winning all four races. The skaters started in American fashion, in a group and not alone against time as had been the custom at St. Moritz and Chamonix in 1928 and 1924. Jack Shea, of Lake Placid and Dartmouth College, won both the 500 and the 1500 meter races, and the 5000 and 10,000 meter events were taken by Irving Jaffee of New York City. These victories gave the United States the impetus toward amassing 103 points in the un-

official toll. Norway was second with 77 points, Canada third with 49, Sweden fourth with 28, Finland fifth with 25, Austria sixth with 15, and Germany seventh with 12.

The event that attracted most attention at the games was the bobsledding, four-man and two-man. The bobsledders were sent down a narrow groove in Mt. Hoevenberg, and there were many accidents, serious and harmless, in both the official competition and in the days of practice that preceded the events. The two-man bobsled race was won by J. Hubert Stevens and his brother, Curtis Stevens, in a thrilling contest with 11 other sleds. The United States team of Billy Fiske, Jay O'Brien, Eddie Eagan and Clifford Gray retained the four-man title won in 1928.

The figure skating brought together the experts of the world and Miss Sonja Henie of Norway won the women's title and Karl Schaefer of Austria won the men's championship. The pairs was again won by M. and Mme. Pierre Brunet of France. Sherwin C. Badger and Miss Beatrix Loughran of the United States were runners-up to the Brunets. Miss Maribel Vinson of the United States was third in the women's competition and Roger Turner of the United States was sixth in the men's.

Sven Utterstrom of Sweden won the 18-kilometer ski race. Olle Zetterstrom, in twenty-third place, was the first United States skier to finish. Johan Grottnumsbraaten of Norway captured the combined skiing event, Rolf Monsen of the United States taking ninth. Birger Ruud of Norway won the ski jump with two teammates, Hans Beck and Kaare Wahlberg, second and third. Casper Olmoen of the United States was fifth. The long distance ski run, the 50-kilometers, was won by Veli Saarinen of Finland, with Vaino Luukkanen, another Finn, second.

The hockey was closely contested with Canada nosing out the United States for the title, by the margin of a goal scored in the overtime period. Emile St. Goddard of Canada won the sled dog demonstration race, beating Leonard Seppala of the United States. Women's speed skating was demonstrated on the Olympic programme and Miss Jean Wilson of Canada won the 500-meter race; Miss Elizabeth Dubois, of the United States, the 1000 meters; and Miss Catherine Klein, of the United States, the 1500 meter event.

#### CHAMPIONS AT THE WINTER OLYMPICS:

*Speed Skating*—500 meters, Jack Shea, United States.

1500 meters, Jack Shea, United States.

5000 meters, Irving Jaffee, United States.

10,000 meters, Irving Jaffee, United States.

*Figure Skating*—Men. Karl Schaefer, Austria.

Women. Miss Sonja Henie, Norway.

Pairs. M. and Mme. Pierre Brunet, France.

*Skiing*—18-kilometer run, Sven Utterstrom, Sweden.

50-kilometer run, Veli Saarinen, Finland.

Combined run and jump, Johan Grottnumsbraaten, Norway.

Jump, Birger Ruud, Norway.

*Hockey*—Canada.

*Bobsledding*—Two-man team, United States (Hubert and Curtis Stevens).

Four-man team, United States (William L. Fiske, Edward F. Eagan, Clifford B. Gray, Jay O'Brien).

Point scoring according to the unofficial press system (10, 5, 4, 3, 2, 1):

United States, 103; Norway, 77; Canada, 49; Sweden, 28; Finland, 25; Austria, 15; Germany, 12; France, 10; Switzerland, 9; Hungary, 7; Rumania, 4; Poland, 3; Italy, 3; Belgium, 1; Czechoslovakia, 1.

**TENTH OLYMPIAD.** The games at Los Angeles were the finest ever held in the history of the world. The facilities, furnished by Los Angeles, included excellent stadia for the different sports and a bungalow village to accommodate the army of 2000 athletes from 39 nations from different parts of the world. In point of performances, the games of the year 1932 have never been excelled. Olympic world records were shattered in almost every sport, and athletics in general rose to a new peak of perfection. In point of numbers of spectators, the games were witnessed by the largest crowds in history. On several occasions the huge Olympic Stadium, used for football by the University of Southern California for the past few years, was packed to overflowing, and that meant that more than 100,000 persons were inside the gates watching the athletes in action.

Rather than attempt to pick out the outstanding events and performances, the different sports and games are reviewed in the following paragraphs. Unofficial scoring results are also appended with the complete list of championships won at the games.

**TRACK AND FIELD.** The track and field events proved the greatest attraction to the spectators and also furnished the greatest number of new Olympic and world records. Among these the victories of Thomas Hampson of England, in the 800-meter run (equivalent to the half mile in the United States) and the triumph of Bill Carr of the United States in the 400-meter run (equivalent to the quarter mile) are generally regarded as among the greatest athletic feats of all time. Hampson, a thin, bespectacled British schoolmaster, lightly considered before the games, raced all opposition into the ground in his specialty and negotiated the distance in the amazing world record time of 1:49.8, beating Alex Wilson and Phil Edwards, of Canada, Edwin Genung, Edwin Turner, and Charles Hornbostel of the United States in that order. The former Olympic mark was 1:50.6.

Carr, University of Pennsylvania runner, who had surprised as well as disappointed Californians when he twice defeated the ace, Benjamin Bangs Eastman, of Stanford, in the 400 meters before the games, duplicated his victory of the intercollegiates and the Olympic tryouts in the games themselves. In the final he sped around the cinder track in 0:46.2, a new world and Olympic record, beating Eastman and Alex Wilson to the tape in a thrilling contest. Carr's new mark bettered the recognized world mark made by Emerson Spencer in 1928 of 0:47, and the Olympic record of 0:47.6 established by Eric Liddell, the Scot, who in 1924 ran the quarter mile rather than run the half mile on a Sunday.

But Carr and Hampson were not the only stars. Eddie Tolan, negro runner from the University of Michigan, accounted for the only "double" in the men's events. The mid-Westerner, recognized before the game as among the premier sprinters of the world, captured both the 100- and 200-meter dashes. In the 100-meter event the judges at the finish were unable to decide who had won—Tolan or Ralph Metcalfe, negro from

Marquette University. The electro-photographic "camera-clock" was consulted and through this mechanical medium, a comparatively new invention which, by means of a ray of light and films, timed and pictured the races (see *PHOTOGRAPHY*), Tolan was determined winner, after the 50,000 spectators in the stands had decided that Tolan had been defeated by a scant inch. The timers had clocked Tolan in 0:10.3 and the electric "eye" timed him 0:10.28. Two days later Tolan again led the pick of the world sprinters home. This time, in the 200 meters, Metcalfe was third, with George Simpson, former Ohio State University representative, second. Tolan was timed in 0:21.2.

Since the days of the ancient Greeks the laurel wreath of achievement has gone to the winner of the classic marathon, the final event on the track and field programme. In 1932, Juan Carlos Zabala, a native of Argentina, won this 26-mile race, breaking the Olympic time for the event, and setting such a fast pace throughout that the second and third men—Sam Ferris of Great Britain and A. Tiovonen of Finland—also bettered the existing standard for the distance. Zabala was timed 2:31:36. The former Olympic record of 2:32:35.8 was set by Hannes Holm-mainen in 1924.

One of the surprise victories of the games was that of Luigi Beccali, of Italy, in the 1500-meter run (the Olympic mile). This proved to be the first flat race victory ever scored by Italy. Beccali, springing from nowhere in the last two laps, was clocked 3:51.2, leading John F. Cornes, captain of the Oxford University track team, and Phil Edwards, former New York University star middle-distance man, to the tape. It was Edwards' second third place of the games, the negro having also taken third in the 800 meters.

In the 3000-meter steeplechase an unfortunate thing occurred, when, because of the error of an official, the field was made to run an extra lap making a total of 3450 meters. It made no difference to the winner, Volmari Iso-Hollo, of Finland, who was 40 yards ahead at the finish, Joe McCluskey, popular Fordham University runner, was second at 3000 meters but, the way the race was run, finished third, 3 yards behind Tom Evenson of Great Britain.

The only event of the track and field games that bred ill-feeling was the 5000-meter run. In this Lauri Lehtinen, durable Finnish runner, bearing the hopes of his country after the Olympic Committee had upheld the International Federation's ruling not to allow Paavo Nurmi, Finnish wonder, to run because of charges of professionalism, battled to the finish line with Ralph Hill, United States. Near the finish line, as Hill strove to pass Lehtinen, the Finn swerved over as if to block Hill. When Hill switched to the other side, again Lehtinen lurched and blocked the American off. The judges placed Lehtinen first, and failed to recognize the "boos" of the crowd, which believed that Lehtinen had purposely made the moves. The judges ruled that Lehtinen's swerving was due to fatigue and not to any ulterior motive.

The unofficial point score in the track and field events, based on the 10-5-4-3-2-1 scoring system used in the United States, was:

United States—296½; Finland—72; Great Britain—64; Germany—51½; Canada—49; Japan—40; Poland—25; Ireland—23; Italy—23; Sweden—17; Argentina—13; South Africa—12; France—7;

Holland-7; New Zealand-6; Latvia-5; Philippines-4; Czechoslovakia-4; Hungary-3; Brazil-1; Australia-1.

**SWIMMING.** Japan's swimmers winning five firsts dominated the aquatic sports and forced the United States male swimmers into second place. The swimming of the American women was superb and the United States was able to pile up 167 points against Japan's 95 in the final unofficial standing.

For the first time in twenty-five years the United States entrants were beaten in the 100-meter free style and backstroke. Yazuzi Miyazaki (15 years old) won the 100-meter free style in 0:58 $\frac{1}{10}$ , and Masazi Kivokawa won the 100-meter backstroke in 1:08 $\frac{9}{10}$ . In the 200-meters breaststroke the Japanese finished one-two. Yoshiyuki Tsurata repeated his 1928 victory in 2:45 $\frac{1}{10}$ , and Reizo Koike (15 years old) was second in 2:46 $\frac{1}{10}$ . Kasuo Kitamura (14 years old) won the 1500-meter free style event with Iyozo Makino (16 years old), second, Kitamura's time was 19:12 $\frac{1}{10}$ . Clarence "Buster" Crabbe, of the United States, defeated Tatsumo Oyokata in the 400-meter free style in 4:48, a new Olympic record. By winning the 800-meter relay the Japanese proved conclusively their superiority in the sprint ranks. Miyazaki, Yusa, Toyoda, and Yokoyama thrashed the distance in 8:58 $\frac{1}{10}$  as against the former Olympic record of 9:36 $\frac{1}{10}$ , an amazing feat. They finished 20 yards ahead of the United States quartet, which also broke the former Olympic mark by doing 9:10 $\frac{1}{10}$ .

In the men's events the Japanese finished with 76 points as against 33 for the United States in second place. This was a remarkable showing. Immature boys from Japan, adopting American methods, had improved on them. The Japanese stroke did not vary much from the stroke taught here for the last six years. Some of the competitors used the six-beat crawl, others the eight-beat. Some swam with their feet entirely submerged and others raised them above the surface.

In the women's events, the United States was supreme, winning six of the seven events. Miss Helene Madison, who holds every world's record for women from the shortest distances up to a mile, won the 100-meter and the 400-meter free style, and swam anchor on the winning 400-meter relay team. Miss Eleanor Holm, won the 100-meter backstroke, and Miss Clare Dennis, sixteen-year-old Australian, broke the United States monopoly by winning the 200-meter breast-stroke in 3:06 $\frac{1}{10}$ .

All of the four diving events were won by United States representatives. Mickey Riley Galitzen won the springboard dive for men, and Miss Georgia Coleman, won the same event for women. Harold Smith captured the men's high dive and Miss Dorothy Poynton won the event for women. In the diving the United States made the highest possible number of points—38—and Japan scored only one.

Hungary won an expected victory in the water polo. The surprise of the water polo came when the little-considered United States team held Germany to a 4-4 tie. Hungary blanked the United States, 7 to 0. The Brazilian team was disqualified in the match with Germany. The referee called repeated fouls and the South Americans loudly resented the officiating. Germany was leading, 7 to 3, when the match was called.

The unofficial point score in the swimming events, based on the 10-5-4-3-2-1 scoring system:

United States-167; Japan-95; Australia-21; Great Britain-20; Canada-11; Holland-10; Germany-10; France-8; Denmark-6; Philippines-6; South Africa-5; Hungary-4; Austria-4; Sweden-3; Mexico-3; Argentina-1.

**ROWING.** For the second successive Olympic a University of California eight-oared crew, representing the United States, swept the Olympic feature event. The California crew, winner on the Oakland Estuary in March, at Poughkeepsie in June, and at Worcester in the trials in July, beat the world's best at Long Beach, where a rowing course was laid out in Alimitos Bay. In the first heat the United States eight led the Leander crew of Canada by 1 foot over the 2000-meter course. In the final, the United States crew nipped Italy as the boats slid across the finish line. Trailing Italy's surprising eight by 2 yards with twenty to go, the burly Californians, before 80,000 persons lining the banks of the course, whipped their shell over the finish line one-tenth of a second ahead of the Italians—the span of a man's hand. The United States boat was behind after Italy had taken its last stroke but the final United States sweep pulled the shell to the lead. Canada and Great Britain followed, all four finishing within one boat length. The members of the United States eight were Winslow Hall, Harold Tower, Charles Chandler, Burton Jastram, David Dunlap, Duncan Gregg, James Blair, Edwin Salisbury, and Norris Graham, coxswain. The Italian eight were Cioni, Garzelli, Del Bimbo, Vestrini, Barsotti, Bracci, Balleri, Barbieri, and Milani, coxswain.

Bobby Pearce, of Australia, retained his Olympic title in the single sculls, defeating Bill Miller of the United States in the final by three-quarters of a length in the rather slow time of 7:44 $\frac{1}{2}$ . Pearce acted as if out for a pleasure row but Miller collapsed after the race.

**BOXING.** The victory of Stephen Enekes, of Hungary, champion of Europe, in the 112-pound class was the feature of the boxing at Los Angeles. Enekes defeated Louis Salica of the United States in an early round bout and the decision was roundly booed by the spectators. In the final he outpointed Francisco Cabones of Mexico. Eddie Flynn, former representative of Loyola University, New Orleans, won the welterweight title by defeating Erich Campe of Germany in the final. Lawrence Stevens, 18-year-old youth from Johannesburg, South Africa, defeated Thure Ahlqvist of Sweden for the lightweight championship.

**WRESTLING.** Johan Richthoff of Sweden duplicated his 1928 victory in the heavyweight catch-as-catch-can class, defeating Nikolaus Hirschl of Austria in the final. In his first match, Richthoff defeated Jack Riley, former Northwestern University football player, representing the United States. Robert Pearce, Jack Van Bebber, and Peter Mehringer won titles for the United States. Pearce defeated Aatos Jaskari of Finland in the bantamweight final, and Van Bebber defeated Eino Leino of Finland for the welterweight championship.

**EQUESTRIAN.** Lieut. Takeichi Nishi of Japan, riding the magnificent bay gelding Uranus, won the Prix des Nations, the main event on the equestrian programme. The test called for a circuit of the difficult course set up in the Olympic Stadium. There were fence jumps over timber and water jumps, and so difficult was the course

**BILLY FISKE AND HIS OLYMPIC TEAM**  
Winner of the Four-man Bobsled Race

**CHUHEI NAMBU**  
Winner of the hop-step-jump

Winner of the 10,000-meter Run

**JUAN CARLOS ZABALA**  
Marathon Winner

that at least one rider and mount of each of the four nations competing was eliminated and no team title was awarded. Lieutenant Nishi was charged with eight faults. Maj. Harry D. Chamberlin of the United States, riding Show Girl, was second.

**YACHTS.** Gilbert Gray of Lake Pontchartrain, representing the United States, with his *Jupiter*, won the Star class championship in Los Angeles Harbor. Owen Churchill gave the United States a second victory by amassing the most points in the 8-meter class which his *Angelita* won. Jacques Le Brun of France won the class for Olympic monotypes with 87 points. He was under disqualification after the eleventh race of the series and Jan Maas of Holland was declared the winner but the Olympic board of review upheld his protest and restored his points. Maas finished with 85 points. *Bissbi*, sailed by Tore Holm of Sweden, won the 6-meter class.

**FIELD HOCKEY.** The Indian field hockey team again dominated play at the Olympics, repeating its 1928 triumph easily. In the final game the Indian team defeated the United States, 24 to 1. In this game Roop Singh, India left inside, scored twelve goals and Shyan Chand, centre forward, seven.

The unofficial scoring in the Olympic games, all sports, based on three points for first place, two for second, and one for third, follows. There is no official scoring in the Olympics but this method was used by General McArthur in making his report to the U. S. Olympic Committee in 1928 and was adopted by the newspapers in 1932.

Nation	Firsts	Seconds	Thirds	Points
United States .....	39	32	21	202

The champions crowned at Los Angeles were:

**Track and Field (Men)**—Shotput, Leo Sexton, U. S. A.; high jump, Duncan McNaughton, Canada; 10,000-meter run, Jan Kusocinski, Poland; 100-meter dash, Eddie Tolan, U. S. A.; 400-meter hurdles, Robert Tisdall, Ireland; 800-meter run, Thomas Hampson, Great Britain; \* hammer throw, Dr. Pat O'Callaghan, Ireland; broad jump, Edward L. Gordon, U. S. A.; 110-meter hurdles, George Saling, U. S. A.; 200-meter dash, Eddie Tolan, U. S. A.; pole vault, William Miller, U. S. A.; discus, John Anderson, U. S. A.; 50,000-meter walk, Thomas William Green, Great Britain, javelin, M. Jarvinen, Finland; hop, step, and jump, Chuhei Nambu, Japan; 1500-meter run, Luigi Beccali, Italy; 5000-meter run, Lauri Lehtinen, Finland; 400-meter run, William Carr, U. S. A.; 8000-meter steeplechase, Volmari Iso-Hollo, Finland; decathlon, James Bausch, U. S. A.; 400-meter relay, U. S. A. (Kiesel,

Toppino, Dyer, Wykoff); 1600-meter relay, U. S. A. (Fuqua, Ablowich, Warnet, Carr); marathon, Juan Carlos Zabala, Argentina.

**(Women)**—Javelin, Mildred Didrikson, U. S. A.; 100-meter dash, Stanislaw Walsiewicz (Stella Walsh), Poland; discus, Lillian Copeland, U. S. A.; 80-meter hurdles, Mildred Didrikson, U. S. A.; 400-meter relay, U. S. A. (Mary Carew, Evelyn Furtch, Annette Rogers, Wilhelmina Von Bremen); high jump, Jean Shiley, U. S. A.

**Swimming (Men)**—100-meter free style, Tasui Miyazaki, Japan; springboard dive, Mickey Riley Galitzen, U. S. A.; 800-meter relay, Japan (Miyazaki, Yusa, Toyoda, Yokoyama); 400-meter free style, Clarence Crabbe, U. S. A.; 100-meter backstroke, Masaji Kiyokawa, Japan; high dive, Harold Smith, U. S. A.; 1500-meter free style, Kasuo Kitamura, Japan; 200-meter breast-stroke, Yoshiyuki Tsuruta, Japan.

**(Women)**—100-meter free style, Helene Madison, U. S. A.; 200-meter breast-stroke, Clare Dennis, Australia; springboard dive, Georgia Coleman, U. S. A.; 100-meter backstroke, Eleanor Holm, U. S. A.; high dive, Dorothy Poynton, U. S. A.; 400-meter relay, U. S. A. (Josephine McKim, Helen Johns, Eleanor Saville, Helene Madison); 400-meter free style, Helene Madison, U. S. A.

**Water Polo**—Hungary.

**Modern Pentathlon**—Count Johan Oxenstierna, Sweden.

**Pistol Shooting**—Major Renzo Morigi, Italy; carbine shooting—Bertie Belhelm Ronnmark, Sweden.

**Equestrian**—Dressage, Commandant François Lesage, France, riding Taine; team, United States of America; individual all-around, Lt. de Mortanges, Holland; Prix de Nations, Lt. Takeichi Nishi, Japan, riding Uranus.

**Fencing**—Team Foils, France; team épées, France; team sabers, Hungary; women's foils, Ellen Preis, Austria; men's foils, Gustavo Marzi, Italy; men's épées, G. Cornaggia-Medici, Italy; men's sabers, George Piller, Hungary.

**Wrestling** (Catch-as-catch-can)—Bantamweight, Robert Pearce, U. S. A.; featherweight, H. Pihlajamaki, Finland; lightweight, Charles Pacome, France; welterweight, J. Van Bebber, U. S. A.; middleweight, I. Johansson, Sweden; light heavyweight, Peter Mehninger, U. S. A.; heavyweight, J. Richthoff, Sweden.

**(Greco-Roman)**—Bantamweight, Jakob Brendel, Germany; featherweight, Giovanni Gozzi, Italy; lightweight, Eric Malmberg, Sweden, welterweight, Ivar Johansson, Sweden; \* middleweight, Vaino Kokkinen, Finland; light heavyweight, Rudolf Svensson, Sweden; heavyweight, Carl Westergren, Sweden.

**Cycling**—\* 4000-meter pursuit race, Italy; 1000-meter scratch, J. Van Egmund, Holland; 1000-meter time trial, Edgar L. Gray, Australia; 2000-meter tandem, Louis Chailion and Maurice Perrin, France; long distance team, Italy (individual, Attilio Pavezzi Italy).

**Weight-Lifting**—Featherweight, R. Suvinny, France; lightweight, René Duverger, France; middleweight, R. Janyar, Germany, light heavyweight, L. Hostin, France; heavyweight, Jaroslav Skobla, Czechoslovakia.

**Yachting**—8-meter class, *Angelita*, Owen Churchill, U. S. A.; 6-meter class, *Bissbi*, Tore Holm, Sweden; star class, *Jupiter*, Gilbert Gray, U. S. A.; monotype class, *Jacques Le Brun*, France.

**Gymnastics**—Indian clubs, George Roth, U. S. A.; pommel horse, Frank Haubold, U. S. A.; horizontal bar, Stephen Pelle, Hungary; free exercises, Stephen Pelle, Hungary; parallel bars, Romeo Neri, Italy; rings, George Gulack, U. S. A.; mat exercises, Rowland Wolfe, U. S. A.; long horse, Savino Guglielmetti, Italy; team, Italy.

**\* Field Hockey**—India.

**Rowing**—Four-oared with coxswain, Germany; pair-oared without coxswain, Great Britain; \* single sculls, Bobby Pearce, Australia; pair-oared with coxswain, U. S. A.; double-sculls, U. S. A. (Gilmore and Myers); four-oared without coxswain, Great Britain; eight-oared, U. S. A. (University of California).

**Boating**—Flyweight, Stephen Enekes, Hungary; bantamweight, Horace Gwynne, Canada; featherweight, Carmelo Rohedo, Argentina; lightweight, Lawrence Stevens, South Africa; welterweight, Eddie Flynn, U. S. A.; middleweight, Carmen Barth, U. S. A.; light heavyweight, David Carstens, South Africa; heavyweight, Santiago Lovell, Argentina; team, U. S. A.

**RECAPITULATIONS.** Three things stand out vividly in reviewing the Olympic games at Los Angeles (1) the indisputable power of the United States entries that amassed thirty-nine first places, thirty-two seconds, and twenty-one thirds in all events; (2) the rise of Italy and Japan as athletic powers; and (3) the decline of Germany and Finland as athletic nations. In 1928

\* Retained title.

\* Retained title.

the United States gained 131 points as compared to 202 in 1932. Japan leaped from seventeenth among the nations in 1928 to third four years later. Italy advanced from seventh to second. Finland, second in 1928, was sixth in 1932; Germany, third in 1928 at Amsterdam, was seventh at Los Angeles. Finland, without the services of the incomparable Nurmi in the distance events, in which he had ruled supreme since 1920, was handicapped seriously. Much of Japan's rise can be traced to the swimming renaissance in the Orient, which is due to the betterment of American methods taught the Nipponese by American instructors within the last four years.

The Olympic Federation chose Berlin as the site of the 1936 games. Berlin was originally picked for the 1916 games but the World War intervened.

**OLYMPIC INTERNATIONAL EXHIBITION.** See ART EXHIBITIONS; SCULPTURE.

**OLYNTHUS.** See ARCHÆOLOGY.

**O'MALLEY, FRANK WARD.** An American newspaper writer, died in Tours, France, Oct. 19, 1932. He was born in Pittston, Pa., Nov. 30, 1875, and studied drawing and painting at the Art Students' League, Washington (1894-95), took special courses at the University of Notre Dame (1895-98), and again studied drawing, painting, and sculpture at the Pennsylvania Academy of Fine Arts, Philadelphia (1898-1902). He was then for several years a commercial illustrator in New York City. In 1906 he joined the staff of the *New York Sun* as a reporter and gained a wide reputation as a humorous and special writer. After 1919 he devoted himself principally to feature article writing. In conjunction with Edward Waterman Townsend he wrote the plays *The Head of the House* (1909) and *A Certain Party* (1910). His books include *The War Whirl in Washington* (1918) and *The Swiss Family O'Malley* (1928).

**OMAN.** See ARABIA.

**ONTARIO,** ōn-tā'ri-ō. Second in size (after Quebec) among the Canadian Provinces, Ontario lies between Quebec on the east and Manitoba on the west. The area is 412,582 square miles; the population (1931 census) was 3,431,683, compared with 2,933,662 in 1921. Toronto, the capital, had 631,577 inhabitants in 1931 (521,893 in 1921); Hamilton, 155,547 (114,151); Ottawa, 126,872 (107,843); London, 71,148 (60,959); and Windsor, 63,108 (38,591). Living births in 1930 numbered 71,263; deaths, 37,313; marriages, 25,605. Elementary and secondary schools in 1930 enrolled 747,000 pupils.

Besides leading all the other Canadian Provinces in manufacturing, Ontario is rich in agricultural, mineral, and forest resources. With 9888 manufacturing establishments, representing a capital investment of \$2,431,369,848, and 307,477 employees, the factories of the Province in 1930 manufactured goods valued at \$1,713,025,322 of which \$876,358,542 represented the value added in process of production. In 1930 the publicly owned Ontario Hydro-Electric Power Commission delivered 1,263,512 electric horsepower to 668 municipalities who through their various utility commissions supplied 586,267 customers.

There are about 14,000,000 acres of cultivated land, of which 9,064,649 acres yielded field crops valued at \$124,541,000 in 1931. Mineral production in 1931 was provisionally reported at \$96,126,990, the chief minerals being gold, silver, copper, nickel, platinum, crude petroleum, and

natural gas. Gold production in 1932 was reported by the provincial Department of Mines at \$47,250,000, or \$4,500,000 higher than in 1931. Seven new gold mines went into production during 1932.

From the forested area of about 240,000 square miles, lumber and other sawmill products valued at \$24,714,168, wood pulp valued at \$31,463,873, and paper and newsprint valued at \$56,251,703 were extracted in 1930. Fisheries yielded \$3,294,629 in 1930. Steam railways extend over 11,000 miles and highways over 52,000 miles. In 1932, the first full season, a total of 8,388,916 tons of freight moved through the new Welland Canal. The tidewater port and terminal of the Temiskaming & Northern Ontario Railway, on the southern shores of James Bay, was named Moosonee in place of Moose Harbor.

The budget for 1932-33 provided for increased taxation on corporations, gasoline (to 6 cents per imperial gallon), liquor, and legal documents; expenditures were estimated to total \$55,640,000. In 1930-31, revenue was \$54,390,092; expenditure, \$54,846,994. The bonded indebtedness in 1930 was \$398,821,344.

The Province is administered by a lieutenant-governor, appointed by the Dominion, a responsible cabinet, and a single legislative chamber of 112 members elected by popular vote. The 18th Legislature constituted in 1929 comprised 90 Conservatives, 15 Liberals, 5 Progressives, 1 Laborite, and 1 United Farmer. Ontario was represented in the Dominion Parliament at Ottawa by 24 members in the Senate, and 82 members in the House of Commons. Colonel (Dr.) H. A. Bruce was appointed Lieutenant-Governor, in October, 1931, to succeed W. D. Ross who resigned. Premier, President of the Council, and Minister of Education, G. S. Henry (Conservative). See CANADA.

As a result of the resurvey of the Ontario-Manitoba boundary in the vicinity of the eastern end of Island Lake, some 5320 square miles of mineral and timber country were added to the Province of Ontario in 1932.

**OPPENHEIM, JAMES.** An American author, died in New York City, Aug. 3, 1932. He was born in St. Paul, Minn., May 24, 1882, studied during 1901-03 at Columbia University, and was a social worker at the Hudson Guild Settlement in New York City. He also taught during 1905-07 at the Hebrew Technical School for Girls in New York City, after which literary work occupied him primarily. Among his novels and short stories (involving for the most part social and ethical problems) are: *Doctor Rast* (1909); *Wild Oats* (1910); *Pay Envelopes* (1911); *The Nine Tenths* (1911); *The Olympian* (1912); *Idle Wives* (1914); *The Beloved* (1915); *War and Laughter* (1916). He was also a poet of note, his poems appearing in such collections as *Monday Morning and Other Poems* (1909); *The Pioneers* (a poetic play, 1910); *Songs for the New Age* (1914); *The Book of Self* (1917); *The Solitary* (1919); *The Mystic Warrior* (an autobiographical poem, 1921); *The Golden Bird* (1923); and *The Sea* (1924).

**ORANGE FREE STATE.** A province of the Union of South Africa. Capital, Bloemfontein. See SOUTH AFRICA, UNION OF.

**ORANGES.** See HORTICULTURE.

**ORCHESTRAS.** See MUSIC.

**ORE DEPOSITS.** See GEOLOGY.

**ORE DRESSING.** See METALLURGY.

**OREGON. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 953,786, as against 783,389 in 1920. Portland had 301,815 inhabitants. Salem, the capital, 26,266.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay ..	1932	1,281,000	1,994,000*	\$11,603,000
	1931	1,157,000	1,686,000*	14,142,000
Wheat ..	1932	991,000	20,060,000	8,024,000
	1931	945,000	17,662,000	6,712,000
Oats ...	1932	223,000	6,802,000	1,905,000
	1931	223,000	7,186,000	1,927,000
Potatoes ..	1932	42,000	5,040,000	2,066,000
	1931	42,000	5,460,000	2,348,000
Apples ....	1932	.....	4,950,000	2,277,000
	1931	.....	4,150,000	2,200,000
Corn ..	1932	65,000	2,015,000	1,028,000
	1931	62,000	1,984,000	1,290,000
Hops ...	1932	15,500	13,020,000*	2,344,000
	1931	15,500	16,988,000*	2,378,000
Barley ..	1932	96,000	2,688,000	887,000
	1931	74,000	2,220,000	888,000

\* Tons.    † Pounds

**MINERAL PRODUCTION.** The total value of the State's mineral product was \$6,169,898 for 1930; for 1929, \$6,876,703. In great part it consisted of production of divers minerals for which totals by value were not separately tabulated by the Federal Bureau of Mines. These aggregated \$2,453,926 for 1930. Of the remaining product nearly one-half was supplied by stone, to the quantity of 1,685,740 short tons quarried in 1930 and 1,951,980 in 1929; by value, \$1,708,956 for 1930 and \$1,905,747 for 1929. Sand and gravel production, somewhat less in value, totaled \$1,644,243 for 1930. Production of metals was distinctly secondary. Mercury was the leader, its production attaining 2919 76-pound flasks for 1930, as against 3657 for 1929; by value, \$355,711 for 1930, and \$446,684 for 1929. Gold was produced to the quantity of 15,301 fine ounces in 1931, and 14,300 in 1930; by value, \$316,300 for 1931, and \$295,600 for 1930.

**FINANCE.** State expenditures in the year ended Sept. 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$14,537,129 (of which \$446,124 was for local education); for interest on debt, \$2,762,414; for permanent improvements, \$12,279,541; total, \$29,579,912 (of which \$15,250,217 was for highways, \$4,182,620 being for maintenance and \$11,067,597 for construction). Revenues were \$29,767,296. Of these, property and special taxes furnished 19.6 per cent; departmental earnings and compensation to the State for officers' services, 7.2; sale of licenses, 49.1 (in which was included a gasoline sale tax that produced \$6,356,292). Funded debt outstanding on Sept. 30, 1931, totaled \$58,749,460, of which \$29,491,750 was for highways. Net of sinking-fund assets, the debt was \$31,138,136. On an assessed valuation of \$1,125,180,592 the State levied in the year ad-valorem taxes of \$4,592,628.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 3472.07. In the year previous, 43.08 miles of new line had been put in operation; 26.54 miles abandoned.

**EDUCATION.** The control of all the State's

higher institutions of learning was vested in a single chancellor. An unsuccessful effort was made to increase the revenue for public schools by the proposed imposition of a special tax levy. This failing, the public schools were obliged to cope with severe reduction of revenue, due to deficient collections. The selection of textbooks, under the system of State adoption, and the shaping of curricula were placed in charge of a single commission chosen by the State board of education.

**CHARITIES AND CORRECTIONS** Full charge of the State's institutions for the care or custody of persons, under the system in effect in 1932, rested in the State Board of Control. This board was composed of the Governor, Secretary of State and State Treasurer, *ex officio*, and a secretary. It held visitorial power with regard to a number of State-aided institutions run by societies. It administered a law of 1931 for the collection of \$20 a month from relatives or patients' estates for the care of the insane, feeble-minded, or tubercular in State institutions.

The State institutions, with their average populations for the period October, 1930-1932, inclusive, were: for mental cases, Oregon State Hospital, at Salem (2084), and Eastern Oregon State Hospital, at Pendleton (1089); tubercular cases, Oregon State Tuberculosis Hospital, Salem (209); and Eastern Oregon Tuberculosis Hospital, The Dalles (109); State Penitentiary, Salem (879); for juvenile delinquents, Oregon State Training School, Woodburn (105 boys), and Oregon State Industrial School for Girls, Salem (74); State Institution for the Feeble-Minded, Salem (845); State schools for the deaf (125) and the blind (43), both at Salem; Oregon Employment Institution for the Blind, Portland (60); Oregon State Soldiers' Home, Roseburg (88). The Soldiers' Home was to be transferred to the Federal Government after the completion of new buildings.

**POLITICAL AND OTHER EVENTS.** Efforts to reform public finances in the State were continued. Governor Meier obtained support in the powerful Oregon Taxpayers' Equalization and Conservation League for a series of proposals advocated by him. These included extension over other State subdivisions of the plan employed in Multnomah County, where a county commission had the veto power over items in the budgets of taxing and borrowing units within the county; higher income-tax rates and lower exemptions; consolidation of school districts and other local governmental units; and a broad system for fixing salaries of public employees at "reasonable" levels. At Portland the Hibernia Bank, which had closed in December, 1931, was reopened with the support of depositors, who permitted 30 per cent of their deposits to be shifted to a specially formed security-holding company, that took over the unrealizable investments of the bank. American settlers in the neighborhood of the town of Banks drove out a group of 84 Filipinos on April 24, on the latter's arrival to start an agricultural settlement. In the State primary elections of May 20 Senator Steiwer gained a Republican renomination, while the Democrats chose as their nominee for Senate candidate Walter B. Gleason, an advocate of the repeal of prohibition. Representative W. C. Hawley was defeated for a Republican renomination by another repealist, James W. Mott.

**ELECTIONS.** The popular vote of November 8

was cast for the Democratic National ticket by more than 3 to 2. Reported totals, for President, were: Roosevelt (Dem.), 213,871; Hoover (Rep.), 136,019. Frederick Steiwer (Rep.) was reelected to the United States Senate, defeating W. B. Gleason (Dem.); 1 Republican and 2 Democrats were sent to the House of Representatives. An initiated measure to repeal the State's statute for the enforcement of prohibition was passed by popular vote.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Julius L. Meier; Secretary of State and State Auditor, Hal E. Hoss; Treasurer, Rufus C. Holman; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

**Supreme Court:** Chief Justice, John L. Rand; Associate Justices, Henry J. Bean, Harry H. Belt, J. O. Bailey, George Rossman, Percy R. Kelly, J. U. Campbell.

**OREGON, UNIVERSITY OF.** A coeducational institution under State control and support in Eugene, founded in 1876. It consists of a college of arts and letters, a college of social science, lower division groups (liberal arts), and schools of business administration, education, fine arts, journalism, law, physical education, and science. The total enrollment for the autumn term of 1932 was 2293, of whom 1352 were men and 941 women. The attendance at the 1932 summer sessions was 1549, of whom 447 were men and 1102 women. The faculty for the autumn term numbered 238. The total income for the year ending June 30, 1932, was \$1,305,409. The library contained 238,450 volumes.

Under the new Oregon State system of higher education, the University of Oregon is one of six units in the State's higher educational plan, organized under a single State Board of Higher Education with offices at Salem, Ore., and offering on six campuses a comprehensive programme of technical, liberal, and professional education. (See **OREGON STATE AGRICULTURAL COLLEGE**.) This system was contemplated by act of the 1929 legislature, and after a survey of the State by the educational commission of the United States Office of Education the new State Board was authorized beginning July 1, 1931, to conduct and reorganize the several institutions according to a programme of "higher educational development adapted to the needs of the State." A referendum measure proposing to move the university from Eugene to Corvallis and there combine it with the State Agricultural College was defeated Nov. 8, 1932, by a vote of more than 6 to 1. President, Arnold Bennett Hall, J.D., LL.D.

**OREGON STATE AGRICULTURAL COLLEGE.** The Federal land-grant college of Oregon, established under Federal and State support in 1868 in Corvallis. The enrollment for the autumn term of 1932 was 2263, of whom 1517 were men and 746 women. The 1932 summer session enrollment was 1221. The total resident enrollment for the full year 1931-32 was 5273. There were 298 members on the teaching faculty. By action of the State Board of Higher Education, all curricula of the State institutions were reorganized and correlated during the spring and summer of 1932. At the State College were placed lower division liberal arts and sciences, upper division and graduate biological and physical science (school of science), and professional and technical schools of agriculture, educa-

tion, engineering, forestry, home economics, and pharmacy. There were 111,196 catalogued volumes in the library. President, William Jasper Kerr, Sc.D., LL.D.

**ORT, WOMEN'S ASSOCIATION AMERICAN.** A society organized in 1927 for the support of trade and agricultural activities among the Jews in Central and Eastern Europe. It is derived from the organization ORT (the initials of three Russian words meaning Organization for the Promotion of Trade and Agriculture), founded in 1880 by prominent Russian Jews, such as Baron H. Ginzburg, S. Poliakov, and Prof. N. Bakst. Among its activities in 1932 were the support of trade and vocational schools for youths and adults of both sexes; the purchase of agricultural implements and livestock for Ort colonies; and the supplying of tools and machinery to artisans. The Ort Tool Supply Corp., for instance, enabled relatives in the United States to send machinery free of duty to the deceased Jews in the U.S.S.R. The society established also a guardian bureau to finance orphans through a three-year course in vocational schools. World headquarters of the Ort are in Berlin, Germany, with branches in England, France, South Africa, the United States, and Canada. The offices of the Women's Association are at 220 Fifth Avenue, New York City.

**ORTON, EDWARD, JR.** An American chemist, died in Columbus, Ohio, Feb. 10, 1932. He was born in Chester, N. Y., Oct. 8, 1863. Upon his graduation from Ohio State University in 1884, he served successively as chemist and mining engineer, superintendent of blast furnaces, and manager of the plants of several clay industries. In 1894 he was instrumental in establishing at Ohio State University the first school in the United States for instruction in ceramic engineering. He was director of this school until 1916 and served also as dean of the engineering college during 1902-08, and again during 1910-16. In 1916 he was elected one of the university's two first research professors, having earlier distinguished himself as the first American chemist to manufacture, under laboratory control, a high silicon alloy of iron, known as ferro-silicon. On his retirement in 1917 he became a commanding major in the Officers' Reserve Corps of the U. S. Army, and on the entry of the United States into the World War was assigned to the Motor Transport Corps, with which he served in France. He received the Distinguished Service Medal and in 1923 was made a brigadier general in the Officers' Reserve Corps.

In 1896 Orton established the Standard Pyrometric Cone Co., whose product was used for regulating the firing process of ceramic products and other wares burned in kilns. Two years later he founded the American Ceramic Society, which he served as secretary and editor until 1917, and as president during 1930-31. He was also State geologist of Ohio from 1899 to 1906, during which time he placed the work of the Survey on a firm basis and published a series of monographs, including *Clays of Ohio and the Industries Established upon Them*, and *The Clay-Working Industries of Ohio*. He was the author of *The Progress of the Ceramic Industry* (1903), and *Qualities of Paving Bricks* (1911).

**OSBORN, H. F.** See ZOOLOGY.

**O'SHEA, MICHAEL VINCENT.** An American educator, died in Madison, Wis., Jan. 14, 1932. He was born in Le Roy, N. Y., Sept. 17, 1866. On graduating from Cornell University in 1892 he taught at the State Normal School in Mankato, Minn., until 1895 and at the Buffalo Teachers' College until 1897. He was then called to the University of Wisconsin where he was professor of education until his death. He became prominent as a lecturer on pedagogy and also in university extension work and conducted several important surveys of educational systems, chief of which were those in Mississippi (1925-26) and Virginia (1927). He was chairman of the American committee at the International Congress of Education held in Liège, Belgium, in 1905, and at the International Congress of Home Education held in Brussels in 1910. In 1911-12 he was president of the Society of College Teachers of Education. His publications include: *Suggestions for the Observation and Study of Children* (1894); *Aspects of Mental Economy* (1900); *Education as Adjustment* (1903); *Dynamic Factors in Education* (1906); *Linguistic Development and Education* (1907); *Social Development and Education* (1909); *Every-Day Problems in Teaching* (1912); *Mental Development and Education* (1920); *First Steps in Child Training* (1920); *The Trend of the Teens* (1920); *Faults of Childhood and Youth* (1920); *Every-Day Problems in Child Training* (1920); *Tobacco and Mental Efficiency* (1923); *The Child: His Nature and His Needs* (1925); *Newer Ways with Children* (1929). He was editor of *The Junior Home Magazine* and *The Nation's Schools* and editor-in-chief of *The World Book Encyclopædia*, *Experimental Education Series*, *The Childhood and Youth Series*, and *The Parents' Library*.

**OSTWALD, WILHELM.** A German chemist, died in Grossbothen, Germany, Apr. 4, 1932. He was born in Riga, Latvia, Sept. 2, 1853, and attended the University of Dorpat. In 1882 he became professor of chemistry at the Riga Polytechnicum, and five years later was appointed professor of physical chemistry at the University of Leipzig. In 1905 he was nominated to the first German exchange professorship at Harvard. He resigned his university appointment the following year, retiring to his country home, "Villa Energy," near Leipzig, so as to devote himself more fully to research. Following the example of Chevreul he became particularly interested in the theory of color, and founded in Dresden in 1920 a laboratory for color-study. He was also president (after 1911) of the German Monist League, being an exponent of that form of monism, called energism, which identifies ultimate reality with physical energy. His conclusion was that all matter was but one phase or another of energy and that, consequently, the living organism was but a system of energies and a phase of a far greater system of energies constituting the universe.

In 1909 Ostwald received the Nobel Prize for chemistry in recognition of his contribution toward establishing a cohesive and unitary body of knowledge in the field of physical chemistry. His researches, while director of the Physicochemical Institute at the University of Leipzig, had dealt particularly with electrochemistry, including the electric conductivity of organic acids, the parallel existing between the electrolytic dis-

sociation of such acids and their power of chemical reaction, and the color of ions. One of his most important discoveries was that of oxidizing ammonia by passing it, mixed with air, over a heated platinum gauze, so as to form oxides of nitrogen from which nitric acid and nitrates might be made. It was by means of this process, and by later developments in connection with it, that Germany was enabled to continue the manufacture of explosives after the enforcement of the Allied blockade during the World War.

Among Ostwald's publications in the field of physical chemistry are: *Lehrbuch der allgemeinen Chemie* (2 vols., 1885-88); *Grundriss der allgemeinen Chemie* (1890); *Hand und Hilfsbuch zur Ausführung physikochemischer Messungen* (1893); *Die wissenschaftlichen Grundlagen der analytischen Chemie* (1894); *Elektrochemie* (1895); *Grundlinien der anorganischen Chemie* (1900); and *Die Schule der Chemie* (1904). His researches in the field of color were incorporated in such books as *Mathematische Farbenlehre* (1918); *Harmonie der Farben* (1918); *Physikalische Farbenlehre* (1919); and *Farbkunde* (1923). His important books on philosophical subjects include: *Vorlesungen über Naturphilosophie* (1903); *Energetische Grundlagen der Kulturwissenschaft* (1909); *Der energetische Imperativ* (1912); *Die Philosophie der Werte* (1912); and *Monistische Sonntagspredigten* (4 vols., 1911-14). In 1887 he established with Jacobus van't Hoff, the Dutch chemist, *Zeitschrift für physikalische Chemie*, and two years later undertook a collection of reprints of important scientific essays, called *Klassiker der exakten Wissenschaften*, of which more than 200 volumes were published. He edited also during 1901-14 *Annalen der Naturphilosophie*, during 1912-15 *Der Monist*, and after 1921 *Farbe*. His last published work was an autobiography, *Lebenslinien* (1926-27).

**OVERSEA TELEPHONE SERVICE.** See TELEPHONY.

**PACIFIC RELATIONS, INSTITUTE OF.** An organization formed in Honolulu in 1925 to serve as an unofficial body in studying the conditions of the Pacific peoples. It holds biennial conferences, promotes and coordinates research by other agencies, conducts research through its own secretariat, and endeavors to stimulate the mood of inquiry regarding Pacific problems on the part of the public generally. It is governed by a Pacific council, consisting of one representative from a recognized affiliated body of similar purposes in each country, including Australia, Canada, China, Great Britain, Japan, the Philippines, New Zealand, the United States, and the U.S.S.R.

During 1932 the institute's research and educational activities were continued through the national councils along the general lines agreed upon at the Shanghai conference. The next biennial conference was announced to be held at Banff in August and September, 1933. The development of the outline for the discussion agenda, following the original suggestions made at Shanghai, showed a definite preference for emphasis on economic aspects of conflict and control in the Pacific area, but provision was made that the political and educational factors be considered

also. Pertinent data papers are in preparation by the International Research Committee and by the various national councils.

The American council of the institute, in addition to carrying on its part of the conference preparation, published a series of fortnightly bulletins, *I. P. R. Memoranda*, and a pamphlet *Conflict in the Far East, 1931-32*; prepared several study outlines on the Far Eastern conflict and was instrumental in interpreting the Lytton Report to the American public; and widened its library and research facilities and services. The institute published *Problems of the Pacific, 1931*, the report of the Shanghai Conference, edited by Bruno Lasker; and continued to publish the monthly magazine *Pacific Affairs*, under the editorship of Miss Elizabeth Green.

Newton D. Baker was elected chairman of the American council upon the resignation of Jerome D. Greene, who accepted the appointment to the Wilson professorship of international affairs at the University of Wales. Edward C. Carter continued as secretary; Everett Case was elected treasurer; and Dr. James T. Shotwell continued as chairman of the American research committee. Headquarters of the institute are in Honolulu, and of the American council at 129 East 52 Street, New York City. An American branch office is located in the Claus Spreckels Building, San Francisco.

**PAINTING.** The dominant influence shown in American painting during the year 1932 was, strangely enough, Mexican in its derivation. This resulted, without question, from the interest created in Mexican art by the late Dwight Morrow while Ambassador to Mexico. It was he who, realizing the ability of Diego Rivera, gave him a commission to execute a mural painting for a public building in the town adjacent to the City of Mexico where he had a summer home. The success of this led to similar commissions for public buildings in the United States. Rivera has produced mural paintings in public buildings on the west coast, in the Middle West and the East. An exhibition of his paintings was held at the Museum of Modern Art in New York in 1932. A commission has been given to him for mural paintings for the Great Hall, Rockefeller Center. Frank Brangwyn, of England, and José Maria Sert, of Spain, also received commissions for murals for this same building in New York.

Dartmouth College has commissioned José Clemente Orozco, Mexican by birth, to execute the largest fresco yet produced in the United States, illustrating "The Epic of Civilization on the American Continent," which will consist of two main and seven smaller panels, and will cover three thousand square feet of the walls of the Baker Memorial Library.

In Los Angeles during the past year a well known Mexican painter, David Alfaro Siqueiros, with the cooperation of a number of artists of Southern California, has produced two large frescoes on exterior walls of buildings, one at the Chournard School, the other on a wall in the Mexican village, Alvaro Street. Alfaro Ramos Martinez, founder of the open air art school in

Mexico, has also been working and teaching in Los Angeles. A Mexican painter wrote from Paris recently: "Mexican art has captured America," and it is true that many of the American painters of the younger school are following in the lead of these Mexican masters, imitating their somewhat stiff, primitive style—a style derived from Indian art produced under Spanish tradition.

However, American mural painters also have received, during the past year, numerous commissions. Ezra Winter was commissioned by the Rockefeller Center, or Radio City, to produce a painting 60 × 40 feet in dimensions, based subjectively on the legend which is folklore with the Oregon Indians—the theme of the age-old quest for the Fountain of Youth. In this connection it is interesting to note that a Radio City Art Commission has been appointed, consisting of Edward W. Forbes, Director of the Fogg Art Museum, Cambridge; Paul J. Sachs, Associate Director of the same museum; Herbert E. Winlock, Director of the Metropolitan Museum of Art; Everett V. Meeks, Dean of the Department of Fine Arts at Yale University; and Fiske Kimball, Director of the Pennsylvania Museum of Art, Philadelphia. The function of this commission is to pass upon works of art in connection with these great buildings in New York.

For the Metropolitan Life Insurance Company's new home office building, Fourth Avenue and 24th Street, New York, D. Putnam Brinley executed a series of mural decorations, illustrating Mark Twain's *Adventures of Huckleberry Finn* and "Scenes from Wild Life," and Nicholas Pavloff produced a series of murals, illustrating Washington Irving's *Knickerbocker History of New York*. Mr. Brinley also in 1932 completed a mural painting, 27 × 12 feet, for the chancel of St. George's Church, Bridgeport, Conn.

A series of murals illustrating "The Arts of Life in America" by Thomas Benton were installed in the Reading Room of the Whitney Museum of American Art on December 6 and much discussed.

Two murals representing the Old and the New South were executed by John Norton of Chicago, for the vestibule of the new Court House at Birmingham, Alabama. Mr. Norton's murals for the Tavern Club, Birmingham, Ala., won the Architectural League's gold medal in 1931.

Francis Scott Bradford, Fellow of the American Academy in Rome, completed in March, 1932, twenty-six mural paintings for the Milwaukee Court House illustrating events in the life and development of the city. The main panel, 10 × 15 feet, portrays the landing of the first white settler Juneau in Milwaukee.

Edward Buk Elreich, mural painter of New York, won the competition for a vast mural decoration, 430 feet in length and 30 feet high, for the westerly wall, back of the colonnade, in the Industrial Arts Building, designed by Ely Jacques Kahn, for the "Century of Progress Exposition" to be held in Chicago in 1933.

The second prize, oil painting, Olympic International Exhibition, Los Angeles, was awarded to Ruth Miller for "Struggle"—a wrestling match. In the class of water colors and drawings, a first prize was awarded to Lee Blair for "Rodeo," a water color, and second prize to Percy Crosby for a drawing of a skater, "Jack-knife."

Will S. Taylor, Curator of Art of Brown Uni-

versity, completed the first of a series of murals on the Life of the American Man of the Iron Age for the Morgan Memorial Hall of the American Museum of Natural History, New York.

An interesting series of murals by J. R. L. Styres were painted and placed in rooms occupied by children and others in the Metropolitan Hospital on Welfare Island, New York. The subjects for these were scenes from *Alice in Wonderland*, *Little Red Riding Hood*, and other familiar tales.

Jules Guerin in February completed mural paintings for the new State Capitol at Baton Rouge, Louisiana; and by midsummer Dean Cornwell completed his notable series illustrating the History of California for the Public Library in Los Angeles.

A mural painting for the reredos in the Chapel of Our Saviour, Church of the Seamen's Institute, 22 South Street, New York, was executed by Gordon Grant. This is a marine, rather than a subject picture. See ART EXHIBITIONS; ART MUSEUMS.

FELLOWSHIPS AND SCHOLARSHIPS. The John Simon Guggenheim Memorial Foundation awarded during 1932 two Latin American Exchange Fellowships in Art to Mr. Howard Cook, Granville, Mass., for creative work in etchings, wood engraving, and lithography in Mexico, and to Mr. Andrew M. Dasburg, Santa Fe, New Mexico, for creative work in painting and study of contemporary Mexican fresco painting; and the following Guggenheim Memorial Fellowships in Art: to Mr. Peter Blume, Gaylordsville, Conn., for creative work in painting abroad; to Mr. Mitchell Fields, New York City, for creative work in sculpture abroad; to Mr. Ernest Fiene, New York City, for study of the works of the old masters in several museums of Europe and creative work in painting; to Mr. John B. Flanagan, New York City, for creative work in sculpture abroad; to Mr. Benjamin Greenstein, New York City, for sculpture, drawing, and painting abroad; to Mr. Peppino Mangravite, New York City, for creative work in painting abroad; to Mr. Antonio Salemme, New York City, for creative work in sculpture abroad.

The Oberlaender Trust, Carl Schurz Memorial Foundation Fellowship for research work in Germany was awarded to Miss Helen Appleton Read, Art Critic of the Brooklyn Eagle, in order that she might study Germany's post-war cultural expression and write a book on *The Aesthetics of the New Era*.

The Pulitzer Art Prize consisting of an \$1800 scholarship to an American art student of greatest promise was awarded to Mr. Francesco Roggeri of New York.

The Paris Prize in Architecture of the Society of Beaux Arts Architects was awarded to Mr. Richard H. Granelli of New York, and the Paris Prize in Sculpture to Mr. George J. Sklar of Philadelphia.

NECROLOGY. Among the painters who died during 1932 were Harold Haven Brown, Emil Carlson, Glenn O. Coleman, Elliott Daingerfield, Lockwood de Forest, Ignaz Gaugengigle, Francis C. Jones, Will H. Low, Gari Melchers, Walter L. Palmer, Alethea H. Platt, Carleton Wiggins, and Dwight Williams.

BIBLIOGRAPHY. Among the publications of the year may be noted the following: *Samuel F. B. Morse, American Painter*, by Harry B. Wehle;

*Life Portraits of George Washington and Their Replicas*, by John H. Morgan and Mantle Fielding; *Gilbert Stuart*, by William T. Whitley; *Rembrandt*, by Arthur M. Hind; *Italian Pictures of the Renaissance*, by Bernard Berenson; *English Painting from Seventh Century to Present Day*, by Charles Johnson; *French Painting*, by R. H. Wilenski; *Early American Painting*, by Frederick F. Sherman; *The Teaching of Art*, by Margaret E. Mathias; *Art Appreciation*, by Margaret Dobson; *An Autobiography*, by Frank Lloyd Wright; *Men and Memories*, by William Rothenstein.

**PALESTINE.** A territory comprising that part of historic Palestine which lies to the west of Trans-Jordan; administered since Sept. 29, 1923, by Great Britain under a mandate of the League of Nations. Capital, Jerusalem.

AREA AND POPULATION. With an area of about 10,000 square miles, Palestine had a population of 1,035,154 at the census of Nov. 18, 1931. Of the total, 759,952 (73 per cent) were Moslems, 175,006 (17 per cent) were Jews, 90,607 (8 per cent) were Christians, and 9589 were of other faiths. The census population in 1922 was 757,182. In 1930, births numbered 44,587; deaths, 19,513. Immigrants in 1931 numbered 5533, of whom 4075 were Jews, and 197 British police; emigrants numbered 1346 (3003 in 1930). Populations of the chief towns at the 1931 census were: Jerusalem, 90,407; Jaffa, 51,366; Tel-Aviv, 46,116; Haifa, 50,533. English, Arabic, and Hebrew are the official languages.

EDUCATION. In 1931, there were 308 government schools, with 24,288 pupils, mostly Moslems; 377 Jewish schools, with 33,527 pupils; 156 Christian schools, with 16,099 pupils; and 137 private Moslem schools, with 7319 pupils. The government training colleges for teachers had 135 students, and the Hebrew University on Mount Scopus 204 students.

PRODUCTION. Agriculture is the main support of the population, but small industries are developing. The first commercial shipment of potash from the Dead Sea was made in 1931. Wine, soap, olive oil, tobacco products, cement, and salt are the chief industrial products. Livestock in 1930 included 145,397 cattle, 252,773 sheep, 25,321 camels, 13,825 horses, 76,858 donkeys, and 5247 buffaloes. The 1931 almond crop was 300 metric tons (692 in 1930); grapes, 3250 tons (6000); tobacco, 441 (958); oranges (shipments), 2,616,451 cases. The 1930 cereal harvest was: Wheat, 87,300 metric tons; barley, 51,972; durra, 31,000. Lentils and olives are other leading crops.

Besides potash, the principal minerals are salt, bitumen, gypsum, limestone, and sandstone. According to the 1928 census of industry, there were 3505 industrial plants employing 11,627 wage earners and 815 prime movers with a potential horse power of 15,873. The value of the net industrial output in 1928 amounted to £P3,886,000 (about \$18,900,000).

In 1931 the effects of the world depression were less severe in Palestine than in many neighboring countries. Industrial output was sustained, except for a decline in wine production, and an active domestic market offset the decreased foreign demand for Palestine exports. The output of tobacco products, matches, and soap increased, while the production of cement and flour continued large and that of salt and distillery products declined. There was a decline in the number of new enterprises, also. Following the abandon-

ment of the gold standard by Great Britain in September, 1931, funds were diverted into building construction, due to the uncertainty resulting from the depreciation of sterling. Total construction exceeded that for 1930. Investments in buildings at Tel-Aviv were estimated to have risen to £P300,000 from £P200,000 in 1930. The port improvements under way at Haifa added materially to the construction activity of the year.

**COMMERCE.** Exports of domestic products in 1931 were valued at 1,572,061 Palestine pounds (\$7,129,300), compared with £P1,896,095 (\$9,227,350) in 1930; imports were valued at £P5,940,000 (\$26,937,900), as against £P6,985,258 (\$33,993,760) in 1930. The leading exports were: Oranges, £P886,356; laundry soap, £P117,393; watermelons, £P47,720; durra, £P37,696; wine, £P30,592. Imports, in order of value, were cotton piece goods, cattle for slaughtering, silk tissues, wheat, wood and timber, wheat flour, and benzine. Imports came chiefly from Egypt, which furnished 17.2 per cent of the total (22.8 per cent in 1930); Syria, 17.1 per cent (14.8); and the United Kingdom, 16.8 (16.7). The United Kingdom in 1931 took 45.1 per cent of all exports (37.1 in 1930); Syria, 14.2 (11.1); and Germany, 12.8 (10.7). Imports from the United States were valued at £P257,370 (\$1,167,170), and exports to the United States at £P19,780 (\$89,700).

**FINANCE.** Revenue of the government in 1931 totaled £P2,110,985 (£P2,348,259 in 1930), to which was added a grant-in-aid from the British Government of £P222,909 (£P41,286 in 1930). Expenditure, including £P104,947 for public works and the railway deficit of £P67,916, totaled £P2,374,866, as compared with £P2,536,505 in 1930. The deficit for 1931 was £P40,972; for 1930, £P146,960. The public debt in 1930 amounted to £P4,475,000. The Palestine pound, which has the same par value as the pound sterling, fluctuated in sympathy with the latter after Great Britain abandoned the gold standard in September, 1931. It averaged \$4.535 in 1931, as compared with par of \$4.8665 in 1930.

**COMMUNICATIONS.** Palestine in 1931 had 774 miles of railway line, which provide direct communication with Egypt; 1275 miles of highway, of which 540 miles were suitable for motor traffic throughout the year; and air lines providing communication with Egypt, Iraq, Cyprus, Greece, and various other countries on the Imperial Airways system. A new desert air service between Palestine and Iraq was opened by Imperial Airways Sept. 5, 1932. In 1931, 2949 vessels of 1,859,780 tons entered the ports in the foreign trade, compared with 2608 vessels of 1,935,990 tons in 1930. Improvement of the harbor facilities at Haifa at an estimated cost of £P1,250,000 was under way in 1932.

**GOVERNMENT.** A Constitution promulgated Sept. 1, 1922, provided for the appointment of the High Commissioner and Commander-in-Chief, and of an executive council. It provided also for a legislative council, consisting of the High Commissioner, 10 official, and 12 unofficial members, the latter to be elected and to include not less than 2 Christians and 2 Jews. Due to disagreement among the religious communities, the legislative council had not been instituted by 1932. In the meantime its functions were performed by an advisory council appointed by the High Commissioner. The Jewish community enjoyed complete autonomy in their religious, cultural, and

communal affairs, which were controlled by a Chief Rabbinate, an elected assembly, and a general council elected by the assembly, which represented the community in its dealings with the government. A Moslem Supreme Council controlled Moslem religious affairs. High Commissioner and Commander-in-Chief in 1932, Lieut.-Gen. Sir Arthur Grenfell Wauchope (appointed Nov. 1, 1931).

**HISTORY.** While there were no violent outbreaks between Arabs and Jews during 1932, the deep currents of hostility between the two races showed no evidence of abating. Early in the year Arab leaders were reported to have accepted provisionally a proposal for the division of the country into two autonomous regions for Jews and Arabs, respectively, with a single Constitution and assembly. The plan was opposed by Revisionist Jews, who proposed that Great Britain relinquish her mandate in Palestine in favor of direct administration by the League of Nations. Meanwhile landless Arab peasants and nomads undertook what appeared to be a concerted movement to seize lands sold by Arab landlords to Jews. Some threw themselves in front of the plows of Jewish farmers, started to plow Jewish-owned lands, or tore down fences and uprooted young fruit trees of Jewish farmers. Racial hostility reached such a point that the government prohibited Moslem religious processions during feasts of the third week in April, other than those regularly held. The Jewish fair at Tel-Aviv was boycotted by the Arabs, and late in the year an Arab company was formed to buy land for Arab settlement as a counter-measure to land purchases by the Jewish National Fund.

While Arabs and Jews continued their hostility, bitter factional disputes developed within all three religious communities in Palestine. Within the Jewish community, antagonism continued between the Revisionists and Zionists. Revisionist students at the Hebrew University rioted when Norman Bentwich, formerly Attorney General in the Palestine Government, delivered his first lecture as incumbent in the Weizmann chair of international law and peace. On January 14, 600 teachers in the Jewish schools went on strike to secure payment of their salaries, which were six months in arrears. The strike was ended by a compromise on February 10. The adherents and opponents of the Moslem Grand Mufti, Haj Amin el-Husseini, continued their dissensions. His opponents, headed by the Mayor of Jerusalem, established a committee for the holding of a Pan-Arab congress (see IRAQ and SYRIA under *History*). The Greek Orthodox Christian community was divided by a dispute between the Arab-born majority and the Greek-born minority among the clergy over the election of a Patriarch of Jerusalem.

The British Colonial Secretary, Sir Philip Cunliffe-Lister, in a telegram to Dr. Nahum Sokolow, president of the World Zionist organization, reiterated in January that the British Government would "fulfill not only in the letter but in the spirit those solemn obligations (under the Balfour Declaration), which it is their privilege to discharge." Lewis French, director of a government agricultural development plan designed to benefit the Arab peasantry, resigned Nov. 17, 1932. The Arab press had opposed the project and Mr. French was said to have been in disagreement with the High Commissioner. The favorable economic condition of the country led

the government on October 16 to ease restrictions upon Jewish immigration; it was announced that 4500 Jews would be admitted under the labor quota during the ensuing six months. See JEWS.

**PALESTINE ARCHÆOLOGY.** See ARCHÆOLOGY.

**PALLADIUM.** See PLATINUM.

**PALMER, WALTER LAUNT.** An American landscape painter, died Apr. 16, 1932, in Albany, N. Y., where he was born Aug. 1, 1854. He studied painting under Frederick E. Church during 1870-72 and under Carolus Duran in Paris during 1873-77. Among his early landscapes were some charming views of Venice. He made a specialty of minutely elaborated winter scenes, and in his rendering of the clearness and brilliancy of New England winter atmosphere was perhaps unequalled. His chief works in American museums include: "Silent Dawn" and "La Salute at Noon" (Metropolitan Museum of Art, New York City); "Sundown at Walpole, N. H." (Buffalo Fine Arts Academy); "The Pasture Fence" (Public Gallery, Richmond, Ind.); "Lingering Oak Leaves" (Omaha Art Society); "Under the Pines" (Memorial Art Gallery, Rochester, N. Y.); "The Dell" (Art Museum, Youngstown, O.); and "An Upland Stream" (Museum of Fine Arts, Boston). Among the numerous prizes which he received were the second Hallgarten prize of the National Academy of Design (1887), medal at the World's Columbian Exposition, Chicago (1893), Evans prize of the American Water Color Society (1895), and silver medals at the Buffalo, Charleston, and St. Louis Expositions. He was elected an associate of the National Academy in 1887 and an academician in 1897.

**PANAMA**, pān'a-mā'. A republic of Central America, lying between Costa Rica and Colombia and bisected by the Panama Canal Zone. Capital, Panamá.

**AREA AND POPULATION.** Excluding the Canal Zone (q.v.), Panama has an area of about 28,575 square miles and a population (census of 1930) of 467,459, as compared with 446,098 in 1920. The natives are for the most part a mixture of Spanish, Indian, and Negro blood. The population of the principal cities in 1930 was: Panamá, 74,409 (59,458 in 1920); Colón, 29,765 (31,206). During the five-year period 1926 to 1930, births averaged 12,759 annually and deaths 5276, the excess of births being 7483 annually. The average birth and death rates per 1000 inhabitants in 1930 was about 27.3 and 11.3 respectively.

**EDUCATION.** Elementary education is compulsory for children from 7 to 15 years of age. In 1929-30, there were 57,592 pupils in 598 public primary schools, 2175 students in secondary, vocational, and normal schools, and 626 students in the National University. About 65 per cent of the children of school age were attending school in 1929.

**PRODUCTION.** Agriculture, the main industry, is supplemented by cattle raising and lumbering. The chief crops are bananas, cacao, coconuts, coffee, sugar, rubber, tobacco, and sarsaparilla. Banana exports in 1931 numbered 2,338,000 stems, compared with 4,679,000 stems in the peak year of 1929. The coffee production (1931) was about 2,250,000 pounds; sugar (1930-31 season), 5,000,000 pounds, with about 7,000,000 pounds estimated for 1931-32; cacao (exports), about 12,000,000 pounds; coconuts (exports), 9,225,000. Gold and manganese are produced in small quantities. Sugar, liquors, hats, furnitures,

shoes, etc., are manufactured for domestic consumption.

**COMMERCE.** Imports in 1931 were valued at \$12,812,000 (\$18,337,000 in 1930) and exports at \$2,608,000 (\$3,302,000 in 1930). The United States supplied about 61 per cent of the total 1931 imports, the United Kingdom 8.3 per cent, and Germany 4.5 per cent. About one-half of the total imports are purchased by employees, tourists, and travelers in the Canal Zone. The United States in 1930 took 96 per cent of the value of all exports. Bananas normally account for about 75 per cent of the total export value, other items being cacao, coconuts, ivory nuts, cattle hides, and cabinet woods.

**FINANCE.** The budget for the two-year fiscal period beginning Mar. 1, 1933, as passed by the National Assembly Dec. 30, 1932, balanced at 11,835,013 balboas, as compared with the 1931-33 budget estimates placing revenues at 19,961,353 balboas and expenditures at 18,500,934 balboas (balboa equals \$1.00 at par). Toward the autumn of 1932, the budget was running a deficit of about 200,000 balboas a month, but with the inauguration of President Harmodio Arias the deficit was reported to have been reduced to 50,000 balboas a month.

The public debt on Aug. 31, 1931, was reported at \$19,010,796, as compared with \$18,115,456 on June 30, 1930.

**COMMUNICATIONS.** Including lines in the Canal Zone, there were about 295 miles of railway line in 1931. The Panama Railroad, with 48 miles of main line, is owned and operated by an American company. In 1930-31, it carried 494,000 passengers and 325,000 tons of freight, the gross operating receipts being \$1,686,000. Highways extended 679 miles in 1930. A motor highway from Panama City to the Costa Rican border, to form part of the Pan American Highway, was under construction in 1932. A 315-mile section of the project was opened in 1931. On Apr. 14, 1932, the Pan American Airways opened direct service between Panamá and Mexico City.

**GOVERNMENT.** The Constitution of Feb. 13, 1904, as amended in 1918 and 1928, vested executive power in a President elected by a direct vote for four years and ineligible for a succeeding term and legislative power in a national assembly of 46 members, elected for four years. The National Assembly meets biennially on September 1. Three Vice-Presidents are chosen by the National Assembly and a cabinet of five is appointed by the President. Provisional President at the beginning of 1932, Ricardo J. Alfaro (Liberal), who assumed office Jan. 16, 1931, following the successful revolution of Jan. 2, 1931.

**HISTORY.** A troubled period in Panama's history came to a close with the election to the presidency on June 5, 1932, of Dr. Harmodio Arias, and his inauguration on October 1. A prominent lawyer and scholar, Dr. Arias was the candidate of the reformist party which drove President Arosemena from power in the revolution of January, 1931. The Arosemena régime, which was dominated by the so-called Chiarista clique, was accused of corruption and maladministration. In the interim between the revolution and the inauguration of Dr. Harmodio Arias, extensive governmental reforms were pushed through by Acting President Ricardo Alfaro, former Minister to Washington. Dr. Arias was elected by a majority of approximately 10,000 over Francisco Arias Paredes, candidate of the Liberal Reform party.

Political tension developed early in the campaign. President Alfaro on May 19 assumed personal charge of the national police and made extensive preparations to prevent disorders. The election took place with little disorder, however, and Dr. Arias Paredes conceded his defeat in a friendly letter to Dr. Harmodio Arias.

In his inaugural address, President Arias called for drastic economies, a balanced budget, honest and efficient service from public employees, a reduction of tariff rates, the encouragement of agriculture and aid to labor. He pledged his administration to indulge in no political persecutions and to grant no favors. On October 7, he issued a statement to the effect that he found the treasury empty, salaries to government employees in arrears two months, and a floating debt of \$3,000,000, in addition to "an enormous foreign debt." The government revenues, he said, had dropped by \$200,000 a month. To meet this situation, the President reduced his own salary and official expenses, and abolished the positions of 200 government employees. On October 25, he appointed Señor Alfaro as Minister to Washington. On October 31, he abolished the pay of Panama's Ministers to Cuba, Mexico, Colombia, Venezuela, Costa Rica, Ecuador, Chile, Argentina, and Uruguay, effective December 20. The positions were made honorary, but with a small allowance for expenses. About the same time, he introduced a bill to authorize an examination of the affairs of the National Bank of Panama, the stock of which was owned by the government. Within six weeks after the inauguration of President Arias, governmental expenditures had been reduced by \$150,000 a month.

President Arias also had to cope with a serious rent strike, which had broken out several months earlier in Panamá City. On August 15, Acting President Alfaro decreed the suspension of property rights and individual guarantees pending the passage of a rent law by the National Assembly. The Assembly, however, declined to grant the full demands of the strikers and on October 28 demonstrators invaded the Assembly following its refusal to approve a bill cutting all rents 10 to 30 per cent. The Assembly suspended constitutional guarantees in the city, while President Arias appointed a commission to settle the dispute. A law published Oct. 1, 1932, provided for the registration of all foreigners in Panama by December 31 and the payment of a \$5 registration fee. See PANAMA CANAL ZONE.

**PANAMA CANAL.** Traffic through the Panama Canal during the calendar year 1932 was the lowest since 1922, amounting to 4367 transits of commercial ships paying \$19,685,671 in tolls. This compared with 4972 transits and tolls aggregating \$22,530,820 for the calendar year 1931, or a decline in 1932 of 605 transits and \$2,845,149 in tolls. In comparison with 1930, there was a decrease of 1518 transits and \$6,460,353 in tolls. Traffic through the canal declined during the first half of 1932, but, commencing with September, there was a gradual increase for the remainder of the year, due chiefly to increased shipments of grain and fruit from the west coast of North America to Europe.

The daily average of commercial vessels in transit during 1932 was 11.93, as against 13.62 in 1931, 16.12 in 1930, and 17.6 in the peak year 1928. The daily average of tolls paid in 1932 was \$53,786, as against \$61,728 in 1931, and \$71,633 in 1930. The accompanying table shows the 1932

transits and toll collections by months, together with comparative totals for the calendar years 1931 and 1930 and the fiscal year ended June 30, 1932.

PANAMA CANAL TRANSITS AND TOLLS

Month	Totals for month	
	Transits	Tolls
January .....	377	\$1,770,250.68
February .....	358	1,647,797.06
March .....	363	1,645,366.81
April .....	370	1,608,634.67
May .....	357	1,717,401.26
June .....	336	1,534,793.19
July .....	326	1,468,728.36
August .....	314	1,440,848.87
September .....	353	1,598,265.98
October .....	394	1,714,779.06
November .....	388	1,756,865.84
December .....	431	1,781,940.03
Total calendar year, 1932 ..	4,367	19,685,671.81
Total calendar year, 1931 ..	4,972	22,530,820.84
Total calendar year, 1930 ..	5,885	26,146,024.96
Total fiscal year, 1932 . . .	4,506	20,707,377.05

**PANAMA CANAL ZONE.** A strip of land extending for 5 miles on each side of the Panama Canal ceded to the United States by Panama in the treaty of Nov. 18, 1903. Area, 552.8 square miles, of which 361.7 square miles are land and 191.1 square miles are water. The total population in June, 1932, was 42,070, including 11,090 members of the military and naval forces (Army, 9951; Navy, 1139), and 30,980 civilians. The figures represented an increase of 1505 in the military and naval personnel, and of 235 civilians over the previous year. Approximately 700 American and 5500 alien employees of the Panama Canal lived outside of the Canal Zone. In 1931 the death rate per 1000 of population was 7.52 and the birth rate, 12.69, the latter being the lowest on record. Of the 1930 census population, 17,783 were whites, 19,492 Negroes, and 1194 of mixed or other races.

For the fiscal year ended June 30, 1932, net revenues of the canal totaled \$11,751,896, or a return of 2.22 per cent upon the capital investment of \$530,479,285. The net revenue fell short of meeting the 3 per cent interest charge by \$4,162,482. Tolls collected during the year amounted to \$20,706,568; postal and civil revenues, \$327,444; and business profits were \$557,095, making gross revenues of \$21,591,108 against net appropriation expenses of \$9,839,211.

The treaty of 1903 gave the United States control over sanitation and quarantine in the cities and harbors of Panamá and Colón, although they remained within the jurisdiction of Panama. The status of the Canal Zone is that of a military reservation under the Governor, who is appointed by the President of the United States. Governor in 1932, Brig. Gen. Harry Burgess, who was succeeded on Oct. 20, 1932, by Col. Julian L. Schley. See PANAMA CANAL.

**PAN AMERICAN UNION.** An official international organization maintained and supported by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a governing board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director general and assistant director chosen by this board.

The services rendered by the union may be broadly summarized under the following heads: **ECONOMIC.** The office of the foreign trade ad-

viser provides a general commercial information service on all phases of Latin American trade. The division of finance supplies current information on developments in public and private inter-American finance. The division prepares an annual study on Latin American revenues, expenditures, and public debts. The statistical division prepares reports on the trade of the Pan American nations, as well as a general survey of the commerce of all Latin America. These reports are issued annually. The division of agricultural cooperation is active in promoting the exchange of information relating to new and improved agricultural methods throughout the American continent, the elimination of plant and animal diseases, and so forth.

**CULTURAL AND INTELLECTUAL.** The division of intellectual cooperation offers a valuable contribution to the development of cultural and intellectual relations among the Pan American nations by promoting the exchange of professors and students, the establishment of scholarships, and the fostering of contacts and exchange relations among scientific, literary, professional, and artistic organizations. The Columbus Memorial Library of the Pan American Union offers a collection of 75,000 books and many periodicals on Pan American affairs, and its facilities are in constant demand by scholars, research workers, and others.

**PUBLICATIONS.** The Pan American Union publishes monthly *Bulletins* in English, Spanish, and Portuguese, which are chronicles of all phases of Pan American activities. There are available nearly 100 booklets on American nations, their cities, commodities of commerce, ports and harbors, sightseeing, etc. In addition, it issues a large number of miscellaneous publications on a wide variety of topics. During 1932 four special series in Spanish and Portuguese were issued bi-monthly on agriculture, education, social welfare, and on finance, industry, and commerce.

**CONFERENCES.** One of the important functions of the Pan American Union is that of giving effect to the resolutions and conclusions of the International Conferences of American States. These activities consist in conducting investigations and preparing reports on the various subjects entrusted to the Union by the conferences, and in arranging for the many special or technical conferences which are the outgrowth of the International Conferences. During 1932 the governing board approved the programme and regulations of the Seventh International Conference of American States, which is scheduled to meet at Montevideo, Uruguay, in December, 1933.

The first congress of the Pan American Institute of Geography and History met at Rio de Janeiro, Brazil, on Dec. 26, 1932. The Institute was created by a resolution of the Sixth International Conference of American States for the purpose of conducting investigations of a geographical and historical character affecting the republics of the American continent. The headquarters of the institute are located at Mexico City.

**GENERAL CLAIMS COMMISSION UNITED STATES AND PANAMA.** On Apr. 1, 1932, the first meeting of the United States and Panama Claims Commission was held at the Pan American Union for purposes of organization. Another meeting was held on November 18, to consider the question of procedure and to initiate the actual work of the commission. The presiding officer of the commis-

sion is Miguel Cruchaga Tocornal, Ambassador of Chile at Washington, with Elihu Root, Jr., serving as American Commissioner and Horacio Alfaro representing Panama. The task entrusted to the commission is to pass upon unsettled claims of citizens of each country against the other arising since the independence of Panama (Nov. 3, 1903).

**GUATEMALAN-HONDURAN BOUNDARY TRIBUNAL.** During 1932 there has been sitting at the Pan American Union the Guatemalan-Honduran Boundary Tribunal to hear and pass upon the question of the boundary between these two republics of Central America. The cases and counter-cases of both parties were submitted and received by the tribunal and were taken under consideration by the members thereof. To assist the tribunal in reaching a decision an aerial survey of the disputed area was undertaken. The tribunal is presided over by the Chief Justice of the United States, Charles Evans Hughes, the other members being Emilio Bello Codesido, of Chile and Luis Castro Urefia of Costa Rica.

**COMMISSION OF NEUTRALS—BOLIVIAN-PARAGUAYAN CONTROVERSY.** During 1932 the Commission of Neutrals, composed of representatives of the United States, Colombia, Cuba, Mexico, and Uruguay continued to hold sessions in Washington with a view to bringing about a settlement of the dispute between Bolivia and Paraguay over the respective claims of the parties in the Chaco region of South America. In connection with this controversy, on Aug. 3, 1932, representatives in Washington of 19 republics of the American continent signed a declaration on behalf of their governments of far-reaching significance. In this statement it was declared that "The American nations further declare that they will not recognize any territorial arrangement of this controversy which has not been obtained by peaceful means nor validity of territorial acquisitions which may be obtained through occupation or conquest by force of arms." See BOLIVIA.

**PAN AMERICAN DAY.** Pan American Day, which was observed for the first time in 1931, and which was proclaimed by the governments of all the American republics to commemorate the spirit of continental solidarity prevailing among the nations of America, was again observed in 1932 (April 14) with appropriate ceremonies in all the countries members of the Union.

**PAN AMERICAN SANITARY BUREAU.** This is an official organization of the American republics which concerns itself with the collection and dissemination of information on all phases of questions relating to public health and sanitation in the republics. It may also assist in the actual work of combating outbreaks of disease in any republic, the authorities of which desire its cooperation. A monthly bulletin is issued. The bureau is headed by Dr. Hugh S. Cumming, Surgeon General of the United States Public Health Service, assisted by a directing council.

The director general of the Pan American Union is Dr. Leo S. Rowe; the assistant director, Dr. Esteban Gil Borges. Headquarters are in the Pan American Union Building, in Washington.

**PAN-EUROPEAN COMMITTEE.** See UNITED STATES OF EUROPE.

**PAN-PACIFIC UNION.** An organization founded in 1907 to "secure and collate accurate information concerning the material resources of Pacific lands, to study the ideas and opinions that mold public opinion among the peoples of

the several Pacific races, and to bring men together who can understandingly discuss these ideas and opinions in a spirit of fairness that they may point out a true course of justice in dealing with them internationally." Its central office is in Honolulu, because of the location of the Hawaiian Islands at the ocean's crossroads. Its management is under an international board of trustees, with Alexander Hume Ford acting as director.

The director spent the years 1931-32 in Japan and China, organizing student and adult Pan-Pacific clubs and forwarding plans for international clubhouses similar to the one in Honolulu where the various nationalities hold their civic and social activities. In an address before the Pan-Pacific Club of Tokyo he urged that the governments of the Pacific be asked to take over the machinery of the Pan-Pacific Union and finance that organization as their official mouthpiece. The present honorary heads of the union, the presidents, premiers, or governor-generals of the United States, Australia, New Zealand, China, Netherland India, Canada, Japan, Siam, Mexico, Peru, Chile, and French Indo-China, were to gather periodically in Honolulu for a friendly conference on Pacific affairs. The Pan-Pacific clubs would continue to function unofficially as at present, the mouthpieces and open forums of the people themselves. The president in 1932 was Wallace R. Farrington, a former governor of Hawaii.

**PAPER AND PULP.** Under normal conditions the total tonnage of wood pulp produced throughout the world is estimated at about 18,000,000 tons, according to *Paper Trade Journal*, upon which publication most of the following article is based. In 1932 this production dropped to an estimated 12,000,000 tons, a decrease of 33 per cent. Of the total production, by countries, the United States headed the list, followed by Canada, with Sweden third. In the United States the pulp production was estimated by the American Paper and Pulp Association at a total of 3,660,000 tons, composed of the following grades:

	Tons
Mechanical .....	1,160,000
Sulphite, total .....	1,145,000
Sulphate, total .....	930,000
Soda .....	307,000
Screenings and Semichemical .....	118,000
<b>Total, 1932 .....</b>	<b>3,660,000</b>

Figures are not available covering the pulp production of Canada, but the Canadian Pulp and Paper Association has estimated that the decrease from the 1931 production of 3,167,960 tons would run between 12 and 15 per cent, or a 1932 production of 2,700,000 to 2,850,000 tons. Because of labor conditions in Sweden, starting in February and concluded in August, pulp production was greatly reduced, though total exports, chemical and mechanical, showed Sweden still in the lead of European suppliers with 1,422,097 tons, of which 1,179,280 tons was chemical pulp and 242,817 tons mechanical pulp. Finland supplied 834,328 tons of chemical pulp and Norway held the lead in the export of mechanical pulp with 671,351 tons.

The estimates for paper production in the United States during 1932 showed approximately the same scale of reduction that has persisted

annually since 1929, as indicated in the accompanying table. The year's total of production was about 12.7 per cent below 1931, or about 56 per cent of capacity, and only slightly above the output of 1920. The output of newsprint dropped about 9 per cent below 1931, and for the whole of North America, including a Canadian production of 1,900,000 tons, Newfoundland of 272,000 tons, and Mexican of 13,000 tons, a total of 3,200,000 tons, the decline was 13 per cent below the 1931 output of 3,690,000 tons and 27 per cent below the high peak of 4,400,000 tons in 1929.

UNITED STATES PAPER PRODUCTION  
[From *Paper Trade Journal*]

	1932*	1931	1930	1929

\* Estimated—1929-1930-1931 Bureau of Census.

Manufacturers of newsprint in the United States and in Canada were seriously affected by price reductions. At the beginning of the year, a reduction of \$4, making a price of \$53 a ton in New York, was effected; but competition of a cut-throat nature involving rebates, commissions, and other devices to secure trade, resulted in a further cut to \$45 a ton. To Canadian manufacturers this decrease, coupled with reduced consumption, showed a falling off in the value of all paper exports by \$35,926,822 as compared with 1931. The largest decrease was in newsprint, less by \$24,266,913 than for 1931; in quantity a reduction to 1,776,763 tons in 1932 from 2,008,241 tons in 1931. The total exports of pulp and paper from Canada for 1932 as compared with those in 1931 are as follows:

	Paper	1932	1931
Newsprint .....	\$	82,966,199	\$107,233,112
Others .....		3,357,540	3,880,870
<b>Total .....</b>	<b>\$</b>	<b>86,323,739</b>	<b>\$111,113,982</b>
	Pulp		
Sulphate .....		2,318,760	2,617,444
Sulphite (bleached) .....		11,181,623	16,282,735
Sulphite (unbleached) .....		2,596,647	5,109,732
Mechanical .....		2,562,089	4,616,167
Screenings .....		77,937	224,434
N. O. P. ....		82,978	178,909
<b>Total .....</b>	<b>\$</b>	<b>18,920,064</b>	<b>\$ 30,056,643</b>
<b>Total paper and pulp ..</b>	<b>\$105,243,803</b>	<b>\$141,170,625</b>	

For 1931 the production of writing paper averaged 58 per cent of normal, or a decline of 15 per cent below the 1931 average. Of cover paper, production averaged 37 per cent of normal, or a decline of 36 per cent from the 1931 average. In book paper, constant reduction in prices was not offset by increased demand, and by the end of the year it was believed that prices were quoted at cost or lower. Estimated capacity of book paper mills in 1932 was 1,862,000 tons with a produc-

tion of 54 per cent. For coated paper, total capacity was 168,000 tons, with a production of 53 per cent. Decreases in national advertising in magazines to about 25 or 30 per cent of the amount carried in 1929, and a decrease in billboard advertising were in part responsible for the decreased production, but an important factor was the large imports of sulphite pulp into the United States from countries operated under depreciated currency. Foreign manufacturers were able to reduce the cost of manufacture by about one-third and to sell pulp in the United States below the cost of American manufacture.

Nevertheless, the United States foreign trade in paper and paper products was marked by heavy reductions during 1932 in both the export and import fields. Exports, according to the U. S. Bureau of Foreign and Domestic Commerce, were valued at \$15,407,559, a decrease of approximately \$7,000,000, or 30 per cent, as compared with the preceding year. Imports of paper, valued at \$94,089,418, and of paper base stocks, valued at \$54,446,020, underwent proportionately nearly as heavy decreases, while the actual decline in the value of these receipts was much greater. The reduction in value of both imports and exports, however, represents the world-wide decline in prices during 1932, and the desire on the part of purchasers for the cheaper grades of paper, as well as an actual shrinkage in the consumption of paper and paper products. See CHEMISTRY, INDUSTRIAL; FORESTRY.

**PAPUA**, pā'pā-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian government, Sept. 1, 1906. Area, 90,540 square miles, of which about 87,786 are on the island of New Guinea. On June 30, 1931, there were 1128 Europeans and about 275,000 natives. Port Moresby, the capital, had about 2075 inhabitants. Revenue for 1931 amounted to £134,918; expenditure, £135,325; exports, £274,354; imports £240,074. Shipping entered and cleared aggregated 220,399 tons. Lieutenant-Governor and chief judicial officer in 1932, Sir J. H. P. Murray. See NEW GUINEA.

**PARAGUAY**, pār-ā-gwā. An inland republic of South America, bounded by Argentina, Bolivia, and Brazil. Capitol, Asunción.

**AREA AND POPULATION.** Including that part of the Gran Chaco under dispute with Bolivia, the area is estimated at 170,000 square miles; the estimated population in 1930 was 852,000 (excluding about 30,000 Chaco Indians). Populations of the leading cities, with suburbs, in 1926 were: Asunción, 113,884; Villarrica, 26,000; Luque, 13,000; Carapeguá, 12,000. Excluding suburbs, the population of Asunción in 1930 was 89,571. Births and deaths registered in the capital city, Asunción, during 1931 numbered 3671 and 1548 respectively, the corresponding rates per 1000 inhabitants being 38.8 and 16.8.

**EDUCATION.** Primary education is free and nominally compulsory. In 1931 there were 108,741 pupils in 766 elementary schools. Private elementary schools (1929) enrolled 4651 pupils; the two National Colleges (high schools), 1950 students (1930); and the university at Asunción 435 students (1929).

**PRODUCTION.** Agriculture, stock raising, and lumbering are the main industries. The chief

crops in 1930-31 were yerba maté (native tea), tobacco (22,046,000 pounds), cotton (5,500,000 pounds, ginned), sugar (16,535,000 pounds), corn, rice, and beans. In 1931, cattle slaughtered by the frigoríficos numbered 39 per cent less than in 1930, prices were lower, and exports of livestock products, valued at \$3,328,000, were 37.2 per cent less than in the previous year. Quebracho extract, for use in tanning, is the chief forest product. There is little mining, although iron, manganese, copper, and other minerals exist. Meat packing and the production of animal by-products are the leading manufacturing industries. In 1932, industry and trade was adversely affected by the outbreak of the war with Bolivia.

**COMMERCE.** Imports in 1931 declined 47 per cent in value to \$6,729,000 from \$12,643,000 in 1930, while exports fell 27.7 per cent to \$8,503,000 from \$11,839,000 in 1930. The chief exports in order of value in 1931 were quebracho extract, canned meats, cattle hides, tobacco, and yerba maté. Nearly 92 per cent of the exports went to Argentina, but about one-half of them were transhipped to other countries, chiefly the United States, Germany, and Great Britain. The United States furnished 16 per cent of the imports, Argentina, 29 per cent; Great Britain, 12; and Germany, 10.

**FINANCE.** According to the President's message, budget operations for the fiscal year ended Aug. 31, 1931, showed a net deficit of 2,895,647 paper pesos, which, added to the deficit for 1929-30, made an accumulated deficit of 8,156,010 paper pesos. The special external debt budget, not accounted for above, had a deficit of 140,883 paper pesos in 1930-31. Ordinary revenues in 1930-31 amounted to 227,099,000 paper pesos and ordinary expenditures to 226,778 paper pesos, while extraordinary receipts and expenses were 368,667 and 3,585,482 paper pesos, respectively.

The external debt on Nov. 30, 1931, was 3,540,775 gold pesos (3,878,934 gold pesos on Nov. 30, 1930), and the internal debt amounted to 6,385,320 gold and 40,267,006 paper pesos. Full service was maintained on the external bonded debt during 1931 and 1932. The Paraguayan peso was stabilized with relation to the Argentine currency in 1923, at the ratio of 18.75 Paraguayan paper pesos to one Argentine paper peso or 42.61 Paraguayan paper pesos to one Argentine gold peso. The exchange value of the Paraguayan peso declined in 1931 and 1932 in sympathy with the depreciation of the Argentine gold peso, which declined from par of \$0.9648 to \$0.5822 in February, 1932, and rose to \$0.5859 in December.

**COMMUNICATIONS.** There were 632 miles of railway line in 1931. The Paraguay Central Railway (275 miles), the main line, carried 582,000 passengers and 261,000 tons of freight, excluding livestock, in 1931. Highways extended about 3684 miles. Air-mail service between Buenos Aires and Asunción was discontinued in April, 1931. Ninety per cent of the country's foreign trade passed through the port of Asunción via the Paraguay River.

**GOVERNMENT.** Executive power is vested in a president elected for four years, who acts through a ministry of five members; and legislative power in a congress of two houses—a senate of 20 members and a chamber of deputies of 40 members elected directly by the people. Acting President at the beginning of 1932, Emiliano González

Navero, who assumed office Oct. 27, 1931, following the deposition of President José P. Guggiari.

**HISTORY.** Paraguay during the latter half of 1932 was engaged in a desperate struggle with Bolivia for possession of the Chaco Boreal. The full details of the struggle and of the international efforts to terminate it are given in the articles **BOLIVIA** under *History* and **MILITARY PROGRESS**.

On Jan. 28, 1932, Dr. José P. Guggiari was restored to the Presidency, which he had surrendered to Vice President Emiliano González Navero the previous October. The President had resigned pending an investigation of his responsibility for the killing in Asunción of five student demonstrators against the government's conciliatory policy toward Bolivia. The investigating commission absolved Dr. Guggiari of all blame. Upon the expiration of President Guggiari's four-year term on August 15, he was succeeded by Dr. Eusebio Ayala, who was nominated by the dominant Liberal party and elected without opposition on May 8. The new Vice President was Raul Casal Ribeira. Dr. Ayala was Provisional President in 1921-22 and Minister to Washington in 1925. His inaugural address was delivered while mobilization of troops for service in the Chaco was under way.

**PARAO.** See **CAROLINE ISLANDS**.

**PARASITES.** See **ENTOMOLOGY**, **ECONOMIC**; **VETERINARY MEDICINE**.

**PARDEE DAM.** See **DAMS**.

**PARK COLLEGE.** A nonsectarian institution for the higher education of men and women in Parkville, Mo., founded in 1875 and cooperating with the Presbyterian Church in the United States of America. The enrollment for 1932-33 totaled 512. The faculty numbered 37. The endowment funds amounted to \$1,711,500, from which the income was \$63,000. Tuition and fees amounted to \$103,000 and donations to \$14,000; \$32,000 was yielded from other sources. The library contained 25,460 volumes. President, Frederick W. Hawley, D.D., LL.D.

**PARKER, SIR (HORATIO) GILBERT.** A British novelist, died in London, Sept. 6, 1932. He was born in Camden East, Ont., Canada, Nov. 23, 1862, and was educated privately and at Trinity College, Toronto. He was ordained a deacon in the Church of England in 1882, but two years later decided on a journalistic career, going to Australia where in 1885 he was an associate editor on the *Sydney Herald*. After traveling extensively in Australasia he settled in London in 1889, where he became widely known for his short stories and romances of Canadian life and character. After 1900, however, he devoted himself also to other themes, largely those concerned with British imperial prospects and interests. He was Conservative member of Parliament for Gravesend from 1900 to 1918. In 1903 he organized the first Imperial Universities Conference in London. Also, he was chairman of the Imperial South African Association from 1903 to 1911, and of the Small Ownership Committee which he founded. During the World War he was a member of the Government Central Colonial Committee for War Purposes. During 1914-15, he had general charge of British publicity in the United States which served admirably in creating favorable sentiment in behalf of the Allies. He was knighted in 1902, was created a baronet in 1915, and was made a member of the Privy Council in 1916.

Among Parker's works of fiction are: *Pierre and His People* (1892); *Mrs. Falchion* (1893); *The Trespasser* (1893); *The Translation of a Savage* (1894); *The Trail of the Sword* (1894); *When Valmond Came to Pontiac* (1895); *An Adventurer of the North* (1895); *The Seats of the Mighty* (1896); *The Pomp of the Lavaliettes* (1897); *The Battle of the Strong* (1898); *The Lane That Had No Turning* (1900); *The Right of Way* (1901); *Donovan Pasha* (1902); *Old Quebec: The Fortress of New France* (1903); *A Ladder of Swords* (1904); *The Weavers* (1907); *Northern Lights* (1909); *Cumner's Son* (1910); *The Judgment House* (1913); *You Never Know Your Luck* (1915); *The Money Master* (1915); *The World for Sale* (1916); *Wild Youth* (1919); *No Defence* (1920); *Carnac's Folly* (1922); *The Power and the Glory* (1925); *Tarboe* (1927); and *The Promised Land* (1928). Also, he wrote the plays, *The Vendetta* (1889) and *The Seats of the Mighty* (1897); a book of travels, *Round the Compass in Australia* (1892); a volume of poems, *A Lover's Diary* (1894); and a book on the World War, *The World in the Crucible* (1915).

**PARKS, NATIONAL.** No new national parks were established during the year, according to the annual report of the Director of the U. S. National Park Service for the fiscal year ending June 30, 1932, but funds appropriated for the purpose were used to increase the area of several of the parks and especially to improve the approaches to and the facilities of the existing parks. These improvements not only permanently enhanced the natural attractions of the parks but also, in line with the recommendations of Congress, gave employment to many persons. Although, according to the report, there was a marked decrease in the number of recorded visitors to the parks over the previous fiscal year, the number was substantially larger than that of two years previous.

In the Great Smoky Mountains National Park a beautiful scenic highway was initiated through preliminary work on the first section of a mountain road that will ultimately extend through the heart of the Great Smoky Mountains from Newfound Gap in North Carolina to Deals Gap in Tennessee.

Approximately 40 miles of the Skyline Drive along the crest of the Blue Ridge Mountains in the Shenandoah National Park project in Virginia were graded, and the plans were developed toward the completion of this scenic highway from Front Royal along the crest of the mountain range to join the Staunton-Charlottesville highway.

The magnificent Trail Ridge Road in Rocky Mountain National Park a short distance from Denver, opened to the public last season, is one of the outstanding scenic roadways of the world, and is a splendid example of what the National Park Service is doing to make the natural beauty of America accessible to millions. Approximately 11 miles of this highway is 11,000 feet above sea level. Four miles of this section attains the impressive altitude of 12,000 feet and is probably the longest stretch of modern highway ever built at such a height. Another outstanding road project completed during the past year was the highway to the summit of Cadillac Mountain, the highest point within the United States on the Atlantic Coast. Cadillac Mountain is in Acadia National Park on the coast of Maine, and is

world famed for its panoramic views of mountain and sea.

The Wawona Tunnel, 4200 feet long, an important feature of Yosemite National Park's new highway, the Wawona Road, was completed and opened to the public. Access to the famous Petrified Forest of Arizona at all times of the year was assured to motorists by the completion of a bridge over the Rio Puerco and the construction of high-grade approach roads. Progress was made on the Colonial Parkway that will eventually connect Yorktown, Williamsburg, and Jamestown, and constitute a drive of historic interest. Three bridges were placed under construction during the past year.

During the fiscal year ending June, 1932, appropriations of \$7,500,000 were expended for road and trail work in the 22 national parks, and 36 national monuments located throughout the United States, and in the Territories of Alaska and Hawaii. In addition, the Secretary of the Interior had authority to obligate, through the letting of contracts, construction projects to an additional amount of \$2,850,000. During the year \$4,500,000 was available for road and trail construction from appropriations provided in the Interior Department supply bill, and another \$3,000,000 became available through the emergency relief and reconstruction act. Additional authority was also given the Secretary of the Interior to incur obligations up to a total of \$2,500,000, but this was offset by the obligations incurred the previous year for payment from the regular 1933 appropriations for road construction.

The need for the completion of the national-park system by the establishment of parks in the tropical Florida Everglades, California's picturesque Death Valley, the Kings River Canyon of the High Sierra, and other outstanding scenic areas was emphasized by the Director in his report. A few years more might find lands worthy of national-park status put to uses inconsistent with conservation principles, and private holdings difficult, if not impossible, to secure. A bill to establish the Everglades National Park passed the Senate by a unanimous vote on Jan. 19, 1932, and was placed on the House calendar with a favorable report from the Public Lands Committee. The situation with regard to the Kings River Canyon, first suggested for national-park status by John Muir and his associates nearly 40 years ago, has become of prime importance because of the building of a State highway into that region. As long as the area was accessible only by trail, it was fairly safe, but with the region penetrated by a fine highway, this magnificent mountain territory should be preserved from commercial exploitation. The establishment of parks in the Florida Everglades and Death Valley would provide two areas with mild winter climates that would be important factors in rounding out the park system. The majority of the national parks now in existence are regarded largely as summer vacation areas. But the most urgent extension project facing the National Park Service, according to the report, is in the Jackson Hole area where the Grand Teton National Park should be extended to include certain national forest lands, a considerable tract of unappropriated public domain, and a large area of former ranch holdings purchased by Mr. John D. Rockefeller, Jr., to aid in carrying out this plan. The extension is needed to preserve the scenery of the region

and provide adequate winter range for wild life, especially of elk.

Despite unfavorable conditions, total travel to the national parks and monuments in 1932 kept abreast of former years, and, including the estimated visitors to the national monuments, showed an increase of 209,740 persons over last year's total of 3,544,856. Though the sustaining of travel was due in a substantial degree to the public interest in Wakefield and Colonial National Monuments in Virginia and the Great Smoky Mountains National Park, recent additions to the system, the steady use of the national parks in periods of difficulty as well as prosperity shows their definitely useful place in the national life. Though many individual parks showed some decrease in the annual number of visitors, the following parks enjoyed increases over their records for 1931: Yosemite, Calif.; Rocky Mountain, Colo.; Hot Springs, Ark.; Acadia, Me.; and Hawaii.

A serious problem has developed in the menace to fine stands of trees through disease and insect infestation. In the Yellowstone, the mountain pine beetle threatens the destruction of the lodgepole pine constituting about 80 per cent of the park's forests. Serious insect situations also exist in the forests of Yosemite and Sequoia National Parks in California. The condition was reported to be critical in Yosemite where the great sugar pines recently purchased jointly by Mr. Rockefeller and the Federal Government were threatened by a pine beetle infestation.

Wild-life conditions in the national parks continued favorable throughout the year. In spite of the heavy winter, elk and other game in Yellowstone, and deer in the Western parks came through with minor losses. Grand Teton National Park reported some losses of moose, apparently the result of disease, but no serious outbreaks of disease developed anywhere. The most serious condition reported was the reduction of mountain sheep in Mount McKinley National Park as the result of the severe winter. An airplane census of the southern elk herd, which winters in Jackson Hole, was made by the Forest Service, and showed the herd to be larger than heretofore reported. A marked improvement in fishing conditions was noted, with a resultant larger catch per capita of visitors than previously reported. Yellowstone and Glacier National Parks in particular were among the Nation's foremost fishing grounds.

**PARSHALL, HORACE FIELD.** A British-American engineer, died in Bayonne, France, about Dec. 20, 1932. Born in New York State, Sept. 9, 1865, he received his education in the United States, holding the degrees of M.Sc. from Lehigh University and of D.Sc. from Tufts College. In his early career he was associated with Thomas A. Edison and with the General Electric Co. Taking up his residence in London in 1893, he had acted as consulting engineer for hydroelectric installations, railway electrification, and other enterprises in Great Britain and on the continent. As consultant in the construction of the Central of London Railway, the first of the modern underground tubes in London, he had succeeded in introducing multiphase generation and transmission through application of the three-phase rotary converter which he had designed. He designed also the Lancashire electric

power installation. At the time of his death he was chairman of the board of the Central of London Railway and of the Lancashire Electric Power Co. His most important assignment on the continent was as consultant to the Barcelona Traction, Light & Power Co., for which he had designed the dam at Tremp, Spain. For technical monographs read before the Institution of Civil Engineers he received the Grampton and Telford prizes and the Telford gold medal.

**PARSONS, WILLIAM BARCLAY.** An American civil engineer, died May 9, 1932, in New York City where he was born Apr. 15, 1859. On his graduation from Columbia University with the C.E. degree in 1882 he became connected with the Erie Railway. In 1885 he established himself in general practice in New York City. He was chief engineer of the Rapid Transit Commission of New York from 1894 to 1904, during which period he planned and constructed the city's first subway. He was also engaged during 1898-99 in a survey of Chinese railways, and played a prominent part during 1904-05 in the construction of the Panama Canal, first as a member of the Isthmian Canal Commission and then as a member of the board of consulting engineers. He next served, in 1906, in an advisory capacity to the Royal Commission of London Traffic, and during the succeeding decade was examiner of various transportation problems for San Francisco, Detroit, Cambridge, Baltimore, Philadelphia, and Toronto. In 1916 he was chairman of the Chicago Transit Commission. Another important canal project which he constructed was the Cape Cod Canal, of which he served as chief engineer from 1909 to 1914. During the World War he served in France with the 11th U. S. Engineers, distinguishing himself as the commanding officer in warding off a German counter-offensive in the Peronne section of the Somme Valley late in November, 1917. At the time of his death he held the rank of brigadier general of engineers with the Reserve Corps of the U. S. Army. He received the Distinguished Service Medal and also many foreign honors, being made an officer of the French Legion of Honor, a companion of the Distinguished Service Order of Great Britain, and an officer of the Order of the Crown of Belgium. The American Society of Civil Engineers bestowed the Norman Medal on him, and the Institute of Civil Engineers of Great Britain, the Telford Medal. He was also a fellow of the American Academy of Arts and Sciences. He published *Turnouts* (1883); *Track* (1885); *Rapid Transit in Foreign Cities* (1895); *An American Engineer in China* (1900); *The American Engineers in France* (1920); and *Robert Fulton and the Submarine* (1923).

**PATENTS.** See UNITED STATES under *Patents*.

**PATON, LEWIS BAYLES.** An American theologian and archaeologist, died in Hartford, Conn., Jan. 24, 1932. He was born in New York City, June 27, 1864, was graduated from New York University in 1884 and from the Princeton Theological Seminary in 1890, and studied at the University of Berlin (1890-92) and at the University of Marburg (Ph.D., 1897). In 1890 he was ordained to the Presbyterian ministry, but two years later transferred to the Congregational Church. He was instructor in Old Testament exegesis and criticism at the Hartford Theological Seminary during 1892-93, associate professor during 1893-1900, and Nettleton professor thereafter. He directed also during 1903-04 the Amer-

ican School of Oriental Study and Research in Jerusalem and for several years served as associate editor of the *American Journal of Archaeology*. Besides editing *Recent Christian Progress* (1909) he was the author of *The Early History of Syria and Palestine* (1901); *Jerusalem in Bible Times* (1908); *The Early Religion of Israel* (1910); and *Spiritism and the Cult of the Dead in Antiquity* (1921).

**PATTEN, WILLIAM.** An American zoölogist, died in Hanover, N. H., Oct. 27, 1932. He was born in Watertown, Mass., Mar. 15, 1861, and was graduated from the Lawrence Scientific School of Harvard University in 1883, receiving the Ph.D. degree from the University of Leipzig in 1884. After serving for three years as assistant at the Lake Laboratory, Milwaukee, Wis., he became in 1889 professor of biology at the University of North Dakota. In 1893 he was called to Dartmouth College as professor of zoölogy, where he remained until his retirement as professor emeritus in 1931. He was president of Section F (zoölogy) of the American Association for the Advancement of Science in 1918. In 1931 he gained nation-wide fame for the explanation which he gave before that body of the "arachnid" theory of evolution, which he had been engaged in developing over a period of 40 years. In support of this theory he exhibited a billion-year-old fossil of a marine scorpion, the Ostracodern, found on an island in the Baltic Sea. As the common ancestor of both vertebrate and invertebrate life, he regarded this extinct animal as the key to evolution and the "missing link" in the remote ancestry of man. He was also a member of the American Academy of Arts and Sciences, the Academy of Natural Science, and the National Research Council for Biology. His works include *The Evolution of the Vertebrates and Their Kin* (1912) and *The Grand Strategy of Evolution* (1920).

**PATTON, FRANCIS LANDEY.** A British clergyman and educator, died Nov. 25, 1932, in Warwick, Bermuda, where he was born Jan. 22, 1843. He attended Knox College, Toronto, and the University of Toronto. On his graduation from the Princeton Theological Seminary in 1865 he was ordained to the Presbyterian ministry and was successively pastor of the Eighty-fourth Street Presbyterian Church, New York City, the Nyack (N. Y.) Presbyterian Church, and the South Presbyterian Church, Brooklyn. In 1872 he was appointed professor of didactic and polemical theology at the Theological Seminary of the Northwest (now McCormick Seminary), Chicago, and from 1874 to 1881 was pastor of the Jefferson Park Church in that city. He edited also the religious journal, *The Interior*, in which connection he brought charges of heresy against the Rev. David Swing, pastor of the Fourth Presbyterian Church, Chicago, resulting in the latter's trial and subsequent withdrawal from the church. He served in 1878 as moderator of the general assembly of the Presbyterian Church in the United States of America. In 1881 he assumed the professorship endowed for him at the Princeton Theological Seminary by Robert L. Stewart, styled "the relations of philosophy and science to the Christian religion." In 1886 he was made professor of ethics at Princeton College and two years later, in addition to holding that chair, succeeded James McGosh as president. His administration of Princeton was marked by the official assumption in 1896 of the title Princeton Uni-

versity in place of the charter name, The College of New Jersey (long out of use), and by large donations which enabled the university to erect 17 new buildings and to make extensive additions to its equipment. The addition of new courses to both the scientific and academic departments and the establishment of a graduate school caused the enrollment to double, from 603 in 1888 to 1354 in 1902. On resigning this office in 1902 he became president and professor of the philosophy of religion at the Princeton Theology Seminary. After his retirement in 1913 he made his home in Bermuda. He contributed frequently to leading periodicals and wrote *The Inspiration of the Scriptures* (1869), *Summary of Christian Doctrine* (1874), and *Fundamental Christianity* (1926).

**PAU, GEN. PAUL GÉRALD.** A French soldier, died in Paris, Jan. 2, 1932. Born in Montélimar Nov. 29, 1848, he attended the École Spéciale Militaire at Saint-Cyr, and in 1869 joined the 78th Infantry Regiment. During the Franco-Prussian War he took part with his regiment in the action at Fröschweiler and was so badly wounded that his right arm had to be amputated. This did not deter him, however, from continuing his military career, and he finished the campaign as captain in the 63d Regiment. He then served for five years in Algeria, and on his return to France passed through the various grades, becoming in 1897 brigadier general of the 7th Infantry Brigade with headquarters at Soissons. After 1903 he served successively as commander of the 14th Infantry Division at Belfort and the 20th Army Corps at Nancy. In 1909 he became a member of the Higher War Council, and two years later was offered the post of Chief of General Staff, which he declined. On the outbreak of the World War he was made commander of the forces entrusted with the task of invading Alsace so as to draw off as many German troops as possible from the Belgian front. The troops under his command invaded the whole territory from Colmar to the Swiss border but were unable to press home their advantage as they were needed to reinforce the army on the Marne. In 1915 Pau was sent on diplomatic missions to Italy, the Balkan States, and Russia, remaining in the latter country until the outbreak of the Revolution. There he attempted to coördinate the military policy of the Allies on the eastern and western fronts and to organize the supply and distribution of war material sent from France. In July, 1918, he was sent to Australia to express the appreciation of the French people for the services rendered by the Anzacs. In his later years he devoted much time to the care of disabled veterans and was president of the French Red Cross.

**PAUB, pour, EMIL.** An Austrian violinist, conductor, and composer, died in Mistek, Czechoslovakia, June 15, 1932. He was born in Czernowitz, Austria, Aug. 29, 1855, and after preliminary instruction under his father attended the Vienna Conservatory, studying composition under Dessooff and violin under Hellmesberger. Upon graduating in 1870 he joined the Vienna Hofoper Orchestra, and during 1876-91 held successively the position of *kapellmeister* at Kassel, Königsberg, and Mannheim. He then became musical director at the Leipzig Stadt Theatre, and in 1893 was called to the United States as conductor of the Boston Symphony Orchestra,

succeeding Artur Nikisch. In 1898 he became conductor of the New York Philharmonic Society concerts, and the following year assumed the directorship of the New York National Conservatory, a position which Antonin Dvořák had previously held. He conducted at the Metropolitan Opera House in New York City during 1899-1900 and occasionally during the next three years at Covent Garden, London, and the Royal Opera in Madrid. From 1904 to 1910 he was conductor of the Pittsburgh Symphony Orchestra. In 1912, on the appointment of Karl Muck as conductor of the Boston Symphony Orchestra, he was made conductor at the Royal Opera in Berlin. He suffered, however, from severe ear trouble, and as his performance fell short of expectations the Kaiser forced his resignation the following year. Among his compositions are a symphony in A, *In der Natur*; a violin concerto; a string quartet; a violin and piano sonata; pieces for the piano; and songs.

**PAVEMENTS.** See ROADS AND STREETS.

**PEACE.** No National Peace Congress was held during the year by the National Peace Council continuing the British Peace Movement, but the Council organized three successful Conferences attended by representatives of its affiliated societies and of other sympathetic organizations. The first of these Conferences was devoted to "The Prospects of Disarmament"; the second was summoned to give members of interested organizations an opportunity of considering the problems underlying Sino-Japanese relations, as well as the immediate aspect of the dispute between the two countries. In the third Conference, held in April, 1932, the Council returned to the consideration of the prospects of the Disarmament Conference, which had been in session two months.

Apart from its general work for disarmament, which continued steadily throughout the year, the Council undertook two special campaigns. In the month preceding the opening of the Conference, the Council sought to encourage the organization of a great number of eve-of-the-Conference meetings. The Council also encouraged the sending of a large number of telegraphic messages to the opening session of the Disarmament Conference from sympathetic groups in Great Britain, and presented to Sir John Simon, and the British delegation, a memorandum embodying the Council's policy and signed by the chairmen of the greater number of its affiliated societies. Following the adoption on March 17 of a resolution welcoming the large measure of agreement in favor of the abolition of the so-called "aggressive" weapons, which had been revealed in the earlier stages of the Conference, the Council organized a short and intensive campaign to secure a widespread expression of opinion urging British leadership at the Conference in what were expected to be critical discussions following the Easter recess.

The INTERNATIONAL PEACE GARDEN, a sanctuary of 3000 acres on the Canadian-United States boundary, equally divided between the province of Manitoba and the State of North Dakota, was dedicated to the cause of peace on July 14, 1932. It is located in the heart of Turtle Mountains, which are crossed by the international boundary line, and at a point supposed to be the geographical centre of the North American Continent. The garden was opened with impressive dedicatory services in the presence of many Canadian and

United States citizens. The development of the garden will be carried out by an International Peace Garden association. Beautiful garden plots will be created eventually covering the entire area, the full fruition of the plans depending on the raising of a maintenance fund of \$5,000,000, largely through subscriptions of ten-cent pieces by school children. This memorial to lasting peace between the two countries was originated by Henry J. Moore, of Islington, Ontario.

Paul Poiret, of Paris, created the *Green Shirt* to be adopted by those who wish to go on record as standing unequivocally for Peace. It was presented for the first time at the Congress of the War Resisters' International at Lyons, France, and is now offered to the Peace workers of the world, to be worn in meetings, in parades, to be used privately or publicly, as a visible expression of their purpose and comradeship, and as a challenge to those who have not yet made up their minds. Poiret has chosen the color of the olive branch.

The Women's International League for Peace and Freedom issued little yellow slips containing the following declaration: "That part of the income tax which is levied for preparation for war is paid only under protest and duress," to be pasted on income tax reports.

**FEDERAL COUNCIL OF CHURCHES.** The Federal Council of Churches Commission on International Justice and Goodwill built its annual Armistice Week publication around the question "What are the next steps in getting rid of war?", outlining a "Fourfold peace programme" for the consideration of the churches. A study of the following policies was recommended: reduction of armaments; strengthening of the Peace Pact; reconsideration of war debts; and, American membership in the World Court.

This Commission believes that the further reduction of armaments constitutes one of the most pressing issues before the nations of the world, and pointed out that "notwithstanding the widespread suffering and the economic impoverishment of multitudes in all lands, the nations spent, in 1930-31, more than four billion dollars on their armies, navies, and military aircraft." The proposals of President Hoover to cut down the armaments of the world by approximately 33 per cent were indorsed and commended to the churches at large. The opinion was expressed that the World Disarmament Conference, up to date, had fallen "far short of that drastic reduction of armaments and of military budgets demanded alike by far-seeing statesmen and by the vast majority of people generally." In view of this fact, it was urged that there be "a resumption of the will to peace of the churches in order that the Geneva Conference, when it reconvenes, may be encouraged to bring to a speedy and decisive end the present costly and war-provoking competition in armaments."

The second plank of the Commission's peace programme had to do with the strengthening of the Peace Pact. The address of the United States Secretary of State, stating that the nations ratifying the Pact were under an implied obligation to consult one another whenever war threatened, was hailed as "a significant advance in the development of American foreign policy." The policy of the Washington government in refusing to recognize "any situation, treaty, or agreement" brought about by any nation or nations in violation of the Peace Pact was heartily in-

dorsed. "It now remains," the Commission said, "to integrate the principle of 'non-recognition' into the law of the nations." Still another policy designed to strengthen the Peace Pact, as recommended by the Commission, had to do with the cessation of shipment of arms and munitions to nations that violate their peace pledges.

A third suggestion called for a reconsideration of war debts. The observation was made that many careful students of this problem were convinced "that this country, in its own interest and for the sake of world recovery and international peace, should state its willingness to reconsider its war debt policy." A revision downward both of war debts and of reparations was regarded as "essential," it being clearly understood that new war debt agreements "should be accompanied by assurances on the part of the debtor nations that the money thus remitted will not be spent directly or indirectly for increased war preparations."

In the fourth place, the Commission, believing that a world court is essential to world justice, recommended American adherence to the Permanent Court of International Justice.

**"HOOVER DOCTRINE."** "Territorial gains made by any nation guilty of breaking the terms of the Kellogg pact should not be recognized." This, according to Under Secretary of State William R. Castle, Jr., is the new "Hoover Doctrine" which aims to change the attitude of the nations toward the use of force. With its general acceptance, Castle says, "the spoils of war become Dead Sea fruit." To put it in another form: "Japan may acquire Manchuria, but we will not recognize her position in Manchuria." This non-recognition means in substance, that the American Government will ban any money loans to the new state and withhold any assistance looking toward the economic development of the stolen region by use of American financial or commercial aid. Mr. Castle defined this Hoover programme for further discouraging war-like nations before the American Conference on International Justice.

On May 4, he said: "The President has been determined ever since he took office really to base American policy on the Pact of Paris. He believes in all measures honestly to avoid war, but is determined that these measures should not themselves envisage war. He, therefore, looked into the future, realized that, in the mechanics of international relations, a stern deterrent of the use of force would be to make valueless the results of war. Out of this earnest belief grew that new dictum in international law that territorial gains made by any nation guilty of breaking the terms of the Kellogg pact shall not be recognized."

This idea was first embodied in the note of the Secretary of State to Japan and China of January 8; and this new American doctrine, inspired by the President, was accepted by the League of Nations on March 11. This Doctrine, accepted by most nations of the world through the League vote, is welcomed because it accomplishes, as nearly as may humanly be possible, the purpose of peaceful prevention of war.

Secretary Stimson's speech of Aug. 8, 1932, interpreting the Kellogg pact, has been widely accepted as a considered re-statement of American foreign policy. In Europe special emphasis was placed on the declaration that consultation is implicit in the Pact and becomes inevitable when

the signatories are faced with the threat of its violation. Added significance was given to this formal assurance of consultation by the fact that the report of the League of Nations Commission in Manchuria again brought to the fore the whole Far Eastern question, plus the question of co-operation between the League and the United States. British and French spokesmen, including Premier Herriot, welcomed the assurance of consultation as a step toward the assumption of equal responsibilities by the United States for the preservation of peace.

**BALKAN CONFERENCE.** A third Balkan Conference was held at Bucharest from October 22 to 26, 1932. It was attended by delegations from Greece, Turkey, Yugoslavia, Albania, and Bulgaria. The Conference decided to set up a commission to deal with the question of minorities, but when the draft of the Balkan Pact was brought up for discussion, the Bulgarian delegation left because the other delegations refused to take up the question of minorities first. See UNITED STATES OF EUROPE under *Balkan Conference*.

**DANUBIAN UNION.** In a speech before the Finance Commission of the Chamber of Deputies delivered by M. Tardieu in Paris on March 1, he reported that in Geneva he had urged the representatives of Austria, Hungary, Czechoslovakia, Rumania, and Yugoslavia to form a Danubian union based on a system of preferential agreements and import quotas, and had promised them the support of France, Great Britain, and Italy for this scheme. His speech represented one more attempt to reconstruct the economic unity of the former Austro-Hungarian Empire and thus revive trade between the Succession States, now hampered by high tariffs and drastic currency restrictions. France's willingness to include Austria and Hungary in the proposed union, from which, to Warsaw's dismay, Poland was omitted, constituted a new development in French foreign policy, which in Eastern Europe had hitherto concerned itself primarily with the interests of the Little Entente. See UNITED STATES OF EUROPE.

The failure to mention Germany among the great powers invited to coöperate in the formation of the Danubian union aroused apprehension in Berlin, Vienna, and Budapest, where the French proposal was viewed as a political scheme designed to detach Austria and Hungary from Germany and to bring them under French financial control. On March 3 the German government, ostensibly in reply to the plea for economic *rapprochement* made on February 16 by the Austrian Chancellor, Dr. Buresch, notified Vienna that it was willing to extend preferential treatment to Austrian goods, provided other states agreed to waive the most-favored nation clause. Germany's move for bilateral negotiations with Austria was attacked in the French press as an attempt to thwart the Tardieu proposal. On March 5, the French government, however, formally informed all interested states, including Germany, of its plan for a Danubian union, and the French Ambassador in Berlin assured Germany that her coöperation had been envisaged from the start.

Skepticism in the Danubian countries had not been dispelled by the lukewarm attitude of Great Britain, whose sanction of the French plan was limited to the guarded statement in a *communiqué* issued on March 12 by Sir John Simon and M. Tardieu that the two governments had agreed to coöperate for the purpose of appeasing Eu-

rope's political rivalries and of hastening economic reconstruction. Italy's response, contained in a memorandum of March 7, was less encouraging. The Italian government, opposed to the formation of a Danubian federation under French auspices, declared that conflict of interests in Eastern Europe made a general accord impracticable, and urged the conclusion of bilateral preferential agreements between industrial and agricultural states, similar to those signed by Italy with Austria and Hungary early in March, which provide for the mutual grant of credit and transit facilities. In addition, Italy expressed particular concern regarding the economic plight of Austria and Hungary, and suggested that direct aid should be immediately extended to these two countries. A similar position was taken by the German memorandum on March 16, which stated that neither Austria nor Czechoslovakia can absorb the agrarian surplus of Southeastern Europe, and that the situation of the Danubian countries, among which Germany would include Bulgaria, could be relieved only by preferential arrangements with industrial states.

**POLAND AND SOVIET RUSSIA PACT.** A non-aggression pact between the Soviet Union and Poland was signed July 25 and ratified Nov. 27, 1932. This had been initiated six months earlier and marks an important step toward the pacification of Eastern Europe. In this agreement the two countries note that under the Kellogg pact, they have abandoned war as an instrument of national policy, and declare that they will abstain from mutual aggression, either alone or in coöperation with third states. Any act infringing the territorial integrity or political independence of the other party, even if not preceded by a declaration of war, or unaccompanied by military operations, shall be regarded as a violation of the non-aggression pact. Should one of the parties be attacked by a third state or group of states, the other undertakes to maintain strict neutrality. Finally, the two countries agree to settle all differences, no matter what their nature, by peaceful means; failing settlement through diplomatic negotiations, such differences will be submitted to a conciliation procedure outlined in a special convention which will form an integral part of the non-aggression pact.

Poland delayed the signing of this pact pending the conclusion of a similar agreement between the Soviet Union and Rumania. Negotiations for a Soviet-Rumanian pact, however, have been hampered by Rumania's demand that the Soviet government recognize the occupation of Bessarabia, a Russian province until 1918 which was added to Rumania by the treaty of Oct. 28, 1920. Poland's decision to act without its ally, Rumania, was apparently due to apprehension of the growth of aggressive nationalist feeling in Germany.

The Polish-Soviet pact is a link in a system of non-aggression agreements which the Soviet government intended to conclude with other states. Such agreements were signed or ratified by France, Latvia, and Finland, and the Soviet Union invited Japan to sign a non-aggression pact, on the ground that it would allay fear in both countries regarding a conflict in Manchuria. The Soviet government argued that bilateral non-aggression agreements not only serve to strengthen the Kellogg pact, but provide more flexible machinery for the maintenance of peace. Japan, however, declined to accept the Soviet pro-

posals, stating that the Kellogg pact made a Soviet-Japanese agreement superfluous, and that bilateral negotiations might raise objections on the part of other countries, with whom no such "special intimacies" existed. See **POLAND**.

**WORLD PEACE.** The impressive development of American interest in world problems during recent years has created a widespread and imperative demand for information on international affairs which shall be authoritative, reliable, and entirely free from all suspicion of partiality. Founded by Edward Ginn in 1919, and dedicated to a definite educational objective, the World Peace Foundation is equipped to meet the needs to which this quickened interest has given rise. Operating on the policy that the actual facts concerning international relations constitute the best possible arguments for improved international understanding, the Foundation focuses its activities upon the task of making these facts available in clear and undistorted form. One of its principal means of accomplishing this purpose is the publication of timely and authoritative studies on salient world problems of especial concern to Americans. No series of studies in the international field issued in this country has won so many encomiums from such a wide variety of sources as the publications of the World Peace Foundation. Written by outstanding authorities, rigorously examined and evaluated by an editorial board, they are always noteworthy contributions to their subjects, and are often the most reliable studies in their special fields.

While these volumes are sound and scholarly, they are written in the simplest and clearest manner consistent with an adequate presentation of their subjects. Widely consulted by college and high school teachers and students of general reference purposes, they are also frequently used as texts in connection with a number of courses. Libraries of almost all types, large or small, find them indispensable on account of the wealth of well-organized and readily located information which they contain within small space. To specialists in history, political science, economics, and current world events they are invaluable. Finally, to the general reader they offer competent, unopinionative, and brief, but thorough, surveys and analyses of a wide variety of questions of public interest.

An American Conference on Institutions for the Establishment of International Justice, Washington, D. C., was held in May, 2-5. Its aim was to enable thoughtful men and women of the United States to take stock of their duties toward institutions for the establishment of international justice, with particular reference to the elimination of international war. It was held under the auspices of The American Peace Society.

What pacific means should be developed to make the Kellogg pact effective? The nations renounced war as a means of settling troubles and difficulties among them in the Paris (Kellogg) pact. It was mutually agreed that the solution of international disputes or conflicts should never be sought except by pacific means; but those means were not provided.

Formal alternatives for war are at least four in number—arbitration, a world court, conciliation, and conference. Of these the first two are juristic in character. They deal alike primarily with questions involving treaty rights and the

interpretation of international law. The procedure of the court culminates in a judgment, and that of arbitration in an award. The scope of the latter is widened, however, to include those miscellaneous cases which lie outside the categories of international law. Conciliation and conference, on the other hand, are political institutions. The conclusions of the former are not binding; while those of the latter, since its members include the plenipotentiaries of the disputant nations, work toward an agreement which is almost as binding as the verdict of a court.

These agencies are restricted in their relative powers and can function effectively only within their proper spheres. But this fact should not breed a suspicion of inefficiency. Each of these influences is a cog in the machinery which will eventually produce the perfect pattern of peace, which, I believe, is a world court. The principal obstacles in the way of a world Court for all disputes between nations are the lack of a code of international law and the growing spirit of nationalism so prevalent at present. The Supreme Court of the United States was not developed in a day, but by a slow and gradual process. All the sovereign States that form the Union agreed to accept it, and no one of them thinks of referring interstate difficulties to any other body except the Supreme Court.

The Nobel Peace Prize, which was valued at about \$40,000 last year when awarded to Nicholas Murray Butler, president of Columbia University and Miss Jane Addams, of Hull House, Chicago, was founded by Alfred Bernard Nobel, inventor of dynamite and gun cotton, who died in 1896. A Norwegian Assembly committee composed of five members was empowered to award the prize, but none was awarded in 1932.

**PENNSYLVANIA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 9,631,350, as against 8,720,017 in 1920. Philadelphia had (1930) 1,950,961 inhabitants; Pittsburgh, 669,817; Scranton, 143,433; Reading, 111,171; Harrisburg, the capital, 80,339.

**AGRICULTURE.** The table on page 635 shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** The value of the State's production of coal, the chief component of its yearly mineral total, declined again, for 1931, by nearly 20 per cent. The value of all coal produced was \$451,415,000 for 1931, as against \$568,158,000 for 1930. The decline was due in part to lower prices for coal, but in greater part to lower production by quantity. The total of net tons of coal mined dropped to 157,304,350 (1931), from 193,847,624 (1930). As to kinds, the production of anthracite declined to 59,645,652 net tons (1931) from 69,384,837 (1930); in value, to \$296,355,000 (1931), from \$354,574,000 (1930). That of bituminous coal decreased to 97,658,698 net tons (1931), from 124,462,787 (1930); by

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1932	2,437,000	2,613,000 <sup>a</sup>	\$24,800,000

<sup>a</sup> Tons    <sup>b</sup> Pounds.

value, to \$155,060,000 (1931), from \$213,584,000 (1930). The number of persons employed at coal mines was reduced to 256,157 (1931), from 280,954 (1930); the average number of days of work of the employed, to 175 (1931), from 204 (1930). The output of the coke ovens was much curtailed, to 8,380,249 short tons (1931), from 14,540,579 (1930); by value, to \$32,458,184 (1931), from \$54,098,236 (1930). The minor production of native iron ore was cut, for 1931, approximately to half of that for 1930. Blast furnaces produced in 1931, 5,099,016 long tons of pig iron (in 1930, 9,734,591); by value, in 1931, \$86,877,965 (in 1930, \$176,521,843).

Production of Portland cement dropped to 28,510,231 barrels (1931) from 37,843,662 (1930); shipments, in nearly the same amounts as production, attained the values of \$30,952,302 (1931) and \$52,712,176 (1930). The production of petroleum was moderately reduced, to 11,892,000 barrels (1931), from 12,803,000 (1930); in value, to \$23,550,000 (1931) from \$33,410,000 (1930). Natural gas production, not yet stated for 1931, was 88,706,000 M cubic feet, by value \$44,521,000, for 1930, and was moderately below totals for 1929. Production of ferro-alloys declined in quantity to 340,475 long tons (1930) from 428,629 (1929), in value to \$29,627,740 (1930) from \$42,361,076 (1929), and declined further in 1931, as would seem from a great reduction in the totals of this product for the whole Union. The clay products of the State, chiefly consisting of brick and tile, attained the value of \$38,336,710 for 1930, the latest year covered by Federal compilations, as against \$49,674,492 for 1929. The quantity of lime shipped by the State's producers declined to 480,000 short tons (estimated, 1931) from 633,520 (1930); the value, to \$3,200,000 (estimated, 1931) from \$4,661,670 (1930). The State had other substantial yearly lines of production, notably those of sand and gravel, stone and slate, chiefly for its own markets. The total value of the State's native mineral products, duplications and such items of chiefly extraneous raw-material supply as pig iron eliminated, was \$778,523,421 for 1930; for 1929, \$892,913,833.

FINANCE. State expenditures in the year ended May 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$117,033,554 (of which \$29,409,634 was for local education); for conducting public-service enterprises, \$107,715; for interest on debt, \$3,985,248; for permanent improvements, \$61,052,492; total, \$182,179,009 (of which \$74,905,967 was for high-

ways, \$28,415,305 being for maintenance and \$46,490,662 for construction). Revenues were \$195,981,737. Of these, special property and other special taxes furnished 43.7 per cent; departmental earnings and compensation to the State for officers' services, 6.8; sale of licenses, 38.7 (in which was included a gasoline sale tax that produced \$27,483,131). Funded debt outstanding on May 31, 1931, totaled \$89,978,320, of which \$89,221,000 was for highways. Net of sinking-fund assets, the debt was \$78,635,764. The State levied in the year no general ad-valorem taxes on property.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1932, was 11,155. In the year previous, 66.9 miles of new line had been put in operation, 52.91 miles abandoned.

EDUCATION. The commission organized in 1931 to study the State's problems pertaining to public education carried on its work in 1932 through a number of committees, which examined such matters as costs, legislative, administrative, and curricular needs. A ten-year programme was to be formulated in accordance with the resultant findings. In the meanwhile there was some disposition to postpone legislative action of a general character, to await the outcome of the inquiry. An attempt made at the legislative session of 1932, to permit an intermission of three years in payments into the school retirement fund was defeated. For the academic year 1930-1931, the latest for which figures were obtainable, the number of persons of school age in the State was reported as 2,010,566. There were enrolled in the public schools 1,970,416 pupils. Of these, 1,521,033 were in common schools or elementary grades, and 449,383 were in high schools. The expenditures of the year for public-school education totaled \$215,426,010. Teachers' salaries, by the year, averaged \$1293 for the elementary, and \$1931 for the high-school positions.

CHARITIES AND CORRECTIONS. A Department of Welfare, created by an act of 1921, performed in 1932 the State's central functions of supervision over the penal reformatory and eleemosynary institutions of the State. It had as its head a Secretary of Welfare (Mrs. I. Albert Liveright), holding by appointment for a term of four years. The State institutions of care and custody, with their populations of May 31, 1932, were: Eastern State Penitentiary, Philadelphia and Graterford (2931); Western State Penitentiary, Pittsburgh (1059); Western State Penitentiary, Rockview (1023); Pennsylvania Industrial School, Huntingdon (1251); State Industrial Home for Women, Muncy (161); Pennsylvania Training School, Morgantown (788); eight State Hospitals (mental), situated respectively at Allentown (1458), Danville (1811), Farview (642), Harrisburg (1733), Norristown (3091), Torrance (1061), Warren (1872), and Wernersville (1190); for the feeble-minded and epileptics, State Schools at Pennhurst (1588), and Polk (2749), a State Village at Laurelton (622), and a State Colony for Epileptics at Selingsgrove (362); ten medical and surgical hospitals, chiefly to serve special needs in the mining districts, situated at Ashland (184), Blossburg (56), Coaldale (80), Connellsville (54), Hazleton (113), Locust Mountain (60), Nanticoke (94), Philipsburg (84), Scranton (166), and Shamokin (70).

LEGISLATION. The General Assembly met in

special session on June 29, to effect retrenchment in State expenditure and to provide funds for the relief of the needy. It passed a law permitting the cities of Philadelphia and Pittsburgh to levy special taxes, not duplicating any taxes imposed by the State, for general revenue purposes. A State sales tax was enacted, levying 1 per cent on gross sales; it was designed to provide about \$12,000,000 a year. Political subdivisions were empowered to borrow money needed for relief expenditures on the security of uncollected tax bills; this measure applied particularly to Philadelphia, as it served to remove a limitation in the city charter on borrowing for such a purpose. An amendment to the State constitution was initiated, for submission to popular vote; it provided for the State repayment of \$25,000,000 expended for local cost of relief to the needy. Payment of taxes to political subdivisions by a number of installments was made lawful. The State appropriations that had been made in 1931 were reduced, as to many items, by a total of some \$5,778,000. The "lame duck" Amendment to the Federal Constitution, providing for earlier inaugurations and earlier initial sessions of Congress, received State ratification. A committee of the State Senate was created, to investigate the relations of the State public-service commission with utility interests.

**POLITICAL AND OTHER EVENTS.** A special session of the Legislature had enacted, late in 1931, the Talbot Law, providing \$10,000,000 of State funds to be distributed during 1932 among the 308 poor-districts, for the relief of the needy unemployed. The State Supreme Court rendered on April 7 a decision affirming the constitutionality of the law. The measure was found to have made inadequate provision for the need that existed. Governor Pinchot called another special session and resumed his effort of 1931 to put through a much more ambitious relief programme. His lack of control over the Republican legislative group ruined his plans and left the State precariously provided to contribute to poor-relief, although an additional \$12,000,000 for the purpose was estimated to have been provided by a 1 per cent sales tax. Governor Pinchot sought in August to obtain from the Reconstruction Finance Corporation a loan of \$45,000,000 to Pennsylvania to meet the State's further requirements for poor-relief. This application was denied, the Corporation holding that the State had failed to qualify for assistance by drawing as far as it could on its own resources. Governor Pinchot appealed to President Hoover in person, but the President declined to bring official pressure on the Corporation. Eventually a small fraction of the loan demanded was granted to Pennsylvania on condition that it be used in certain specified parts of the State only. Loans for relief needs were, however, made piecemeal by the corporation to Pennsylvania or to subdivisions of the State, to a total, by the year's end, of \$12,835,538.

Assertions made by A. A. Chapman led in July to Governor Pinchot's ordering an investigation of payments made by the Philadelphia Rapid Transit interests to public officials. William D. B. Ainey, chairman of the State Public Service Commission, denied having received \$150,000 from the late Thomas E. Mitten. Charges were placed before the State Senate, and Mr. Ainey resigned on August 3. State Attorney General Schnader admitted on August 13 that he had received a salary

from one of the subsidiaries of the transit company while serving as special deputy attorney general, but declared he had resigned the company post on becoming State Attorney General. Former Mayor Mackey of Philadelphia also admitted having been a recipient of a salary from the Philadelphia Rapid Transit organization, asserting the circumstances to have been entirely proper. U. S. Senator James J. Davis was indicted in New York on a Federal charge alleging that he had been interested in the running of a lottery among members of the Loyal Order of Moose. He was brought to trial in September; after the case had run several weeks a mistrial was declared on October 3, because of improper conduct on the part of a juror, reported by the defense. Mayor Charles H. Kline of Pittsburgh was tried before a jury in Butler County and was found guilty of malfeasance in office on May 14, on a charge involving advance payment of \$5000 on a city purchase of trucks. A taxpayer's suit for an injunction against the construction of a proposed Allegheny County town hall at Pittsburgh failed, the State Supreme Court denying the injunction on May 9 and holding that the allegation of excessive cost in the contract price of \$1,127,911 had not been established.

A strike without regular union authorization occurred in part of the anthracite coal-mining region in March. At Johnstown, in August, a part of the "bonus army" that had been expelled from Washington was harbored for some days and received assistance from the local authorities. Governor Pinchot later facilitated the removal of the men by rail to their home States. The finances of Philadelphia were strained throughout the year by deficiencies in tax collections. The city government was forced to effect considerable economies, so that its expenditures for the first half of the calendar year ran about \$6,000,000 below those for the like period of 1931. Up to the beginning of April it was reported that the city had dropped 1571 employees. The pay of the police and firemen was cut in June by 4 per cent. At Villanova the Augustinian Villanova College was partly destroyed by fire on August 2.

At the State primaries, held on April 26, regular Republican candidates prevailed over the Pinchot partisans, who ran as supporters of prohibition and of large bond issues to meet economic needs. James J. Davis was renominated by the Republicans for Senator.

**ELECTIONS.** The popular vote of November 8 was cast for the Republican National ticket in a proportion (much less than the State's normal), of approximately 9 to 8. For President, the officially reported totals were: Hoover (Rep.), 1,453,540; Roosevelt (Dem.), 1,295,948. James J. Davis (Rep.) was reelected to the United States Senate, on the apparent returns, by a plurality not far from that for Hoover. The number of Republicans in the State's delegation to the House of Representatives was reduced to 23 and that of Democrats was increased to 11 in the elections to the Seventy-third Congress.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Gifford Pinchot; Lieutenant-Governor, Edward C. Shannon; Secretary of the Commonwealth, Richard J. Beamish; Treasurer, Edward Martin; Auditor-General, Charles A. Waters; Attorney-General, William A. Schnader; Superintendent of Public Instruction, James N. Rule.

**Supreme Court:** Chief Justice, Robert S. Frazer; Associate Judges, Alexander Simpson, John W. Kephart, William I. Schiffer, George W. Maxey, James B. Drew, William B. Linn.

**PENNSYLVANIA, UNIVERSITY OF.** A nonsectarian institution of higher education in Philadelphia, primarily for men but with certain courses open for women, founded in 1740. It is composed of the college of arts and sciences, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional school of medicine, graduate medicine, law, dentistry, veterinary medicine, hygiene, and public health. The 1932 autumn enrollment was 13,298, including all schools and departments. Of those enrolled, 7854 were candidates for degrees; 2718 were candidates for certificates; and 2726 were partial students and auditors. The enrollment for the 1932 summer session was 1900. The faculty numbered 1536. The productive funds amounted to \$18,598,934. The income for the year from all sources, exclusive of hospitals and museums was \$5,750,550.

The important gifts and subscriptions received during the year included the Morris Arboretum of 180 acres of land and numerous buildings, with an adequate endowment, to be maintained for the development of botany and botanical research and for certain public purposes. The library contained 740,294 bound volumes and 74,000 pamphlets. President, Thomas S. Gates, Ph.B., LL.B., LL.D. Provost, Josiah H. Penniman, Ph.D., Litt.D., LL.D., L.H.D. See UNIVERSITIES AND COLLEGES.

**PENNSYLVANIA MUSEUM OF ART.** See ART MUSEUMS; SCULPTURE.

**PENNSYLVANIA RAILROAD.** See RAILWAYS; ELECTRIC TRANSPORTATION.

**PENNSYLVANIA STATE COLLEGE,** THE. A nonsectarian institution for the higher education of men and women at State College, Pa., founded in 1855. In Nov. 1, 1932, the undergraduate enrollment totaled 4403, distributed in seven schools. The 1932 summer session enrollment was 3503. The resident faculty numbered 644, including agricultural and home economics extension staffs. The productive funds of the college amounted to approximately \$517,000 and the income for operation for the year to \$4,806,150. The library contained 136,064 volumes. A home economics building and a dairy building were completed during 1932. President, Ralph D. Hetzel, LL.D.

**PENSIONS.** See CHILD WELFARE; MATERNITY PROTECTION; OLD AGE PENSIONS; UNITED STATES under *Veterans' Administration*.

**PEPTIC ULCER, ETIOLOGY OF.** See MEDICINE AND SURGERY.

**PERAK, pa'rāk'.** See FEDERATED MALAY STATES.

**PERIM.** See ADEN.

**PERKIN MEDAL.** See CHEMISTRY, INDUSTRIAL.

**PERLIS.** See UNFEDERATED MALAY STATES.

**PERMANENT COURT OF INTERNATIONAL JUSTICE.** See ARBITRATION, INTERNATIONAL; LEAGUE OF NATIONS; WORLD COURT; LAW IN 1932.

**PERSIA.** A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Tehran

(Teheran); reigning Shah in 1932, Riza Khan Pahlevi.

**AREA AND POPULATION.** The area is estimated at about 628,000 square miles; the population at from 8,000,000 to 10,000,000, about 2,000,000 of whom are nomads. Europeans in the country were estimated at from 1000 to 6000. The chief cities, with their estimated population in 1931, are: Tehran, 320,000; Tabriz, 240,000; Meshed, 152,000; Isfahan, 126,600. The bulk of the population are Moslems of the Shiite sect.

**EDUCATION.** About 90 per cent of the population are illiterate. In 1930, the number of pupils enrolled in the schools was about 146,870; more than 750 students were studying in Europe.

**PRODUCTION.** Persia is a predominantly agricultural country, producing chiefly wheat, barley, rice, tobacco, fruits, wool, opium, gums, cotton, and silk. The 1931 crops and wool output were reported to be larger than the 1930 figures. (See 1931 YEAR BOOK.) Petroleum is the chief mineral product, the output in 1931 totaling 44,300,000 barrels, as against 45,420,000 barrels in 1930. The Anglo-Persian Oil Company controlled the bulk of the Persian production. Iron, coal, copper, lead, manganese, marble, cobalt, and nickel are found, but there is little production. Rug making and petroleum refining are the leading industries. Rug exports to the United States in 1931 were valued at \$3,828,500 (\$4,485,000 in 1930); the United States normally takes about half the total production. Local manufacturing was stimulated in 1931 by the establishment of a government monopoly of foreign trade. Several new textile mills were constructed and a sugar refinery at Karizek began operations.

**COMMERCE.** For the fiscal year ended Mar. 20, 1931, exports were valued at \$111,250,000 (including mineral oil valued at \$76,384,000), as against exports of \$132,129,000 (mineral oil, \$91,246,000) in 1929-30. The 1930-31 imports totaled \$61,600,000 (\$77,176,000 in 1929-30). Imports of cotton textiles, wearing apparel, iron and steel, and wood products declined in 1930-31, while increases were reported in machinery, chemicals, drugs, dyes, and munitions. Besides mineral oils, the leading exports in 1930-31 were: wool rugs, \$9,478,000 (\$12,316,000 in 1929-30); opium, \$3,726,000 (\$5,891,000); rice, \$2,433,000 (\$2,782,000); and raw cotton, \$2,358,000 (\$3,304,000). The United Kingdom furnished 30 per cent of the 1930-31 imports (21 per cent in 1929-30); Soviet Russia, 29 per cent (31); United States, 3 per cent (8). Of the exports, exclusive of mineral oils, 36 per cent went to Soviet Russia (31 per cent in 1929-30); 15 per cent to the United States (18). The United Kingdom took 48 per cent of the mineral oils, Egypt 18 per cent, and India 9 per cent. According to United States statistics, exports to and imports from Persia during 1932 (calendar year) were \$1,082,363 and \$2,764,428, respectively, as compared with \$1,056,631 and \$4,457,487, respectively, for the previous year.

**FINANCE.** In the budget for the fiscal year ended Mar. 20, 1932, revenues were estimated at 320,610,399 kran and 822,611 pounds sterling, and expenditures at 321,925,358 kran and £800,684. (The par value of the kran varies with the price of silver, but the average exchange rate was \$0.0760 for 1931, \$0.0839 for 1930, and \$0.1007 for 1929. The official rate of 12.24 kran to the dollar fixed Feb. 25, 1930, was changed on Feb. 9, 1931, to 18.33 kran to the dollar). The budget

for 1932-33 anticipated revenues (excluding oil royalties) of 421,400,000 krans and £787,000, and expenditures of 421,399,870 krans and £407,176. The government planned to introduce the pahlavi, equal to the pound sterling in value, as the new unit of currency in 1932 but was forced to postpone the experiment.

The funded debt on Mar. 20, 1931, amounted to £1,601,260 (\$7,792,700 converted at par) and the floating debt to 6,661,430 krans (about \$360,200), as compared with £1,626,480 (\$7,915,260) and 11,676,660 krans (\$1,144,000), respectively, on Mar. 20, 1929.

**COMMUNICATIONS.** Railway lines in operation in 1932 totaled about 230 miles, and a new trans-Persian line was under construction. There were about 7953 miles of highways. Air lines, operated by the Junkers Company of Germany, extended 2050 miles and linked Tehran and Meshed with Bagdad, Bushire, and Baku. During 1930-31, the Persian Gulf ports were entered by 12,506 vessels of 6,202,000 net registered tons, and the Caspian Sea ports by 3007 vessels, of 456,000 tons.

**GOVERNMENT.** Executive power is vested in the Shah, an absolute ruler down to 1906, when was established a constitutional form of government with a parliament or Mejliss of 136 members. The actual running of the government is in the hands of a cabinet, appointed and controlled by the Shah. Prime Minister in 1932, Mehdi Quli Kahn Hedayat, appointed March, 1929.

### HISTORY

**ANGLO-PERSIAN OIL DISPUTE.** A dispute between the Persian and British governments, which for a time appeared to present a threat to world peace as serious as the Manchurian situation, broke out on November 27. The Persian government suddenly notified the Anglo-Persian Oil Company that the oil concession, granted in 1901 for 60 years, had been cancelled. The announcement followed fruitless negotiations for an increase in Persia's share of the oil company's profits and for a larger voice in its management. The Persian government's revenues, of which about 70 per cent was normally derived from oil royalties, had been drastically reduced as a result of the depression and the consequent slump in oil prices. The oil royalties received declined from \$6,000,000 to \$1,000,000 between 1930 and 1931.

The Persian case for cancellation was based on the charge that the oil company owed the government millions in unpaid royalties and that the Shah's government was not obliged to recognize a contract made before the establishment of his régime. The Persian Foreign Minister announced that his government was ready to negotiate a new agreement and that operations in the oil fields might continue for the time being. The government's action was applauded by the Persian press as a major step in the campaign to free the country of foreign monopolies. Less than two months before, the government had rejected an application of the British Imperial Airways for a long-time permit for aviation stations. As a result, Imperial Airways was compelled to alter its route to India.

The Anglo-Persian Oil Company's concession was the most important in Persia, covering 500,000 square miles and giving the company exclusive right to produce and sell petroleum and oil products in all but five Persian provinces. In return, the concessionaire agreed to pay the Per-

sian government 16 per cent of the net profits, which up to the end of 1932 totaled about £11,000,000. The British government owned more than half of the common stock of the company and during the same period had received dividends aggregating almost £10,000,000. Moreover, the British admiralty depended upon the Persian monopoly for the bulk of its oil fuel supply.

Accordingly, the British government vigorously protested the cancellation of the concession, declaring that the contract made no provision for such action. Captain Anthony Eden, British Under-Secretary for Foreign Affairs, on December 8, warned Persia that Britain would take all legitimate measures to protect its interests and that unless the cancellation was rescinded by December 15, the question would be referred to the World Court. Persia replied that the World Court was not competent legally to hear the dispute, but that owing to British "threats and pressure," it would bring the dispute to the attention of the Council of the League of Nations. However, the British government was the first to act, requesting the League by telegraph on December 14 to consider the dispute as soon as possible under Article XV of the League Covenant. The Council fixed January 23 as a tentative date for opening the arguments.

**OTHER FOREIGN RELATIONS.** Persia during 1932 concluded new trade agreements with the Soviet Union and Turkey, and a security pact with Turkey. The government gave a warm reception to King Feisal of Iraq, who visited Tehran in April accompanied by the Iraqi Prime Minister and other members of the Cabinet. Economic and political questions affecting the two countries were discussed. The Soviet-Persian treaty, signed at Tehran Oct. 27, 1931, became effective through the exchange of ratifications at Moscow June 22, 1932. It granted most-favored-nation treatment for commerce and navigation between Persia and the Soviet Union and provided for a balanced annual trade during the three years the treaty remained in force. The Turkish-Persian pacts, signed at Ankara November 5, consisted of a security pact, an extradition treaty, and an agreement to renew the existing treaty of friendship. The friendship and neutrality pact was reported to have been ratified by the Persian parliament about December 27. A semi-official Persian newspaper, commenting upon the Turkish treaties, said that the union of Eastern peoples "would protect them against foreign intrigues and guarantee their independence."

That Persia was preparing for all eventualities was indicated by large new orders for warships placed in Italy and for ammunition and airplane parts placed in the United States and Germany during the year.

**FOREIGN CONCESSIONS AND CONTRACTS.** The Persian parliament in June ratified the treaty of Feb. 17, 1932, with Great Britain, by which the Indo-European Telegraph Company in Persia was dissolved. The British and Indian governments retained the right to operate cable stations on the Persian Gulf and to control the land line from Jask to the Indian frontier until 1945. Early in 1932, the government commissioned Swedish engineers to continue the work upon the trans-Persian railway, which was temporarily stopped by the cancellation of the contracts of German and American groups. The contract with the Junkers Air Transport Company was provisionally prolonged when it expired. It was reported

in September that the Persian government had concluded a contract with a Belgian company for the electrification of Tehran and the installation of street cars. Later in the year came reliable reports that the Shah's government was negotiating concessions giving the General Motors and Firestone interests of the United States a virtual monopoly of the Persian automobile and rubber trades.

Improvement of Persian communications along other lines was reported. The highway from the capital to Talus, on the Caspian Sea, was nearly finished. Leading streets in Tehran were widened and surfaced. A regular motor-car service was established between Tehran and Khanikin.

**DOMESTIC UNREST.** Unrest among several of the powerful nomadic tribes was reported at various times during the year. Lur tribesmen in Western Persia on September 1 captured three United States consular officers near Kermanshah, while they were traveling by automobile from Bagdad to Tehran. According to a U. S. State Department release, the tribesmen intended to hold the American officers as hostages for the release of several members of the Lur tribe imprisoned by the Persian government at Tehran. The Americans were rescued by Persian troops on September 4.

**PERU, pē-rōō.** A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Chile. Capital, Lima.

**AREA AND POPULATION.** The area of Peru is about 524,800 square miles. The population in 1930 was estimated at 6,237,000, as compared with 4,574,000 in 1896. Over one-half of the population were native Indians. For the period 1925 to 1929 annual births and deaths averaged 145,989 and 62,736, respectively. The estimated population of the principal cities in 1931 was: Lima, including suburbs, 374,000 (205,000 in 1920); Callao, 75,000 (52,843 in 1920); Arequipa, 70,000; Cusco (Cuzco), 40,000; Chiclayo, 35,000; Trujillo, 30,000; Iquitos, 25,000.

**EDUCATION.** For the school year 1929-30, there were 318,735 pupils enrolled in 3567 primary schools, with an average attendance of 65 per cent. The high school enrollment (1930) was 11,820; normal schools, 1398; universities, 2772.

**PRODUCTION.** Agriculture is the main support of the population, the chief crops being cotton, sugar, cacao, coffee, rice, wheat, and wool. Tobacco, corn, olives, grapes, and rubber are produced also. The arable land in 1929 was reported at 3,663,000 acres; permanent meadows and pasture, 17,683,000 acres; trees, shrubs, and bushes, 89,000 acres. Livestock in 1931 included 1,806,000 cattle, 688,000 swine, 13,000,000 sheep, 1,207,000 llamas and alpacas, 432,000 horses, and 395,000 mules and asses. Production of cotton (1931-32 crop) was 207,000 bales; sugar (1931-32 crop), 402,000 metric tons; coffee (1930), about 3,954,000 pounds; wheat (1930-31), 4,525,000 bushels; wool (1931), 12,125,000 pounds of sheep's wool and 9,921,000 pounds of llama, alpaca, and other wool.

Mineral production during 1931 was valued at 128,039,000 soles (about \$35,940,000), as compared with 183,091,000 soles (\$65,217,000) in 1930 and 368,320,000 soles (\$147,321,000) in 1929. Production of the chief minerals in 1931 was: Gold, 79,412 troy ounces; silver, 8,597,000 troy ounces; copper, 44,330 metric tons (metal

content); lead, 3482 metric tons (metal content); zinc, 104 metric tons (metal content); petroleum, 10,421,000 barrels (12,773,000 barrels in 1930); coal, 180,000 metric tons. Vanadium ore (479 metric tons in 1930) and guano (146,537 short tons in 1930-31) are other products. Petroleum refining, smelting, and the production of textiles, flour, and other products for domestic consumption are the principal manufacturing industries. Local industries were encouraged by tariff protection and concessions as well as the depreciation of the currency in 1930-32.

**COMMERCE.** Preliminary foreign trade figures for 1931 showed imports of \$27,488,000 and exports of \$55,416,000, as against imports of \$51,308,000 and exports of \$88,207,000 in 1930. The leading export items in 1931 and 1930 (in parentheses) were: sugar, \$7,793,000 (\$9,379,000); cotton, 8,605,000 (\$15,185,000); copper bars, \$11,055,000 (\$16,464,000); crude petroleum, \$7,740,000 (\$14,952,000); and gasoline, \$6,313,000 (\$9,498,000). The leading imports (1930) were machinery and tools, foodstuffs, and wood and wood manufactures. (Conversions into United States dollars in the trade statistics were made at the annual average exchange rates for the Peruvian pound and sol of \$0.3562 for 1930 and \$0.2807 for 1931. The sol superseded the pound as of Mar. 27, 1930.)

The United States in 1931 supplied 40.9 per cent of the total imports; the United Kingdom, 12.4 per cent; and Germany, 8.8 per cent. The United States was also the chief market, taking 36.4 per cent of the total exports in 1931 as against 21.9 per cent by the United Kingdom, and 8.7 per cent by Germany. For the fiscal year ended June 30, 1932, United States statistics showed exports to Peru of \$5,930,000 (\$10,598,000 in 1930-31) and imports from Peru of \$5,466,000 (\$13,385,000).

**FINANCE.** According to preliminary figures released by the Minister of Finance Aug. 16, 1932, ordinary revenues during 1931 amounted to 99,852,246 soles and ordinary expenditures to 105,112,242 soles, the deficit being 5,259,996 soles. No data on extrabudgetary operations were available. In 1930, ordinary revenues and expenditures were 118,792,210 soles and 131,281,854 soles, respectively.

The national debt on June 30, 1931, amounted to \$96,056,319, £4,239,046, and 105,859,076 gold soles. Interest and sinking-fund payments on all national debts were suspended by the decree of May 29, 1931 and no provision was made in the 1932 budget estimates for foreign debt payments. The municipality of Lima and the Province of Callao suspended service on their dollar bonds during 1931. Nevertheless, Congress on Sept. 21, 1932, approved a 20,000,000-sole internal war loan (see *History*). After stabilizing the sol at \$0.28 in April, 1931, the government was forced to abandon the gold standard on May 14, 1932. The sol thereafter depreciated to \$0.175 at the end of the year.

**COMMUNICATIONS.** The railways in 1930 had 2810 miles of line, of which 642 miles were state owned. The railways in 1930 carried 5,597,000 passengers and 3,242,000 metric tons of freight, the gross revenues being equivalent to \$10,520,000. Highways extended about 12,000 miles (1930), of which 1140 miles were macadam. Air lines in 1931 connected the principal cities. Automatic telephone service was inaugurated in Lima in December, 1931, and on Oct. 14, 1932, wireless

telephone connections were officially established with the United States, Canada, Mexico, and Cuba. The capacity of vessels entering all Peruvian ports (including those on Lake Titicaca and the Amazon River) in 1930 was 16,225,000 net registered tons.

**GOVERNMENT.** Following the overthrow of President Leguía (see 1930 YEAR BOOK) Congress was dissolved in August, 1930. By a decree of Sept. 2, 1930, a temporary junta assumed all functions conferred on the executive and legislative powers by the Constitution. Constitutional government was restored on Dec. 8, 1931, and a Constituent Assembly was engaged during 1932 in drafting a new constitution (see *History*).

#### HISTORY

**THE CLASH WITH COLOMBIA.** The last four months of 1932 witnessed the development of a crisis between Peru and Colombia over the possession of the port of Leticia on the upper Amazon. The port, situated in territory ceded by Peru to Colombia in 1922 in return for other territory, was seized by Peruvian private citizens on September 1. When Colombia prepared to restore its sovereignty by force, Peru gave notice that it would resist such measures. Peru's proposal for arbitration of the dispute was rejected by Colombia on the ground that the issue was an internal one, involving acknowledged Colombian territory. The Peruvian Congress on September 21 authorized a \$5,000,000 internal war loan. On October 4, it laid a special war tax ranging from 1 to 15 per cent on all incomes, including those of foreign residents. Peruvian troops were mobilized and by the end of the year a strong force had been concentrated at Leticia to meet Colombian forces advancing overland from Bogotá and up the Amazon. The outbreak of war early in 1933 was generally expected. For details, see COLOMBIA under *History*.

**INTERNAL DEVELOPMENTS.** The Leticia incident served, at least temporarily, to unite the bulk of the people of Peru behind the government of President Sánchez Cerro. Previous to this incident, the government had been forced to devote most of its energies to maintaining itself in power. From the time of his inauguration on Dec. 8, 1931, Sánchez Cerro faced the vigorous opposition of the Aprista party (*Partido Aprista Peruano*). This radical and reformist group, led by Victor Raúl Haya de la Torre, polled a heavy vote in the 1931 elections and seated 23 representatives in the Constituent Congress. Charging that the elections were unfairly conducted, it demanded the appointment of a junta to take over the government and call new elections.

The President took vigorous action to suppress his opponents. Haya de la Torre and other leaders of the party were forced into hiding and when Haya de la Torre was finally arrested on May 6, he was held incommunicado for the remainder of the year. Government police invaded the Congress building, seized the 23 Aprista representatives, and deported them. The Civilist (government) majority in Congress then outlawed the Aprista party. According to a statement of the general secretary of the Apristas (New York *Times*, Jan. 15, 1933) a systematic persecution and boycott of the party was launched by the government. It ordered that all Apristas be dismissed from their employment, imprisoned hundreds, and sent other prisoners to work in the forests or the guano islands.

On Jan. 9, 1932, a month after his inauguration, the President induced Congress to grant him extraordinary powers. In February, he frustrated a revolt in Lima and deported Gen. Gustavo Jiménez, former commander of the Peruvian Army, and 12 other leaders. On March 6, Sánchez Cerro and an aide were shot and wounded, while attending church services in the capital. The would-be assassin, José Arnaldo Melgar Márquez, and an alleged accomplice, Juan Seoane, were sentenced to death on March 15, but the sentence was later commuted to life imprisonment. The President's wound proved to be slight. While deportations and arrests continued, the President faced repeated Cabinet overturns and sporadic revolts in various parts of the country. On May 8, the crews of the two naval vessels, *Almirante Grau* and *Coronel Bolognesi*, revolted but were forced to surrender by loyal troops and air units. Eight of the ringleaders were executed and others sentenced to long terms of imprisonment. The most serious crisis faced by the government was the uprising in the city and port of Trujillo on the north coast on July 6. Loyal troops finally quelled the rebellion on July 10 after sharp fighting in which about 200 lives were lost. Forty-four involved in the revolt were executed on July 27 and 57 not yet taken into custody were condemned to death. Five more executions on August 4 followed a subsequent outbreak at Huaraz. The government officially attributed the uprising to Communists and Apristas. It was reported that the rebels, while in control of the city of Trujillo, massacred 150 loyal soldiers and civilians.

While President Sánchez Cerro succeeded in crushing open political opposition by executing, exiling, or imprisoning hostile leaders, he had less success in efforts to check the economic depression. On May 14, the government was forced to abandon the gold standard "for a temporary period." Widespread unemployment and want contributed to the political unrest. The Sánchez Cerro government proposed or enacted a series of laws intended to improve the status of labor or embodying the government's nationalistic principles. While administrative expenses were drastically reduced, Congress approved a contract for the completion of improvements on Callao harbor which were begun in 1928 by an American company. The project was expected to give work to 800 men. A measure of October 7 withdrew the match monopoly granted to the Swedish Match Company and authorized the government to organize and operate its own match monopoly. In November, a commission was appointed to frame an industrial code for submission to Congress. Bills were also introduced providing for 30 days' notice prior to the discharge of manual laborers, 15 days' pay for each year of service upon discharge, and half pay to laborers in compulsory military service. A number of laws were passed creating new districts and provinces in Peru.

**DEATH OF LEGUÍA.** Augusto Leguía (q.v.), former President and dictator of Peru for 11 years prior to his overthrow by revolution on Aug. 25, 1930, died in the Naval hospital at Bellavista on Feb. 6, 1932. He had been transferred there in November from the Panóptico prison in Lima. Information concerning the large loans raised in the United States during the Leguía régime was made public during hearings before the United States Finance Committee in January, 1932. Frederick Strauss and Henry C. Breck, partners in

the banking house of J. and W. Seligman & Co., testified that their company had paid \$415,000 in commissions to Juan Leguía, son of the President, for acting as agent in three loans to Peru totaling \$100,000,000. Of these loans there were outstanding \$87,000,000 in complete default when the testimony was given.

**FOREIGN RELATIONS.** As a result of Peruvian nationalism, combined with the propaganda carried on against the Sánchez Cerro régime by deported Apristas in various Latin American capitals, Peru became increasingly isolated during 1932. During the year, the Congresses of Argentina, Colombia, Spain, Ecuador, and Costa Rica passed resolutions asking for the release of Haya de la Torre or for a just consideration of his case. Scores of other organizations and leading intellectuals in various countries protested to the Lima government. In two instances, the Aprista propaganda threatened to involve Peru in difficulties with other countries. Diplomatic relations between Peru and Mexico were severed by the latter in May when President Sánchez Cerro declared the Mexican Minister in Lima *persona non grata*. The Mexican Minister was alleged to have allowed Apristas to use his diplomatic mail pouch in order to avoid interception of their correspondence by government agents. However, diplomatic relations were soon reestablished.

The Peruvian government strongly resented the action of the Argentine Congress in condemning the "tyranny" in Peru and asking amnesty for Haya de la Torre. Peru's action at Leticia led to friction with Ecuador and Brazil as well as to an open break with Colombia. With the development of this dispute, Peru withdrew from the ABC-Peru diplomatic accord which the Argentine Foreign Minister organized among Argentina, Brazil, Chile, and Peru in an effort to end the warfare between Bolivia and Paraguay in the Chaco. In June the Peruvian government sounded out the other South American nations with regard to its proposal for concerted Latin-American tariff reprisals against the United States, which was then about to impose a higher duty upon copper. Peruvian officials said the proposal met with favor in Chile and several other countries, but was flatly rejected by Argentina. See **COLOMBIA**, **BRAZIL**, **ECUADOR**, **ARGENTINA**, and **MEXICO** under *History*; **COMMUNISM**; **EXPLORATION**.

**PETROLEUM.** The production of crude oil for the world in 1932, amounted to 1,301,350,000 barrels, according to estimates compiled by the American Petroleum Institute. This indicates a decrease of approximately 5.1 per cent from the 1931 production, which amounted to 1,371,105,000 barrels. Approximately 95.5 per cent of the crude oil produced in 1932 came from the eight foremost producing countries of the world, viz.: United States, Russia, Venezuela, Rumania, Persia, Netherlands East Indies, Mexico, and Colombia. Together, it has been estimated, these countries produced 1,242,242,000 barrels. The United States remained the world's greatest producer, supplying 60.1 per cent of the total in 1932 against 62.1 per cent in 1931; 63.7 per cent in 1930, 67.8 per cent in 1929, 68 per cent in 1928, and 71.4 per cent in 1927. The output in the United States during 1932 was 781,845,000 barrels, as compared with 851,081,000 in 1931, indicating a decrease of 8.4 per cent on a daily average basis. Russia maintained its second place

ranking with its total of 156,570,000 barrels, 12 per cent of the world total, compared with 161,900,000 barrels in 1931. This indicates a decrease from 1931 of 3.3 per cent. Third place was held by Venezuela with its total of 115,680,000 barrels, or 8.9 per cent of the world total, compared with 118,770,000 barrels or 8.7 per cent of the world production in 1931. This indicates a decrease of 2.6 per cent.

The total production of crude petroleum in the United States in 1932 was 781,845,000 barrels, a decrease of 69,236,000 barrels from 1931, according to preliminary estimates of the U. S. Bureau of Mines. Texas was again the leading producing State although its output for the year, 311,069,000 barrels, was 6 per cent below the total in 1931. The output of the East Texas field in 1932 was 120,158,000 barrels compared with 109,630,000 barrels in 1931. The number of producing wells in the East Texas field rose from about 3600 on January 1 to about 9500 on December 31, while the daily allotment per well on January 1

#### CRUDE OIL PRODUCTION IN THE UNITED STATES, BY STATES

[In barrels of 42 gallons]

	1932	1931
Arkansas . . . . .	11,907,000	14,791,000
California . . . . .	178,128,000	188,890,000
Colorado . . . . .	1,177,000	1,545,000
Illinois . . . . .	4,661,000	5,039,000
Indiana . . . . .	804,000	840,000
Kansas . . . . .	84,800,000	87,018,000
Kentucky . . . . .	6,264,000	6,456,000
Louisiana . . . . .	21,478,000	21,804,000
Michigan . . . . .	6,729,000	7,789,000
Montana . . . . .	2,449,000	2,830,000
New Mexico . . . . .	12,511,000	15,227,000
New York . . . . .	3,501,000	3,863,000
Ohio . . . . .	4,597,000	5,327,000
Oklahoma . . . . .	152,621,000	180,574,000
Pennsylvania . . . . .	12,403,000	11,892,000
Tennessee . . . . .	5,000	6,000
Texas . . . . .	311,069,000	332,437,000
West Virginia . . . . .	3,882,000	4,472,000
Wyoming . . . . .	13,359,000	14,834,000
Total United States . . . . .	781,845,000	851,081,000
Daily average . . . . .	2,136,200	2,331,700
Decrease in daily average . . . . .	8.4 per cent in 1932	

was 100 barrels and 37 barrels on December 17. Drilling activities increased in 1932, when 10,444 oil wells were completed in the United States, compared with 6788 in 1931.

Total crude runs to stills in 1932 fell to 819,997,000 barrels from 894,608,000 barrels in 1931. Crude stocks declined 32,201,000 barrels during the year. Drafts were made in stocks of all oils in eight of the twelve months of 1932; the net decline in these stocks was 43,564,000 barrels, the total amount on hand December 31 was 588,172,000 barrels.

**REFINED PRODUCTS.** The indicated domestic demand for motor fuel in December, 1932, was 27,191,000 barrels, a decline of 11 per cent from a year ago. The domestic demand for 1932 was 373,770,000 barrels, or 7.3 per cent less than in 1931. Total demand, including 35,434,000 barrels exported, was 409,204,000 barrels, a decrease of 8.9 per cent from 1931. Stocks of motor fuel on Dec. 31, 1932, totaled 49,671,000 barrels, compared with 47,152,000 barrels on hand a month previous and with 51,521,000 barrels on hand on Jan. 1, 1932. The percentage yield of gasoline continued to increase, amounting to 44.7 per cent in 1932, compared with 44.3 per cent in 1931. The majority of the minor refined products showed declines in production and demand in 1932; a notable exception was kerosene which showed the first annual increase in indicated demand since 1925.

UNITED STATES REFINERY AND CONSUMPTION STATISTICS

	1932	1931
Crude oil run through refineries (bbls.):

Total .....	1,502,400	1,831,900
Total (thousands of barrels)	35,772	43,617

State or major district showed a larger production in 1932 than in 1931. Stocks of natural gasoline at the plants were materially lowered in 1932, beginning in May, and the total on hand at the close of the year, 13,840,000 gallons, was 8,230,000 gallons below the total on hand Jan. 1, 1932. However, this reduction was more than balanced by an increase in stocks of natural gasoline at refineries.

**OIL CONSERVATION.** The urge for individual profit at the expense of the public welfare, especially the welfare of future generations, has been most vividly shown in the unreasonable production of oil. In recent years this has resulted in a tremendous oversupply, and, prior to restraint in production, lowered prices for crude oil, dropping in 1931 from \$0.96 to \$0.18 a barrel in Texas. Voluntary State and interstate restrictions on output have, in 1932, somewhat relieved the unbridled competition; but Report V of the Federal Oil Conservation Board, a body composed of the Secretaries of the Interior, War, Navy, and Commerce, does not anticipate any permanent lessening of overproduction except by an interstate compact that will definitely prorate the production in each State. The Report sounds the following warning:

The public must not lose sight of the fact that our reserves are exhaustible and should not be exploited heedlessly. The public interest demands that these reserves should be properly and carefully developed to assure recovery of the maximum amount of oil and gas and their economic utilization. Accumulated stocks and reported large potentials are indicative of overproduction, caused by premature development, rather than the result of abundant underground reserves.

An analysis of the oil reserves of the United States, based upon the consensus of well-founded opinions, indicates that present known recoverable oil reserves in the United States are of the magnitude of 10 billion barrels. Although in its fourth report this Board discussed some of the factors causing revision of estimates of oil supply and pointed out that during the last decade every estimate had required revision upward in the light of increased production factors, nevertheless it is timely to realize the significance which should be attached to well-founded figures showing that at the current rates of production, the equivalent of our present known oil reserves will have been withdrawn from their underground reservoirs in 10 to 12 years.

**PHILADELPHIA OPERA COMPANY.** See MUSIC.

**PHILADELPHIA ORCHESTRA.** See MUSIC.

**PHILADELPHIA TRI-STATE DISTRICT.** See CITY AND REGIONAL PLANNING.

**PHILANTHROPY.** See WELFARE WORK.

**PHILHARMONIC-SYMPHONY ORCHESTRA.** See MUSIC.

**PHILIPPINES,** fil'i-pîns, -pêns -pîns. The largest island group of the Malay Archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

**AREA AND POPULATION.** Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5124; Negros, 4903; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. In 1931, the population was estimated at 12,084,021. The population of Manila was 285,306 in 1918; estimated at 336,906 in 1931. Other cities, with the population in 1918, were Cebu, 65,502; Legaspi, 52,756; Iloilo, 49,114.

Births reported during 1931 totaled 287,750; deaths, 165,429; marriages, 50,591. The average annual birth rate per 1000 of population for the five year period 1926-30 was 38.79; the death rate, 21.45. A total of 36,231 persons, excluding the personnel of U. S. military and naval forces, entered the Philippines during 1931 (41,732 in 1930), and 40,909 persons departed (39,759 in 1930). Arrivals included 5097 Americans, 10,610 Filipinos, 16,687 Chinese, and 1738 Japanese. Of those departing, 4660 were Americans, 11,502 Filipinos, 21,034 Chinese, and 1667 Japanese. In 1931 only 674 more Filipinos went to the United States than returned to the islands, while the Filipino population of Hawaii was increased by 606. Tagalog, Ilocano, and Visayan are the principal native dialects. In 1930, about 1,000,000 natives spoke English.

**EDUCATION.** Education is free, secular, and coeducational, the schools being conducted in English. Enrollment in the public schools for the 1931-32 school year dropped to 1,175,380 from the record figure of 1,224,548 in the previous year. All but 75,000 of the 1931-32 enrollment was in primary and secondary schools. There were 16,811 secondary pupils in vocational schools. Private schools numbered 363, with 100,399 pupils. In 1930, the sum of 23,625,736 pesos, or 23.36 per cent of the total insular expenditures, was appropriated for education. In 1929, 7753 students were enrolled in the University of the Philippines at Manila.

**PRODUCTION.** Agriculture is the basic industry of the islands. Cultivated land totaled about 9,990,000 acres in 1931, or about 13.5 per cent of the total area; grass and open lands, 13,100,000 acres; forests, 45,500,000 acres. The value of the nine leading agricultural crops declined from \$248,926,000 in 1929 to \$226,051,000 in 1930. In 1931, the value of all crops declined more than 25 per cent from the preceding year. Production of the chief crops in 1931 was as follows: Rice, 99,933,000 bushels (110,051,000 in 1930); Manila hemp (abaca), 362,019,000 pounds (430,975,000 in 1930); tobacco, 95,935,000 pounds (101,662,000 in 1930); sugar, 1,879,542,000 pounds (2,204,160,000 in 1932); cacao, 2,730,000 pounds (2,685,000 in 1930). Corn, maguay, coconuts, and coffee are other important crops. With the exception of sugar, prices of all farm products declined sharply in 1931. The value of coconut production was 40 per cent less than in 1930; Manila hemp, 55 per cent; corn, 30 per cent; the export value of maguay, 62 per cent.

Livestock at the beginning of 1931 included 2,031,301 buffaloes, 1,217,928 cattle, 344,448 horses, 2,774,758 swine, and 128,020 sheep. The total value of livestock declined to 264,482,048 pesos in 1931 from 285,959,900 pesos in 1930 (peso equals \$0.50). The output of the principal mineral and manufactured products in 1931, with 1930 figures in parentheses, was: Gold, 174,000 troy ounces (179,000); cigarettes, 4,301,000,000 (4,744,000,000); cigars, 282,000,000 (286,000,000); copra (year ended June 30), 1,069,000,000 pounds (1,151,000,000); coconut oil, 366,000,000 pounds (359,000,000); timber (cut), 513,000,000 board feet (610,299,000); rattan (split), 2,887,000 pounds (3,137,000); rattan (unsplit), 13,560,000 linear feet (15,693,000). The general business decline during 1931 is indicated by the decreases registered in the value of the following items, as compared with 1930: Imports, 19.4 per cent; exports, 21.9 per cent; gross sales, 23.4

per cent; monetary circulation, 8.68 per cent; agricultural production, 25 per cent; building construction, 4.5 per cent.

**COMMERCE.** Final trade returns for the calendar year 1932 showed total Philippine exports valued at 190,676,000 pesos (\$95,338,000) and total imports valued at 158,790,000 pesos (\$79,395,000), or decreases of 8 per cent and 20 per cent, respectively, from the previous year. In 1931, exports were valued at 207,944,000 pesos (\$103,972,000) and imports at 198,357,000 pesos (\$99,179,000). In 1932, the United States purchased slightly more than 87 per cent of the total exports and supplied 65 per cent of the imports. Spain, Great Britain, and Japan, in the year 1931, took 4.2, 4, and 3.5 per cent of the exports. Japan supplied 11.1 per cent of the imports; China, 5.8 per cent; Germany, 3.7; and Great Britain, 2.9. Sugar accounted for nearly half the total value of exports in 1931. Coconut oil, textile fibres, copra, and tobacco and manufactures, in the order named, were other leading export products. Cotton manufactures imported in 1931 were valued at \$16,401,000. Other chief import items were: Iron and steel, \$9,260,000; petroleum products, \$8,747,000; vehicles, \$4,581,000; machinery and parts, \$4,105,000; grains and products, \$4,639,000; dairy products, \$4,079,000.

**FINANCE.** The accompanying table shows insular receipts and expenditures, exclusive of all items of a refundable character, expressed in U. S. currency (1 peso equals \$0.50), for the fiscal calendar years 1930 and 1931.

#### PHILIPPINE GOVERNMENT RECEIPTS AND EXPENDITURES

	<i>Credits</i>	1930	1931

\* Prior to 1931, included in item of bureaus and offices.

Ordinary revenues in 1931—receipts from customs, internal revenue, and miscellaneous sources—amounted to \$32,881,587, a decrease of \$5,345,905 from 1930, and ordinary expenditures were \$38,207,978, a decrease of \$1,728,419 from the preceding year. Expenditures exceeded revenues by \$5,326,391, but the surplus accumulated from previous years was sufficient to make up this deficit and leave an unappropriated balance

amounting to \$2,925,338. The budget for 1933, as passed by the Legislature, called for expenditure of \$30,500,000. The anticipated deficit of \$6,500,000 was to be met by further economies and higher tariff schedules (see *History*). The budget surplus in 1932 totaled \$983,837.

The net bonded indebtedness of the insular government on Dec. 31, 1931, stood at 100,736,917 pesos (\$50,368,458), and that of provincial and municipal governments at 16,065,162 pesos (\$8,032,581). The bonded indebtedness was increased by 500,000 pesos (\$250,000), during 1931 due to the sale of metropolitan water district investment bonds. Of the various government business enterprises, the National Development Company in 1931 showed a net loss of 9562 pesos; the Cebu Portland Cement Co. a net profit of 444,584 pesos; the Philippine National Bank a net income of 2,289,541 pesos (2,786,422 pesos in 1930); and the Manila Railroad Co. a net income of 527,786 pesos (1,111,581 pesos in 1930).

**COMMUNICATIONS.** The railway mileage in 1931 was over 800 miles, of which the government-owned Manila Railroad, operating in Luzon, had about 675 miles. The highway mileage was increased by 575 miles during 1931, bringing the total for the islands up to 8900 miles of first, second, and third-class roads. Vessels entering the ports during 1931 numbered 1300, of 5,212,850 net tons, and vessels clearing 1368, of 5,478,264 net tons. The inward cargo amounted to 1,618,381 tons; the outward cargo to 1,537,396 tons. American vessels handled 39 per cent of the total trade in 1931 (44 per cent in 1930).

**GOVERNMENT.** Executive power rests in a governor general, appointed by the President of the United States; and in six departmental secretaries, all Filipinos except the vice governor, who is also secretary of public instruction. A senate of 24 members and a house of 93 members are elected by popular vote (except for 9 representatives and 2 senators appointed by the Governor General). A council of state, headed by the Governor General, serves as a link between the executive and legislative branches. Governor General Dwight Filley Davis resigned, effective Jan. 9, 1932, and was succeeded on Feb. 29, 1932, by Theodore Roosevelt, eldest son of President Theodore Roosevelt, who had been Governor of Puerto Rico since Oct. 7, 1929. Vice Gov. George C. Butte resigned July 1, 1932, to accept an appointment as associate justice of the Philippine Supreme Court, and was succeeded on Aug. 20, 1932, by John H. Holliday, of Missouri.

### HISTORY

**CONGRESS GRANTS INDEPENDENCE.** Advocates of Philippine independence found powerful allies during 1932 in American sugar, farming, and dairying interests desirous of excluding competitive tariff-free Philippine products. There was also increasing public sentiment in favor of the restriction of immigration from the Philippines. The combination of these interests shattered the stubborn opposition offered by the President, the Secretaries of State and War, the manufacturing and commercial interests anxious to continue their virtual monopoly of the Philippine market, and those opposing independence on patriotic or idealistic grounds. The climax of years of agitation came on Dec. 29, 1932, when the House of Representatives at Washington passed a bill—previously adopted by the Senate,—providing for independence of the islands at the end of ap-

proximately 12 years. At the end of the year, the measure was awaiting action by the President.

The provisions of the independence measure were summarized in the *New York Times* of Dec. 30, 1932, as follows:

Once in effect, the act would authorize the Philippine Legislature to provide for the election of delegates to a constitutional convention to meet in Manila within a year after the enactment of the act for drafting a constitution for the Commonwealth of the Philippine Islands. The Constitution must be republican in form, contain a bill of rights, and include certain provisions pending the withdrawal of United States sovereignty.

It is required that until withdrawal of the United States Filipinos shall continue to owe allegiance to the United States; officers shall take an oath of loyalty to the United States; religious toleration shall be secured; United States and religious, charitable, and educational property shall be free from taxation; the Philippine public debt shall be subject to Congressional limitation and the contracting of foreign loans subject to Presidential approval.

In addition, it is provided that the new government is to assume and pay all the obligations of the present government and its subdivisions; public schools conducted primarily in English shall be maintained; acts affecting currency, coinage, foreign commerce, and immigration must have Presidential approval; foreign affairs shall be controlled by the United States, and all acts passed by the Commonwealth Legislature shall be reported to Congress.

The United States shall retain the right to expropriate property and maintain military forces and reservations in the islands, decisions of the insular courts shall be subject to review by the United States Supreme Court; the United States reserves the right to intervene for the protection of the insular government, for the preservation of life, property and individual liberty, and for the discharge of government obligations.

Also, the islands are to recognize the authority of a United States High Commissioner, while American citizens and corporations are to receive equal rights and treatment.

Within two years from the enactment of the independence act the Constitution thus formulated is to be submitted to the President. If he disapproves, the Constitution is to be returned for further action; if he approves, it is to be submitted to a direct vote of the Philippine people within four months. This vote is to be considered "an expression of the will of the people of the Philippine Islands in favor of independence."

If the popular vote is against the Constitution, the present government is to continue.

If the vote favors the Constitution the Governor General shall, within 30 days, issue a proclamation for a general election, to be held not earlier than three months nor later than six months after the proclamation, for choosing officers of the new commonwealth.

Upon the completion of the election the President shall order the termination of the present government and the transfer of authority to the new.

With this new government there begins the ten-year probationary period. During this time free entry of Philippine imports into the United States shall be done away with and regular tariff rates will be imposed on all Philippine sugar entering the United States in excess of 50,000 long tons of refined and 800,000 long tons of raw sugar a year; on all Philippine coconut oil in excess of 200,000 long tons a year, and on all Philippine cordage and fibers in excess of 3,000,000 pounds a year.

On all duty-free articles sent to the United States the Philippine Government shall levy an export tax, beginning at 5 per cent in the sixth year following the inauguration of the new government and increasing to 25 per cent in the tenth year.

The revenues from this tax shall be used to service the obligations of the Philippine Government and its subdivisions until those obligations are retired.

During the probationary period every amendment to the Philippine Constitution must be submitted for the approval or disapproval of the President; the President shall have the right to suspend any law or order of the Philippine Government which he believes will prevent the government from fulfilling its contracts or from meeting its bonded obligations, which is likely to impair the soundness of the insular currency, or which will violate international obligations of the United States.

Immediately upon the acceptance of the independence act by the Philippine Legislature or by convention, immigration restrictions against Filipinos shall be imposed. The islands shall be considered a separate country and receive an immigration quota of 50 a year; Filipinos not citizens of the United States shall be considered aliens.

On the Fourth of July following the expiration of a period of 10 years after the inauguration of the Philippine Commonwealth, the President shall proclaim the

freedom of the Philippine Islands and withdraw all American sovereignty except over American military reservations agreed upon.

The independence bill had a mixed reception both in the United States and the Philippines. The Philippine Independence Mission and the two Resident Commissioners of the Philippines in Washington approved it. The press and the Legislature in the Philippines at the end of the year were engaged in a bitter debate as to the advisability of accepting the measure. On December 29, the Legislature, meeting as the Independence Commission, voted to instruct the mission in Washington that the commission was willing to have President Hoover sign the bill in order to give Filipinos an opportunity to express their opinion, but that it was unwilling to urge him to do so. Manuel Quezon, president of the Philippine Senate, had previously telegraphed demanding "immediate independence or nothing." Filipino objections were directed chiefly against the provision for a ten-year transition period and that authorizing retention of naval bases by the United States. In the United States, the measure was defended as the best compromise obtainable and attacked as a "one-sided arrangement which benefited American special interests at the expense of the Philippine people."

The final action of Congress came after hearings early in the year before the Insular Affairs Committees of the Senate and House; the adoption of the Hare bill in the House, 306 to 47, on April 4; amendment of the Hare bill in the Senate in June; the passage of the Hawes-Cutting independence bill by the Senate December 17; and further revision of the amended measure by a conference committee of the House and Senate. See UNITED STATES under *Seventy-second Congress*.

**DOMESTIC POLITICS.** When the second session of the Ninth Philippine Legislature met in July, 1932, it faced four major tasks, namely, to balance the budget, reorganize the governmental system, standardize salaries of government employees, and revise the tariff schedule. When the session adjourned November 8, action had been taken on all these measures, but the net results were far from those envisaged.

In his first message to the Legislature on July 16, Governor General Roosevelt submitted a budget containing proposed economies sufficient to offset the 7,200,000 peso deficit incurred in 1931 and the 17,500,000-peso operating deficit forecast for the 1932 fiscal year. He suggested the consolidation of governmental offices and functions, revision of the revenue system, readjustment of taxes in favor of the small farmer, imposition of new indirect taxes, forest conservation, and the development of manufacturing, fishing, and other industries. The Legislature, however, threw out the Governor General's budget, which provided for appropriations of 54,000,000 pesos and a deficit of 6,000,000 pesos. Instead it adopted a budget calling for expenditures of 61,000,000 pesos, of which 42,000,000 was for operation of the budget, 10,500,000 pesos for fixed charges, 5,000,000 for "pork barrel" public works, and 3,500,000 for gratuities and pensions for those employees dropped through governmental reorganization. The resulting deficit of 13,000,000 pesos was expected to be offset by the savings and new income expected from the reorganization and tariff measures.

The governmental reorganization bill called for

the dismissal of from 6000 to 8000 employees and a saving of about 8,000,000 pesos. This was greatly modified by the Legislature, the law as passed providing for dismissal of only about 200 men. Coupled with the salary standardization law, it was expected to save only about 4,000,000 pesos. The salary standardization law provided for a general scaling down of government salaries and for uniformity of salaries throughout the various departments.

In revising the tariff, the Legislature raised many schedules by 200, 300, 500, and even 2000 per cent and, in addition, gave the Governor General discretionary power to alter the schedules. It raised the rates on 352 imported commodities. Aimed chiefly at Japanese and Chinese imports, at German and Swiss drugs, and at Indian jute sacking, the tariff measures closed the Philippines, to a large extent, to imports from any country other than the United States. The new rates, which became effective December 21, aroused protests and threats of tariff retaliation from both Japan and China.

When the regular session adjourned, the Governor General reconvened the Legislature in special session, in an effort to secure the passage of revenue bills and other measures needed to balance the budget. In the special session, insurgent groups were with difficulty prevented from voting salary increases for all members of the Legislature. Moreover, it developed that there had been wholesale tampering of many bills passed during both the regular and special session, including several already signed by the Governor General. These developments aroused a storm of protest. On December 9, 2000 students of the University of the Philippines demonstrated before the Legislative Building. Accusing legislators of treachery in seeking to raise their own salaries while lowering those of public servants, the students booed down speakers who attempted to explain the situation.

**MORO OUTBREAK.** Moro outlaws on October 9 ambushed a constabulary detail of 23 men near Culculi, on the Island of Jolo, killing 12 and wounding two. Reinforcements were sent to the district and on October 13 the outlaws were driven from their fortified village. Deaths of members of the constabulary and outlaws in the outbreak were reported at 49. A minor outbreak of 30 tribesmen was reported from Jolo on December 19. The unrest among the Moros was partly attributed to a destructive typhoon, which struck the Sulu Archipelago in April, 1932, causing about 200 deaths and heavy damage to property and crops.

**OTHER EVENTS.** During the first half of 1932, the following were appointed associate justices of the Philippine Supreme Court: José Abad Santos, Maj. Gen. John A. Hull, U. S. Army (retired), Judge James C. Vickers, Judge Carlos Imperial, and George C. Butte, who resigned as Vice Governor to accept the appointment. At Washington, on December 13, ratifications of a convention fixing the boundary between the Philippine Archipelago and the British protectorate of North Borneo, were exchanged. Sedition sentences against 30 Communists, arrested following a demonstration held in Manila in 1931, were affirmed by the Supreme Court of the Islands on October 26. It was announced in August by Dr. Stanton Youngberg, director of the Philippine Bureau of Animal Husbandry, that the rinderpest disease, formerly the most disastrous

animal scourge in the Philippines, had been completely eradicated.

**PHILLIPS UNIVERSITY.** A coeducational institution of higher learning at University Station, Enid, Okla., founded in 1907. The enrollment for the autumn of 1932 in all departments was 474. The attendance at the 1932 summer session was 318. The faculty numbered 34. The productive endowment amounted to 690,830. The income for the year was \$98,755. The library contained 20,859 volumes, exclusive of public documents. President, Isaac Newton McCash, D.D., LL.D.

**PHILOLOGY, CLASSICAL.** The best way to gain a fair conception of the more important contributions to classical philology is to examine lists of articles and books, or abstracts of them, or both, given in certain periodicals—*The American Historical Review*, *The American Journal of Philology*, *Antiquity*, *The Classical Journal*, *Classical Philology*, *Language*, *Speculum*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *History*, *Athenæum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique de Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative importance of items listed. A very valuable feature of this work is the "Namenverzeichnis," which gives in alphabetical order the names of the scholars whose articles or books are named in the body of the work, with references back to the numbered items which describe articles or books. The latest volume of this work is vol. 56, which covers the publications of the year 1929. In France a work of like value is published under the title *L'Année Philologique et Analytique de l'Antiquité*, under the editorship of J. Marouzeau. Volume v of this work covers the publications of the year 1930.

*The Year's Work in Classical Studies*, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philosophy," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

To *The Loeb Classical Library* (see YEAR BOOKS, 1911–1931), additions were made, on the Greek side, of versions of Aristotle, *The Politics*, H. Rackham; Dio Chrysostom (the first of four volumes), J. W. Cohoon; *Elegy and Iambus*, two volumes (the remains of Greek elegiac and iambic poets, from Callinus to Crates, except the choliambic poets), J. M. Edmonds; Eusebius, *The Ecclesiastical History* (the second and concluding volume), J. E. L. Oulton; Philo Judæus (the fourth of ten volumes), F. H. Colson and G. H. Whitaker; Philostratus, *Imagines*, and Callistratus, *Descriptions* (in one volume), A. Fairbanks; *Select Papyri* (the first of two volumes), A. S. Hunt and C. C. Edgar. On the Latin side there were added versions of Ovid, *Fasti*, Sir

George James Fraser; Plautus (the fourth of five volumes; this volume contains translations of the *Pœnulus*, the *Pseudolus*, and the *Rudens*), P. Nixon; *Scriptores Historiæ Augustæ* (the third and concluding volume), D. Magie; Seneca, *Moral Essays* (the second of three volumes), J. W. Basore.

During the year progress was made on two lexicographical projects of the very highest importance. Of the tenth edition of Liddell and Scott, *A Greek-English Lexicon*, part vi was published (six parts out of ten have now appeared, with a total of 1200 pages). The *Lexicon* has been carried well into the letter Omicron. Of the *Thesaurus Lingue Latinæ*, one part appeared: volume v, second series, fascicle ii (*efficax . . . elaboro*).

Progress has been made also with *Paulys Realencyklopädie der Klassischen Altertumswissenschaft* (see YEAR BOOK, 1931). A half-volume, known as *Zweite Reihe, Achte Halbband (Symposion-Literatur . . . Tauris)* was published in 1932. So was the second half of volume xv (*Met . . . Molaris Lapis*).

Of A. Walde, *Latinisches Etymologisches Wörterbuch*, third edition, by J. B. Hofmann (see YEAR BOOK, 1931), part v appeared. This carries the work into *emo* (page 400).

In *The American Journal of Philology*, liii, appeared "The Public Finances of Rome 200–157 B.C.," T. Frank; "Die Quellen für das Spätromischen Heerwesen," E. von Nisicher; "The Hero of the Pharsalia," H. C. Nutting (Professor Nutting finds no true hero in Lucan's poem; he inclines to "suggest the claims of a heroine, namely *Libertas*. Certainly she plays an outstanding part through the tragedy . . ."); "Tacitus and the *Speculum Principis*," K. Scott; "Parmenides and the *Parmenides* of Plato," H. F. Cherniss; "The *Dirtas* of Tiberius," K. Scott; "Some Political Allusions in Plautus' *Trinummus*," T. Frank; "Plato in Afghanistan and India," W. L. Lorimer; "The Grammar of Drinking Healths," Grace H. Macurdy; "The Personal Endings of the Hittite Verb," W. Petersen (the author attempts to "trace the connection of practically the entire system of Hittite verb-endings with the primitive Indo-European as known before the discovery of Hittite . . ."); "The Inscribed *Kernos* of Duenos," A. D. Fraser (another attempt to interpret the famous Duenos-inscription); "On Plato's Republic X 597 B," H. Cherniss; "The Character of Clytemnestra in the *Choephoroe* and the *Eumenides* of Aeschylus," Florence M. B. Anderson; "The *Astronomica* of Manilius," R. B. Steele; "Tibullus, Messalla and the *Via Latina*," George McCracken; "Two Notes on the History of Alexander the Great," C. A. Robinson, Jr.; "Adfatim, Fatisci, Fessus," W. H. Kirk; "The Sacred Treasure and the Rate of Manumission," T. Frank.

From *Classical Philology*, xxvii, may be mentioned "Classical Authors in Certain Mediaeval *Florilegia*," B. L. Ullman; "Tiberius' Refusal of the Title 'Augustus,'" K. Scott; "Conservative and Philosophical Influence in the Reign of Diocletian," C. E. Van Sickle; "Pompeian *Ministri*," Gertrude Grether; "Posidonius and Solar Eschatology," R. M. Jones; "Sparta and the Ionian Revolt: A Study of Spartan Foreign Policy and the Genesis of the Peloponnesian League," J. A. O. Larsen; "Line Omissions in

Homeric Papyri Since 1925," Barbara P. McCarthy; "Humor at the Expense of the Ruler Cult," K. Scott; "The Speakers in the Case of Chrysippus v. Phormio," J. O. Lofberg; "Studies in Greek Noun-Formation," Dorothea C. Woodworth; "Aeschylus 'Choephoroi' 770-74," M. Mac Laren, Jr.; "St. Chrysostom's Use of the Greek Poets," P. R. Coleman-Norton; "Accounting in the Zenon Papyri," Elizabeth Grier; "A New Study of Paris Livy 5726 (T)," A. M. Young; "Notes on Lucan's 'Pharsalia,'" H. C. Nutting; "The Battle of the Assinarus," B. D. Meritt.

In *The Classical Journal*, xxvi, xxvii, appeared "Martial and the Roman Crowd," J. W. Spaeth, Jr.; "Early Roman Understanding of Christianity," E. J. Urch; "Conflagrations in Ancient Rome," H. V. Canter; "The Divine Retribution Suffered by the Helvetii," E. S. McCartney; "The Name Galatea in the Pygmalion Myth," Helen H. Law; "Some Observations on Aristotle's View of Tragedy," E. G. Schaubroth; "Julius Caesar in the Augustan Poets," William M. Green; "The Modern Touch in Seneca," Anna E. Strase; "The Duration of the Action in *Aeneid* iv," W. P. Clark; *Septima Aestas* Again," F. H. Potter (a discussion of the expression *septima . . . aestas*, used by Dido in *Aeneid* 1.755-756 of the length of Aeneas's wanderings since the fall of Troy); "The *Manes Catulliani* of J. C. Scaliger," K. P. Harrington; "Mussolini and the Roman Empire," K. Scott; "Alcibiades and the Persian Alliance," F. B. Marsh; "On Homer's Similes," Eleanor F. Rambo; "The Economic Collapse of the Roman Empire," L. C. West; "The Originality of the *Copa*," George McCracken; "The Gangster in Roman Politics," F. B. Marsh; "Hospites Venturi," Mary Johnston (on the entertainment of guests at Rome).

*The Classical Weekly*, xxv, contained the following articles: "A Classification of the Similes of Ovid," Eliza G. Wilkins; "Vergil and Epicureanism," N. W. DeWitt; "Ancient Memory Systems," L. A. Post; "Feminism in the Corpus Inscriptionum Latinarum," S. L. Mohler; "The Literary Lineage of Cupid <in Greek Literature>," F. A. Spencer; "Roman Barbers," D. B. Kaufman; "Diet in Ancient Medical Practice as Shown by Celsus in his *De Medicina*," E. LeV. Crum; "Possible Latin Sources for an Episode in Charles Reade, *The Cloister and the Hearth*," O. R. Kuchne; "Classical Weather Lore of Thunder and Lightning," E. S. McCartney; "Burial Customs of the Romans," J. L. Heller; "Symphosius and the Latin Riddle," R. T. Ohl; "The Autocrat and Horace," J. P. Pritchard (a study of the indebtedness of Oliver Wendell Holmes to Horace); "Literary Interests of a Roman Magistrate: Quintus Tullius Cicero," J. Stinchcomb; "Xenophon's Portrait of a Young Wife," L. R. Shero; "The Suitors' Competition in Archery," A. D. Fraser (an attempt to determine the nature of the feat in archery performed by Odysseus, described in *Odyssey*, xxi. Professor Fraser argues that the axes used were of the type now known as "spectacles axe." He explains the apertures in this type of axe as thong-holes, with the help of which, by means of thongs, axe-head and handle were joined); "Menander and Terence," L. A. Post; "Apollonius Called the Rhodian," M. Hadas; "Lucan 7.1-6," H. C. Nutting; "Socrates and the Printing Press: Benjamin Franklin and the Classics," R. M. Gummere; "The Social Revolution in Third-Century Sparta," M. Hadas.

In *Transactions and Proceedings of the American Philological Association*, lxii, which contains the papers read before the Association at its meeting of December, 1931, the following articles appeared: "Two Notes on the Legend of Orpheus," I. M. Linforth; "The Indo-European Dative and Locative," E. H. Sturtevant; "On the Cnossian Custom of Snatching Money from Lenders," E. S. McCartney; "New Inscriptions from Olynthus and Environs," D. M. Robinson; "Notes on the Early Life of Nero," R. M. Geer; "The Overtrustful Editors of Chariton," W. E. Blake; "Stylistic Qualities of the Apostrophe to Nature as a Dramatic Device," A. P. Wagener; "The Significance of Statues in Precious Metals in Emperor Worship," K. Scott; "Suspense in Ancient Epic—An Explanation of *Aeneid* iii," G. E. Duckworth; "The Conspiracy of Agrippina," R. S. Rogers; "The Use of *Forem* and *Essem*," Winnie D. Lowrance; "Vergil's Catalogue of the Latin Forces," Blanche Brotherton; "The 'Vis' of Menander," L. A. Post.

In England the more accessible depositories of the results of classical study are *The Year's Work in Classical Studies* (see the second paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. The articles in *The Classical Review* are very numerous, and are in consequence very short. Their combined value, however, is great. From *The Classical Quarterly*, xxvi, we mention "Virgil's Birthplace Revisited," E. K. Rand; "The Legal Term of Caesar's Governorship in Gaul," F. E. Adcock; "Prose-Rhythm and Prose-Metre," H. D. Broadhead; "Aeschylus, *Agamemnon* 1227-30," A. Y. Campbell; "Aristotle, *Physics* 250 A 9-19 and 266 A 12-24," F. M. Cornford; "Embryological Analogues in Pre-Socratic Cosmogony," H. C. Baldry; "Antony's Legions," W. W. Tarn; "Stesichoros and the Rhadine-Fragment," H. J. Rose; "The 'Simile of Light' in Aristophanes' *Birds*," J. F. Higham; "A Mediaeval Excerptor of the Elder Pliny," D. J. Campbell; "Disticha De Mensibus," A. E. Housman; "The *Antiqua Legio* of Vegetius," H. M. D. Parker; "Diminutives in Augustan Poetry," A. S. F. Gow; "Plato and 'Imitation,'" J. Tate; "Sulla's New Senators in 81 B.C.," H. Hill; "Iliupersides," W. F. J. Knight; "Aristoxenus and the Intervals of Greek Music," R. P. Winnington-Ingram; "Vergil, Probus, and Pietole Again," R. S. Conway.

There remains only space enough to mention a very few of the more important books that have come to the writer's attention. Since it is, in general, clear from its title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their authors' names.

Atkinson, B. F. C., *The Greek Language*; Benz, E., *Marius Victorinus und die Entwicklung der Aberländischen Willens-Metaphysik*; Buchan, J., *Julius Caesar*; Collingwood, R. G., *Roman Britain*; Cooper, L., *The Rhetoric of Aristotle, An Expanded Translation*, etc.; De Ferrari, R. J., and Campbell, H. M., *A Concordance of Prudentius*; Dobson, J. F., *Ancient Education and its Meaning to Us*; Enk, P. J., *Plauti Mercator* (an edition, with prolegomena, critical and explanatory notes); Ferguson, W. S., *The Treasurers of Athena*; Frank, T., *Aspects of Social Behavior in Ancient Rome*;

Gardiner, Alan H., *The Theory of Speech and Language*; Glanville, T. R., *Greek Byways*; Graff, W. L., *Language and Languages*; Haight, Eliza-

beth H., *Romance in the Latin Elegiac Poets*; Harward, J., *The Platonic Epistles, Translated, with Introduction and Notes*; Jenkins, E. B., *Index Verborum Terentianus*; Jolowicz, H. F., *Historical Introduction to the Study of Roman Law*; Jones, L. W., *The Script of Cologne from Hildebald to Hermann*; Kent, R. G., *The Sounds of Latin*; Knight, W. F. J., *Vergil's Troy: Essays on the Second Book of the Aeneid*;

Labriolle, Pierre de, *Les Satires de Juvenal, Etude et Analyse*; Laistner, M. L. W., *Greek History*; Macurdy, Grace H., *Hellenistic Queens*; Meritt, B. D., *Athenian Financial Documents of the Fifth Century*; Muller, H. F., and Taylor, Pauline, *A Chrestomathy of Vulgar Latin*; Nilsson, M. P., *The Mycenaean Origin of Greek Mythology*; Norwood, G., *Plautus and Terence*; Ridgeway, Sir W., *The Early Age of Greece* (2 vols.); Robinson, C. A., Jr., *The Ephemerides of Alexander's Expedition*;

Shaw, T. E. ('Lawrence of Arabia'), *The Odyssey of Homer Newly Translated Into English Prose*; Sinclair, T. A., *Hesiod, Works and Days, Edited*; Ullman, B. L., *Ancient Writing and Its Influence*; Westermann, W. L., and Keyes, C. W., *Tax Lists and Transportation Lists from Theadelphia*; Wilamowitz-Moellendorf, U. von, *Die Glaube der Hellenen*; Wright, F. A., *A History of Later Greek Literature From the Death of Alexander in 323 B.C. to the Death of Justinian in 565 A.D.*

**PHILOLOGY, MODERN.** It was, of course, to be expected that the study of philology would feel the effects of the present world-wide economic depression, and, if conditions in this field of research were similar to those that have obtained in the past, no other complaints should be forthcoming except the usual regrets of noting that the progress of various undertakings had been retarded. Learned reviews may come and go, and it is quite possible that it might be advantageous to have some disappear in order to make way for others better adapted to the present state of research, and more receptive to new ideas and to the modern attitude toward the many problems that have intrigued scholars of the past. Furthermore, many reviews can easily make up for lost time when economic conditions improve. Finally, a brief respite in productive research might enable scholars to survey the results achieved during the past quarter of a century, to analyze and classify them with care, and to lay the foundations for constructive work in the future.

But present conditions, as stated above, are very different from those that scholars have heretofore been obliged to face. Modern inventions, such as the radio, talking cinema, etc., are breaking down linguistic frontiers on all sides, and are hastening the trend as never before toward a universal language. Revivals of nationalistic feeling may check the movement here and there for brief periods of time, but there is no doubt that in the end most languages will disappear in the maelstrom of internationalism.

Minor languages will, of course, be the first to be sacrificed to this Moloch, and it is at the very moment when trained scholars are urgently needed to study them, so long as some vestiges are left, that the economic depression renders it impossible either to prepare the men or to find funds for this purpose. Individualistic attempts along these lines seem, therefore, foredoomed to failure. The sole hope that remains is for gov-

ernments or collectivistic organizations to set a group of scholars at work to investigate these minor languages from every possible point of view. One of the most striking examples of such collectivism in scholarship—which, it may be noted, is merely a revival of the mediæval guild spirit—may be found in the recent work on the Tristan legend, issued under the auspices of the Soviet Government. This is the *Tristan i Isol'da*, which is subtitled as a Collective Study by the Section for Semantics, Myth, and Folklore of the Academy of Science, Leningrad, under the Editorship of N. Y. Marr (Leningrad). It consists of a series of 12 essays by different specialists, who seek to relate the Celtic Isolde, or Yseult, motif with woman-worship in the Ancient East as manifested by the cult of Ishtar and similar goddesses. The brilliant concluding essay by I. G. Frank-Kamenetskii explains the purpose and results of the new methods introduced by these Russian scholars. The following sentence gives the gist of their theory: "In so far as every process, in the final reckoning, is conditioned by the development of the means of production and the productive relationship, so the paleontology of a plot—both semantic and morphological—reveals its sociological genesis as one of the basic elements of poetic creation. . . ." Whether we agree with these conclusions or not, it must be admitted that these Russian scholars have erected about their theories fortifications of data that appear at first sight almost impregnable.

An important new development in America in the field of general linguistics was the establishment by President F. B. Robinson of the College of the City of New York of the Language Institute, which held its first session at the City College from June 30 to August 11. In 1928 the Linguistic Society of America created at Yale University the Linguistic Institute, of which the second session was held at the same university in 1929. At the end of the last mentioned year, the Institute was transferred to the City College where it held its third and fourth sessions in 1930 and 1931. But since for financial reasons the Linguistic Society felt it inadvisable to go on with the Linguistic Institute in 1932, the City College continued with the work under the name of The Language Institute, and even expanded it somewhat through the introduction of courses with literary as well as linguistic interest. It is hoped that the Linguistic Society may be able to continue in 1933 its original admirable plans. Following is the list of the Faculty of the Language Institute including the courses offered in 1932 (where no institution is mentioned after the title of the teacher, the City College should be understood): Charles U. Clark, Ph.D., Professor of Languages, Director; C. N. Brown, Ph.D., Associate Professor of Classical Languages: Elementary Greek for Linguists, Grammar of the Homeric Poems, and Modern Greek; E. Cross, Ph.D., Instructor in Romance Languages: Romance Linguistics; Geo. O. Curme, LL.D., Emeritus Professor of German, Northwestern University: History of the English Language, English Syntax, and Syntactical Problems; M. B. Emeneau, Ph.D., Research Assistant in Sanskrit, Yale University: Elementary Sanskrit, Introduction to the Veda, and Pali; J. L. Gerig, Ph.D., Litt. D., Professor of Celtic, Columbia University: Old and Middle Irish; J. H. G. Grattan, Ph.D., Professor of English Language and Philology,

University of Liverpool: Old English, Middle English, and Varieties (Regional, Social, and Vocational) of Spoken English; W. Leopold, Ph.D., Associate Professor of German, Northwestern University: Introduction to Linguistic Science, Psychology of Language, and German Etymology; A. Mirambel, D. ès L., Professeur de Grec Moderne à l'Ecole Nationale des Langues et Administrateur de la Société de Linguistique, Paris: L'Idée de Purisme dans la Langue savante et dans la Langue populaire, Langue et Civilisation, and Rapports de la Syntaxe avec la Phonétique et la Morphologie; O. Müller, Ph.D., Associate Professor of Romance Languages: Introduction of Vulgar Latin, Old French, and Linguistic Geography of France; J. J. Obermann, Ph.D., Professor of Semitic Languages, Jewish Institute of Religion, New York: Elementary and Advanced Hebrew, Arabic, and Syriac; B. J. Olli, Ph.D., Instructor in German: Old Norse, Elementary Russian, and Comparative Grammar of Baltic and Slavonic; C. Pharr, Ph.D., Head of the Department of Classics, Vanderbilt University: Early Latin, Oscan and Umbrian, Latin Linguistics for High School Teachers; E. C. Roedder, Ph.D., Professor of German Language and Literature: History of the German Language, Gothic, and German Dialectology; and H. J. Russell, M.A., Assistant Professor of Romance Languages, Miami University: American Phonetics for Foreigners, Physiological Phonetics, and Spanish Phonetics.

France—a country where linguistic problems are taken most seriously—was just recovering from the effects of the Glözel exposures—which revealed how bellicose peace-loving archaeologists may become under irritation—when the French Academy issued its now celebrated *Grammaire* of the French language, and lo! a new and more bitter war broke out, whose effects may endure for many years. While the Grammar was announced as one of the aims of the Academy shortly after it was founded in 1634, no serious attempt to complete it was made until a few years ago, when an editorial committee consisting of Abel Hermant, novelist and author of a popular grammar of spoken French, Paul Valéry, France's leading poet, and Joseph Bédier, the great medievalist, was appointed for that purpose. Notwithstanding the high esteem in which especially the last two members of the committee are held, there is no doubt that if their small volume of 254 pages had appeared under ordinary circumstances it would have received scarcely more than passing attention. But the fact that, while it was already in galley proof, the Grammar had been under steady discussion and revision by all of the Forty Immortals, and that these weekly discussions were shrouded in the greatest mystery, aroused the interest of the French public to almost fever heat. In fact, no better publicity of the press-agent variety could be imagined! Within a short time after its appearance on April 6, several million copies of the Grammar were sold! The unusual modesty of the authors—for they opened their work by stating that "grammar is the art of speaking and writing correctly," and "we can only record present usages"—made an excellent impression—so much so in fact that the adversaries of the Academy were at first discomfited. But in spite of the extraordinary precautions taken by the Academy to avoid mistakes, they forgot one all-important fact, i.e. that there is

only one good grammarian—a really remarkable one, to be exact—in all France, Ferdinand Brunot of the Sorbonne, and, of course, they failed to consult him, doubtless because he is not a member of the Academy. It required just one month—for the preface is dated May 26—for M. Brunot to publish his *Observations sur la Grammaire de l'Académie Française*, a volume of 127 pp., or almost half the size of that of the Academy. These observations, placed side by side with the quotations from the Grammar which provoked them, are of a truly devastating character, all the more enhanced by the fact that M. Brunot is a kindly, and not a captious, critic. If an American college student should be guilty of having committed some of these errors, a Frenchman would be horrified, and would take keen pleasure in citing them as an indication of the general backwardness of our culture. "What is M. Brunot's final conclusion?" may be asked. We can only quote the words of the distinguished savant (p. 127): "Ces vices, qui sont fondamentaux, ne permettent pas d'espérer que l'œuvre puisse être améliorée par des retouches. Un des Académiciens me demandait, il y a quelques jours, ce qu'il faudrait pour que la Grammaire soit bonne. Je n'ai pu lui répondre que ceci: Il faudrait en faire une autre, suivant une autre méthode." *Sic transit gloria* of the Academicians who, for three centuries have held that they, and they alone, are the true arbiters of correct usage in so far as written and spoken French are concerned—"les greffiers de l'usage," as an Academician of the 17th century, Vaugelas, entitled himself. And now, alas! the Grammar of the Forty Immortals is the subject of gibes and parodies which the French love so much. To mention only one, we have Baudry de Saunier's *Gaietés et Tristesses de la Grammaire de l'Académie Française*, of which more than 10,000 copies were sold within a short time after its appearance. And in order to rehabilitate himself in the good graces of the French public Abel Hermant issues a sort of reply called *Ainsi Parla Monsieur Lancelot (Le Bon Usage du Français)* in which he strikes a Papini pose and castigates all and sundry.

It may not be out of place to note here that a new section of M. Brunot's stupendous work, *Histoire de la langue française des origines à 1900*, was issued during the year. It is Part VI, Volume II, Part A, and is entitled: *A. Français: La langue post-classique*. There is no doubt that this great work will go down in history as one of the monumental contributions of our time. During the summer there appeared also a new and revised edition of the same author's abridgment of the above grammar, *Précis de grammaire historique de la langue française*, prepared with the collaboration of Charles Bruneau.

Recent publications of the Linguistic Society of America include the following (all published at Philadelphia): Maurice Bloomfield and Franklin Edgerton, *Vedic Variants II, Phonetics*, a second volume (the first of which treated *The Verb*) in a series, which aims to study and evaluate from all possible viewpoints the variations in the numerous repeated verses and formulæ of the Veda, as revealed in Bloomfield's monumental *Vedic Concordance*; and numbers 9 to 12 of the Language Dissertations, which are: G. S. Lane, *Words for Clothing in the Principal Indo-European Languages*; H. F. Standerwick, *Etymological Studies in the Greek Dialect Inscriptions*; A. L. Rice, *Gothic Prepositional*

*Compounds*; and Grace S. Hopkins, *Indo-European Deiwos and Related Words*.

Before taking up the bibliographical surveys of the different aspects and branches of Indo-European philology, a word may be said regarding the study of languages in the United States. It is generally believed that, as a consequence of the economic depression, registration of students in those subjects has declined considerably. While this may hold true for the ancient and Oriental languages, it is certainly not the case with the modern languages. The study of the English language and philology is not only holding its own in most of our colleges and universities, but in some places registration shows even an upward trend. As for the modern foreign languages, the example of New York may be cited for it serves as a good standard of measurement for the greater part of our country. Thus, "a survey of enrollments," says the October-December (1932) issue of the *Romanic Review* (New York), "in fourteen colleges and universities in greater New York, made recently by J. L. Beha of the city high schools, reveals that the number of students of French and German far exceed those of Italian, Spanish, Greek or Latin. Enrollments in French for the semester ending last June totaled 14,742, an increase of 234 over 1931, and in German 10,257, an increase of 255. While enrollments in Spanish also increased slightly in 1932, those in Italian fell off 125 and in Latin 422. In the seven-year period from 1925, the study of Greek has steadily declined." This report was prepared for the guidance of high school authorities in preparing students for college courses. These proportions likewise hold true for students in the high schools of New York, as may be seen in the following statistics of registration issued by the Board of Education on November 10 for the current year: French, with a total enrollment of 107,007, shows an increase of 7682 or 7.7 per cent greater than in 1931; Spanish, 40,756, or an increase of 3.2 per cent; German, 23,496, or an increase of 20 per cent; and Italian, 6153, or an increase of 19.3 per cent. The Board further points out that the study of German rose 200 per cent in five years in the high schools. That these figures are characteristic of the country in general may be seen in the enrollments in modern foreign languages at Lincoln Memorial University, Harrogate, Tenn., an institution attended by mountaineers of the Appalachian region, who are far removed from contacts with Europe. "Out of a total enrollment of 386 L.M.U. students in the fall of 1932," says the Middlesboro, Ky., *Three States* of October 27, "372 are taking courses in the Department of Foreign Languages." "Who can claim now," adds the same journal, "that mountaineers do not take any interest in the study of modern tongues?" Regarding methods of teaching foreign languages, it may be noted that Simone France upholds instruction of the spoken language, in an article entitled "Is Classroom French Worth the Effort?", published during the year in *The Parents' Magazine*. The late Thos. J. McCormack, however, presented very forcible arguments in behalf of the study of literature and philology in a splendid address on "Some Reflections on the Learning of Modern Foreign Languages," given before the University of Illinois High School Conference.

GENERAL. Prof. Alan Gardiner's *The Theory of Speech and Language* (New York) attempts to

give an account of the mechanism of speech. With a wealth of explanation and illustration the author shows how to distinguish between language and speech, between sentence and word, and between form and function. On the other hand, Prof. Willem L. Graff's *Language and Languages: An Introduction to Linguistics* (ib.) is divided into two parts, the first of which, entitled "Constituents and Mechanism," deals with the phonetic element in language, meaning, units of signification, accentuation, and contrasts of logical and linguistic categories; and the second part, headed "Drift and Diversification," discusses phonetic and linguistic change and their causes, semantic changes, principles of language classification including both the Indo-European and non Indo-European languages, and a glossary and bibliography. B. L. Ullman's *Ancient Writing and Its Influence* (ib.) presents a history of the alphabet along with the development of writing. A very valuable contribution to the history of paleography is to be found in Prof. L. W. Jones' *The Script of Cologne from Hildebrand to Hermann*, containing 100 plates (Cambridge, Mass.), which was issued by the Medieval Academy of America. This volume forms a pendant to Prof. E. K. Rand's *Survey of the Manuscripts of Tours*, which was published by the Academy in 1929, and which examines the production of another great medieval calligraphic scriptorium—in fact, Tours and Cologne may well be called the two great book-centres of medieval times. Professor Jones supplies the history of the production of the Cologne scriptorium during more than a century (ca. 791–923) and traces the development of the script from the wildly cursive Merovingian to the regular Caroline minuscule, which then became the standard form of writing—just as the Roman type is to-day among printers—throughout Europe for more than four centuries. In fact, the first type adopted by printers in the Latin countries in the 15th and 16th centuries was modeled largely in accordance with the forms used in this script. Another interesting fact revealed by Professor Jones is that Alcuin, the Anglo-Irish scholar who was invited to the continent in 782 by Charlemagne for the purpose of inaugurating the *École du Palais* (from which, we may note, our modern universities developed) and who was later to become Bishop of Tours, sent at least one book to Cologne in order to have it copied there. This great Irish scholar forms, therefore, the connecting link between two of the most important medieval scriptoria or publishing centres. Furthermore, since Professor Jones notes the presence of at least one Irish scribe at Cologne, and since we know also that some of the best work that emanated from Monte Cassino, a third great scriptorium located near Naples, was the work of Irish scribes, we are now enabled to give more credit to these early wandering Celts for the powerful influence they exerted both upon pedagogy through the development of the universities and upon culture in general through their learning and skill in writing. One is now permitted to wonder whether the influence of these Irish scholars may not also be found in the development of the Romance tongues. For example, one of the intriguing problems of Romance philology, which scholars have thus far been unable to explain, is the change from the Latin pitch accent to the stress accent of vulgar Latin, as a consequence of which all unaccented

syllables tended to disappear in the later Romance tongues. We know, in the first place, that the Latin used by scholars of the continent from the fifth century on was taught to them by learned missionaries sent from Ireland and doubtless, therefore, reflected to some extent—just as English, French and Italian pronunciations of Latin differ to-day—their pronunciation of the classic tongue, and also that the stress accent is one of the characteristic features of Old and Middle Irish. This, then, is a problem for future scholars to settle. We may content ourselves by merely offering it as a possible solution at present.

Contributions to mythology include the Index (vol. xiii) of *The Mythology of All Races* (Boston), edited by Florence R. Gray and J. A. MacCulloch; and *Myths and Legends of the World* (New York, 3 vols.), being the new additions to this series, which are those of the Australian aboriginals by W. R. Smith, those of Japan by F. H. Davis, and those of the North American Indians by Lewis Spence. Frederick Anderson continued his edition of the late Prof. George Hemphill's *Mediterranean Studies: IV Etruscan: V Venetic and Venetic Inscriptions* (Stanford University, Calif.), consisting of his readings of these inscriptions—which, it may be added, are not generally accepted by scholars. Martha W. Beckwith's *Folklore in America* (Poughkeepsie, N. Y.), a volume issued by the recently created Folklore Foundation of Vassar College, discusses its scope and method. W. W. Strickland's *How Foreign Words Are Welcomed and Transfigured* (New York) is a study in word derivation. Archibald Lyall's new phrase book (London) is unique in that it deals with 25 languages.

Other works include Marv W. MacNair, *A List of American Doctoral Dissertations Printed in 1930* (Library of Congress, Washington, D. C.), containing alphabetical lists of Ph.D. theses, with classified lists and subject index; E. A. Kirkpatrick, *The Sciences of Man in the Making* (New York), an outline of the various sciences dealing with man and his development, such as anthropology, economics, psychology, etc.; the eighth and final volume of "The Corridors of Time" series consisting of H. Peake and H. J. Fleure, *The Horse and the Sword* (New Haven, Conn.), which relates the story of man from his emergence in the dim past to about 800 B.C.; G. Heard, *The Emergence of Man* (New York), a history of the early stages of human progress emphasizing man's spiritual development; W. Heape, *Emigration, Migration and Nomadism* (London), a valuable contribution to anthropological and philological research; Dr. O. C. Ellis, *History of Fire and Flame* (ib.), containing much recondite ancient and medieval lore; R. Thurnwald, *Economics in Primitive Communities* (New York), a study of primitive economic life in all parts of the world, but with special emphasis on the African tribes; K. Saunders, *The Heritage of Asia* (ib.), a study of the cultures of India, Japan, China, and Korea; W. L. Nida, *Inventions and Discoveries of Ancient Times* (Chicago), Book V of "The Story of Man" series, describing the development of civilization from the Copper Age to the fall of the Roman Empire; H. E. Burton, *The Discovery of the Ancient World* (Cambridge, Mass.), a study of the expansion of geographical knowledge from the time of the ancient Egyptians to the second century

A.D.; J. N. L. Baker, *A History of Geographical Discovery and Exploration* (Boston), a survey from the earliest times to the present; C. J. S. Thompson, *Poisons and Poisoners* (New York), a history of toxicology beginning with the earliest times; H. W. Haggard, *The Lame, the Halt, and the Blind* (ib.), a study of the progress of medicine and its influence on civilization; J. T. Addison, *Life Beyond Death in the Beliefs of Mankind* (Boston), a review beginning with primitive ages; J. A. MacCulloch, *Medieval Faith and Fable* (ib.), a study of the characteristic beliefs of the Middle Ages; G. P. Baker, *Charlemagne and the United States of Europe* (New York), a biography including an account of the formation of the medieval European State; C. Dawson, *The Making of Europe* (ib.), a study of the birth and development of European culture and social organization from the fourth to the eleventh centuries; *The Cambridge Medieval History* (vol. vii, Cambridge, Eng.), a symposium dealing mainly with the fourteenth century, planned by the late J. B. Bury and edited by the late J. R. Tanner, C. W. Previté-Orton and Z. N. Brooke; J. W. Thompson, *An Economic and Social History of Europe in the Later Middle Ages, 1300-1530* (New York), a continuation of *An Economic and Social History of the Middle Ages*; C. H. McIlwain, *The Growth of Political Thought in the West* (ib.), a survey extending from the fifth century B.C. in Greece to the end of the Middle Ages; M. B. Barr, *Studies in Social and Legal Theories* (Philadelphia), a presentation of the development of legal theories through early and medieval philosophical history; Philip Gosse, *The History of Piracy* (London and New York), a study of the conditions responsible for piracy, its various rises and declines; M. Magre, *Magicians, Seers and Mystics* (New York), a translation from the French of an account of the diffusion of Oriental mysticism through the Albigenses, Rosicrucianism, etc.; M. von Boehn, *Dolls and Puppets* (Philadelphia), a translation from the German of a history of dolls and puppets from prehistoric days to modern times; S. McKechnie, *Popular Entertainments Through the Ages* (New York), a narrative of the rise of minstrels, fairs, pantomime, etc.; E. C. May, *The Circus: From Rome to Ringling* (ib.), a history beginning with Pompeii; T. Komisarjevsky, *The Costume of the Theatre* (ib.), the story of theatrical costume from the earliest times; M. von Boehn, *Modes and Manners* (vol. i, Philadelphia), a translation from the German of the first volume of a series of four, describing fashions and social manners from the decline of the ancient world to the Renaissance; F. M. Kelly and R. Schwabe, *A Short History of Costume and Armour, 1066-1800* (New York), with stress on England; *Boutell's Heraldry* (ib.), revised by V. Wheeler-Holohan; J. C. Myers, *Wrestling from Antiquity to Date* (St. Louis, Mo.), a history of the sport, with an analysis of its various aspects; M. D. Whitman, *Tennis: Origins and Mysteries* (New York), a history of the game, with a historical bibliography by R. W. Henderson; F. P. Chambers, *The History of Taste* (ib.), outlining the major revolutions of taste and criticism, beginning with the Middle Ages and with special emphasis on taste in England; Ethel Peyser and Marion Bauer, *Music Through the Ages* (ib.), containing the salient points in its history; Phyllis Ackerman, *Tapstry, the Mirror of Civi-*

lization (*ib.*), profusely illustrated; E. Corti, *A History of Smoking* (*ib.*); P. Bloomfield, *Imaginary Worlds* (London), an account of Utopias from Plato to Aldous Huxley; E. Thompson Seton, *Famous Animal Stories* (New York), an anthology extending from ancient myth and fable to modern accounts; G. M. Richards, *The Fairy Dictionary* (*ib.*), covering many nations; G. H. Gerould, *The Ballad of Tradition* (*ib.*), a study of the origin and development of ballad literature, with selections from American ballads; Ann H. Swenson, *Proverbs and Proverbial Expressions* (Florence, Italy), a dictionary of proverbs in English, French, and Italian; A. Taylor, *The Proverb* (Cambridge, Mass.), an investigation of its origin, history, and style; W. P. Jones, *The Pastourelle* (*ib.*), researches into the origins and traditions of a lyric type that has been cultivated in France, England, and America from the pre-Renaissance to the present day; and Roberta F. Brinkley, *Arthurian Legend in the Seventeenth Century* (Baltimore), being No. 3 of the Johns Hopkins monographs in literary history.

AFRICAN. Exploration and archaeological investigations in Africa—which are throwing much light on the languages spoken there both in ancient and modern times—were continued actively during the year notwithstanding the economic depression. Consequently within the next few years we may expect great progress to be made in the study of the comparative philology of the African languages as well as of the cultures which these languages represent. Important works devoted to this domain of research include the following: R. L. Moodie, *Roentgenologic Studies of Egyptian and Peruvian Mummies* (Chicago), a study of pathological conditions as revealed in ancient mummies by roentgenograms, issued by the Field Museum of Natural History; A. W. Shorter, *An Introduction to Egyptian Religion* (New York), an account covering the eighteenth dynasty; *Ten Coptic Legal Texts* (*ib.*), copies of the texts of the seventh and eighth centuries, A.D., with translations and notes, published by the Metropolitan Museum of Art; Jeanne d'Ucel, *Berber Art* (Norman, Okla.), an introduction, discussing North African crafts and designs; James Baikie, *Egyptian Antiquities in the Nile Valley* (New York), a descriptive handbook; H. G. E. White, *The Monasteries of the Wadi 'N Natrun, Part II: The History of the Monasteries of Nitria and of Scetis* (*ib.*), a history of these Egyptian monasteries from the Roman period (315–451 A.D.) to the nineteenth century, published by the Metropolitan Museum of Art; R. S. Rattray, *The Tribes of the Ashanti Hinterland* (*ib.*, 2 vols.), a sociological investigation of the inhabitants of the Northern Territories of the Gold Coast, including a linguistic survey with a chapter by D. Westermann; E. R. Hardy, Jr., *The Large Estates of Byzantine Egypt* (*ib.*), a study of social conditions in Egypt in the sixth century, A.D., and their significance in developments of the medieval period; Col. H. M. Hole, *Black Majesty* (London), tracing the careers of three African rulers—Khamia, Lobengula, and Lewanika—who strove in various ways to meet the civilization they found gradually encompassing them; and Dorothea Fairbridge, *Historic Farms of South Africa* (New York), a study of agricultural conditions in South Africa during the seventeenth and eighteenth centuries.

Since the legendary home of the Gypsies is Africa, we may be permitted to include studies on them here, especially in view of the fact that their language now consists of borrowings from many languages and cannot be definitely identified with any one group of languages. These studies include: J. Sampsoneste, *Romane Gilla* (New York), consisting of poems in Romany, with English translations; Helen C. Crew, *The Showl with the Silver Bells* (*ib.*), the story of a Gypsy clan in England in Shakespeare's time; and Irving Brown, *Romany Road* (*ib.*), adventures among the Gypsies related by an authority on the subject.

CHINA AND JAPAN. The Sino-Japanese conflict in Manchuria and elsewhere has let loose a veritable avalanche of works, both neutral and partisan, which attempt to clarify the cultural and political conditions that obtain in both countries. Whereas present political animosities are of more interest to the student of foreign affairs, cultural, historical, and literary works fall within the domain of philology in the broad sense of the word, since they enable one to arrive at a better understanding of the attitude of mind and customs which have been mainly contributory to the development of the modern Chinese and Japanese languages. Among such works are *Asiatic Mythologies* (New York), by J. Hackin and others, which contains a detailed description and explanation of the mythologies of the greater nations of Asia; *The Vision of Asia* (London), by L. Cranmer-Byng, editor of the "Wisdom of the East" series, which compares the ideals of the West with the ancient Chinese view of life; G. K. Zipf, *Selected Studies of the Principle of Relative Frequency in Language* (Cambridge, Mass.), consisting of the results of an investigation undertaken to determine whether or not the modern vernacular of Peiping agrees with Indo-European tongues in substantiating the principle of relative frequency; R. D. Jameson, *Three Lectures on Chinese Folklore* (Peiping, China), a study of comparative folklore and its problems as illustrated by Chinese examples; L. S. Hsu, *The Political Philosophy of Confucianism* (New York), an interpretation of the social and political ideas of the great philosopher as well as of his forerunners and his early disciples; *The Wisdom of Confucius* (Boston), a collection of the ethical sayings of the master and his disciples, edited by M. M. Dawson, one of America's outstanding authorities on Confucianism; J. K. Shryock, *The Origin and Development of the State Cult of Confucius* (New York), an investigation of Confucianism as a school of sociological and philosophic thought; *Mencius* (*ib.*), a translation of the sayings of the Chinese philosopher made by L. A. Lyall; Nancy L. Swann, *Pan Chao: The Foremost Woman Scholar of China* (*ib.*), a biography of a scholar of the first century A.D., with translations of some of her work; G. F. Hudson, *Europe and China* (London), a scholarly historical survey of the influences of Europe's Hellenic culture upon China and those of China's civilization upon Europe; M. A. Roland-Cabaton, *Index de la Bibliotheca indosinica de Henri Cordier* (Paris), a publication of the École Française d'Extrême Orient; *Chinese Art* (New York), selected articles from the new 14th edition of the *Encyclopædia Britannica*; C. H. Peake, *Nationalism and Education in Modern China* (*ib.*), an account of the relations of nationalism with the changing

educational system from 1860 to 1929; Admiral Ts'ai Ting-Kan, *Chinese Poems in English Rhyme* (Chicago), a University of Chicago publication containing poems from the T'ang dynasty reproduced in the Chinese text with English translation; E. D. Harvey, *The Mind of China* (New Haven, Conn.), an effort at clarification; E. T. Williams, *China, Yesterday and Today* (New York), a fifth edition, revised; C. A. Clark, *Religions of Old Korea* (ib.), a series of lectures, originally delivered at Princeton University; O. Lattimore, *Manchuria, Cradle of Conflict* (ib.), a study of the movements of peoples and the conflict of cultures on the northeastern frontiers of China; P. T. Etherton and H. R. Tiltman, *Manchuria: The Cockpit of Asia* (ib.), an analysis of the underlying causes of the present crisis; F. H. Davis, *Myths and Legends of Japan* (ib.), a survey; G. B. Sansom, *Japan: A Short Cultural History* (ib.), a history from the earliest times emphasizing the significance of the economic, religious and social institutions of Japan; *The Western Influences in Modern Japan* (Chicago), a series of papers on cultural relations, by I. Nitobe and others; Lady Murasaki, *The Lady of the Boat* (Boston), A. Waley's translation of the fifth part of *The Tale of Genji*, by a famous Japanese woman of the 10th century; B. H. Chamberlain, *Translation of Ko-Ji-Ki* (Kobe, Japan), a second edition; and W. Axling, *Kagawa* (N. Y.), a biography of the Japanese religious leader.

INDO-IRANIAN AND TIBETAN. India's steady hold on the attention of the educated public of Europe and America continued during the year without any indication of decline. Of course, many explanations may be given for what otherwise might appear a most perplexing problem. In the first place, if Greece developed the methods of philosophical thought, India remains as the creator of its content. Linguistically speaking, India has also had the good fortune of having been interpreted to the West by a large group of extraordinarily gifted scholars. Finally that mysterious country is the storehouse of a great variety of customs, religions, cultural conflicts, and artistic tendencies—all of which render it most fascinating to the modern mind. The student of India's philology cannot, therefore, neglect all these factors, for the languages of India represent different stages or tendencies in the course of its history, and the study of semantics, so vitally important to an understanding of Hindu philosophy, is perforce inherently bound up in all of them. A work revealing the great progress that has been made in recent years, especially in Sanskrit semantics, is the *Dictionnaire sanscrit-français*, edited by N. Stehoupak, L. Nitti, and L. Renou, of which Parts I, II, and III appeared (Paris).

Other important contributions include: S. V. Venkateswara, *Indian Culture Through the Ages* (vol. ii, N. Y.), a history dealing with public life, political institutions and development of thought in India; *The Song of the Lord* (ib.), a new translation of the great epic poem *Bhagavad-gita*, with introduction and notes, by E. J. Thomas; *Self-Realization of Noble Wisdom* (Thetford, Vt.), a version of a Buddhist scripture, based upon Professor Suzuki's translation of the *Lankavatara Sutra*, edited by D. Goddard; L. B. Coxe, *The Seventh Ogre* (Cortland, N. Y.), an adaptation of an East Indian folktale; D. G. Mukerji, *The Master Monkey* (N. Y.), contain-

ing the legendary adventures of the baboon, who is the god of Hindu athletics; *The Oxford Book of Bengali Verse* (Oxford, Eng.), printed in the vernacular; Sir George MacMunn, *The Religions and Hidden Cults of India* (N. Y.), studies in the nature and history of Indian religions; J. Abbott, *The Keys of Power* (ib.), researches in the beliefs and ritual of India; R. Otto, *Mysticism, East and West* (ib.), a comparative analysis of its nature; H. P. Blavatsky, *The Key to Theosophy* (ib.), a reprint of the original edition of 1889; *A Buddhist Bible* (Thetford, Vt.), a translation, with interpretation, of the favorite scriptures of the Zen sect, containing also a brief history of early Zen Buddhism, edited by D. Goddard; L. Binyon, *Akbar* (N. Y.), a short biography of the last of the Moguls (1542-1605), who reigned as Emperor of India from 1556 to his death; H. Lamb, *Nur Mahal* (ib.), the story of a Persian woman who became the uncrowned head of the Mogul empire at the height of its glory; G. S. Ghurye, *Caste and Race in India* (ib.), a history of the institution of caste; L. S. S. O'Malley, *Indian Caste Customs* (ib.), an account of the caste system, with its customs and tendencies; Frieda Hauswirth, *Purdah: The Status of Indian Women* (ib.), a study of the condition of women in India from the Vedic period to the present day; Sir John Marriott, *The English in India* (Oxford, Eng.), a record which sets contemporary problems in their historical perspective; the Maharaja of Burdwan, *The Indian Horizon* (London), present-day India as viewed by a Moslem prince; and Dr. R. G. Shani, *Shakespeare Through Eastern Eyes* (ib.), an investigation offering striking contrasts between the mind of the Occident and that of the Orient.

Tibet is represented by the following studies: C. Bell, *The Religion of Tibet* (N. Y.), a history of Buddhism in Tibet; Alexandra David-Neel, *Magic and Mystery in Tibet* (ib.), a record of the author's experiences among the Lamas of Tibet; and D. MacDonald, *Twenty Years in Tibet* (Philadelphia), a story of personal experiences in the forbidden lands.

On Persian we have the splendid contribution of Prof. A. V. Williams Jackson, *Researches in Manichaeism* (N. Y.). The volume consists of thirteen studies devoted to Manichaeism, the first and most important of the two schismatic movements in Zoroastrianism (the other, Mazdakism, coming much later), which arose early in the third century A.D. The revival of interest in this religion is due to the discovery, in the Oasis of Turfan in Eastern Turkistan, from 1902 to 1907, of many fragments of Mani's long-lost Bible, written in Middle Persian (Pahlavi), Soghdian, Old Turkish, and Chinese. Professor Jackson studies the Pahlavi fragments and adds thereto various monographs interpreting the text.

ARCHAEOLOGY, ANTHROPOLOGY, AND BIBLIOGRAPHY. A few works dealing with these subjects, which have special interest for the student of philology, may be noted here.\* Thus, R. G. Collingwood, *Roman Britain* (N. Y.), consisting of an expansion of an archaeological study first published in 1923; D. H. Lawrence, *Etruscan Places* (ib.), a series of essays on Etruscan archaeology, art, etc.; Franz Boas, *Anthropology and Modern*

\* For studies relating especially to American archaeology and anthropology, the reader is referred to the subsection entitled South American, under the heading of SPANISH.

*Life* (ib.), a revised edition; A. B. Lewis, *Ethnology of Melanesia* (Chicago), a publication issued by the Field Museum of Natural History; R. F. Fortune, *Sorcerers of Dobu* (N. Y.), an account of the influences of sorcery upon the lives of the members of a Melanesian tribe; and J. H. Driberg, *At Home with the Savage* (ib.), a presentation of the general aspects of anthropology for the non-technical reader.

A very important contribution was made to bibliography in *The Cambridge Bibliography of English Literature* (Cambridge, Eng.), which is announced as a complete recension and amplification of the bibliographies accompanying *The Cambridge History of English Literature*. Other useful works are: H. L. Johnson, *Gutenberg and the Book of Books* (N. Y.), a historical monograph, with bibliographical notes, reproductions of specimen pages, and a listing of known copies of the Gutenberg Bible; *Robert Granjon: Sixteenth-Century Type Founder and Printer* (Brooklyn, N. Y.), an account of the life and work of one of the greatest figures in early printing in France, issued by the Mergenthaler Linotype Co.; B. H. Streeter, *The Chained Library* (N. Y.), a survey of four centuries in the development of the English library; C. R. Gillett, *Burned Books* (2 vols., ib.), a study of the censorship of literature in England from the 16th to the 19th century; W. B. Hunt and E. C. Hunt, *Fifty Alphabets* (Milwaukee, Wis.), a record of fifty styles of lettering, with explanatory notes; *The Harkness Collection in the Library of Congress* (Washington, D. C.), a calendar of Spanish MSS. concerning Peru, 1531-1651, presented by Edward S. Harkness in 1929 to the Congressional Library; C. Janin, *Essai sur la Bibliographie contemporaine de 1900 à 1928* (2 vols., Paris); R. Mahé *Bibliographie des Livres de Luze* (3 vols., ib.); P. Neveux and E. Dacier, *Les Richesses des Bibliothèques provinciales de France* (ib.), issued by the Bibliothèque Nationale and sold at the prohibitive price of \$80; B. M. Fullerton, *Selective Bibliography of American Literature, 1775-1900* (N. Y.), a guide to outstanding literary achievements; W. M. Randall, *The College Library* (Chicago), a descriptive account of the libraries in four-year liberal arts colleges in the United States, issued by the American Library Association; *Index to the Publications of the Bibliographical Society of America, 1899-1931* (ib.), including an index of the publications of the Bibliographical Society of Chicago; *The Papers of the Bibliographical Society of America* (ib.), consisting of parts 1 and 2 of volume 26 for 1932; and E. Lewin, *A New Bibliography of Canada and Its Provinces, The West Indies and the Colonial History of America* (London), issued by the Royal Empire Society.

CELTIC. It may well be said that Western European archaeology, with the exception, of course, of Greece and Rome, is basically Celtic. This statement is explained by the fact that, probably, considerably more than a thousand years before the beginning of the Christian era, the Celts began to migrate from their primitive home which Camille Jullian locates along the northern coasts of Germany and the western coasts of Denmark. About the 5th century B.C. the so-called Celtic Empire embraced almost all the territory between the Dniester River in Russia, on the banks of which the Celts constructed their easternmost city, Carrodunum, and the shores of Portugal in the west, and between the northern coasts of Scotland and

the very gates of Rome itself—for the modern Sinigaglia in Italy reveals their presence that far south. Consequently, archæologists, working in various parts of this vast territory, are continually uncovering evidence of a Celtic character. The discoveries made by them since the beginning of the 20th century have so completely revolutionized our knowledge of the primitive Gaulish language that in 1920 the late Georges Dottin was able to issue a volume of some 360 pages entitled *La Langue Gauloise*. If such a work had been attempted in 1880 it would not have been longer than some 15 or 20 pages; while if it were rewritten to-day, it would probably be twice its present length. And now that the work of archæological exploration is being transformed into a splendidly organized system, such as is evidenced by the Harvard University Expedition to Ireland during the past summer, we may expect even greater results and a more rapid development of the study of Celtic philology in the near future. It is not surprising, therefore, that such a large number of scholars of Central Europe are "seized with the Celtic madness" and are now trying to coördinate and interpret, both archæologically and linguistically, the vast amount of data furnished by these excavations. A masterly work of this kind is the late Henri Hubert's *Les Celtes et l'Expansion celtique jusqu'à l'Époque de la Tène* (Paris). After analyzing the already highly developed civilization of the Celts previous to the epoch marked by the archæological discoveries made at Tène, Switzerland—for the early Greeks and Romans spoke of them already as "des barbares élus"—the author discusses the Celtic language in three brilliant chapters, and then explains the cultural significance of the archæological discoveries. The conclusions to which he is forced bear out the suggestion made above regarding the origin of French in our discussion of Professor Jones's *Script of Cologne*, for he states (p. 19) succinctly: "Mais le français est du latin prononcé par des Celtes et mis au service d'esprits celtiques." But he goes even farther and makes a revolutionary pronouncement, which completely upsets a cherished traditional legend of the French that they are the cultural descendants of ancient Greece in modern times, when he says: "Bref, la civilisation des Celtes est au fond de la nôtre, comme la nation que commençaient à former les Celtes de Gaule est au fond de notre nation" (pp. 19-20). This great work will mark, no doubt, an important milestone in our course toward the reconstruction of the Gaulish language and a re-evaluation of the vast influence of the early Celts upon the modern cultures of Europe.

In America, the American Irish Historical Society, which has come to the fore in recent years as a worthy rival of our various Scandinavian historical societies, continued its splendid work. Unfortunately few Americans of non-Irish extraction are aware of the fact that this Society is now one of the most important historical societies in America, that it owns extensive and well-endowed quarters, which house a valuable historical collection made up principally of donations from Dr. J. T. Nagle, W. C. Durant, J. I. C. Clarke, J. D. Crimmins, and Dr. Thos. A. Emmet, that it publishes an annual volume of *Proceedings*, a quarterly *Recorder*, besides many special papers and works, and that it boasts of a membership of nearly 5000 persons. Our fellow-citizens of Irish descent deserve, therefore, com-

mendation for the steady encouragement they have given this worthy organization during the past three trying years.

Contributions to the Irish branch of Celtic philology include S. MacCall, *And So Began the Irish Nation* (N. Y.), a history of the origin and development of Ireland from prehistoric times to the Christian era; Canon J. R. Ardill, *Saint Patrick* (London), a biography that attempts to prove that Ireland's famous saint lived in the second century, and not in the fifth; Dr. A. Mahr, *Christian Art in Ancient Ireland* (2 vols., Dublin), a valuable work issued by the Publications Office of the Irish Free State; E. Wenhams, *Domestic Silver of Great Britain and Ireland* (N. Y.), a survey of silverwork from 500 A.D. to the 19th century; M. L. Sjoestedt, *Phonétique d'un Parler irlandais de Kerry* (Paris), the fourth volume of the "Collection de Documents Linguistiques" series; *A Treasury of Irish Poetry* (ib.), edited by S. A. Brooke and T. W. Rolleston, a revised and enlarged collection; A. Deering, *Sir Samuel Ferguson, Poet and Antiquarian* (Philadelphia), a biographical and critical study, issued by the University of Pennsylvania; R. Flower, *Poems and Translations* (N. Y.), a collection of poems including translations from the Irish; W. A. Adams, *Ireland and Irish Emigration to the New World from 1815 to the Famine* (New Haven, Conn.), a history of Irish emigration to America and its influence upon our culture; and the Rev. J. J. Williams, *The "Black Irish" of Jamaica* (N. Y.), a study of the origins of Irish surnames among the Negroes of Jamaica.

Scottish and Welsh are represented by W. A. Craigie, *A Dictionary of the Older Scottish Tongue* (parts i and ii, Chicago), a dictionary of words in use from the 12th century to the end of the 17th, going as far as the word Berising; J. Baikie, *Things Seen in the Scottish Highlands* (N. Y.), a description of noteworthy sites; Prof. G. M. Trevelyan, *Ramillies and the Union with Scotland* (London), a history of the period of Queen Anne; and H. V. Morton, *In Search of Wales* (ib.), called by Lloyd George the best travel book on Wales that he has ever read.

GERMANIC. That Germany is losing her leadership in philology was attributed in our survey of last year (1931), on the one hand, to her unsettled political and financial conditions, which render publication difficult, and, on the other, to the large following among the younger generation, that has been won over by the brilliant, though unsound, linguistic theories proposed by Karl Vossler and his school. This condition was aggravated during the year 1932, with the result that some of the oldest philological reviews are going through a veritable struggle for existence. Finally, the opportunities offered to students in Germany by the study of pure philology are far from being as attractive as in the pre-War days.

Max von Boehn's *Modes and Manners* (vol. i, Philadelphia), translated by Joan Joshua, gives an unattractive, as well as unsympathetic, picture of German life from the decline of the ancient world to the Renaissance. An important linguistic fact, however, brought out by him is that whereas the Germanic dialects during this period were understood only by a few thousand persons, Latin, the language of the Church, was understood by millions of inhabitants of the Western Empire, especially around the Mediterranean. The Germans readily learned Latin "be-

cause," he adds, "they experienced no sensation of loss in renouncing their mother tongue."

Other contributions to the study of Germanic philology include H. Hirt, *Handbuch des Urgermanischen* (Heidelberg), of which the first part issued is sub-titled *Laut- und Akzentlehre*; V. Grönbech, *The Culture of the Teutons* (2 vols., Copenhagen); G. Stumpel, *Name und Nationalität der Germanen* (Leipzig), consisting of a short reexamination of the observations of Poseidonios, Cæsar and Tacitus; W. Wissmann, *Nomina postverbalia in den altgermanischen Sprachen nebst einer Voruntersuchung über deverbative o-Verba* (part i, Göttingen); M. Gottschald, *Deutsche Namenkunde: Unsere Familiennamen nach ihrer Entstehung und Bedeutung* (Munich); K. Bohn, *Untersuchungen zu Personennamen der Werdener Urbare (etwa bis 1150)* (Greifswald, 1931); H. Brinkmann, *Sprachwandel und Sprachbewegungen in althochdeutschen Zeit* (Jena, 1931); J. Mansion, *Althochdeutsches Lesebuch für Anfänger* (2d ed., Heidelberg); E. Hermann, *Lautgesetz und Analogie* (Berlin, 1931); K. Luick, *Deutsche Lautlehre* (3d ed., Leipzig); H. Röhl and F. Norman, *Wörterbuch zur deutschen Literatur* (ib., 1931); A. Schirmer, *Beiträge zur nordthüringischen Dialektgeographie* (Marburg), being the 26th Heft in the "Deutsche Dialektgeographie" Series; E. Kuntze, *Studien zur Mundart der Stadt Saarbrücken (Lautlehre)* (ib.), being Heft 31 of the same series; E. Rosendahl, *Niedersächsische Literaturgeschichte* (Leipzig); G. Ehrismann, *Geschichte der deutschen Literatur bis zum Ausgang des Mittelalters* (Munich), a second edition of the first volume; W. Rose, *Men, Myths and Movements in German Literature* (N. Y.); *Germany: A Companion to German Studies* (ib.), a symposium on German history and culture, edited by J. Bithell; Goethe, *Faust* (parts i and ii, ib.), translated by G. M. Pries as a contribution to the Goethe centenary; and K. Wichmann, *Pocket Dictionary of the German and English Languages* (ib.).

The small Scandinavian countries have been almost alone, during the past few years, in upholding the highest standards of philological research, if one may be permitted to judge from the large proportion—considering the small number of their universities—and high quality of the studies devoted to their language and literature that have recently appeared. In fact, it seems as if Germany is passing the torch of philology on to her smaller neighbors. Thus, among the numerous works devoted to this field we may note the following as most important: T. Knudsen and A. Sommervelt, *Norsk Riksmåls-Ordbok* (Oslo), of which the fourth fasciculus appeared; E. A. Kock and R. Meissner, *Skaldisches Lesebuch* (Halle, 1931), of which the second part was issued; H. R. Holand, *The Kensington Stone* (Ephraim, Wis.), a study of the evidences of Norwegian exploration in pre-Columbian America, which the London *Times* considered as "undeniably impressive and deserving of serious consideration"; Snorre Sturlason, *Heimskringla: or the Lives of the Norse Kings* (N. Y.), edited by E. Monsen and translated into English with the assistance of A. H. Smith; *Hrafnkels Saga Freysgota* (Cambridge, Mass.), edited by F. S. Cawley; H. Koht, *The Old Norse Sagas* (London), a publication of the American-Scandinavian Foundation; F. R. Sterrett, *Years of Achievement* (Philadelphia), an account of

Norse immigrants in Minnesota in the '60's; *Norwegian-American Studies and Papers* (vol. vi; Northfield, Minn.), a publication of the Norwegian-American Historical Association, devoted to the early days of Norwegian immigrants in America; G. M. Stephenson, *The Religious Aspects of Swedish Immigration* (Minneapolis), an account of the community and religious life of the Swedish colonists in America, issued by the University of Minnesota; Christina S. von H. Bogoslovsky, *The Educational Crisis in Sweden* (N. Y.), a survey of present educational problems in Sweden, published by Columbia University; C. Holland, *Denmark* (ib.); and *Education in Denmark* (ib.), edited by A. Boje, E. J. Borup and H. Ruetebeck, containing a detailed study of the educational system of modern Denmark.

SLAVIC. A question that often presents itself to one's mind is: Why is Russian—the language of more than 165,000,000 people—so little studied in the United States? The answer thereto may be found in the following reasons: First, until the advent of the Soviet Republic, there was no standardized language in Russia, but, on the contrary, a number of dialects of which the most important were Great Britain, White Russian, and Little Russian; second, the great difficulty in learning the Russian alphabet and grammar as well as in distinguishing the various *nuances* in the pronunciation of Russian words; third, that Russian scholarly productions were heretofore published mainly in French and German; and, finally, a general lack of interest in Russian literature, with the exception of a few outstanding authors of the 19th and 20th centuries, most of whose works were accessible in translations either into English, French, or German. As the Soviet Government is now beginning to direct the collective efforts of scholars toward the study of the languages, history, literature, folklore and customs of the Slavic people, we may soon expect the development of a real Slavic scholarship on this side of the Atlantic.

Balto-Slavic was represented by R. Exblom, *Zur Entstehung und Entwicklung der slavobaltischen und der nordischen Akzentarten* (Leipzig, 1931). Other studies include H. von Eckardt, *Russia* (N. Y.), a history translated from the German; D. S. Mirsky, *Russia* (ib.), a social and cultural history, edited by E. G. Seligman; N. K. Chadwick, *Russian Heroic Poetry* (ib.), translations, accompanied by introduction and explanatory notes, of selected poems from the 10th to the 19th centuries; G. T. Robinson, *Rural Russia under the Old Régime* (ib.), a study of the landlord-peasant life; K. Bercovici, *The Incredible Balkans* (ib.), a history of the Balkan countries and their influence upon the rest of Europe; M. Haiman, *Poland and the American Revolutionary War* (Chicago), a memorial account of the Polish officers who fought under Washington; R. J. Kerner, *Bohemia in the Eighteenth Century* (N. Y.), a political, economic, and social history, with emphasis upon the reign of Leopold II, 1790-92; and *Yugoslav Popular Ballads* (Cambridge, Eng.), an anthology selected by Dr. D. Subotic, Reader in Serbo-Croat at the University of London.

ENGLISH. It has been pointed out in these columns during the past few years that English is rapidly becoming the world's international language. But this rôle, however enviable it may appear, involves certain responsibilities, among which clarity of pronunciation may be cited.

This quality, however, is now largely lacking, especially among the British English, not even excluding their actors and actresses, with the result that we are becoming more and more incomprehensible to foreigners. The explanation for this unpleasant fact must be attributed to the violent stress given by the English to the accented syllables of words, rendering it necessary either to slur or to drop entirely the unaccented syllables, particularly those in close proximity to the accented ones. If you ask almost any Britisher where this disagreeable pronunciation arose, he will reply at once: Oxford. And heretofore, we may add, Oxford has been somewhat proud of having thus influenced the course of English speech, notwithstanding the protests of purists. Within the past year or two, however, these protests have been multiplied, with the consequence that the galled jade is now wincing, for Oxford declines to recognize its child. Thus, a loyal Oxonian, Dr. R. W. Chapman of the Oxford University Press now issuing various dictionaries, upholds "standard English" in his *Oxford English* (Oxford), and even defends it against attacks—which, be it added, are supposed to emanate from America—directed against "a certain debased, effete, and inaudible form of speech" that, according to him, Americans—the British critics are passed over in silence—suppose to be cultivated particularly at Oxford. "That's that!"—if colloquial American is not out of place in discussing so sacred a subject. (See *The Atlantic Monthly* Vol. 147, No. 2, pp. 145-151.)

Among the contributions to Anglo-Saxon we may note J. R. C. Hall, *Concise Anglo-Saxon Dictionary* (Cambridge, Eng., 1931), which appears in a third edition; F. Holthausen, *Altenglisches etymologisches Wörterbuch* (Heidelberg), of which the first Lieferung was issued; R. Girvan, *Angelsaksisch Handboek* (Haarlem, 1931); J. Hoops, *Beowulfstudien* (Heidelberg); *Beowulf* (N. Y.), translated into English verse by W. E. Leonard; and *The Mercell Book* (ib.), edited by Prof. G. P. Krapp and published in "The Anglo-Saxon Poetic Records" series.

Old and Middle English are represented by S. O. Andrew, *The Old English Alliterative Measure* (London, 1931); R. W. Chambers and M. Daunt, *The Book of London English, 1384-1425* (Oxford, 1931); G. R. Owst, *Literature and Pulpit in Medieval England* (Cambridge, Eng.), which reveals the debt of early English literature to the medieval homilists; Lucie Delarue-Mardrus, *William the Conqueror* (N. Y.), an account of his life (1028-87), with particular emphasis on his psychology, translated from the French; *English Lyrics of the XIIIth Century* (ib.), an anthology, edited by Prof. Carleton Brown; Sister Mary Byrne, *The Tradition of the Nun in Medieval England* (Washington, D. C.), a doctoral dissertation presented at the Catholic University; Dorothy M. Stuart, *Men and Women of Plantagenet England* (ib.), a survey of life in the 13th and 14th centuries; G. K. Chesterton, *Chaucer* (ib.), a biographical and critical study; Germaine Dempster, *Dramatic Irony in Chaucer* (Stanford University, Calif.), being No. 3 of vol. iv of the Stanford University Series of Language and Literature; G. G. Fox, *The Medieval Sciences in the Works of John Gower* (Princeton, N. J.), a Princeton University doctoral dissertation on the medieval poet (1325-1408); Alice Beardwood, *Alien Merchants in England* (Cambridge, Mass.), a study of their legal and eco-

monic condition, published by the Medieval Academy of America; and H. D. Sedgwick, *The Life of Edward the Black Prince, 1330-1375* (Indianapolis, Ind.), a biographical account by the author of *Henry of Navarre*.

Works relating to the Renaissance include E. K. Chambers, *The Oxford Book of Sixteenth Century Verse* (N. Y.), an anthology; E. B. Reed, *Christmas Carols Printed in the Sixteenth Century* (Cambridge, Mass.), a facsimile reproduction of all the known collections printed during the period; Prof. Edwin Greenlaw, *Studies in Spenser's Historical Allegory* (Baltimore), a posthumous collection of four papers; C. B. Millican, *Spenser and the Table Round* (Cambridge, Mass.), a study of Spenser's use of the Arthurian Legend; *The Michigan Facsimile Series* (Ann Arbor), consisting of John Ghesel's *The Rule of Health* (Oxford, 1631), Richard Hodges' *A Special Help to Orthographie* (London, 1643), and *The Art of Limning* (London, 1573); and Christopher Goodman, *How Superior Powers Ought to be Obeyed* (N. Y.), a facsimile of the Protestant treatise of 1558, issued by the Columbia University Press for the Facsimile Texts Society.

The year 1932 saw the issue of new editions of the following dictionaries: Funk & Wagnalls *New Standard Dictionary* and *The Practical Standard Dictionary*, edited by Frank H. Vizetelly (N. Y.); Francis Grose, *A Classical Dictionary of the Vulgar Tongue* (N. Y.), a new edition of a well known 18th century work, edited with a biographical and critical essay by Eric Partridge; Prof. H. C. Wyld, *The Universal Dictionary of the English language* (London), whose novel features are the use of two systems of indicating the pronunciation, originated by Dr. Isaac K. Funk in his *New Standard Dictionary*—one for ordinary readers, and the other for students of phonetics—and the attention given to the history of words and their semantics; W. Ripman, *A Pocket Dictionary of English Rhymes* (N. Y.); and C. O. S. Mawson, *The Dictionary Companion* (Garden City, N. Y.). In the field of encyclopedias a new departure was indicated by the publication in 25 volumes of Funk & Wagnalls *New Standard Encyclopedia*, ed. by Vizetelly (N. Y.).

Contributions to the study of grammar, syntax, and style include Frank H. Vizetelly, *How to Use English* (N. Y.), a guide to correct speech and writing; O. Jespersen, *A Modern English Grammar on Historical Principles* (Heidelberg), of which part iv, syntax 3, was issued; E. Krusinska, *Handbook of Present Day English* (3 vols. 5th ed.; Groningen), of which part ii, English Accidence and Syntax, 1, 2, 3, was published; M. H. Wesen, *Words Confused and Misused* (N. Y.), containing distinctions in the use of words; Emma L. Rice, *Handbook of Better Speech* (Kingsport, Tenn.), a reference book; *The Newgate Garland* (London), an anthology of Victorian thieves' songs and canting ballads, edited by W. L. Hanchant; *Dialect Notes* (vol. vi, parts 3 and 4, New Haven, Conn.), edited by M. L. Hanley, and containing the late R. H. Thornton's *An American Glossary*, and Prof. E. E. Hale, Jr., *Geographical Terms in the Far West*; *Folk-Say IV: The Land is Ours* (Norman, Okla.), the fourth annual volume of regional prose and verse; *Southwestern Lore* (Dallas, Tex.), no. ix of the Publications of the Texas Folk-Lore Society, edited by J. F. Dobie; F. Applegate, *Native Tales from New Mexico* (N. Y.);

and C. W. Park, *English Applied in Technical Writing* (ib.), a revised edition.

A few general works may be mentioned in concluding this section: Hilaire Belloc, *A History of England* (N. Y.), of which the present volume (iv), deals with "The Transformation of England, 1525-1612"; Prof. D. Bush, *Mythology and the Renaissance Tradition in English Poetry* (Minneapolis, Minn.), tracing the uses of mythology in English non-dramatic poetry from the Middle Ages to the Restoration; B. Brawley, *History of the English Hymn* (N. Y.), a literary, rather than musical, study; L. B. Salomon, *The Devil Take Her* (Philadelphia), a study of the rebellious lover in English poetry; Dr. P. A. Robin, *Animal Lore in English Literature* (London), including facsimiles from early MSS.; H. F. Watson, *The Sailor in English Fiction and Drama* (ib.); *Essays and Studies by Members of the English Association* (Oxford), containing contributions by Dr. R. W. Chapman, Prof. W. L. Renwick, and others; C. Oman, *The Coinage of England* (N. Y.), its history from 400 A.D.; N. Lloyd, *A History of the English House* (ib.), beginning with the Norman Conquest; and C. R. Fay, *The Corn Laws and Social England* (Cambridge, Eng.), a timely monograph.

ROMANCE, GENERAL. *Todd Memorial Volumes* (2 vols., N. Y.), edited by J. D. Fitz-Gerald and Pauline Taylor, contain a collection of philological and literary studies in honor of the late Henry Alfred Todd, Professor of Romance Philology at Columbia University, contributed by some 40 of his colleagues, friends, and former pupils. The third edition of W. Meyer-Lübke, *Romanisches etymologisches Wörterbuch* (Heidelberg) has now gone through its sixth Lieferung. *A Chrestomathy of Vulgar Latin* (Boston), edited by H. F. Muller and Pauline Taylor, is not only a handy selection of texts illustrative of the transformation of Latin into Romance, but contains a further development of Professor Muller's interesting theory of the sudden change from Latin into French. H. Kahane, *Bezeichnungen der Kinnbacke im Galloromanischen* (Jena) is an interesting analysis of all the words relating to the mouth and throat that are to be found in the early Romance languages.

FRENCH. Old French language and literature are studied in K. Voretzsch *Einführung in das Studium der altfranzösischen Sprache* (8th ed., Halle); A. Hilka, *Franz. Philologiestudienplan und Lektürekanon* (Göttingen, 1931); Schwan-Behrens, *Grammatik des Altfranzösischen* (4th ed., Leipzig); H. Omont, *Fabliaux, Dits et Contes en Vers du XIII<sup>e</sup> Siècle* (Paris), a reprint of the most ancient and important corpus of the poetry of the medieval jongleurs, written down at that time; R. Bossuat, *Histoire de la Littérature française* (ib.), of which vol. i deals with the Middle Ages; *Perlesvaus: Le Haut Livre du Graal* (vol. i; Chicago), edited by W. A. Nitze and T. A. Jenkins, a valuable edition of a 13th century French Grail romance found in the Hatton MS. of Oxford, with variants from the Welsh text, and a glossary; E. Philpot, *Trois Farces du Recueil de Londres* (Rennes), a very important and useful selection of farces; C. B. Lewis, *Classical Mythology and Arthurian Romance* (London), supplying the sources of the greatest of medieval poets, Chrestien de Troyes; Jouham de la Chapele de Blois, *Le Conte dou Barril* (New Haven, Conn.), a critical edition of a 13th century poem by R. C. Bates; M. Pelan, *L'Influence*

du "Brut" de Wace sur les Romanciers de l'Époque (Paris); *Gligois* (Cambridge, Mass.), a French Arthurian romance of the 13th century, edited, with an introduction, by C. H. Livingston; and the following excellent publications of the Institute of French Studies (N. Y.), viz., G. L. Trager, *The Use of the Latin Demonstratives as the Source of the Romance Article*, dealing especially with *Ille* and *Ipse*, up to 600 A.D.; V. L. Dedek-Héry, *The Life of Saint Alexis*, an edition of an Old French poem of the 11th century, with an introduction and a special glossary; *The "Elucidation," A Prologue to the "Conte del Graal,"* edited by A. W. Thompson; and H. L. Humphreys, *A Study of Case Reduction in the Old French Pronoun*, a very valuable contribution, supplying us with carefully prepared statistics drawn from a number of works. The Institute—which, it may be said, is a non-commercial organization—deserves warmest congratulations on its extraordinary activity during these years of depression.

Contributions to the later periods of French literature and philology include E. Garnett, *The Trial of Jeanne d'Arc* (N. Y.); Sister Mary Townner, *La Vision-Christine* (Washington, D. C.), an edition of one of the best prose works of Christine de Pisan, issued by the Catholic University; Rachel A. Taylor, *Renaissance France* (London), a survey; Jehanne d'Orliac, *François I: Prince of the Renaissance* (Philadelphia), a biography, translated from the French; E. Huguet, *Dictionnaire de la Langue française du XVII<sup>e</sup> Siècle* (Paris), of which the 17th and 18th parts of vol. ii were issued; A. B. Gibson, *The Philosophy of Descartes* (N. Y.), a study of Descartes in relation to the philosophical background of his times; P. Chesnel, *History of Cavalier de La Salle* (ib.), a translation from the French of a biography based largely on the explorer's letters and reports; G. Bonno, *Lettres inédites de Suard à Wilkes* (Berkeley, Calif.), a work issued by the University of California; J. H. Pillionel, *Les Graminées* (Cambridge, Mass.); and the following additional studies issued by the Institute of French Studies (N. Y.): Boileau, Racine, Furetière, etc., *Chapelain Décoiffé, a Battle of Parodies*, edited by G. L. van Roosbroeck; Saint-Evremond, *La Comédie des Académistes*, the text of the MS. of 1638, published with an introduction by G. L. van Roosbroeck; A. Iacuzzi, *The European Vogue of Favart*, a study in the diffusion of the "Opéra Comique"; G. L. van Roosbroeck, *Persian Letters before Montesquieu*, a very important contribution to the investigation of a widespread satirical and critical movement of the 18th century; and G. M. Spring, *The Vitalism of Count de Gobineau*.

Dictionaries and special studies include O. Bloch and W. von Wartburg, *Dictionnaire étymologique de la langue française* (Paris), of which the first of the two volumes was published; *Dictionnaire de l'Académie française* (to be in 2 vols., of 4 parts each; ib.), of which part 3 of vol. i (*Des-Fro*) appeared; *Larousse du XX<sup>e</sup> Siècle* (ib.), a six-volume encyclopedic dictionary of which vol. v was issued; J. Guiraud, *Dictionnaire français-anglais* (ib.), unsatisfactory from the English point of view; *Follett's Classic French Dictionary* (Chicago), revised by A. J. Provost, a compact as well as complete dictionary for students; *English-French Comprehensive Technical Dictionary of the Automobile and Allied Industries* (N. Y.), compiled by L. L. Sell,

the first of a series of bilingual dictionaries of the automobile industry; E. Chautard, *La Vie étrange de l'Argot* (Paris); A. van Gennep, *Le Folklore du Dauphiné* (2 vols., Paris); and C. Orsel, *Le Verbe français* (ib.).

A few general works may suffice to close this section: C. Seignobos, *The Evolution of the French People* (N. Y.), a history, translated from the French by Catherine A. Phillips; G. Lanson and P. Tuffrau, *Manuel d'Histoire de la Littérature française* (Boston), a revised edition of a textbook; J. Barzun, *The French Race* (N. Y.), a study of the theories of its origins and the resultant social and political implications, previous to the French Revolution; R. E. Curtius, *The Civilization of France* (ib.), a survey, translated from the German; H. Ormsby, *France: A Regional and Economic Geography* (ib.); and R. K. Gooch, *Regionalism in France* (ib.), a study of the movement toward decentralization in France, undertaken for the University of Virginia Institute for Research in the Social Sciences.

ITALIAN. Philological studies in Italy during the year consisted principally of bibliographical and dialectal studies. Among them we may mention *Navigatio Sancti Brendani, An Old Italian Version* (London), the 10th volume of the Publications of the Philological Society, edited by E. G. R. Waters; B. Apollonio, *Grammatica del dialetto ampezzano* (Trento, 1931); L. A. Ondis, *Phonology of the Cilentan Dialect* (N. Y.), another excellent publication of the Institute of French Studies; R. Barabesi, *Bibliografia della provincia di Grosseto* (Siena, 1931); A. Barolo, *Folklore monferrino* (Turin, 1931); S. Debenedetti, *Testi antichi siciliani* (ib.); and G. Fragale, *Saggio di Toponomastica siciliana* (Naples, 1931).

Other works include D. H. Lawrence, *Etruscan Places* (N. Y.), being a reconstruction of Etruscan civilization; *Love Rimes of Petrarch* (Ithaca, N. Y.), translated by Morris Bishop; *The Memoirs of Benvenuto Cellini* (N. Y.), translated by R. H. H. Cust; F. C. Church, *The Italian Reformers, 1534-1564* (ib.), a study of the religious controversies of that period; J. S. Kenard, *The Italian Theatre* (2 vols., ib.), a history of the Italian theatre from its beginnings to the present day; *The Golden Book of Italian Poetry* (ib.), an anthology extending from St. Francis of Assisi to the present day, edited by the late Lauro De Bosis; A. Castiglioni, *Italian Medicine* (ib.), being vol. vi of the *Clio Medica* series of the history of medicine; H. R. Marraro, *American Opinion on the Unification of Italy, 1846-1861* (ib.), an account of the reaction in America toward Italy's struggle for nationalism; and N. Spinelli, *Dizionario italiano-inglese e inglese-italiano* (Turin, 1931), of which the second—and incidentally, the weaker—part, consisting of 2145 pp. was issued.

CATALAN, PORTUGUESE, PROVENÇAL AND ROMANIAN. The intellectual activity displayed by the Catalans in the year or two of their newly acquired liberty is fully as great as their renowned commercial activity. Among the numerous works dealing with their language and literature which have been issued recently the following are noteworthy: A. Griera, *Gramàtica històrica del Català antio* (Barcelona, 1931); *Diccionari enciclopèdic de la Llengua catalana* (ib.), which has now passed its seventh fasciculus; and F. de B. Moll, *Estudi fonètic y lexicol*

*del Dialecte de Ciutadella* (Palma de Mallorca, 1931).

The ancient University of Coimbra, Alma Mater of Camões and other leading poets and writers, appears now to be the centre of the intellectual life of Portugal, and the brilliant Prof. J. da Providencia Costa is its prophet. *Bíblos*, the splendid review issued by the University under the editorship of the above-mentioned scholar, now ranks among the best in Europe. Other studies coming from Coimbra include V. Taborda, *Alto Trás-os Montes* (Coimbra), a geographical and cultural study; L. S. Machado, *Expedições normandas no ocidente da Hispânia*; etc.

Contributions to Provençal included two most valuable works: First, Frédéric Mistral's splendid *Lou Trésor dóu Felibrigue ou Dictionnaire provençal français embrassant les divers dialectes de la langue d'oc moderne* (2 vols. of 2400 pp., Paris), which may be called the Bible of the modern Félibres; and *Bertran von Born, Lieder* (Halle), edited by C. Appel, an edition of the verse of one of the greatest poets of ancient Provence.

In Rumanian we have C. U. Clark's *United Rumania* (N. Y.), a splendid survey based upon the author's *Greater Rumania*; T. W. Riker, *The Making of Roumania* (ib.), a study of Rumanian nationalism from 1856 to 1866; and J. S. Roucek, *Contemporary Roumania and Her Problems* (Stanford University, Calif.), another study of nationalism.

**SPANISH AND HISPANIC AMERICAN.** The Hispanic Society of America, which through the high quality of its work outstrips all other Spanish organizations the world over, issued two beautiful volumes, viz., G. E. Bonsor, *The Archaeological Sketch-Book of the Roman Necropolis at Carmona* (N. Y., 1931); and the same author's *The Archaeological Expedition Along the Guadalquivir* (ib.). The University of California published the following two interesting studies. L. O. Wright, *The -ra Verb Form in Spain* (Berkeley); and H. Corbató, *Los Misterios del Corpus de Valencia* (ib.), a historical and philological study of these 15th century Mystery plays.

Other works include A. de Pagés y J. Pérez de Hervás, *Diccionario de la Lengua castellana* (5 vols., Barcelona); F. R. Décano, *Filosofía del Verbo* (2d ed., Madrid, 1931); L. Beses, *Diccionario de argot español* (Barcelona, 1931); J. García Sorano, *Vocabulario del Dialecto murciano* (Madrid); H. O. Lyte, *Spanish Literature and Spain in Some of the Leading German Magazines of the Second Half of the Eighteenth Century* (Madison, Wis.), being No. 32 in the University of Wisconsin Studies in Language and Literature; F. Callcott, *When Spain Was Young* (N. Y.), stories of the great Spanish heroes of the period from 700 to 1000 A.D.; and C. R. Post, *A History of Spanish Painting* (Cambridge, Mass.), of which this fourth volume is devoted to the Hispano-Flemish period.

South America is represented by A. Malaret, *Diccionario de Americanismos* (2d ed., San Juan, P. R., 1931), which is reviewed at length in the *Romanic Review* (N. Y., July-Sept., pp. 261-3); W. S. Robertson, *History of the Latin-American Nations* (N. Y.), a second, revised edition; P. A. Means, *The Fall of the Inca Empire and the Spanish Rule in Peru: 1530-1780* (ib.); F. Shay, *Incredible Pizarro* (ib.), a biography; A. E. Elliott, *Paraguay* (ib.), a publication of Teachers College (Columbia University) dealing with cul-

tural, social, and educational conditions; E. Braga and K. G. Gubb, *The Republic of Brazil* (ib.), a survey of the religious situation; Dr. Price-Mars, *Black Gods* (ib.), an account of Haiti by a Haitian; Pura Belpre, *Perez and Martina* (ib.), an English version of an old Puerto Rican folk tale; E. H. Thompson, *People of the Serpent* (Boston), the life and adventures of an archaeologist in Yucatan; F. E. Kelly, *Pedro de Alvarado, Conquistador* (Princeton, N. J.), a biography of a lieutenant of Cortez in Central America; and W. Spratling, *Little Mexico* (N. Y.), descriptions of the daily life of Mexico and its people.

**PHONETICS AND INTERNATIONAL LANGUAGE.** General works include C. E. Parmenter and S. N. Treviño, *A Technique for the Analysis of Pitch in Connected Discourse*, published in the *Archives Néerlandaises de Phonétique Expérimentale* (Leyden, vii), and the same authors' *Vowel Positions as Shown by X-Ray* (Chicago), an arraignment of Prof. G. O. Russell's theories, reprinted from the *Quarterly Journal of Speech*. In English phonetics we have Daniel Jones, *Outline of English Phonetics* (3d ed., N. Y.); G. E. Fuhrken, *Standard English Speech* (Cambridge, Eng.), a compendium of English phonetics for French students; and C. Winkler, *Abnormal Speech* (N. Y.), a study of its cause, prevention, and treatment. French is represented by the excellent work of Prof. J. L. Barker, *French Phonetic Manual* (Salt Lake City, Utah), which is as effective in teaching correct pronunciation to beginners as in teaching how to overcome the bad accent that has once been acquired; Lilius E. Armstrong, *The Phonetics of French* (London), a very practical handbook; Gaudefroy-Demonbynes, *Manuel de phonétique française* (Paris); and H. Kellenberger, *The Influence of Accentuation on French Word Order* (Princeton, N. J.), a very scholarly contribution to the Elliott Monographs series. Professor T. Navarro Tomás has inaugurated in the Centro de Estudios Históricos of Madrid an Archivo de la Palabra, containing records of all famous Spanish scholars and writers.

Of the dozen or more international languages now cultivated in various parts of the world, Interlingua seems to be the only one making steady progress. Hence, the *Key to and Primer of Interlingua* (N. Y.) is most welcome. Mention should also be made of the Rev. E. P. Foster's *English-Ro Dictionary* (Waverly, W. Va.), consisting of English words translated into this proposed world language.

**PHILOSOPHY.** During the year 1932 the centennial of Goethe and the tri-centennial of Spinoza drew much attention to these two philosophical minds so deeply related to one another. Among the books that appeared in celebration of Spinoza and his philosophy are those of A. Wolfson, F. Kettner, A. Vlodemans, and Lewis Browne. The Goethe celebration was, if anything, more widespread and ardent, though the great poet did not receive the praise from philosophers and scientists which would have pleased him most. The world wide depression affected to a noticeable degree the temper of philosophy, and a renewed interest was shown in social and economic ethics, and a new curiosity as to the dénouement of society, man, and the universe. Naturally the startling developments in physical science have added zest to the latter interest.

The most important event in the history of

Ethics for 1932 was undoubtedly the translation of Nicolai Hartmann's *Ethik* which has been called "the greatest work of its kind in modern times." Following closely the basic principles of Max Scheler's *Die Formalismus in der Ethik und die Materiale Wertethik*, Hartmann endeavors to combine the rich insight of Nietzsche into a realm of objective values with the Kantian insistence upon the *a priori*. The ancient precursor of this method, of course, is Aristotle, and its great modern exponent, Scheler. Ethics under this new leadership is at once material, as opposed to formal, objective, *a priori*, and personal. The third volume which in some respects is the most original sets out to prove that freedom is not negative, but positive. Mere indeterminism, such as that of Epicurus, is not freedom, but distressing accident, and neither responsibility nor imputability can be established by it. Each level of existence is completely determined either by its own laws or by those of lower levels. Thus personality is determined by consciousness, consciousness by organic life, organic life by the causal structure of nature (mechanism) and the causal structure of nature by mathematical order, while mathematical order is determined by the ontologically primal and basic relations. But this determination of the higher level by the lower is only partial. So far as the higher level is governed by its material it is completely determined by the lower level, but with respect to form or pattern it has its own laws, laws which are not contrary, but supplementary to the laws of the lower level. Thus, as Hartmann says, the higher level in its distinctive character is never determined by the lower. Organic life could not determine the peculiar nature of consciousness, nor could mathematical structure determine the idiosyncrasies of the organic. Each higher stratum is therefore free as compared with the lower. This is the real nature of freedom. It is the "plus" which a higher pattern adds to the elements on which it is built, elements which are necessary but not sufficient to its existence. Thus freedom is excluded from the indeterminist's world, since higher structures and purposes can only be realized by means of causal completeness of the lower structures. But it would also be excluded from a world completely determined by mechanical causes, or completely determined by teleology. Both factors must work together if freedom, and hence morality, is to be realized. Hartmann's sound discussion approaches at times Wundt's conception of "creative synthesis," the doctrines of the creative evolutionists, and the principles of the *Gestalt* psychologists, but also, of course, goes much beyond them.

Both Hartmann and Scheler have learned a great deal from Aristotle, but at crucial points they sometimes reject his authority. Thus, according to Aristotle, a thing is good if it realizes its definition completely. So, if a man is completely rational, he is good, for virtue, as Kant would say, is binding upon the will of every rational being. This optimistic principle is rejected by Scheler and Hartmann, who insist that "what ought to be" and "what is" are independent categories, and that axiological and ontological principles are distinct. Thus, as Hartmann would say, the self is not determined by moral principles, but by itself, in the sense explained above.

The same point was discussed this year at a symposium of the Aristotelian Society on "Is Goodness a Quality?" H. W. B. Joseph in crit-

icizing G. E. Moore's doctrine that the adjective "good" is indefinable says: "What is peculiar about good is that, if you could define the good or what has goodness (which Moore says can be defined), you would thereby define its good or goodness (which he says is indefinable). That holds for any subject which is good . . . It is true of the goodness of a poem, which is really identical with the poem. . . . If the poet in turn is good, his goodness is identical with him, as this spiritual being . . ." Professor Moore replies that if a poem is identical with its goodness, then "good" could not be applied in the same sense to different poems, and to say that "This poem is good" will be the same as to say that "This poem is this poem." Professor Moore allows his opponents' contention another interpretation. By "This is good" Mr. Joseph may mean "This experience is identical with the special complex of characters which justifies us in saying that it is worth having for its own sake." But this, he says, is also wrong for I can imagine another experience having exactly the same complex of characters, which would be contrary to definition. Mr. Joseph, in his reply, does not meet this particular argument, but strengthens his position by allusions to Aristotle's doctrine that "good" is profoundly diversified in different goods, i.e. different good things. He reiterates his contention (which Professor Moore held to be self contradictory) that the nature of what is good may be distinguishable from, and yet one with, its goodness. At any rate, he says, it is no worse than asserting that a class is both one and many. Prof. A. E. Taylor agrees with Professor Moore that the goodness of the poet or poem is not identical with the poet or poem. Nor is the goodness of either "identical with the complex of characters on the strength of which we call poet or poem good of its kind." What makes the tragedy a tragedy at all is that it "means to be" something which it may conceivably not succeed in being. So far as it succeeds in realizing the typical structure which it "means to be" it is a good tragedy. Since all things are good only in so far as they realize their type or definition, and since none of them does, none of them is identical with its own goodness. But (it seems clear) this is what Mr. Joseph really meant, through he expressed it badly. Professor Taylor does not really agree with Professor Moore but with Mr. Joseph. The controversy between Professor Moore and his two opponents is the conflict of Cambridge, with its background of Realism and Logical Atomism, and Oxford with its Aristotelian and Idealistic prepossessions.

Another contribution to Ethics this year, Oswald Spengler's *Der Mensch und die Technik*, is distinguished by its practical and world-historic emphasis. The technique of modern man, according to Spengler, is a derivative of his will to power, and an analogue to the teeth and claws of the beast of prey. Corresponding to the basic division of beasts of prey and herbivorous animals, there are two ethics and two kinds of men, those who are born to lead and command, and those who are born to follow and obey. For just as some men are born poets, some are born to rule. Following Nietzsche (and in opposition to his master, Schopenhauer), Spengler allows no importance to curiosity as an independent motive to the development of science, though it is clear that theoretical science often develops before technical advantages are discerned by the will

to power. Spengler's argumentative power, detached as it is in this book from his historical erudition, appears rather weak. The beast of prey has no insatiable craving for power, but only a modest desire for a good meal. Thus, that man is a beast of prey, does not imply an insatiable craving on his part. At times Spengler's argument seems to be that the will to power, and the striving of civilized man are both insatiable and that, therefore, they are the same. The logical blunder here suggests that he has forgotten that curiosity and other passions may be as insatiable as the power-passion. No doubt, when the large work of which this book is only an excerpt, appears, it will be explained—how the one beast of prey is able to evolve so many contrasting cultures.

Charles A. Campbell's new book with the paradoxical title *Scepticism and Construction* reaffirms Bradley's destructive arguments against "appearances" and defends his "super-rational Absolute." The main argument is that reason remains unsatisfied until it finds an ultimate ground to mediate the difference of two terms. But such a ground is unobtainable since, if we find a ground *G* between the terms *X* and *Y* we must also find another ground or reason relating *G* with *X* and with *Y*, and so on *ad infinitum*, to the Absolute which is beyond the contradictions of finite reason. This argument was answered, of course, long ago by Bertrand Russell and by Josiah Royce, who pointed out that an infinite regress need not be a vicious regress. The idealist clings to it, however, in spite of all. When the Realist says some terms, *X* and *Y*, can be related without a ground or reason, the Idealist says no. Herewith they distinguish themselves. Thought and Reality cannot agree, Mr. Campbell continues, because there is a difference in kind which renders them incommensurable. And here he falls into the ancient fallacy of skeptics. He cannot know reality because he knows that reality is different in kind from knowledge. Moreover, why should he think that Thought and Reality must be of the same kind if Thought is to be true? To agree with Reality, Thought need not be identical with it, nor of the same kind. Having proved, as he thinks, that ultimate knowledge is impossible, he proceeds to vindicate a modest phenomenal truth and to construct an Ethics and a philosophy of religion which do not at all bear out his contention that skepticism is an aid to philosophical development. Thus, he decides that the moral value of an act cannot depend upon the particular content willed because this is determined by external factors—time, place, and education, while the degree of "energy-will" expended in carrying out the act, since it depends upon the person himself, will be the one deciding factor. Thus a man will be good who carried out his acts with great energy, no matter how cruel, stupid, or selfish those acts may be. This voluntarism of Mr. Campbell, together with his doctrine that "desire for good is desire of one's own good," brings him very close to Nietzsche and Spengler (as discussed above), a company he would not relish. But Scheler and Hartmann, who disprove Ethical voluntarism and the traditional British egoism, and fix their attention on the objective realm of values, reject such doctrines as Mr. Campbell's with fervor.

A book that will prove helpful to students of British philosophy is John Laird's *Hume's Phi-*

*losophy of Human Nature*, a careful commentary and interpretation of all the works of the greatest English philosopher, especially in relation to his philosophical milieu and immediate sources. With regard to the famous doctrine of Causality, Laird's comments are especially sharp and cogent. Thus he shows clearly that, though Hume denies the validity of general rules, he himself makes use of them throughout with only an occasional misgiving, and he hints that the argument by which Hume supports his contention that cause is neither necessary nor uniform assumes, at times, the falsity of this contention. On the other hand he sees nothing wrong with Hume's doctrine that causal necessity cannot be perceived. It would seem, however, that Hume accepts the objective reality of succession because it is perceived *visually*, but denies the objectivity of causal necessity because it is perceived by the kinesthetic sense, the testimony of which he allows (quite arbitrarily), only a subjective validity. Laird's commentary, at any rate, shows the pitfalls and doubtful glory of the skeptic's career. In the writer's account of Hume's theory of the passions we find again a sympathetic understanding of the philosopher in his historical setting. Hutcheson and Mandeville, we learn, had much influence on Hume at this point while Descartes' famous theory of the passions, in which the contrast of mind and body played such a central part, could not well be assimilated to Hume's account. According to Laird, Hume's insistence on the disinterestedness of sympathy was original and important, and when we consider the British tradition in which Hume wrote, this appears to be true. At the same time he calls our attention to the fact that Hume fails to make a proper distinction between pride and vanity though he criticizes Rochefoucauld for identifying the two. Throughout the book Laird has balanced his judgments so well that the polemics of T. H. Greene and the exaggerated commendation of others are corrected equally, and the philosopher displayed in his true colors.

Grieg's new edition of Hume's letters, his entertaining biography, and Laing's book on the philosopher serve to supplement the work of Laird, and to commemorate in one year both the life and works of the great skeptic.

Another philosophical biography appearing this year, Houston Peterson's *Huxley, Prophet of Science*, demonstrates conclusively that the "Bull dog of Darwin," despite his immense prestige, did not achieve philosophical distinction, though his influence on "morality," by withdrawing its theological support, was doubtless greater than that of ethical thinkers who did.

In his *Philosophy of Descartes*, Boyce Gibson argues that Descartes' mission was to bring about a reconciliation between the church and the new science of Galileo and Kepler. "Descartes' only interest" was not his physics; he also saw the crucial importance of metaphysics as a support of science, and he was sincerely desirous of restricting his doctrines to the approval of the Mother Church. Thus while Descartes, by proving the world from the existence of God, instead of proving God from the nature of the world, seemed to make God a means and the physical world an end, and theology merely ancillary to physics, such was not his intent. Though Professor Gibson accords some truth to M. Gilson's contention that Descartes allowed the exigencies of his physics to dictate his philosophical con-

clusions, he insists that Descartes is anyhow the crucible in which scientific and Christian doctrines were first brought together. Descartes' reticence and caution, his rejection of the Copernican hypothesis, and in general his anxious conformity to the Church, which has been ascribed to timidity or even moral cowardice, is explained by Professor Gibson as a consequence of his ruling passion for tranquillity, for peace and security with which to carry on his studies. In his discussion of the Ontological argument Professor Gibson remarks that Descartes had probably not read St. Anselm, and that his major premise, "I can think of a being than whom no greater exists," was highly ambiguous but that the minor premise which states that God's essence and existence are inseparable was admissible and very important. For him it seems to imply that if *anything* exists God must, for the notion of a finite being is only reached by whittling down the original notion of an infinite being. If that which is limited exists, that which is unlimited must exist. But such a limited being does exist. The self has already been proved, at least in Descartes' opinion. This variation of the argument was expressed in a letter of Descartes to Clerselier.

Our understanding of Medieval philosophy has been enlarged during the past year by the publication of a number of books. J. G. Sike's volume on Peter Abailard (Pierre Abélard) throws light on many controversial questions in the life and works of this most interesting scholastic. The popular notion that Abailard was "a martyr to Rationalism in an age which was notorious for its obscurantist thought" is rejected by modern authorities. His confidence in reason and in the power of logic in theology was even inferior to that of some of his more orthodox opponents. He allowed, to be sure, more importance to reason in relation to faith than did a voluntarist like St. Bernard, who believed that the death of the martyrs was itself a sufficient proof of the Christian dogmas. Against such doctrines Abailard argued that blind faith is of little value without understanding of what is believed, and that mere belief in the existence of God, since it is shared by devils, cannot be very meritorious. The "secrets of God," on the other hand, are not to be reached by reason. Concerning the vexed question as to Abailard's exact views on "universals," Sikes has something to contribute. Evidently the philosopher had little respect for the Nominalist theories put forward by Roscelin. Abailard's persistent attacks on various types of realism may have suggested, however, what in fact is untrue, that he rejected every form of realism. Thus when he denies that the universal "man" can be predicated universally, he is not denying that "man" is a universal, but only a certain realistic theory that "man" is a collection of individual men in so far as they are men. These cannot be predicated, the philosopher is maintaining, because they are individuals. Abailard's preoccupation with Grammar, with words, and with the process of abstraction by which we form conceptions may also have suggested the false conclusion that he denied "universals." But it is clear that he held them to be objectively real, at least in the mind of God.

An enthusiastic account of the life and thought of St. Thomas, *The Angelic Doctor*, by the eloquent Jacques Maritain, perhaps the most popular exponent of scholastic philosophy at the pres-

ent time, though it adds little to our knowledge of the subject, is, at any rate, a forceful and entertaining book.

Dr. Julius Kraft in his volume *Von Husserl zu Heidegger* has given a compact and vigorous criticism of the phenomenologists. The development from Husserl, the founder of phenomenology, to Heidegger, the latest member of the school, has been, according to Kraft, a great decline, comparable to the descent from Aristotle to St. Thomas, from Plato to Plotinus, from Kant to Hegel (or from Cæsar to Nero, we may add). Kraft first directs his attack against Husserl's super-principle that phenomenology, the science of sciences, must be intuitive, but he fails to answer Husserl's argument that the final premises of knowledge cannot be proved and hence must be intuited, if there is to be any knowledge at all, and thus his first attack fails. He also joins Scheler, who though a phenomenologist is opposed to Husserl at this point, in an attack upon the "phenomenological reduction." The exclusion of existential propositions from philosophical consideration will not give us any new knowledge that we did not possess in the "natural" outlook on the world. Kraft also opposes the phenomenological idealism of Husserl, which, he hints, has really nothing better to support it than Berkeley's discredited argument. He also rejects the claim of phenomenology that it can vindicate all knowledge. If it vindicates all knowledge, there would have to be a science to vindicate it, and so on *ad infinitum*. Husserl, however, has answered this argument, and shown how phenomenological knowledge can vindicate itself. Kraft's criticism of Husserl's and Pfänder's attempt to subordinate logic to phenomenology seems to have greater justification. For phenomenological propositions do presuppose logical ones. Phenomenology must therefore be taken as propædæutic to logic, not as logically prior to logic. Kraft pays high tribute to the genius of Max Scheler but dismisses his ethical personalism, his epistemological animism and mysticism. For Heidegger he has little respect. His philological, psychological, religious ontology, according to Kraft, approaches madness, and reaches its natural conclusion in the concept "Nothing" to which, in Heidegger's mythology, we are driven by "Care." A race of men will at last arise, Kraft remembers a prophetic saying of Nietzsche, who will reverence non-being and be ready to sacrifice even God for Nothing.

A criticism of phenomenology was rendered this year also by Ryle, Hodges, and Acton in the Aristotelian Society (London), but the appraisal and counter-arguments, though sharp and lucid, are too brief and piece-meal to match the complexity and subtlety of the school they are concerned with. The symposium of the English philosophers, however, shows us the contrast between the cautious, critical, empiricist English and the bolder, systematic, rationalistic Germans they are criticizing.

Unfortunately, none of these critics of phenomenology was able to profit by Husserl's last book, the long expected *Méditations Cartésiennes*, which was published too late to be considered. In this compact volume Husserl exhibits the relation between the phenomenological doctrine of "reduction" and the Cartesian method of systematic doubt. In agreement with Descartes he insists upon the priority and superior certainty

of subjective knowledge. The intuition of those essences which make possible all knowledge and existence is naturally prior to all other knowledge. To know that propositions are valid we must each examine them privately, and validate them in intuition, but final substantiation of these propositions will require a critique of the process of validation itself. Such a critique Husserl has supplied. This book, of course, carries on the work of the *Ideen* and *Formale und Transcendentale Logik*. It deepens the foundation of phenomenology and defines again the programme of the school.

Logic, like phenomenology, has flourished. Last year Eaton of Harvard and Stebbing of London University both published comprehensive works on logic, and each of them included an introduction to symbolic logic. The publication in 1932 of Lewis and Langford's *Symbolic Logic*, an extended work covering the history, technique, varieties, and recent developments of symbolic logic, marks the growing interest in the subject. The historical section allows Leibnitz and Boole chief credit as founders of symbolic logic, and traces the cross-influence and repercussion of the English, Italian, and German developments, all of which played their part in the formation of Whitehead and Russell's *Principia Mathematica*. Lewis contrasts "material" systems such as those of Boole, Peano, and Russell with "strict" systems such as those of McCall and himself, and states the advantages of the latter. Thus, for example, the *Principia* of Whitehead and Russell asserts that a false proposition implies all propositions and a true proposition is implied by all propositions, but these peculiar theorems do not occur in Lewis's system. A particularly interesting chapter devoted to Truth-Value Systems gives an account of the recent work of Lukasiewicz and Tarski. In his *A Review of Symbolic Logic* (now out of print) Lewis maintained that it would be possible to develop unusual systems, i.e. systems in which one such fundamental principle as the Law of Contradiction or the Law of Excluded Middle would not apply. Now he is able to make good his claim in the system of Lukasiewicz, which is consistent, according to Lewis, though in it the Law of Excluded Middle does not hold. Instead of dividing propositions into two, and only two classes, true and false, Lukasiewicz adds another class of *doubtful* propositions, and thus creates a 3-value logic which shows the most interesting contrasts to the ordinary 2-value systems. Naturally this work will have great importance in philosophy, mathematics, and science in general. The theory of the infinite and the theory of change will be affected, and such mathematicians as Brower, and such philosophers as Whitehead and Dewey, will have new ground to stand on. Langford, who writes the latter half of the book, is not always in perfect agreement with Lewis. Thus the logical realism of the former is in contradiction, it would seem, to the nominalism or conceptualism of the latter. Langford's chapter on *The Logical Paradoxes* takes up a number of problems which have come to life, or which glow again with a new insistence, in the wake of modern logic. The criticism of the theory of types and the various doctrines of the meaning of false propositions are sifted and balanced skillfully, so that the technical, logistic work is provided with some metaphysical and epistemological support.

Scott Buchanan's *Symbolic Distance* is concerned with the analysis and reduction of fictions such as appear throughout the whole range of scientific discourse. Fictions had been a great problem for the authors of *Principia Mathematica*. For them mathematics, the most certain of the sciences was concerned almost exclusively with fictions. Buchanan makes a new start. Borrowing from the forgotten work of Bentham, he decides that fictions come about by the ordinary expansion of primitive symbols, or "phraseoplerosis" as Bentham calls it. His conclusions are gained by an analysis of the part played by matrices and analogies in the structure and formation of language.

Logic, metaphysics, epistemology, and ethics are all represented in Clifford Barrett's edition of essays entitled *Contemporary Idealism in America*. Among the contributors are well-known American philosophers such as George Herbert Palmer, William Earnest Hocking, Charles M. Bakewell, Wilbur M. Urban, G. Watts Cunningham, and the English philosopher, R. F. Hoernle, and their idealisms range from individualistic to absolutistic. This volume constitutes the third American symposium representing a school of philosophers. First came the volume of the six new realists, then the polemical broadside of the seven critical realists, and now the idealists, undismayed by the hostility of the two schools of realists, but rather gaining strength by their mutual enmity, have created a school, though scarcely a programme, of their own.

**PHONETICS.** See PHILOLOGY, MODERN.

**PHOSPHATE ROCK.** The domestic phosphate rock industry continued the downward trend which began in 1931, but the proportionate declines in mine production and shipments were not as great as in 1931; also, stocks on hand at the end of 1932 did not show as large a relative

gain as the year before. Continued curtailment in mine production indicated the efforts of producers to keep production more nearly balanced with consumption. The average value per ton of phosphate rock shipped in 1932 (\$3.24) dropped 42 cents, compared with 1931, although quoted prices in trade journals were practically the same as those for 1931. Figures compiled by the U. S. Bureau of Mines showed a decrease of about 34 per cent in mine production, compared with 1931. Shipments of phosphate rock in 1932 showed decreases of about 33 per cent in quantity and 41 per cent in value, while total stocks increased about 25 per cent. Decreases of 53 per cent in quantity and 57 per cent in value of imports of phosphate rock for consumption in the United States were recorded, and figures for exports of phosphate rock from the United States indicated decreases of about 36 per cent in quantity and 35 per cent in value, compared with 1931. The quantity of phosphate rock mined in the United States in 1932 was approximately 1,711,050 long tons, compared with 2,577,535 tons in 1931. Total shipments of phosphate rock in 1932 were about 1,700,800 long tons, valued at \$5,504,996, compared with 2,534,959 long tons, valued at \$9,288,485 in 1931. Florida furnished 1,483,435 tons and shipped 1,486,573 tons valued at \$4,652,275, or an average price of \$3.13 a ton. Tennessee produced 182,200 tons and shipped 168,026 tons valued at \$673,636 or an average price of \$3.99 a ton.

Total imports of crude phosphate rock, for consumption in the United States in 1932, were 6350 long tons, valued at \$69,879, compared with 13,496 long tons, valued at \$162,517 in 1931. As in 1931, the total quantity imported into the United States in 1932 came from two countries only—French Oceania and the United Kingdom. French Oceania supplied 6300 tons destined for Maryland, and 50 tons, valued at \$138, went to Hawaii.

**PHOTOGRAPHY.** A survey of the progress in various branches of photography during the year brings to light several noteworthy advances. The movie patron, for example, was able to listen to improved sound and to observe pictures of better quality than heretofore. This came about partly because the studio technician had placed at his disposal devices that permitted superior recording and photographic emulsions that possessed improved properties, and because the reproducing apparatus in theatres was improved.

The amateur for whom photography was popularized was encouraged to use cameras of compact design which were capable of taking many more pictures on shorter lengths of film. If his interests were inclined toward the small ciné camera, he had many cameras and projectors from which to choose to make his pictures obtainable at prices which made this form of recreation increasingly attractive.

Photography was also finding greater application in diverse fields of endeavor. Obliterated manuscripts were made readable, old Roman, Celtic, and Saxon landmarks defined, the shadow of the moon during a total eclipse photographed, rapid motion analyzed, and regions of the spectrum heretofore photographically inaccessible were studied with comparative ease.

In fact, there was no field of photographic work which had not benefited from the improved emulsions that have been made available during the past two years.

**APPLICATIONS OF PHOTOGRAPHY.** At the Tenth Olympic Games (q.v.) held in Los Angeles during the summer, more than 43,000 feet of motion picture films were exposed by one photographer of the different Olympic events (*American Cinematographer*, 13: September, 1932, p. 36), and many thousands of feet and rolls of film were exposed by news cameramen and spectators. A new camera was used on this occasion which not only photographed the finish of each track event but also the runner's time, correct to  $\frac{1}{100}$  second. (Fig. 1.) (*Prof. Eng.* 4: June, 1932, p. 20.)

A total eclipse of the sun occurred on Aug. 31, 1932, and attracted many thousands of persons because totality occurred in Quebec and several of the New England States. Astronomers had an opportunity to use many of the improved photographic plates, and while ground expeditions were busily exposing their plates, several aerial expeditions were training their cameras on the spectacle from many thousands of feet above the clouds. Captain Stevens and Lieutenant McAllister, for example, succeeded in recording, for the first time, the onrushing panorama of the moon's shadow, a great oval 100 by 55 miles in area. (Fig. 2.) (*Nat'l Geog. Mag.* 62: Nov. 1932, p. 581.) Earlier in the year while flying at an altitude of 23,000 feet near Salinas, Calif., Captain Stevens successfully photographed Mt. Shasta, 331.2 miles distant, which was entirely invisible. This picture is the longest distance yet photographed and the result was obtained on an infra-red sensitive film.

An interesting use of aerial photography had been made for several years by O. G. S. Crawford, of the British Ordnance Survey, who had been photographing old boundary lines and other archeological markings in various parts of England. Surface inequalities produce shadows, rocks, and bare soil show characteristic tone contrasts, and differences in soil composition are revealed by tone variations in vegetation. By photographing these areas in early morning or late afternoon, and preferably during the months of the summer, the best results have been achieved. A certain number of previously unknown early bronze age camp sites were reported by him at an international meeting held in London in August. (*Brit. J. Phot.* 79: Aug. 12, 1932, p. 481.)

A novel application of infra-red plates was that made by Bendikson who used them to reveal expurgated passages from old Latin manuscripts which were entirely opaque when photographed by visible light (*Library J.* 57: Oct. 1, 1932, p. 789), while at the other side of the spectrum, the luminescence given off by certain inks when exposed to ultraviolet radiation was photographed by Lieutenant-Colonel Mansfield in connection with a study of forged documents. (*Illustrated Catalog—Roy. Phot. Soc.* 77th Annual Exhibition p. 18.)

Strong retrenchment was practiced by the professional motion picture industry and although the number of feature pictures was not reduced greatly, economies were effected in all departments. The year witnessed further important refinements in the quality of sound motion pictures and it was expected to be only a matter of time until these would be incorporated in

AMATEUR MOTION PICTURE EQUIPMENT

many theatres. Most theatre loudspeakers had a range of 60 to 5000 cycles. With the new devices, frequencies of 40 to 10,000 cycles per second could be recorded and about 60 to 10,000 cycles reproduced. Much greater volume could also be recorded and reproduced without distortion. (*Epiogram* 4: June, 1932, p. 1; *Mot. Pict. Proj.* 5: June, 1932, p. 14; *J. Soc. Mot. Pict., Eng.*, 19: Nov., 1932, p. 401.) Variable width sound records having a double edged symmetrical track instead of the single edge previously used resulted in almost complete elimination of ground noise. (*Internat. Proj.* 3: Nov. 1932, p. 26.)

The faster film emulsions, announced in 1931, came into practically universal use, both for exterior as well as interior photography and their development had become a routine matter by the laboratories. Efforts were being continued to standardize practices within the motion picture industry, one of the most notable being the final establishment of an aperture size for sound cameras and projectors.

Special process photography came into greater use in conjunction with feature pictures during recent years. Developments were directed last year toward the perfection of the projection process, wherein the background was projected on a large translucent screen before which the foreground action was staged. (*Amer. Cinemat.* 12: Jan., 1932, p. 11; *ibid.* 13: July, 1932, p. 15; and Oct., 1932, p. 11.) Almost any location could thereby be introduced without the necessity either of transporting the players to the actual scene or of building the scene on the set. This method was replacing, for many types of work, the more complicated differential lighting schemes as well as the use of backgrounds painted on glass.

The use of color in feature pictures was very much restricted over former years but several very effective "shorts" by a three-color subtractive process were released during the latter part of the year. The method was reported to be a modification of the two-color imbibition process developed by Technicolor. The patent literature also indicated much work on improved lenticular film processes.

The portrait, commercial, and news photographers were able to select a wide range of photographic materials both of improved orthochromatic and panchromatic sensitivity, as a result of the introduction of several additional emulsions.

F. E. Ives, a well-known inventor of color processes, announced an amateur process which, although incomplete from the standpoint of true color, was claimed to yield very pleasing results. It consisted essentially of superimposing a dye transparency on a blue toned bromide print. (*Camera*, Phila., 45: 1932, p. 17.) A tri-pack color roll film was also made available which had to be returned to the manufacturer for processing. (*Commercial Phot.* 7: Feb., 1932, p. 198.)

An analysis of several types of rapid movement was accomplished by Edgerton who succeeded in adapting a stroboscope as the exposing device for a continuously moving motion picture film. (*Electronics* 4: July, 1932, p. 220.)

The first sound-on-16 mm.-film projectors were marketed during the year. One system consisted of a small "edition" of the regular 35 mm. film and had the sound track located between the perforations and the picture area; another dis-

pensed with perforations along one side and located the sound track in that space: still another introduced the track on a bias between the perforations and the picture. (*Mot. Pict. Herald* 106: Jan., 23, 1932, p. 20; *J. Soc. Mot. Pict. Eng.* 19: September, 1932, pp. 219 and 237; also *Home Movies* 1: July, 1932, p. 68.)

Since the commercial introduction of amateur motion pictures in 1923, a film 16 mm. wide (about  $\frac{1}{4}$  in.) has been used extensively. This contains 40 pictures to each foot of film and a reel of 400 feet requires about 15 minutes to project, comparable with 1000 feet of 35 mm. (silent) film. A new system announced in August (*Movie Makers* 7: August, 1932, p. 350) uses 16 mm. film in the camera but makes two rows of pictures, each being about one-quarter the size of those made previously on 16 mm. film. After development, the film is split down the middle and spliced end to end. Two hundred feet of this film which is 8 mm. wide is equivalent to 400 feet of 16 mm. or 1000 feet of 35 mm. film. The process thus reduces further the cost of amateur "movies" and makes available a very compact camera, and projector. (Fig. 3.)

An emulsion of high speed was made available for Kodak color users which made possible exposures under less favorable lighting than were possible heretofore and, in addition, gave a further improvement in color quality. (*Movie Makers* 7: April, 1932, p. 158.) Another lenticular color process known as Agfacolor, and using 16 mm. film, was introduced commercially (*Amat. Phot. and Cinemat.* 74: Sept. 21, 1932, p. 274). A two-color additive process, utilizing filters in a rotating sector wheel before both the camera and projector lens, and having a novel pull-down mechanism, was announced under the name, Morgana process. (*Filmo Topics* 8: June-July, 1932, p. 4.)

Motion pictures on film 16 mm. wide were finding greater use in schools, libraries, and for general recording purposes. The visual education department of the Philadelphia Public Schools, for example, had over two million feet of film available. (*Amer. Cinemat.* 13: May, 1932, p. 46.) The University of Chicago was preparing an extensive programme of short supplementary lectures by authorities in different branches of science to be made on 16 mm. films. This is believed to represent the first use of sound-on-16-mm. film for educational work. The great value of this medium for copying books, manuscripts, and even newspapers was stressed by Henry who reported that the 1931 catalogue of the *Société des Editions sur Films des Bibliothèques Nationales de France* contained many thousands of pages of rare manuscripts and prints. (*Library J.* 57: Mar. 1, 1932, p. 215.) All details of the largest building project ever conducted under a single management, the Rockefeller Center in New York, were being recorded on 16 mm. films. (*Movie Makers* 7: October, 1932, p. 432.)

Improvements were made in the sensitiveness of fluorescent screens and in the quality of sensitive materials for X-ray photography.

As a result of a marked trend in the last three years, four-color work was commonly supplied in offset printing. Dry lithography was being introduced into non-printing offices and plants in the form of small offset presses, the process being known as "Drylith." The Howey photo-electric engraving machine announced in 1931 was in

actual use on several newspapers. Three-color reproductions were also produced with the aid of this apparatus. (*Photo-Engravers Bull.* 22: November, 1932, p. 141.) A comprehensive treatise on the theory of lithographic printing containing an excellent bibliography was published by Tritton (*J. Soc. Chem. Ind.* 51: September 2, 1932, p. 299 et seq.).

**PHYSICAL MEASUREMENTS.** According to the May, 1932, report of the Progress Committee of the Society of Motion Picture Engineers, "... sensitometric methods of control so long followed in sound processing work, are now slowly but surely finding application in the work of developing the picture negative." (*J. Soc. Mot. Pict. Eng.* 19: August, 1932, p. 117.) Each year additional attempts are made to eliminate uncertain and laborious "trial and error" methods in photographic practice. An instrument for precise photographic photometry was described by Jones and McFarlane, which permits very accurate measurement of filter factors, photographic reflection, and transmission of colored materials, and the photographic intensity of light sources (*J. Soc. Mot. Pict. Eng.* 19: October, 1932, p. 361.)

Reflection densities of photographic papers were claimed to be measured easily and without eye fatigue by means of a sensitive electrical instrument embodying a photo-cell. (*Phot. J.* 72: February and March, 1932, pp. 57 and 344.) Lees described an unusual form of recording microphotometer. (*J. Sci. Instr.* 8: September, 1931, p. 273.) A scatter method of measuring the graininess of a photographic silver deposit was stated by Threadgold to give results closely in agreement with visual examination. (*Phot. J.* 72: August, 1932, p. 348.)

Qualitative measurement of spectral sensitivity of a photographic material has been made for many years with the aid of an instrument known as a wedge spectrograph. All absorbing wedges, however, possess a small amount of spectral selectivity. To overcome this objection and increase the precision of this type of instrument, Miller designed a spectrograph which does not require an absorbing wedge. (*Rev. Sci. Instr.* 3: January, 1932, p. 30.)

As a means of effecting further improvements in tone quality of photographically recorded sound, Sandvik and Hall investigated the harmonic content of variable density sound records and found the conditions of exposure and development giving minimum harmonic content. (*J. Soc. Mot. Pict. Eng.* 19: October, 1932, p. 346.)

**MANUFACTURE OF SENSITIZED MATERIALS.** Several classes of panchromatic materials were made available for the user of photographic films and plates, so that a selection could be made on the basis of high sensitivity in different spectral regions, blue, green, or red, depending on the requirements which needed to be satisfied. For certain of the highly red sensitive types it was found necessary to introduce new light filters of a yellow-green color which absorbed in the red and reduced the exposure in this region. (*Studio Light* 24: March-April, 1932, p. 15; *Kinotechnik* 14: Mar. 1, 1932, p. 90.)

Significant progress was noted by the spectroscopist and the astronomer using improved emulsions made available in 1931. (See **NEW INTERNATIONAL YEAR BOOK—1931**, p. 656.) Many of these materials were used for recording the solar

eclipse in August, and others for stellar spectra in conjunction with the great telescopes at the observatories throughout the world. (*Public. Astron. Soc. Pacific* 44: August, 1932, p. 269; *ibid.*, October, 1932, p. 323.) Of especial significance were the distinct improvements noted in the sensitizing of emulsions to infra-red. (*J. Opt. Soc. Amer.* 22: April, 1932, p. 204; also *Phot. J.* 72: August, 1932, p. 334.)

A new sensitizing dye, Xenocyanine, made possible plates having a broad sensitizing band from 8000 to 12,000 Å, making it possible to record spectral lines many times fainter than those which could be recorded on materials heretofore available for the interval 9000 to 10,000 Å. Infra-red arc spectra of 50 elements were observed with these plates by Meggers and Kiess, who reported on finding many new lines. (*Bur. Stand. J. Research* 9: September, 1932, p. 309.)

Fuchs discussed the newer dyes belonging to the cyanine classes and also published data on the stabilization of photographic emulsions. (*Phot. Ind.* 35: June 8, 1932, p. 578; *ibid.*, Aug. 24, 1932, p. 843.)

Until last year most amateur roll films were supplied in 6-, 10-, and 12-exposure lengths. During the year, the 6-exposure length was replaced largely by 8-exposure rolls at no increase in cost to the user over that of the 6-exposure rolls. Orthochromatic films and plates were improved further in sensitiveness and quality for the amateur, the commercial and the press photographer.

Information on analysis of emulsions was presented by Carroll and Hubbard in two papers. (*Bur. Stand. J. Research* 8: April, 1932, p. 481; *ibid.*, June, 1932, p. 711.)

Methods for increasing the sensitiveness of wet collodion and of bichromated gelatins were described respectively by Wilkinson (*Process Engraver's Monthly* 39: February, 1932, p. 33), and by Lobel and DuBois (*Bull. soc. franc. phot.* (3) 19: March, 1932, p. 57).

The Soviet film industry was reported to have two raw film plants in operation which were turning out 60,000 meters of film daily. (*Bull. Mot. Pict. Div.*, U. S. Dept. Comm., Apr. 6, 1932, p. 1.)

**NEW APPARATUS.** The trend for smaller cameras continued to grow but these cameras did not seem to meet with the same enthusiastic reception in America as on the European continent. (*Phot. Ind.* 30: Aug. 3, 1932, p. 769.) Several cameras were added to an already growing list which permitted 16 exposures on 8-exposure lengths of film, each picture being about one-half size those normally made on such film. Several types using 35 mm. film were proving popular although the box camera and the folding pocket type continued in greatest use. An innovation was the introduction of reflex cameras of small design using "vest pocket" and other small films. (*Brit. J. Phot.* 79: Jan. 15, 1932, p. 38; *Amer. Phot.* 26: December, 1932, p. 735.)

Aerial cameras were also being lightened considerably in their design as it was recognized that the majority of commercial aerial photographs could be made easily with hand held cameras. (*Photo-Era* 68: March, 1932, p. 160.)

An "evidence camera" which recorded a miniature set-up of a traffic accident, the names of the witnesses, and the affidavit of a witness was claimed to represent a valuable adjunct in the settlement of accident cases.

In the motion picture field, camera housings or blimps were considered necessary on most all cameras for sound photography, even with further improvements in silencing camera mechanisms. The housing made the sound cameras appear almost as bulky as some of the camera types of 1905 to 1910. One camera utilized an evacuated housing for which certain claims were advanced. (*Internat. Phot.* 3: November, 1931, p. 27.) Cranes and booms have been used for several years to swing the camera toward or away from the centre of action on a motion picture set. In such work, it is necessary to have a means of varying the focus throughout the movement of the boom. By using a lens having a new optical design, these "zoom" effects may be accomplished from a stationary camera and without the use of a crane. With this lens the objective is always in focus while varying the magnification. (*Amer. Cinemat.* 13: June, 1932, p. 16.)

Adjuncts to the making of sound motion pictures consisted of the following: several types of cranes or booms which permitted the camera to be moved quickly and smoothly several feet above the floor level; perambulator or movable tripods of intricate mechanical design; portable sound recording units; and such special equipment as a distortion-factor meter, reverberation meters, synchronous interlocks, etc.

It had been common practice for several years to record negative sound records along one edge of a separate film from that which is used for the picture, except in news work where the sound was recorded on the same film as the picture. In order to economize on film consumption, most studios last year adopted a practice of recording sound along both edges of a separate film from the one used for the picture record. After processing, the film is split into two 17.5 mm. strips, broken into scenes, and printed as a positive along two edges of 35 mm. film, and again developed and split into two 17.5 mm. strips for editing with the picture positive. (*Amer. Cinemat.* 13: October, 1932, p. 22.)

A useful camera set-up for motion photomicrography was described by Loveland (*J. Opt. Soc. Amer.* 22: March, 1932, p. 161).

An elaborate exposure meter containing two photoelectric cells of the photronic type and having a dial which reads directly in the exposure units required was marketed for the ciné amateur. (*Popular Sci. Monthly* 121: November, 1932, p. 22.) A compact exposure meter of the extinction type was introduced as an attachment for the Leica camera. (*Brit. J. Phot.* 79: June 24, 1932, p. 388.) A comprehensive review of various designs of exposure meters was published by Pledge. (*Phot. J.* 72: May, 1932, p. 206.) Film editing machines taking either sound-on-film, or picture and sound on separate films were in use, one type having a non-intermittent film driving movement (*Kine Weekly* 183: May 12, 1932, p. 57).

Incandescent lamps were improved both for amateur as well as professional work. An over-volted model gave very satisfactory illumination for the amateur users (*Movie Makers* 7: April, 1932, p. 168), and a radical change in design which eliminated the usual metal base was introduced for large studio lamps. (*Amer. Cinemat.* 13: July, 1932, p. 25.)

Several new models of amateur ciné cameras and projectors were introduced. (*Phot. Korr.* 68: February, 1932, p. 34; *Technique Cinemat.*

3: March, 1932, p. 155; *Phot. J.* 72: January, 1932, p. 41; *Amer. Cinemat.* 3: August, 1932, p. 11.)

THE PHOTOGRAPHIC PROCESS. For the development of the smaller films containing 8 to 16 exposures, fine grain negative developers continued to be recommended by various individuals although the merits of many of the formulas were questionable. An increasing tendency prevailed for the development to a comparatively low degree of contrast of motion picture, portrait, commercial, and some amateur negatives. Better quality prints with decreased graininess were claimed.

Details for the making of negative duplicates from originals were published by Crabtree and Schwingel. (*J. Soc. Mot. Pict. Eng.* 19: July, 1932, p. 891). Carroll and Hubbard described the mechanism of hypersensitization. (*J. Soc. Mot. Pict. Eng.* 18: May, 1932, p. 600.)

PHOTOGRAPHIC THEORY. From the behavior of plates on physical development, which have silver layers of less than unimolecular thickness, Reinders and Hamburger concluded that the lower limit of developability "lies in an average thickness of 0.001 to 0.005 atom of silver, three silver atoms constituting the smallest developable aggregate." (*Z. wiss. Phot.* 31: 1932, p. 32.) Schwartz and Urbach considered the latent image as a photoelectrically discharged grain surface. (*Z. wiss. Phot.* 31: 1932, p. 77.)

A colorimetric method for the determination of small quantities of silver has been worked out by Jelley based on the reduction of ammoniacal solutions of sodium hydrosulphite in the presence of gelatin to form clear yellow silver solutions of a reproducible shade. (*J. Soc. Chem. Ind.* 51: 1932, p. 191.)

Bullock has shown under definite conditions that there is a spontaneous growth of the latent image which continues for a time after the exposure has been ended, and he contends that the effect doubtless enters as an error into most scientific applications of photography. (*Sci. ind. phot.* 3: 2d Series, June-July, 1932, p. 201.)

Hilsch and Pohl showed in 1930 that light absorption with the alkaline halides is directly attributable to the energy required to transfer an electron from anion to the cation. As pointed out by Sheppard and Vanselow (*Z. wiss. Phot.* 30: March, 1932, p. 272), for the silver halides, this involves the lattice energy of the crystals and the ionization potentials of the elements. In the case of the silver halides the observed absorption does not correspond with that calculated on this basis. The absorption extends further into the long wavelengths than would be predicted, by an amount increasing progressively from silver chloride to silver iodide. (*Bericht VIII Internat. Kongress Phot.* Barth, Leipzig, 1931, p. 13.)

Both in regard to color sensitized and non-color sensitized emulsions, attention was being devoted increasingly to the adsorption of different ingredients by the silver halide. Experimental evidence was advanced to show that acid dyes are adsorbed to silver bromide only in the presence of silver ions, and basic sensitizing dyes mainly in an alkaline medium and with excess of bromide ion. Quantitatively it was found that the adsorption of the dye and of gelatin approached a mono-molecular layer about the grain. (*J. Physical Chem.* 36: January, 1932, p. 174.) These results were confirmed by Carroll

and Hubbard who showed further that differences exist between individual dyes which may be explained on the hypothesis that spectral sensitization depends on adsorption of the dye by the oppositely charged ion of the silver lattice. (*Bur. Stand. J. of Research* 9: October, 1932, p. 529.)

**BIBLIOGRAPHY.** General reviews of photographic progress are published annually by the Society of Chemical Industry (London), and *British Journal of Photography* (London). The *Jahrbuch für Photographie*, edited by J. M. Eder (Vienna), also provides a valuable summary of progress but, unfortunately, conditions have made regular publication impossible. Several annuals issue a yearly review of new apparatus, namely *Cinematographic Annual* (Hollywood), *Deutscher Kamera Almanac* (Berlin), *Photofreund Jahrbuch* (Berlin), *British Journal Almanac* (London).

During 1932, *Photo Era* (Wolfboro, N. H.) was absorbed by *American Photography* (Boston), and *Bioscope* (London) was incorporated with *Kinematograph Weekly* (London). Two new British publications appeared, namely *Home Movies* (London), and *Photography* (London). The first issues of a quarterly, *The Journal of the Biological Photographic Association* (Baltimore), appeared during the latter part of the year.

The more notable books of the year were: *Bericht über den VIII Internationalen Kongress für Wissenschaftliche und Angewandte Photographie*, Dresden, 1931 (Barth, Leipzig); L. Hacker, *Cinematic Design* (Amer. Photo. Pub. Co., Boston); B. B. Hampton, *A History of the Movies* (Covici Friede, N. Y.); B. Brown, *Talking Pictures*, (Pitman & Sons, London); G. F. Jones, *Sound Film Reproduction* (Blackie & Sons, London); J. R. Cameron and J. A. Dubray, *Cinematography and Talks* (Cameron Pub. Co., Woodmont, Conn.); *The Film in National Life*, (Allen & Unwin, London); M. Hesse and C. Amedée-Mannheim, *La Photographie* (Colin, Paris); A. von Bariss, *Wie fotografiere ich in Farben* (Bechhold, Frankfurt); H. Schwartz, *Trans. from German by H. E. Fraenkel, David Octavius Hill* (Harrap & Co., London); W. J. Smith, E. L. Turner, and C. D. Hallam, *Photoengraving in Relief* (Pitman & Sons, London); K. Gnoth, *Die modernen Reproduktions- und Kopierverfahren im Dienste des Offsetdruckes*, (Gnoth, Leipzig); O. Gruber, *Photogrammetry*, Trans. by G. T. McCaw and F. A. Cazalet (Amer. Photo. Pub. Co., Boston); H. Luscher, *Stereophotography* (Union Deutsche Verlags, Berlin); A. C. Hardy and F. H. Perrin, *The Principles of Optics* (McGraw-Hill Book Co., New York); P. Fleury, *Étalons Photométriques* (Éditions de la Revue d'Optique, Paris); J. J. Rorimer, *Ultraviolet Rays and Their Use in the Examination of Works of Art* (Metropolitan Museum of Art, N. Y.); H. C. Pillsbury, *U. S. Army X-ray Manual* (Hoebner, N. Y.).

A partial list of the handbooks and annuals appearing during the year is as follows: *Ausführliches Handbuch der Photographie*, edited by J. M. Eder, W. Knappe (Halle)—volumes appearing during 1932 were: vol. i, pt. 1, *Geschichte der Photographie*, and vol. iii, pt. 3, *Sensibilisierung und Desensibilisierung*; *Handbuch der wissenschaftlichen und Angewandten Photographie*, edited by A. Hay, 9 vols., Springer (Vienna)—volumes appearing during 1932 were:

vol. i, *Das Photographische Objectiv*; vol. vi, *Die theoretischen Grundlagen der Photographische Prozesse* (edited by W. Meidinger); vol. vi, pt. 1, *Wissenschaftliche Anwendungen der Photographie*; *Jahrbuch für Photographie, Kinematographie, und Reproduktionsverfahren für die Jahre 1928-1929*, vol. 31, pt. 1, edited by J. M. Eder, W. Knappe (Halle); *American Annual of Photography*, American Photographic Publishing Co. (Boston); *Photofreund Jahrbuch 1932-1933*, Photokino Verlags (Berlin); *British Journal Almanac*, Greenwood (London); *Deutsche Kamera Almanac*, Berlin; *Soviet Photo Almanac*, Moscow; *American Cinematographic Annual*, Hollywood; *Kinematograph Yearbook*, London; *Penrose's Annual*, London; *Klimschs Jahrbuch*, Frankfurt a. Main.

**PHOTOPLAYS.** See MOTION PICTURES.

**PHYSICAL ANTHROPOLOGY.** See ANTHROPOLOGY.

**PHYSICS.** The year 1932 was marked by intensive work in atomic physics. The order of accuracy and the volume are notable. At the same time, never was speculation more active among truly great physicists. Cosmic rays, the discovery of the neutron, transmutation, the principle of uncertainty, the expanding universe and its physical destiny, the accelerated proton as a laboratory tool for disrupting or building up atomic nuclei, the production of gamma rays, the physics of the weather and of plant growth—are typical subjects engaging the thought and experimental activity of physicists. A sense of impending discoveries of great importance pervades the literature as the technique of transmutation is being mastered and becoming an every-day procedure in many laboratories. The rise of the electron tube, with its countless uses, raises the expectation that nuclear physics may be of comparable fruitfulness.

At Leningrad a notable conference on the structure of matter was held. Dirac gave an analysis of atomic structure in terms of neutrons and protons and how these accord with the principle of conservation of energy. The latter is held in spite of electron emission from radioactive bodies which seems at variance with the conservation of energy. The modern theories of the structure of matter already show noteworthy practical applications—the deformation of the slip planes in structural metals is studied by X-ray crystal lattice analysis. The control of the properties of alloys is in sight as evidenced by the production of some 1600 kinds of alloy steel.

The rise of metals in quantity production is illustrated by the production of 10 pounds of indium, a very rare metal of atomic number 49, which is now available for research purposes. The rare element of atomic number 75, rhenium, has been produced in quantity sufficient for exhibit purposes and experimentation. Transparent steel is now available for use in scientific instruments. Dow found it practical to replace copper as a conductor in an electrochemical plant, using a 4-inch iron pipe filled with sodium. This conducted three times as much current as copper per unit weight at 4000 amperes.

Pettit correlated the ultra-violet variability of sunlight with the sunspot curves since June, 1924, except the year ending June, 1929. The problem of ultra-violet dosage is of much interest. Knudson cured rickets in a patient in three weeks by radiating one-fourth of a square inch for 20 minutes daily, or one square inch

for five minutes daily. Bowden and Snow report that ultra-violet will change carrot yellow pigment into vitamin A and foresee a new industry—the production of this important vitamin wholesale. The effective wave length is 2650 angstroms and the mother substance is carotene.

Using special photographic emulsions devised by the Research Laboratory of the Eastman Kodak Company, the Bureau of Standards extended spectroscopy to 1200 millimicrons, opening up frequencies far beyond the limits of vision where the main features of the spectrum of some of the elements lie. In a study of carbon arc fluorescence of formaldehyde, Herzberg and Franz found two frequencies in the ground state, 1713 and 1023, respectively, which are also given by the Raman Spectrum: 1713 is doubtless the C-O vibration; 1023, the H transverse vibration.

Bhagavantam presents (*Indian Journal of Research*) a complete study of the Raman spectrum of hydrogen. The intensity of the unchanged lines were in disagreement with the theoretical values of the Raman lines. Bhagavantam and Raman found that the disagreement vanishes if we assume that the photon rotates with angular

$$\text{momentum } \pm \frac{h}{2\pi}.$$

If an atom of hydrogen unites with an atom of oxygen, a certain unit quantity of energy is set free as radiation. To ionize a radium atom involves a million times this quantity of energy and the ionization involved in cosmic rays requires several hundred million volts. Millikan and others attribute such rays to the synthesis of the heavy elements out of hydrogen and helium. Millikan and Anderson described the latter's experiment showing that the cosmic rays are absorbed by the nucleus. Tracks in a field of 17,000 gauss indicate positive particles mostly. In 17 per cent of the cases the nuclei were broken up, ejecting positive and negative particles.

Taylor compared X-ray ionization standards of the Bureau of Standards with those of England, Germany, and France, showing an agreement within a half per cent. No change was detected from disturbance during transportation. Lauritsen's million-volt tube gives X-rays equal to 20 roentgens at 70 centimeters, the medical equivalent of 2 kilograms of pure radium which would cost at present prices \$20,000,000. See RADIUM.

*Cosmic rays* were central in interest for physics. Dirac suggests the combination of a positive and negative pole as fundamental entities and the simplest system for creating cosmic rays of a billion volts. Cosmic ray research advanced on a wide geographic front. Compton reported a 16 per cent increase at latitude 45, and 23 per cent at 9000 feet, near the north magnetic pole. Mott-Smith and Howell "find the intensity of cosmic rays at 25,000 feet to be 21 times that at sea level and that it is still increasing rapidly. At that level an inch of lead will stop 40 per cent of the rays." Compton used an electrometer to measure the electric current produced in a chamber containing argon gas when cosmic rays penetrate it. Since March, 1932, he has taken and received observations from many parts of the western hemisphere. His conclusions controvert the wave or photon theory of cosmic rays held by Millikan and support the charged particle hypothesis of cosmic rays. Neutrons would not be affected by lines of magnetic force. If of local origin they would diminish as observed

at higher and higher atmospheric levels. Compton holds that electrons shot from the sun cause the aurora and are cosmic rays.

*Radio* (q.v.) was an active field—radio beacons for aviation, radio communication systems for the aviator, entertainment, news, political addresses, instruction, systems for keeping in touch with polar expeditions, storm detectors, blind landing systems—all these and the fundamentals of frequency control with high precision and the adaptation of the most suitable wave length to the transmission conditions of the atmosphere, form a field of experiment and trial of unusual importance. The Bureau of Standards eclipse expedition did not confirm the supposed rain of neutrons, but rather supported the view that the ultra-violet of sunlight is responsible for the ionized layer. The Bureau of Standards three new laboratories and transmission stations at Beltsville, Maryland, are to be devoted to a continuous transmission of signals of scheduled frequencies most useful in industrial alternating current power circuits and useful ranges of kilocycles for radio transmission. An accuracy of within a part in 5,000,000 is being regularly attained in its transmissions. Its three new receiving laboratories at Meadows, Maryland, are to record continuously and automatically the height of the ionized layer.

*Television* (q.v.) advanced in laboratory developments of devices and methods. Applications of radio physics are found in the radio storm detector in power plants to warn of thunder storms within a hundred miles so that the plants may prepare for heavier loads on lighting circuits. In studies of nerve impulses, Bronk found their speed ranges from 3 to 300 feet per second and that they are electrical, with frequencies of a few to more than 100 per second.

"Noise," undesired sound, engaged the attention of physicists. Graphic recorders, noise meters, and the measurement of noise types in typical environs are of notable interest. One recording sound meter functions with a maximum intensity one-half billion times the minimum sound. Another is used to study the entire acoustic spectrum intensively. The Bureau of Standards has developed a very effective apparatus, entirely free from the personal equation. The "campaign against noise" in America and abroad aims to prevent noise making and reduce its transmission by sound-absorbing construction or materials. The extraordinary success in making an eight cylinder explosion motor completely silent even above 2000 r.p.m. is a notable achievement.

*Electronic Music.* Of increasing interest and significance is the arrival of electronic music. Great organs of unsurpassed tonal beauty are now available, which have not a single pipe, reed, or stop—only radio tubes and electric wires. Electronic music marks the beginning of a new art and a new industry, the physical actuators and controls of which will afford great scope for physical research.

*Sound.* The physics of sound has many and varied applications, but the merest mention must suffice. Sound-absorbing materials were submitted in considerable number to the Bureau of Standards, and the industry for their production has grown 400 per cent in the present depression period. Telephony involves research affecting the clarity of transmitted speech. Inglis, Gray, and Jenkins devised an artificial voice and ear as a

standard source and receptor of unvarying high quality. Graphs of the living voice and of the standard source match with astonishing perfection. The standard voice duplicates the uttered sound as modified by nearby objects so that the least modification of the transmission system gives with great fidelity the exact effect of such modification upon the listener.

In talking motion pictures such fidelity of sound, music, and speech is called for. The high-frequency components are the field which is at present active. Studies of the pitch and loudness show that tinkling keys have the highest frequency that man can detect by the ear and the lowest rumble of a grand organ the lowest. The sound of artillery fire is the loudest endurable sound and that of rustling leaves the faintest of audible sounds, in the energy ratio of 100 million million to 1.

By X-rays Bragg analyzed *space lattices of crystals* of complex forms of silicates. Anderson found that real pearls show a hexagonal lattice and detected culture pearls by their 4-fold symmetry. Joffe pointed out that crystals offer smaller electrical resistance the more perfect their lattice. Theile, in a study of the temperature, plasticity, and tensile strength of rock-salt crystals, found that distortion and strengthening were aided by heat, and at 600° the strengthening was 1000 times that of the stress when plasticity began. The breaking strength was then within a tenth of the theoretical lattice strength. Rexer tempered solid rock salt, producing notable changes, e.g. in phosphorescence and alkalinity. Frankel discussed the measurable rigidity of liquids under high frequency mechanical vibration. Sounder found new regularities connecting the elements, their isotopes and their abundance, as well as their structure and other properties. In a study of Fe-Al alloys, Bradley and Jay correlated crystal structure and percentage composition and heat treatment. Anderson interprets crystal growth in Group II metals (Be to Hg) in terms of atom-by-atom accretion. The force of an impacting atom varies as the number of neighboring lattice atoms. He derives the related deposition energy for eleven typical positions of different crystal structure. Goetz and Zwicky open a new field—"freezing the atoms"—in crystal structure to within 1.5° C. of absolute zero. The freezing serves the same purpose that dyes serve in the selective staining of biological specimens for microscopic study. Goetz has pointed out some astonishing possibilities for metallurgy.

Finch used a variable condenser and cathode-ray oscillograph to study high-speed rotations of an easily deformable shell at 30,000 r.p.m. Reltón found that such experimental work aids mathematical analysis, confirming assumptions and disclosing unsuspected factors. The use of motion pictures in scientific research is growing. Motion picture machines capable of handling 80,000 exposures per second have been produced and the conditions under which 3,000,000 pictures per second can be handled have been formulated. Edgerton and Germeshausen with exposures of a half-millionth of a second and light equal to 40,000 fifty-watt lamps studied the detail motions of familiar phenomena, the wink of an eye, the tee-off of a golf ball, the fall of a drop of milk on a milk surface. The research programme of the McMath-Hulbert Observatory

extended the use of motion pictures to variable star cycles, motions of sunspots, the activities of solar phenomena, and cometary changes and movements.

Most significant was the new programme of instruction in fundamental physics by the use of motion pictures, by the University of Chicago. The first two films, "Reduction and Oxidation," and "Molecular Structure," viewed by the writer of this article, are believed to offer great promise of interesting films destined to accelerate a grasp of the principles of fundamental physics by the student.

*Computing Machines.* Mechanization has spread to the details of scientific computing. The monumental task of computing the 1400 harmonic terms in the moon's motions was set to electric machine tabulation and automatic computation at one-fourth the cost and 10 times the speed. The Bush computing machine has already solved some thousand complex equations, notably in atomic physics. The accuracy of automatic computing machines appears in a year's work of one machine which performed operations involving 30,000,000 numbers without error. A great variety of computing work is now possible with commercial machines adapted to specific uses.

The research development of *photo cells* was toward the voltaic type. The applications continue to multiply. The photo cell proved to be a better egg candler than the human eye. One new cell responds to one-quintillionth ampere. The Weston photo cell and that of Westinghouse work as a relay directly from the cell to the machinery to be controlled, without any other source of current. Fricke and also Coblenz use the photoelectric cell to measure the ultra-violet intensity of sunlight. In Fricke's device, electrons in being emitted from the cathode absorb the ultra-violet and neutralize a definite known potential.

*Controlled environment* (indoor climate) continued to be an active field for applied physics. Abbot published results on the lethal effect of ultra-violet, the bending of plants toward light, dependence of wheat growth on the radiation intensity and amount of carbonic acid available, the transparency of chemicals to rays, and optimum conditions for plant growth. In many laboratories related experiments are in progress which show the unexpected importance of control of the physical conditions and the astonishing response of plant life to new conditions. Rose seeds at 41° germinated in 140 days as against five years or more under usual conditions. Potatoes from seeds exposed to ethylene chlorhydrin grew 2 feet high and bore tubers before untreated stock was above ground. Holly berries growing usually in five years arrived, in a controlled environment, within 10 months at the Boyce Thompson Institute for plant research.

*Mass Spectrograph.* Tungsten helide will be recalled as perhaps the first molecule involving any atom of the inert group VIII as disclosed by the mass spectrograph. Weil and Fraunhofer in a new achievement caused the combination of krypton with chlorine forming krypton-chloride, a dark red substance. Clearly the elements of group VIII of the atomic table can no longer be regarded as strictly inert. Smythe and Mat-tauch devised a non-magnetic mass spectrograph. An alternating electric field at right angles to the paths of the particles eliminates all but the de-

sired velocities. The ratio of  $O^{16}$  to  $O^{18}$  exceeds 600.

Blekney found that ions ( $H^1H^1H^1$ ) of mass 3 and ( $H^1H^2$ ) all of mass 3 are formed at a frequency proportional to the pressure. Commercial hydrogen shows a ratio of  $H^2$  to  $H^1$  molecules, one in thirty thousand, and for the sample prepared by Urey, Brickwedde, and Murphy it was one in one thousand. Bainbridge finds the mass of  $H^2$  to be 2.01353 plus or minus .000064 by mass spectrographic methods, using 14 spectra, comparing the mass of ( $H^1H^2H^3$ ) with He, the masses of helium, hydrogen, and the electron being accepted as the 4.00216, 1.00778, and 0.00055 on the  $O^{16}$  equals 16 basis. If the  $H^2$  nucleus is formed by a proton and a neutron of mass 1.0067, the binding energy will be under a million electron volts.

Washburn and Urey found a source of the newly discovered hydrogen atom of mass 2. In the industrial production of oxygen and hydrogen by electrolysis, the hydrogen mass 2 occurs more plentifully in the residual waters. Lawrence is able with his new machine to produce hydrogen molecule ions, consisting of two protons united by an electron. He whirls protons in magnetic fields using one of the largest electromagnets in the world.

As the basis for atomic weights R. Mecke rejected hydrogen and suggested helium 4,000 which seems to have no isotopes. Nuclear structure is not well enough known to permit a more fundamental principle to be applied.

Dirac held that the radiation field and the atom are energy systems comprising the energy of the atom, the energy of the electro-magnetic waves (the field), and the energy of coupling of atom and field.

MacMillan interpreted the red shift in nebular spectra as a Doppler phenomenon. A small leakage of a photon's energy may reduce the quantum and thus lengthen the wave. One per cent loss in 17,600,000 years would suffice to give the effect of nebular recession. Flint outlined a 5-dimensional theory of gravitation and quantum mechanics, deducing a smallest detectable length and a smallest detectable time interval for a moving particle, and thus generalized the uncertainty principle of Heisenberg. Heisenberg admitted that observational verification of every scientific concept is an impossible ideal, mitigating somewhat his extreme interpretation of the principle of indeterminism (the denial of causality).

**Atom Disruption.** Thirteen years ago this reviewer of physics recorded the first artificial disruption of the atom when Rutherford knocked a hydrogen atom out of a nitrogen atom. To-day "atom smashing" is a daily technic of research laboratories. The use of high-speed particles in physical research gains ground each year as shown by the enlarging group of workers in this field. The million volt mark has been passed. The use involves (1) the production of high-speed electrons, (2) the acceleration of light ions, and (3) the Wideroe method, in which the ions are accelerated on passing through the common axis of a series of tubes connected alternately to a high-frequency oscillator. Webster found that alpha particles (helium nuclei) impinging on light elements Li, Be, B, F, Na, Mg, and Al produce gamma rays while on H, C, N, Ni, Cu, and Sn they do not. A half quantum per million alpha

particles is produced for Mg and thirty quanta for Be.

Penetrating rays from beryllium under impact of alpha rays could pass through an inch of lead in reaching one-half its energy value. Joliot and his wife found that ionization increased when a film containing hydrogen was interposed between the window and the beryllium target due to protons moving  $3 \times 10^9$  cm. per second. The Joliot's suggested that the radiation from beryllium was photons from the hydrogen of quantum energy  $5 \times 10^7$  electron volts and Compton scattering like that of gamma rays. Chadwick held Be rays to be neutrons of unit mass and zero charge. If a  $Be^9$  nucleus receives an alpha particle, it becomes a  $C^{12}$  nucleus, expelling a neutron. From the experimental velocities  $3 \times 10^9$  cm. per second and measurements of the recoiled tracks produced by the radiation from Be, the mass computed by Chadwick was found to be that of hydrogen.

Cockcroft and Walton used 300 kv protons to bombard the light elements. Beginning at 120 kv, lithium gives off 8 cm. range electrons in air, the number increasing with potential as observed by zinc sulphide screen. Rutherford stated that the scintillations were due to alpha particles, but that a proton may unite with a lithium nucleus (mass 7) forming a nucleus of mass 8. Supposing the latter unstable, it may form 2 alpha particles, each of mass 4, and each involving a potential drop of 8000 kv although produced by proton impact of about 100 kv. Boron showed 4 cm. range particles produced by protons of 135 kv. Carbon gave about the same at 150 kv, and fluorine 2.8 cm. at 200 kv. Lawrence used 700,000 electron volts to accelerate protons, successfully disintegrating the lithium atom into two alpha particles. The protons combined with the lithium nuclei.

**The Neutron.** Element of atomic number zero, called the neutron, was predicted by many who felt that the K-orbit implied a lower energy level in which the K-electron came into contact with the proton dissipating its potential energy, representing a collapse of the hydrogen atom. The neutron has already opened up a field of research of great interest. Since its charge is zero at ordinary distances, it can pass through matter without deflection except by direct hit. Dee reported that a neutron striking an electron should give it a speed of  $6.6 \times 10^9$  cm. per second, and a recoil as high as 3.4 mm. Heisenberg announced his conclusion that radioactivity consisted of bursting neutrons in unstable nuclei formed of protons and neutrons. Langer stated that cosmic rays may originate when two magnetic poles unite, forming a neutron. Dirac suggested that the two magnetic poles (positive and negative) may exist separately.

Feather reports on elastic and inelastic collisions between neutrons and nitrogen nuclei. Recoil tracks 3.5 mm. accord with the neutron concept. Twelve of 32 paired disintegration tracks appeared to be cases of neutron capture explainable by assuming the expulsion of an alpha particle forming a new nucleus of Boron (mass 11). Wilson has just received the Duddell Medal for inventing the Wilson-Cloud chamber—a key device in current search for the neutron.

De Broglie believes neutrons in nuclei are waves which interfere and their absorption is of a different type. Ellis predicted a new form of energy in the nucleus awaiting discovery. Using

a neutron and a proton, Bartlett has built up the chemical table as far as oxygen at this point, adding successively a neutron, a neutron, a proton, and a proton until he reaches the iron group, predicting cobalt isotope 57, manganese 53, and vanadium 49. Delbruck suggested that protons and neutrons have as charges common multiples of  $e$ , or zero, and that they may have as high as six charges. He regards cosmic rays as particles of atomic weight 1, picking up compensating electrons in the atmosphere.

**Electrons and Protons.** Interest was aroused among physicists by Einstein's extension of his unified field theory to the interior of electrons and protons, a domain which had hitherto resisted rationalization. Duane derived the mass of the electron by means of a single experiment, obtaining  $m_0 = 9.054 \times 10^{-28}$  g. Some 60 papers deal with Langmuir's electron temperature research and related problems. It will be recalled that Langmuir found electron speed in gas discharges to have a Maxwellian distribution.  $T$  is thus due to their kinetic energy. In a vacuum maintained above stirred liquid helium, Keeson has produced a temperature of  $-272.3^\circ \text{C.}$ , an advance of  $0.1^\circ$  nearer absolute zero ( $-273.1^\circ \text{C.}$ ).

Eddington's eighth paper, which he announced as rigorous, develops from the identity of the electric charges and their interchangeability certain conclusions. He derives the inverse square law between electrons, Pauli's principle that two like parts of a system must differ in behavior, and computes the electronic charge from the velocity of light and the quantum of action. He now needs but four separate constants to enable him to describe known phenomena.

A new journal, the *Journal of Chemical Physics*, was to begin publication, January, 1933. It is published by the American Institute of Physics, Incorporated. Its scope is to be the border land between physics and chemistry. The four founder societies of the Institute comprise The American Physical Society, The Optical Society of America, The Acoustical Society of America, and The American Society of Rheology. The Institute represents a membership of 5000. The purpose is to foster cooperative relations among physicists—the science of physics on the one hand and the arts and industries on the other. It is empowered to administer grants and endowments.

**Symbols.** A notable advance in the use of standard symbols is now made possible by a new work giving the letter and graphical symbols and abbreviations for 13 specialized subjects, chiefly in applied physics, which have been adopted as American Standards. The new work is a nation-wide attempt to standardize the symbols and abbreviations in terms of which science and technics record their data.

The value of mathematics in physics is so great that the appearance of 40 new periodicals in this field since 1926 is most gratifying, apropos of Eddington's interesting comment "Nowadays we do not encourage the engineer to make the world for us out of his material, but we turn to the mathematician."

Eddington's radio talks brought the American public samples of the speculative daring of modern physicists. He dated cosmic rays to the time before the expansion of our universe began and estimates that most of them have traveled several times around the universe. He estimated that the universe doubles its diameter in 1,300,000,000 years at its present rate. On the relativ-

ity theory he suggested that the expanding universe may really be the shrinking atom which would give the same result to human observation. In Tolman's mathematical formulation the universe expands to a maximum in finite time, then shrinks to zero in finite time, but (from his equation) does not pass through zero. De Sitter joined Einstein in a revised theory that space may not be curved and that it may be Euclidian 3-dimensional space after all.

Irving Langmuir received the Nobel Prize for his work in pure science, particularly chemistry. He stated: "My primary interest has been in pure science in the borderland of chemistry and physics, and it is this fundamental work that the Nobel Prize recognizes. . . . We are now at a stage where we have a greater prospect of discovering new leads, new relationships, new laws, than we have had at any time in the past. We are at a really exciting stage in physics."

**BIBLIOGRAPHY.** The publication of many works in physics have made the year 1932 notable. The following may serve as examples of the rich literature of the year in the field of physics: Soddy's *Interpretation of the Atom*; Debye's *Structure of Molecules*; Castelfranchi's *Recent Advances in Atomic Physics*; Allen's *Electrons and Waves*; Hughes' *Photoelectric Phenomena*; Johnson's *Modern Physics*; Malisoff's *Meet the Sciences*; Lindeman's *The Physical Significance of the Quantum Theory*.

**PIFFL, FREDERICK, CARDINAL.** An Austrian prelate of the Roman Catholic Church, died in Vienna, Apr. 20, 1932. He was born in Landskron, Bohemia, Oct. 15, 1864. After serving his novitiate in the historic monastery of Klosterneuburg he was ordained a priest in 1888 and was assigned to pastoral work in the industrial districts of Floridsdorf and Heiligenstadt. A year later he was recalled to Klosterneuburg as professor of moral theology at the theological institute, and in 1907 was elected provost. Francis Joseph nominated him to the archbishopric of Vienna in 1913, and the following year Pope Benedict XV created him a cardinal. He was a keen patron of sacred music, which he did much to foster at the Vienna Academy of Music.

**PITT, PERCY.** A British conductor and composer, died in Hampstead, Nov. 23, 1932. Born in London, Jan. 4, 1870, he studied under Reinecke and Jadassohn at the Leipzig Conservatory and under Rheinberger at the Akademie der Tonkunst in Munich. In 1895 he was appointed chorusmaster for the Mottl concerts; in 1896, organist at the Queen's Hall orchestra concerts, and in 1902, *maestro-al-piano* at the Royal Opera, Covent Garden. The Covent Garden Grand Opera Syndicate appointed him its musical director in 1907. He was conductor for the Beecham Opera Company during 1915-18 and artistic director to the British National Opera Company during 1920-24. In 1922 he became first musical director of the British Broadcasting Company, and two years later resumed the post of musical director to the Covent Garden Syndicate. His works include a symphony in G minor (composed for and

first heard at the Birmingham Festival in October, 1906); *Le Sang des Crépuscules*, symphonic prelude; *Anactoria*, symphonic poem for viola and orchestra; *Ballade*, for violin and orchestra; concerto for clarinet and orchestra; *Cinderella*; *Dance Rhythms*; *Fêtes galantes* (after Verlaine); *Coronation March*, *Serenade*, *English Rhapsody* (on folk songs), and *Oriental Rhapsody*, all for orchestra; *Sakura*, ballet-pantomime; *Hohenlinden*, ballad for male chorus and orchestra; overture to *The Taming of the Shrew*; and incidental music to Stephen Phillips's *Paolo and Francesca*, Alfred Austin's *Flodden Field*, and Shakespeare's *King Richard II*.

**PITTSBURGH, UNIVERSITY OF.** A nonsectarian institution of higher education for men and women, comprising 17 schools and divisions, in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1932 was 10,490, distributed as follows: College, 1970; engineering, 526; mines, 90; business administration, 615; education, 726; Johnstown Junior College, 431; Erie Centre, 377; Uniontown Centre, 181; graduate school, 1443; downtown division, 2172; medicine, 264; law, 359; pharmacy, 163; dentistry, 237; retail training, 10; extension division, 926. The 1932 summer session enrollment was 3399. There were 921 members on the faculty for the year ending June 30, 1932. The amount of endowment was \$2,150,958, and the income from endowment during 1931-32 was \$95,789. There were 150,638 volumes in the library. Chancellor: John G. Bowman, LL.D.

**PLATINUM.** The platinum refiners of the United States in 1931 purchased 446 ounces of crude placer platinum of domestic origin and 34,933 ounces of foreign crude platinum, as compared with 797 ounces of domestic crude platinum, and 44,765 ounces of foreign crude platinum purchased in 1930, according to the U. S. Bureau of Mines. Domestic materials purchased in 1931 included 67 ounces from Alaska, 353 ounces from California, and 26 ounces from Oregon. Purchases of foreign crude platinum in 1931 included 22 ounces from Canada, 28,611 ounces from Colombia, 1 ounce from Russia, and 5299 ounces from South Africa. Refined platinum metals recovered in 1931 from crude platinum, from ore and concentrates, and from gold and copper refining amounted to 36,205 ounces, of which 8393 ounces was reported to have come from domestic materials.

The uses of platinum and its allied metals are many and varied. The most widely used metal of the group is platinum, which constituted 76,990 ounces (nearly 65 per cent) of the total platinum metals sold by domestic refiners in 1931. The principal consumer of platinum was the jewelry industry. Second in magnitude as a consumer of platinum in 1931 was the chemical industry, where the metal is used chiefly for catalyzers in the manufacture of sulphuric, acetic, and nitric acids, for stills for sulphuric acid, for anodes for electrochemical processes, and as chemical ware in the form of crucibles, dishes, and other laboratory equipment. Third as a consumer ranked

the dental industry, where platinum is used chiefly in posts and pins for artificial teeth. The electrical industry was the fourth largest consumer, the metal being used chiefly in contact points, in telephone and telegraph apparatus, and in magneto contacts.

Next to platinum, palladium is the most extensively used of the metals of the platinum group; it constituted 37,923 ounces (nearly 32 per cent) of the total platinum metals sold by domestic refiners in 1931. It is by far the cheapest metal of the platinum group, especially volume for volume, and tends more and more to replace other metals. The largest consumer of palladium in 1931 was the electrical industry, which purchased 22,028 ounces from domestic refiners, compared with 9569 ounces in 1930. The next largest quantity of palladium is used in the dental industry, where the metal is alloyed with gold and platinum for use in artificial teeth. Much smaller quantities of palladium are used in jewelry and still smaller quantities in chemical ware.

The uses of iridium are few compared with those of platinum and palladium, but it ranks third among the platinum group as regards total consumption; in 1931 sales of iridium amounted to 3259 ounces (2.7 per cent) of the total sales of platinum metals. It is employed chiefly as a hardener for platinum, principally in jewelry which uses a 10 per cent iridium alloy and in the electrical industries where an alloy containing 15 per cent or more is used.

The consumption of the other platinum metals—osmium, rhodium, and ruthenium—is quite small, amounting to only 0.86 per cent of the total for the group in 1931.

**PLUMER, HERBERT CHARLES ONSLOW PLUMER, FIRST VISCOUNT, OF MESSINES AND OF BILTON.** A British field marshal, died in London, July 16, 1932. Born in Torquay Mar. 13, 1857, he attended Eton and Sandhurst and entered the army in 1876. In 1884 he went to Egypt where, as a captain in the York and Lancaster Regiment, he was employed in the Red Sea littoral, and took part in the actions at El Teb and Tamai in the Sudan campaign. The following year he was appointed to the Staff College at Camberley. On his promotion to the rank of major in 1893 he was sent to South Africa where during the Matabele and Mashona native rising in 1896 he raised and commanded a corps of mounted rifles. During 1897-99 he was again in England as garrison instructor at Aldershot. He then returned to South Africa, and on the outbreak of the Boer War assumed the command of the Rhodesian frontier force which was engaged for months in a gallant attempt to relieve Mafeking from the north. He remained in South Africa until 1902, being successively promoted to brigadier general and major general. During 1902-03 he commanded the 4th Brigade, 1st Army Corps, and during 1903-04 the 10th Division and 19th Brigade, 4th Army Corps. In 1904 he was made quartermaster-general to the force and third military member of the Army Council. The following year he was sent to Ireland where until 1909 he commanded the 5th Division, being promoted

to lieutenant general. He was in charge of the Northern Command from 1911 to 1914. In January, 1915, he was made commander of the 5th Army Corps, consisting of the 27th and 28th Divisions, which held the southern end of the Ypres salient and bore the brunt of the German gas attack in April. In May, 1915, he assumed command of the 2d Army, whose most brilliant exploit was the blowing up of the Messines-Wytschaete ridge in the Messines offensive on June 7, 1917. In November, 1917, he was entrusted with the command of the British contingent of four divisions sent to the basin of the Po following the Italian disaster at Caporetto. He was recalled to Flanders in March, 1918, to command the 2d Army again in its defense of Ypres during the great German offensive. In September, with King Albert as leader of the reorganized Belgian Army, he launched the attack that resulted in the precipitate retreat of the army under Prince Rupert of Bavaria.

After the signing of the Armistice Plumer was sent to Germany as commander of the British Army of Occupation, remaining there until April, 1919. From 1919 to 1924 he was governor and commander-in-chief of Malta. In 1925 he succeeded Sir Herbert Samuel as high commissioner for Palestine and was highly successful during his three-year administration in reconciling the animosities resulting from Jewish and Arab aspirations. He was created field marshal and baron in 1919 and viscount in 1929. In addition to numerous British decorations he received those of the French Legion of Honor, the Order of the Star of Leopold (Belgium), and the Order of St. Maurice and St. Lazarus (Italy), and in 1928 was made a Knight of Justice of the Order of the Hospital of St. John of Jerusalem.

**PLUMS.** See HORTICULTURE.

**PLUNKETT, SIR HORACE (CURZON).** An Irish statesman, died in Weybridge, Surrey, England, Mar. 26, 1932. Born Oct. 24, 1854, third son of the sixteenth Baron Dunsany, he was educated at Eton and University College, Oxford. During 1870-89 he lived in the United States as a ranchman in Montana. On his return to Ireland he was instrumental in the promotion of agricultural co-operation, and in 1894 founded the Irish Agricultural Organization Society. The following year he formed in Parliament, to which he had been elected as a Unionist member for County Dublin in 1892, the Recess Committee, whose report on agricultural needs and suggested legislation he drafted. He lost his seat in Parliament in 1900, but served until 1907 as vice-president of the department of agriculture and technical instruction for Ireland, which had been developed from the recommendations of this committee. When the Liberals came into power in 1906 he was retained by Lord Bryce, then Chief Secretary for Ireland, until Nationalist opposition to him grew too strong. On his resignation government support of the valuable work done by the Irish Agricultural Organization Society was withdrawn. He was also a commissioner of the Congested Districts Board for Ireland from 1891 to 1918, and in 1897 was made a member of the Privy Council of Ireland.

Sir Horace played an important part in the Irish agitation before and during the World War. Early in 1914 he visited Ulster and attempted to bring about a reconciliation, suggesting that after a term of years a part of Ulster might vote whether it would secede from Home Rule Ire-

land. Again in 1917-18 he was chairman of the Irish Convention which attempted to find a peaceful solution of the Irish question, following the Sinn Féin rebellion of 1916. The purpose of this convention was to draw up a plan for a constitution of the government of Ireland and to submit this plan to the British government. In 1919 he created and endowed the Horace Plunkett Foundation, a trust for the promotion of agricultural development. He was a Senator of the Irish Free State during 1922-23. Among his writings are: *Ireland in the New Century* (1904); *Noblesse Oblige: An Irish Rendering* (1908); *The Rural Life Problem of the United States* (1910); *Some Tendencies of Modern Medicine* (1913); *A Better Way: An Appeal to Ulster Not to Desert Ireland* (1914); *Home Rule and Conscription* (1918); and *Oxford and the Rural Problem* (Sidney Ball Memorial Lecture, 1920). Knighthood in the Royal Victorian Order was conferred on him in 1903. In 1929 he was elected a member of the Royal Irish Academy.

**POETRY.** See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; ITALIAN LITERATURE; PHILOLOGY, MODERN; PHILOLOGY, CLASSICAL; SPANISH-AMERICAN LITERATURES; SPANISH LITERATURE.

**POLAND.** A central European state, partitioned among Germany, Russia, and Austria from 1772 to 1918, when it was reestablished as an independent republic. Capital, Warsaw (Warszawa).

**AREA AND POPULATION.** With an area of 139,868 square miles, Poland had a population of 32,120,020 at the census of Dec. 9, 1931 (excluding military in barracks), compared with a population of 27,176,717 at the census of 1921. The increase for the decade was 18.2 per cent. Births in 1931 numbered 965,795; deaths, 494,893; marriages, 273,322. The average number of births per 1000 inhabitants for the period 1925-29 was 33.2; of deaths, 17.3; the average natural increase, 15.9. Emigration declined from 218,387 in 1930 to 76,000 in 1931. The largest cities, with the census population of Dec. 9, 1931, and the 1921 census population in parentheses, were: Warsaw (Warszawa), 1,178,211 (936,713); Łódź, 605,287 (451,974); Poznań (Poznań), 246,574 (184,758); Lemberg (Lwów), 316,177 (219,388); Cracow (Kraków), 221,200 (183,706); Wilno (Vilna), 197,049 (128,954 in 1919); Katowice, 127,841 (104,868). Poles formed 69 per cent of the population in 1921; Ruthenians, 15 per cent; Jews, 8 per cent; White Russians, 4 per cent; Germans, 3 per cent; and other nationalities, 1 per cent. The population was divided into religious groups in 1930 approximately as follows: Roman Catholics, 74.9 per cent; Jews, 9.7 per cent; Russian Orthodox, 2.4 per cent; and Protestants, 2 per cent.

**EDUCATION.** For the 1930-31 school year, there were 26,540 elementary schools, with 3,961,885 pupils; 743 secondary schools, with 204,992 pupils; 203 teachers' training colleges, with 35,710 pupils; and 1621 professional schools, with 205,456 pupils (1929-30). The 22 universities and high schools had 1699 teachers and 48,155 students in 1930-31. The universities were: Warsaw, 9158 students; Cracow, 7144; Lwów, 6276; Poznań, 4414; Wilno, 3618; Lublin, 711. Elementary education is compulsory and all education is free.

**PRODUCTION.** Poland is predominantly agricultural, although there are numerous important in-

dustries. In 1930, 63.8 per cent of the population was engaged in agriculture, forestry, or fishing; 15.4 per cent in mining and industry; 9.5 per cent in trade and transportation; and 11.3 per cent in other occupations. Of the total area of Poland in 1931, cultivated land comprised 48.6 per cent, forest 24.1 per cent, pastures and meadows 15.3 per cent; and waste land 10.4 per cent. Nearly 60 per cent of the arable land was devoted to cereals. Poland normally ranks third among the nations in the production of rye and potatoes, sixth in sugar beets, seventh in oats, and eighth in barley. Production of the chief crops in 1931, in millions of quintals (quintal equals 220.46 pounds), was: wheat, 22.6; rye, 57; barley, 14.8; oats, 23.1; potatoes, 309.9; sugar beets, 27.6. Hemp, hops, and chicory are other important crops. Livestock in 1931 included 4,123,000 horses, 9,786,000 cattle, 2,599,000 sheep, and 7,321,000 swine. Final estimates of the four main cereal crops for 1932, in millions of quintals, were: Wheat, 13.5; rye, 61.1; barley, 14.0; oats, 23.9.

The mineral and metallurgical output in 1931, with 1930 figures in parentheses, was as follows (in metric tons): Coal, 38,268,000 (37,505,649); crude petroleum, 631,200 (662,763); potash, 261,600 (305,609); salt, 440,400 (387,400); iron ores, 284,400 (476,400); zinc and lead ores, 610,800 (1,051,200); pig iron, 347,114 (477,948); cast steel and ingots, 1,036,966 (1,237,497); rolled products, 752,519 (904,188); other iron and steel manufactures, 240,362 (330,334). The production of natural gas was 473,820,000 cubic meters (489,189,000). Cotton and wool textiles, paper and paper manufactures, chemicals, timber, and petroleum products are the leading industrial products. In 1931, Poland had 30 petroleum refineries, producing 559,648 metric tons of refined products; in 1930-31, 69 sugar refineries, producing 698,051 tons. Of the estimated national income of 18,967,900,000 zlotys (zloty equals \$0.1122 at par) in 1928-29, agriculture contributed 9,059,300,000 zlotys, industry 6,930,300,000 zlotys, and trade (foreign and domestic), 2,978,300,000 zlotys. The general index of industrial production, with 1928 equal to 100, declined to an average of 81.8 for 1930, 69.3 for 1931, and 53.2 for the month of September, 1932. The number of persons employed in industrial establishments of 20 or more workers averaged 765,919 for 1930, 650,518 for 1931, and 540,120 at the end of March, 1932, after which there was a steady rise to 573,463 at the end of August, 1932.

COMMERCE. The trend of Polish foreign trade in recent years is shown in the accompanying table from the *Bulletin* of the Bank of Poland research department.

FOREIGN TRADE OF POLAND, 1927 TO 1931  
[In millions of zlotys, zloty equals \$0.1122]

Year	Imports	Exports	Balance
1927 .....	2,895.5	2,515.1	-380.4
1928 .....	3,362.2	2,508.0	-854.2
1929 .....	3,111.0	2,813.4	-297.6
1930 .....	2,245.9	2,433.2	+187.3
1931 .....	1,462.5	1,878.4	+415.9
1932 .....	862.0	1,083.8	+221.8

The value of the 1931 exports was distributed by the four main commodity classifications as follows (in millions of zlotys): Raw materials and partly manufactured articles, 801; articles of food and drink, 542; manufactures, 447; live animals, 88. Similar classification of imports in 1931 gave: Manufactures, 683; raw materials and

semi-manufactures, 590; articles of food and drink, 194; live animals, 1. Germany was both the leading customer and the chief source of imports in 1931, purchasing Polish goods to the value of 315,218,000 zlotys, and furnishing imports valued at 359,225,000 zlotys. Great Britain purchased 318,523,000 zlotys worth of exports, and furnished 104,392,000 zlotys worth of imports; the United States, 12,654,000 and 153,884,000 zlotys, respectively; Czechoslovakia, 143,867,000 and 100,241,000 zlotys; France, 103,358,000 and 109,725,000 zlotys; and the Soviet Union, 125,257,000 and 36,038,000 zlotys.

Among the 1932 import items, textile raw materials and products declined by 148,000,000 zlotys, or 40 per cent, as compared with 1931; metal goods, by 58,000,000 zlotys (52 per cent); machines and equipment, 58,000,000 zlotys (58 per cent); electrical equipment, 26,000,000 zlotys (51 per cent); hides and leather, by 26,000,000 zlotys (44 per cent); and metal ores, 20,000,000 zlotys (64 per cent). The heaviest export losses occurred in coal, which declined 129,000,000 zlotys, or 38 per cent, in value; in iron and steel, 90,000,000 zlotys (65 per cent); textile products, 70,000,000 zlotys (50 per cent); and lead and zinc, 38,000,000 zlotys (48 per cent). Agricultural exports were 227,000,000 zlotys (60 per cent) less than in 1931. Commodity imports from the United States in 1932 were valued at 103,950,000 zlotys (\$11,663,000); exports to the United States were valued at 10,033,000 zlotys (\$1,125,000).

FINANCE. For the fiscal year ended Mar. 31, 1932, total governmental revenues were 2,262,100,000 zlotys and expenditures were 2,466,100,000 zlotys, the deficit being 204,000,000 zlotys. This compared with revenues in 1930-31 of 2,747,800,000 zlotys, expenditures of 2,809,600,000 zlotys, and a deficit of 61,800,000 zlotys. The budget for 1932-33, as adopted by Parliament Mar. 18, 1932, anticipated revenues of 2,377,357,000 zlotys (\$266,770,000, at par of \$0.1122), and expenditures of 2,451,917,000 zlotys (\$275,105,000), the expected deficit being 74,560,000 zlotys (\$8,365,600). The 1932-33 budget items called for a 10 per cent increase in national defense appropriations, which were 34 per cent of the total appropriations and for an 11 per cent increase in appropriations for service of the public debt, which absorbed 11.2 per cent of the total expenditures.

For the entire calendar year 1932, preliminary returns showed receipts of 1,978,570,000 zlotys, expenses of 2,276,152,000 zlotys, and a deficit of 297,582,000 zlotys.

Poland's public debt on July 1, 1932, amounted to 5,011,100,000 zlotys, of which 4,553,700,000 zlotys, or 90.9 per cent, was held abroad. The foreign debt was distributed as follows: United States government, 1,837,410,000 zlotys; balance on loans of 1920, 1925, and 1927, sold principally in the United States, 1,344,404,000 zlotys; the so-called Post-war Liquidation debt, 324,798,000 zlotys; debts toward private foreign firms, 891,000 zlotys.

COMMUNICATIONS. In 1931, railways in operation had 12,352 miles of line, all state owned, of which 10,908 miles were standard-gauge and 1444 miles narrow-gauge lines. Operating revenue of the state lines in 1930-31 was 1,516,423,000 zlotys and operating expense was 1,486,392,000 zlotys. Highways in 1931 extended about 141,000 miles, of which 28,938 miles were im-

proved roads maintained from the national or local-government budgets. There were 1700 miles of navigable waterways, of which 298 miles were accessible for vessels of over 400 tons. Twenty civil air routes in operation during 1931 carried 11,549 passengers, 305 tons of goods and 52 tons of mail.

Despite the world depression, the number of vessels entering the port of Gdynia during 1931 totaled 3144, of 2,650,000 net registered tons, as against 2238, of 2,031,000 tons, during 1930. Vessels clearing numbered 3148, of 2,665,000 net registered tons (2219, of 2,015,000 tons, in 1930). At Danzig (q.v.), which handles the major share of Poland's shipping trade, entrances numbered 5900, of 4,062,000 net tons, in 1931 and 6078, of 4,143,000 tons, in 1930; clearances were 5971, of 4,064,000 tons, in 1931 and 6086, of 4,143,000 tons, in 1930. Gdynia in 1932 was served by 24 regular steamship lines. In the same year 3610 vessels of 2,791,700 net registered tons entered the port.

**GOVERNMENT.** Under the constitution adopted Mar. 17, 1921, executive power is vested in the President, chosen by both houses of the National Assembly for a period of seven years; and legislative power is vested in the National Assembly, consisting of the Senate of 111 members and the Diet (444 members), called the Sejm, both elected by universal suffrage. President in 1931, Ignace Moscicki, elected June 1, 1926. The composition of the Sejm (lower chamber) following the election of Nov. 16, 1930, was: Government bloc, 247; National People's Union, 62; Peasant party, 48; Socialists, 24; Ukrainians, 18; Christian Democrats, 15; National Labor, 10; Jews, 6; Germans, 5; Communists, 5; other parties, 5; total, 444. Out of 111 members of the Senate, the Government bloc controlled 74; the National People's Union, 12; Peasants, 6; Socialists, 5; Ukrainians, 4; Christian Democrats, 4; Germans, 3; other parties, 3. The chief figures in the Cabinet appointed May 27, 1931, and reconstituted Mar. 21, 1932, were: Premier, Alexander Prystor; Military Affairs, Marshal Josef Pilsudski; Foreign Affairs, August Zaleski; Finance, Jan Pilsudski; Justice, Czeslaw Michalowski. For changes during 1932, see *History*.

### HISTORY

**INTERNAL DEVELOPMENTS.** Marshal Pilsudski's semi-dictatorial régime continued during 1932 the steady undermining of parliamentary government in Poland which had begun with the Marshal's *coup d'état* of 1926. The process had been rendered easier by the victory of the Pilsudski (Government) bloc in the 1930 elections, a victory won, at least in part, by intimidation and manipulation. More than 80 Opposition leaders, affiliated with the Socialist and Peasant parties, were summarily thrown into prison at Brest-Litovsk during the election campaign and charged with conspiracy against the government. Of these all but 11 of the most prominent were released during 1931. Trial of the 11 was under way at the beginning of 1932. On January 13, 10 were found guilty and sentenced to terms of from one to three years at hard labor. Among them was former Premier Wincenty Witos, who received a minimum sentence of one and one-half years because of his distinguished services during the Polish-Soviet war and on other occasions. Announcement of the verdict was accompanied by anti-government demonstrations in Brest-

Litovsk and Warsaw, and in a plenary meeting of Parliament on January 15.

Lacking the two-thirds majority in Parliament necessary to revise the Constitution, the Pilsudski bloc partially satisfied their demand for stronger executive authority by a law passed Mar. 17, 1932. This authorized the President to issue decrees with the force of law. As regards economic and financial matters and those pertaining to jurisdiction and legal status, the special powers were granted only for the parliamentary recess (from March 17 to Nov. 3, 1932). But in matters of public administration, the President's emergency powers were to continue until Dec. 31, 1934. Parliament, however, retained its exclusive jurisdiction over state loans, taxation, and government monopolies.

The government had demanded emergency powers on the ground that the exigencies of the economic depression required quick and decisive action. It now proceeded to supplement economic and financial legislation already adopted by Parliament by a series of decree laws. For the most part these were formulated at monthly conferences among President Moscicki, Premier Prystor, and all former Premiers under the Pilsudski régime. Much of the legislation enacted was designed to relieve the critical condition of Polish farmers. It provided facilities for the payment or postponement of tax and debt arrears, instituted court receiverships for agricultural enterprises, created arbitration offices to deal with credit affairs of small landowners, and discouraged usury.

Another series of laws and decrees dealt with industrial conditions. Unemployment insurance laws were revised so as to reduce the burden on the Treasury. The number of those entitled to receive relief was curtailed, benefits were lowered, and the period over which they were payable was reduced. The dues payable by employers for the account of the unemployment fund were raised. In protest against these measures about half of the working population participated in a one-day strike on March 16. There were clashes with the police and a number of deaths. To care for the unemployed who were not included in the unemployment insurance scheme, the government established the Unemployment Relief Fund organization, two-thirds of whose income was to be raised from private contributions and one-third from taxes on realty rents, sales of sugar, beer, electric bulbs, and gas, and certain amusements. A decree of June 12 provided that salaries of executives in industry, commerce, banking, and insurance should be in proportion to the paying capacity of the enterprises, the earning power of employees, and the state of the employment market. The government assumed dictatorial control over the production and sale of coal, oil, and natural gas; induced producers to lower the price of sugar by 10 per cent; and intervened in numerous other fields of economics and finance. The new customs tariff, formulated after several years of study, was promulgated Oct. 10, 1932, and was to become effective one year later. It constituted an important step in the organization of the economic life of the country. In December, Parliament authorized the compulsory conversion of long-term mortgage bonds, to a maximum interest rate of 4½ per cent; payments on principal were suspended for three years.

Another economy step was the reorganization of the administrative framework of the government. The Ministry of Public Works was abol-

ished on July 1, 1932, its duties being taken over by other ministries. The Ministries of Agriculture and of Agrarian Reforms were merged and the Emigration Office was abolished. In addition, the purchase and sale of salt was transferred from a government bureau to a newly created state enterprise called the Polish Salt Monopoly, which was made a separate legal entity and given the privilege of exploiting the state-owned salt mines and brineworks. Despite these efforts, the financial condition of the government grew steadily worse. When Parliament reconvened November 3, it was faced with the unpleasant task of voting a budget with a \$40,000,000 deficit for the 1933-34 fiscal year.

Besides changes due to the administrative reorganization, resignations of two prominent Cabinet ministers occurred during the year. Minister of Finance Jan Pilsudski, brother of Marshal Pilsudski, resigned unexpectedly on September 5. He was succeeded by Professor Zawadzki, a conservative exponent of *laissez faire* economics. On the eve of the resumption of the disarmament negotiations at Geneva, Foreign Minister August Zaleski resigned (November 2) after six years in office. His place was filled by Col. Josef Beck, a confidant of Marshal Pilsudski, who had served as Under-Secretary in the Foreign Office.

The autonomist agitation in Polish Ukraina, which had flamed into large-scale rebellion in 1930, again led to uprisings during 1932. A rising among Ukrainian peasants in Polesta, Eastern Poland, was reported from Warsaw August 30. On September 15, five Ukrainian writers and journalists were sentenced to prison for four years for participating in a Ukrainian nationalist congress in Vienna three years earlier. On September 26, the Polish Governor of Lwów County dissolved the Ukrainian radical party, Selrop, on the ground that it was spreading anti-Polish and communistic propaganda. The party had a membership of about 400,000 and was represented in Parliament by four Deputies. On December 22, three Ukrainians were sentenced to death at Lwów for an armed attack on the Grodek postoffice.

The anti-Jewish rioting of the previous year was renewed by Nationalist students in the University of Warsaw on Nov. 10, 1932, in connection with the observance of the anniversary of the death of a Christian student in the 1931 outbreaks (see 1931 YEAR BOOK). The attacks upon Jews spread to several other cities, particularly Lwów, where terrorization of Jews was reported to have been continuous from November 26 to December 7. According to an interpellation submitted in Parliament by the Jewish Deputies, 399 Jews received first-aid treatment from November 26 to December 2. One Christian student was killed and the University of Warsaw was closed for several days (see JEWS). A dispute between the government and the Vatican over the activities of the so-called pro-Russian mission was settled by a compromise in September. The pro-Russian mission had been sending foreign Jesuits into Eastern Poland to convert the Greek Orthodox community. The Jesuits were accused by the Poles of Russianization of the White Ruthenian and Ukrainian Greek Orthodox population.

**FOREIGN RELATIONS.** Polish foreign relations during 1932 were dominated by the growing tension with Danzig and Germany, which, in conjunction with the advent of the Herriot govern-

ment in France, caused a significant reorientation in Poland's foreign policy. The increased friction with Danzig was attributable in large part to the intransigent attitude of the German Nationalists and Hitlerites controlling the Senate of the Free City. Dr. Henryk Strasburger, who as Polish High Commissioner in Danzig had labored to improve Polish-Danzig relations, resigned on Feb. 12, 1932 and was succeeded by Dr. Kasimir Papee. In taking office, Dr. Papee asserted that Polish-Danzig relations were far from satisfactory. The Free City, he said, was created to serve as a Polish port and "must be governed so as to fulfill the obligations imposed upon it by the Treaty of Versailles."

THE POLISH CORRIDOR

Dr. Papee immediately became involved in a controversy with the Danzig Senate over the entrance of German-made goods into Poland through Danzig under the guise of having been manufactured in the city. To end this practice, the Warsaw government announced that it would take over the entire administration of the Danzig customs, a project which aroused strong protest among Danzigers. Sensational rumors of a Hitlerite plan to make Danzig the headquarters of the Nazi Storm Troops, who had been banned in Germany, and of Polish preparations for a coup in Danzig plagued officials of all three governments during the spring. Sections of the Polish press urged Marshal Pilsudski to seize Danzig and East Prussia and defy the world, and on May 24 the Foreign Relations Committee of the German Reichstag requested the government to notify Poland that a raid on Danzig would be resisted to the end by Germany. On June 15, in defiance of the Free City authorities and of a ruling of the World Court, a Polish destroyer entered Danzig harbor without observing international port rules. Later in the month the German Navy was welcomed to Danzig, despite objections of the Warsaw government. These developments were accompanied by a Polish boycott of goods made in Danzig and of the Danzig shore resorts.

Through the efforts of Count Gravina, League of Nations Commissioner at Danzig, two protocols were signed between Dr. Papee and Dr. Ernest Ziehm, President of the Danzig Senate, on

August 13. One extended to Polish war vessels the right to enter Danzig Harbor at any time after notifying the Chief Pilot under the Port Council. The other pledged both states to discourage unfriendly activities and demonstrations on the part of their respective citizens. The conclusion of these agreements diminished national hostility somewhat. But tension was revived in November, when Poland undertook to introduce Polish currency for payments in the railway system of the Free City. The Free City immediately appealed to the Council of the League. On November 26, a treaty was signed between the two countries which settled a number of disputes and served to restore more amicable relations.

**THE SOVIET-POLISH NON-AGGRESSION PACT.** The threatening developments in Germany, together with the advent of Herriot's liberal government in France, caused Poland hurriedly to conclude a non-aggression treaty with the Soviet Union, concerning which negotiations had been in progress for several years. A draft treaty was tentatively approved in Moscow on Jan. 25, 1932. It pledged both governments to "refrain from any aggressive acts or from attack against each other, either separately or jointly with other powers." If one of the contracting parties was attacked by another state or group of states, the other agreed not to help the attacking state either directly or indirectly. If one of the contracting parties attacked a third state, the other party would be entitled to denounce the treaty without previous notice. Each of the contracting parties undertook "to refrain from participation in any agreements manifestly hostile toward the other party from the viewpoint of aggression." Conciliation of disputes not capable of solution through ordinary diplomatic channels was provided for in a conciliation convention forming an integral part of the treaty.

It had been the intention of Poland to act in conjunction with her allies, France and Rumania, in concluding the non-aggression pact with the Soviet Union. However, Rumania delayed action by demanding Soviet recognition of Rumania's annexation of Bessarabia as a previous condition to the conclusion of a Soviet-Rumanian non-aggression treaty. Meanwhile the victory of the Left in the French elections greatly alarmed the Poles, who foresaw a possible repudiation of the Franco-Polish alliance, and further restriction of French financial aid. Accordingly, the Polish government proceeded to sign the non-aggression pact at Moscow (July 25) without waiting for a satisfactory outcome of the Soviet-Rumanian negotiations. The conciliation convention provided for in the pact was signed at Moscow November 23 and on November 27 ratification of the non-aggression pact was announced in Moscow and Warsaw. Two days later a Franco-Soviet non-aggression pact was signed in Paris. The conclusion of the Polish-Soviet treaty, while relieving somewhat Poland's anxiety concerning its eastern frontier, by no means ended mutual suspicions between the two powers. In the month of October eight persons were executed in Poland as Soviet spies.

With the elevation of Colonel Beck to the Foreign Office portfolio, steps were taken indicating a disposition to effect a reconciliation with Germany. The Poles were particularly incensed by the failure of Premier Herriot to consult them before announcing his disarmament plan in November (see **DISARMAMENT**).

**DEFAULT ON DEBT TO UNITED STATES.** In September, the government notified the government of the United States that it would take advantage of the option granted in the debt-funding agreement to postpone for two years payment of principal on its debt. The principal amount due Dec. 15, 1932 was \$1,357,000, while the nonpost-ponable interest due was \$3,070,980. In notes of November 22, and Dec. 8, 1932, the Polish government requested that the December 15 interest payment be postponed and that the entire matter of the debt owed by Poland to the United States be reconsidered. The U. S. government rejected both requests, and on December 15 Poland defaulted on her interest payment, pleading inability to transfer the funds except by reducing the gold coverage of the zloty and impairing its stability. John N. Willys, American Ambassador to Poland, resigned on Apr. 20, 1932, and was succeeded by F. Lamnot Belin.

See FRANCE, GERMANY, DANZIG, UNION OF SOVIET SOCIALIST REPUBLICS AND RUMANIA under *History*; REPARATIONS AND WAR DEBTS. Consult Robert Machray, *Poland, 1914-1931* (London, 1932).

**POLAR RESEARCH.** The outstanding development in the field of polar research during 1932 was the launching of the International Polar Year, a programme of systematic observation of magnetic, meteorological, and other geophysical phenomena at a network of stations covering the entire globe. About half the stations were in the polar regions. Thirty-three nations participated in the enterprise and about half of the stations were specially established for the occasion. The various scientific expeditions occupied their respective stations commencing with July, 1932, and were to continue their observations until August, 1933. The enterprise took the form of a jubilee celebration of the First International Polar Year in 1882-83, when 12 countries sent out 14 expeditions, 12 into the Arctic and two into the Antarctic.

As in the First Polar Year, the Arctic attracted most of the 1932-33 expeditions. Twenty-three stations were maintained north of Latitude 60° North. American scientists conducted observations at Fairbanks, and Point Barrow, Alaska, and at Peary Lodge, Thule, Greenland. The latter expedition, sent out by the University of Michigan and the Pan American Airways, investigated the feasibility of establishing an air line from the United States to Europe via Greenland. It also sought evidence as to whether the earth was emerging from or entering upon an Ice Age. British and Canadian stations were maintained at Fort Rae and Chesterfield, in North Canada. Four other stations were scattered along the coast of Greenland. The Soviet government was particularly active in the enterprise, establishing stations in Franz Josef Land and Novaya Zemlya; also in North Siberia at Dickson Harbor, at the mouth of the Lena River, at Yakutsk, and at St. Laurence Bay.

Other polar exploration and research during 1932 was confined mainly to the Arctic regions of the Soviet Union and to Greenland. Besides establishing nine of the 17 new polar stations maintained during the Polar Year, the Soviet government sent a number of expeditions into the Far North. Among the more important was that of the icebreaker *Sibirskov* through the northeast passage from Arkhangelsk to Vladivostok. The *Sibirskov* expedition, headed by Professors

Schmidt and Vize, achieved the passage in one season, a feat never before accomplished. Valuable economic possibilities were believed to have been opened up. Since 1928, the Soviet government had made regular use of the Kara Sea, formerly considered inaccessible, as a trade route to the mouths of the Siberian rivers (Yenesei, Lena, and others) from the West. In the summer of 1932, 46 ships reached the mouths of the Siberian rivers by this route. In the same year, the icebreaker *Malygin* made two trips to Franz Josef Land.

Soviet scientists on board the icebreaker *Tasmir* studied the hydrology of the Kara and Barents Seas. In August, an air expedition, headed by the Soviet aviator B. S. Chuknovsky, started from Troitzk in the Ural Region and explored the Taimir peninsula to the rocky island of Minin, discovered in 1931. The Ushakov expedition completed two years of exploration in North Land and the flyers, Alexeyev and Kozlov, using Dixon Island as their base, reached North Land by airplane. In October, the vessel *Albatross* left Point Dickson on the Siberian coast carrying back to civilization men who had established a hunting post there. On the return trip, the *Albatross* grounded on White Island and six members of the crew rowed 400 miles to the port of Gel in an open boat to secure aid. The icebreaker *Deryatka*, with a crew of 38, set out in search of the *Albatross* but was lost at sea. On December 5 one of the *Deryatka's* boats, containing eight frozen corpses, was found 40 miles north of Archangel. Search for the crew of the *Albatross* was still under way at the end of the year.

Exploration in Greenland during 1932 was stimulated by the rivalry between Norway and Denmark for possession of unsettled parts of the island and by projects for the establishment of air lines from Europe to America via Greenland. A Danish expedition of 96 men, led by Dr. Lange Koch, was the largest to visit Greenland. With two ships, 12 motor boats, and several airplanes, the expedition spent three months mapping and surveying 2400 square kilometers (1490 square miles) of the East Coast between Latitude 70° and 77° North. Several stations were established along the coast, where 26 members of the expeditions remained throughout the winter. In Franz Josef Fiord, Dr. Koch found about 5000 petrified specimens of Stegocephali, quadrupeds of prehistoric times which could walk on land as well as live in the sea. Another Danish explorer, Dr. Knud Rasmussen, mapped by airplane the coastline and fiords of Southeast Greenland from Pikiutdluk (south of Angmagasalik) to Cape Farvel (Farewell). A third Danish party, led by Captain Eynar Mikkelsen, with three British scientists participating, mapped in detail the Blossesville coast, East Greenland. By the end of the 1932 season, Danish explorers had investigated the coast of East Greenland from Cape Bismarck in the north to Cape Farewell in the south.

The British expedition, which since June, 1930, had been making surveys in Greenland for a proposed British Arctic air route, continued its work despite the death of its leader, H. G. Watkins, whose native canoe overturned while he was hunting seals on Lake Fiord August 20. The party prepared to spend another winter in Greenland. Mr. Watkins was succeeded as leader by John Rymill. In June, Admiral Peary's daughter, Mrs. Edward Stafford, with her two sons and a

party sailed with Captain Robert Bartlett in the *Morrissey* for Cape York, Greenland, where a masonry shaft was erected and dedicated (August 25) to the discoverer of the North Pole.

A British group, headed by B. B. Roberts, spent several months exploring the interior of Iceland. They measured the thickness of the Vatna Jokull ice cap by seismic soundings, mapped the area near the eastern scarp of Kverkfjoll, and made geological and ecological surveys. They reported that the Hyannalindir desert supported a flora and fauna much greater than had been supposed. Napoleon Verville, of Edmonton, Canada, returned to that city in September, 1932, after exploring Banks Land and Melville Island in company with Alex Austin. He found that Eskimos were on Melville Island, contradicting the government theory that Banks Land was the northern limit of Eskimo territory. He was the first white man to visit Melville Island since Vilhjalmur Stefansson's 1915 expedition.

While there was little exploration in the Antarctic during 1932, preparations were under way for two important expeditions during 1933. In the United States, Lincoln Ellsworth and Bernt Balchen, both veterans of polar air expeditions, were preparing for a flight across a largely unexplored section of the Antarctic Continent in an effort to determine several unsolved questions, particularly whether there is any opening from the Weddell Sea to the Ross Sea. A Norwegian expedition, headed by Capt. Hjalmar Riiser-Larsen, planned to leave Norway about Jan. 1, 1933, and explore by sled the Antarctic calotte from Enderby Land to the Weddell Sea, a distance of about 3000 miles. Meteorological and magnetic observations were to be made, the latter with a view to correcting charts and maps for the Norwegian whaling industry. The overland trip was to be made by only three men. See EXPLORATION, METEOROLOGY; GREENLAND under *History*.

**POLITICAL AND SOCIAL SCIENCE, THE AMERICAN ACADEMY OF.** A national forum for the discussion of political and social questions, founded in Philadelphia in 1889 and incorporated in 1891. The organization does not take sides upon controverted questions, but seeks to secure and present reliable information to assist the public in forming an intelligent and accurate opinion. The thirty-sixth annual meeting which was held Apr. 15-16, 1932, considered the general subject "National and World Planning." A six-session meeting held on Nov. 11-12, 1932, dealt with the general topic "Next Steps: A Post-Election Stock-Taking." *The Annals* is issued bi-monthly as the official organ of the academy, each publication being devoted to a study of a particular topic of economic, political, or social importance. In 1932 the following topics were considered: *Power and the Public*; *The Modern American Family*; *Modern Insurance Developments*; *National and World Planning*; *Prohibition—A National Experiment*; and *Palestine—A Decade of Development*. This organ from time to time includes special studies prepared by research

fellows appointed by the academy. The officers in 1932 were: president, Ernest Minor Patterson; secretary, J. P. Lichtenberger; treasurer, Charles J. Rhoads; and vice-presidents, the Hon. Herbert Hoover, Carl Kelsey, and Charles G. Haines. Headquarters are at 3457 Walnut Street, Philadelphia, Pa.

**POLITICAL ECONOMY.** Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as: CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; STATISTICS; SOCIALISM; TRADE UNIONS; WELFARE WORK. See also the articles on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

**POLITICAL SCIENCE, ACADEMY OF.** An international institution for advancing the political sciences and promoting their application to public problems, founded in 1880 in New York City and incorporated in 1910. Its membership on Dec. 31, 1932, numbered 6520, of whom eight were honorary members, 225 life members, 5324 individual members, and 1196 subscribing members, chiefly libraries and organizations. At the semi-annual meeting on April 18 in New York City "The Crisis in World Finance and Trade" was discussed. At the fifty-second annual meeting on November 18 the topic under discussion was "Steps Toward Recovery." The officers for 1932 were: Alanson B. Houghton, president; Albert Shaw, Jackson E. Reynolds, and R. C. McCrea, vice-presidents; Parker T. Moon, secretary and editor of publications; George A. Plimpton, treasurer; and Miss Ethel Warner, director and assistant treasurer. Headquarters are in Fayerweather Hall, Columbia University, New York City.

**POLITICS, INSTITUTE OF.** These annual sessions, at which foreign affairs are so discussed as to promote a more sympathetic understanding of the problems and policies of other nations, were inaugurated by the trustees of Williams College in September, 1919. Courses of public lectures are delivered by scholars and statesmen from foreign countries; round-table and open conferences, presided over by recognized authorities on the topics selected for discussion, are established. The first session of the institute was held in Williamstown, Mass., in the summer of 1921, and annual sessions have taken place since that time. Membership is open to men and women on the faculties of colleges and universities, to writers on foreign politics, to persons engaged in the direction of foreign commerce or banking, to diplomatic and consular officials, to officers of the army and navy, to editors, foreign correspondents of the press, and, by invitation, to others who have had training and experience in international law and politics.

The twelfth session of the institute met in Williamstown July 28 to Aug. 25, 1932. The following courses of lectures were given: "Possibilities of Economic Planning—the Actual Situa-

tion in Germany," Prof. Herbert von Beckerath of Bonn University; "The Industrial and Economic Organization of France," Pierre Lyautey, editor of *La Journée Industrielle*, Paris; "Italy and the World Crisis," Dr. Luigi Villari of Rome; "The Financial Outlook in England," Prof. T. E. Gregory of the London School of Economics; "A British View of the World Economic Order," Arnold Toynbee of the Royal Institute of International Affairs, London; "Japan and the Asiatic Continent," Dr. Inazo Nitobe of Tokyo; and "Nation Building in China," Dr. T. Z. Koo of Peiping.

The following is a list of the round-table subjects, with their respective leaders: "Contrasts in Latin American Civilization," Dr. Stephen P. Duggan of the Institute of International Education, New York City; "The Present Position of the Credit Problem," Prof. T. E. Gregory of the London School of Economics; "The Disintegration of the Modern World Order," Arnold J. Toynbee of the Royal Institute of International Affairs and Prof. Edwin F. Gay of Harvard University; "Sino-Japanese Relations in Eastern Asia," Henry Kittredge Norton of Ossining, N. Y.; "The Peace Treaties and the Map of Europe," Prof. Bernadotte E. Schmitt of the University of Chicago; and "American Economic Foreign Policy," W. W. Cumberland of New York City and Prof. John H. Williams of Harvard University. Special general conferences were held as follows: "Limitation of Armaments," Raymond L. Buell of the Foreign Policy Association, New York City; "The Imperial Economic Conference at Ottawa," Dr. P. E. Corbett of McGill University; "The St. Lawrence Waterway," Dr. Walter W. McLaren of Williams College; and "Secretary Stimson's Statement of August Eighth," Dr. Stephen P. Duggan of the Institute of International Education.

The officers of administration in 1932 were: Harry Augustus Garfield, chairman; Walter Wallace McLaren, executive secretary; and Willard Evans Hoyt, treasurer. Headquarters are at 1 Hopkins Hall, Williamstown, Mass.

**POLO.** Play for the Cup of the Americas, a new trophy placed in competition by President Augustin P. Justo of the Argentine, was the most interesting feature of the polo season of 1932. The open championship and other big tournaments of late August and September were lively but there was not the usual number of entries and the final game was a complete runaway for Winston Guest's Templeton team, composed of youthful Long Island players. Immediately after the play on Long Island a team of United States younger men journeyed to South America and played with marked success through the national championship at Buenos Ayres. It was the first time that a United States team (except the U. S. Army four of 1931) had gone to foreign shores since 1921 when the famed Westchester Cup was brought back from England. After the Argentine open, the United States team of Michael Phipps, Winston Guest, Elmer Boeske, and Williams Post II, defeated the Argentines for the new international trophy, two games to one. Boeske was the scoring star of the series but the whole team of the United States youngsters amazed the South Americans by their whirlwind play and served to give even greater popularity to the game in the Argentine, where 30,000 persons packed the stands for each of the three inter-

national games. The series for the new trophy bids fair to become as important as that for the Westchester Trophy, which is competed for every three years by English and United States fours. Plans were made for another Cup of the Americas series on Long Island in 1933.

The Templeton team, composed of Michael Phipps, Winston Guest, Stewart Iglehart, and Raymond Guest, galloped off with the open title, beating J. H. Whitney's Greentree team in the final in September at Meadow Brook. A last minute injury to Cecil Smith, hard-riding Texan on the Greentree team, dismantled that four a bit and the substitution of Tyrell-Martin, English player, did not aid the team work of the losers. The great surprise of the open was the defeat of the Sands Point team, led by Thomas Hitchcock, jr., the lone ten-goal player in the world, in the first round by E. W. Hopping's brilliant Eastcott team. Eastcott played a remarkable defensive game and beat the Hitchcock, Eric Pedley, Lindsey Howard, G. H. (Pete) Bostwick combination, 6 to 5, at the Sands Point Club, Port Washington. In the final of the Monty Waterbury Memorial tournament, the best of the high-goal handicap events, the Sands Point team proved its capabilities, demolishing the same Eastcott four, 18 to 16, after granting an eight-goal allowance.

The United States Army four of Lt. C. N. McFarland, Lt. MacDonald Jones, Lt. George W. Read, jr., and Maj. C. C. Smith rode off with the junior championship at Rumson in August, defeating J. C. Rathborne's Bahadur team in the final. The Meadow Brook Cups, spring handicap tournament, also fell to the Army team. Yale's preeminence in intercollegiate play continued, the Elis taking both outdoor and indoor titles. In the outdoor final, a finely balanced Yale four of Michael Phipps, James P. Mills, Stewart Iglehart, and Dunbar Bostwick vanquished Harvard, 13 to 9, in the final game.

As usual indoor polo was played all over the country, and the national championships were contested at the Squadron A Armory in New York City and the Squadron C Armory in Brooklyn. Winston Guest's Optimists came back to the top after the lapse of a year and won both the open and Class A titles. The Squadron C team of Brooklyn took Class B honors, and the Class C championship was won by the team of the Farmington Valley Polo Association of Connecticut. The Ramapo Polo Club took the Class D title. Yale's riders won the intercollegiate title again, and the interscholastic crown was taken by Lawrenceville, succeeding Hun School.

**PORTLAND CEMENT.** See CEMENT.

**PORTS AND HARBORS.** Drastic cuts in Federal appropriations forced a curtailment of American harbor works during the year. To be sure the Emergency Relief Act passed by Congress had made some comparatively small funds available for this work. It was announced on

September 13th that the expenditure of 15½ million dollars on flood control works and 30 million dollars on rivers and harbors had been authorized. On October 25, Gen. Lytle Brown, Chief of Engineers, let a number of contracts, based on this act, for what would normally be considered smaller improvement, extensions, and maintenance operations.

The construction of a rock-mound breakwater at Monterey, Calif., is of interest and the repairs authorized to the south jetty at the mouth of the Columbia River recalls one of the most interesting jetty constructions in the United States.

Among the more important developments there should be noted the plans of the federal and municipal governments to spend some \$3,700,000 on port developments at Los Angeles, Calif.; the State work on pier and terminal improvements at San Francisco, and the interesting straightening of the San Joaquin River to provide a 26-foot deep waterway for 44 miles above San Francisco Bay.

Also the new 5-mile sea wall which protects New Orleans from Lake Ponchartrain floods is an interesting example of stepped slab design in reinforced concrete and precast concrete pile construction.

We have called attention in previous YEAR BOOKS to the extensive improvement under way in Southampton, Eng. The great drydock and the quay wall construction were the subject of a special article in the *Engineering News-Record* of March 3. The extensive use of huge concrete blocks, or monoliths, and the novel methods used in sinking them, combined with the construction problems connected with building the largest dry dock in the world, mark this work at Southampton as the outstanding harbor construction of the present day.

**PORTUGAL.** A republic of Europe, situated west of Spain in the Iberian Peninsula. Capital Lisbon.

**AREA AND POPULATION.** The total area of Portugal, including the Azores and Madeira, was 35,880 square miles and the census population for 1930 was 6,660,852 (preliminary), compared with 6,032,991 at the census of 1920. Continental Portugal comprised 34,604 square miles and 6,196,020 inhabitants (1930); the Azores and Madeira, 1276 square miles and 464,832 inhabitants. The estimated population in 1931 was 6,716,897. Births over the period of 1927-31 averaged 204,342 annually and deaths 119,166, the excess of births being 85,176 annually. The birth rate per 1000 inhabitants averaged about 30.7 and the death rate 17.9. The population of the chief cities in 1930 was: Lisbon, 594,390 (486,372 in 1920); Porto (Oporto), 227,595; Setúbal, 37,074; Funchal (in Madeira), 24,238 (1920).

**EDUCATION.** Illiterates at the census of 1920 numbered 4,277,341, of whom 3,985,000 were in continental Portugal. In 1929-30, there were 367,330 pupils in the primary schools, 13,991 in circuit schools, 18,125 in secondary schools, and 4949 in universities.

**PRODUCTION.** In continental Portugal, 22,018,191 acres, or 59 per cent of the total area, was under cultivation. About 20 per cent was devoted to pastures and meadows, 16 per cent remained uncultivated, although suitable for cultivation, and 5 per cent was waste land. The wheat crop of nearly 20,000,000 bushels in 1932

was the largest on record; the 1931 crop was 12,999,000 bushels. Rye, barley, oats, corn, and potatoes were other crops. The wine output in 1931 was 178,315,000 gallons; olive oil, 19,763,000 gallons. Cork production was 101,681 metric tons (84,283 tons in 1930). The 1931 sardine catch was the largest in several years but prices declined and in 1932 many sardine packing plants were closed. Coal production in 1931 was 70,000 metric tons, as against 246,673 metric tons of coal and lignite produced in 1930; copper pyrites, 277,000 tons, against 399,120 tons in 1930. The 1930 tin output was 1023 tons; wolfram (tungsten ore), 499 tons. About 5 per cent of the population was engaged in industry at the end of 1930, the chief industries being foodstuffs, textiles, chemicals, shoes and leather, cork, glass, ceramics, and metal working. Textile industries employed 60,000 operatives in 1930.

COMMERCE. Imports in 1931 declined by 32 per cent to \$73,265,000, while exports declined 19 per cent to \$34,247,000, the adverse trade balance being reduced by \$26,555,000, as compared with 1930. In 1930, imports were valued at \$108,016,000 and exports at \$43,443,000. Machinery and tools; coal, coke and briquets; codfish, raw cotton, sugar, cotton goods, and wheat were the leading imports, in order of value, and wines, fish and sardines, cork, and fruits and nuts were the leading exports. The United Kingdom in 1931 furnished 25.5 per cent of the total imports; Germany, 15.4 per cent; the United States, 13.0 per cent; and France, 7.2 per cent. The United Kingdom took 23.3 per cent of the total exports; France, 18.4; Germany, 9.9; and the United States, 4.6 per cent. In 1932 import values were 2.8 per cent higher and export values 2.4 per cent less than in 1931. Imports from the United States were \$4,613,689 (\$5,682,884 in 1931); exports to the United States, \$2,798,124 (\$3,532,734 in 1931).

FINANCE. The national budget showed a surplus for the fourth consecutive year in the fiscal year ended June 30, 1932. Receipts totaled 2,007,000 contos (\$73,055,000), and expenditures 1,857,000 contos (\$67,595,000), leaving a surplus of 150,000 contos (\$5,460,000), as compared with an estimated surplus of 1900 contos (\$69,000), and with an actual surplus in 1930-31 of 152,000 contos (\$6,088,000). The Treasury balance on June 30, 1932, stood at 580,000 contos. (The conto equals 1000 escudos; average exchange values of the escudo for the fiscal years 1930-31 and 1931-32 were \$0.0440 and \$0.0364, respectively.) The ordinary budget for 1932-33 placed revenues at 1,795,199 contos (\$94,371,000), and expenditures at 1,792,224 contos (\$94,297,000). The public debt on June 30, 1930, was approximately \$471,483,000.

COMMUNICATIONS. On Dec. 31, 1930, there were 2128 miles of railway line under operation by a private company, including 894 miles leased from the government. Gross receipts of the railways in 1930 were equivalent to \$14,302,000. Highways extended about 9940 miles. The merchant marine in 1931 consisted of 261 vessels, of 276,357 tons. Vessels entering the ports in the oversea and coastwise trade in 1930 numbered 7356, of 27,597,000 net registered tons.

GOVERNMENT. The Constitution of Aug. 20, 1911, provided for a parliament of two chambers, the National Council of 164 members elected by direct suffrage for three years and the Senate of 71 members elected by the municipal councils

for three years. The President was to be elected by both chambers for four years and was ineligible for reelection. However parliament had not been convened (1932) since the establishment of the military dictatorship of Gen. Antonio Oscar de Fragoso Carmona in 1926. General Carmona was elected President as an unopposed candidate on Mar. 25, 1928. Premier at the beginning of 1932, Gen. Domingos Augusto Alves da Costa Oliveira, who assumed office Jan. 20, 1930.

HISTORY. Under the firm rule of its Dictator President, General Carmona, Portugal came through the depression year 1932 in better shape than most other countries of Europe or of the world. The budget showed a surplus for the fourth successive year, exports declined only 3 per cent as compared with 1931, industrial activity was maintained, the wheat crop was the largest on record, and the vineyards produced so much wine that it was cheaper than bottled water in Lisbon. Despite losses of income due to the Brazilian moratorium and the depreciation of the pound sterling, to which the escudo was linked, the condition of public finances improved. This was reflected in lower money rates, further reduction in the floating debt, additional appropriations for public works, increased balances abroad, further conversions of old loans at lower interest rates, and an increase in the gold reserves of the Bank of Portugal. Portuguese exchange fluctuated with the pound sterling throughout 1932, except when the New York-London rate dropped below \$3.32; at such times the escudo was pegged to the dollar at the rate of 33 buying and 33.20 selling. Exchange restrictions were relaxed in April, and no difficulty was encountered during the remainder of the year in securing exchange for foreign transactions.

The relatively favorable economic situation was reflected in decreased activity among the elements opposed to the Carmona dictatorship. In January several minor uprisings and plots were frustrated. Some 200 persons were arrested January 5 in connection with the discovery of a depot of bombs, rifles, and dynamite in Oporto. Government officials attributed the unrest to Communist agitators. The remainder of the year was relatively quiet. The Minister of the Interior on March 2 announced that the dictatorship would soon end and that a constitutional régime patterned on that of the United States would be established. The text of the proposed Constitution was published on May 28, with the announcement that it would not be submitted to popular referendum until the people had had an opportunity to study and discuss it. It provided for a president chosen by popular vote for seven years and a cabinet responsible to him rather than to the National Assembly. The Assembly, to consist of 90 Deputies, was to be elected for four years, half by popular suffrage and half by various administrative bodies. General Carmona was to be designated the first President.

The Oliveira Cabinet resigned on June 25 while the new Constitution was under consideration and was succeeded on July 4 by a ministry headed by Dr. Oliveira Salazar, the former Minister of Finance. Dr. Salazar held the Finance portfolio, in addition to the Premiership. Other leading cabinet figures were Dr. Albino Pinto Reis, Minister of Interior; Dr. Cesar de Sousa Mendes, Foreign Affairs; Gen. Daniel de Sousa, War. The absence of military men was considered indicative of an effort to popularize the régime. No move was

made toward holding elections or the promised referendum on the Constitution. Instead, at the close of the year, the government issued a decree extending the term of President Carmona for two additional years, the term to end in 1934. At the same time the Dictator granted amnesty to more than 800 political exiles, who were allowed to return to Portugal. The amnesty decree did not apply to some 50 important exiles, including former Prime Minister Alfonso Costa, and Dr. Bernardino Machado, twice President of the republic. The military garrisons at Oporto and elsewhere were reported to have made a formal protest to the government against continuation of the ban upon these men.

Dom Manoel II, who abdicated the throne of Portugal upon the outbreak of the republican revolution of 1908, died in England on July 2, His body was taken to Lisbon on a British cruiser and placed in Lisbon's Pantheon (See MANOEL, DOM).

The future of Portugal's valuable colonial possessions was widely discussed in the European press during the year. Italy, whose demand for more colonies in Africa was openly voiced by Foreign Minister Grandi in the Italian Senate, sent an impressive air fleet to Lisbon in February. Shortly afterward, a fleet of the British Navy called at the Portuguese capital and an English shipbuilding company offered to take over the construction of several Portuguese cruisers, which an Italian contractor declined to build because of the decline of Portuguese exchange.

**PORTUGUESE EAST AFRICA.** See MOZAMBIQUE.

**PORTUGUESE GUINEA**, gí'ně. A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagoz, together with the island of Bolama on which is situated the capital, Bolama (population 4000). Area, estimated at 22,000 square miles; population (1928), 343,961. The principal port is Bissau, population about 1000. Governor, J. F. Vellez Caroco.

**POSTAL CREDIT UNIONS.** See COÖPERATION.

**POST OFFICE DEPARTMENT.** See UNITED STATES under *Administration*.

**POTASH.** See CHEMISTRY, INDUSTRIAL; FERTILIZERS.

**POTATOES.** The potato production in 1932 of 22 countries reporting to the International Institute of Agriculture, not including France and the Soviet Republics, was placed at 4,589,246,000 bushels, a decrease of .7 per cent from the preceding year's crop and an increase of 7.7 per cent over the annual average for the five years 1926-1930. These countries devoted 26,229,000 acres to the crop which was 1.5 per cent above the acreage of 1931 and 5.6 per cent above the annual average of the five year period. The 1932 production of the leading European countries was reported as follows: Germany 1,665,440,000 bushels, Poland 989,492,000 bushels, Czechoslovakia 308,720,000 bushels, Spain 188,526,000 bushels, and the Netherlands 135,215,000 bushels. France produced 598,904,000 bushels in 1931 and an annual average of 514,588,000 bushels for the five years 1926-1930. The Soviet Republics reported an average annual yield of 1,650,221,000 bushels and an average annual area of 13,671,000 acres for the five year period. The production of Canada in 1932 was estimated at 65,415,000 bushels which was 25 per cent below

the crop of 1931 and 15.3 per cent below the five year average.

The Department of Agriculture estimated the potato crop of the United States in 1932 at 356,589,000 bushels produced on 3,368,000 acres at an average yield of 105.9 bushels per acre. Both yield and acreage were lower than in 1931. Production of late potatoes grown in 30 States was placed at a little over 291,300,000 bushels, the intermediate crop at about 35,300,000 bushels and early potatoes at 30,000,000 bushels, or one-fourth smaller than in 1931. The leading potato producing States and their yields were reported as follows: Maine 39,480,000 bushels, Michigan 29,900,000 bushels, Minnesota 29,016,000 bushels, New York 28,350,000 bushels, Wisconsin 22,620,000 bushels, Pennsylvania 21,450,000 bushels, and Idaho 19,500,000 bushels. These States produced 53 per cent of the total crop and 46 per cent of the total acreage. In average yield per acre Maine ranked first with 235 bushels followed by Idaho with 200 bushels. Minnesota produced the largest acreage 372,000 and Michigan and Wisconsin stood next with 260,000 acres each.

The certified seed potato production was estimated at 6,929,000 bushels, or about one-fifth smaller than in 1931. The production of 2,920,600 bushels in Maine was 42 per cent of the total production of the country and was made up of 1,302,400 bushels of Green Mountain, 1,276,200 bushels of Irish Cobbler, and 220,300 bushels of Spaulding Rose. The yields of other leading States were estimated as follows: North Dakota 824,620 bushels, New York 557,950 bushels, Minnesota 437,260 bushels, Nebraska 392,000 bushels, and Michigan 370,650 bushels. In the Western States Bliss Triumph, Early Ohio, and Netted Gem were the more popular varieties.

During the fiscal year ended June 30, 1932, the United States exported 816,000 bushels and imported 89,577,000 pounds of potatoes, comparing respectively with 1,548,000 bushels and 343,757,000 pounds in the preceding fiscal year. The Department of Agriculture secured numerous lots of tubers and seeds from the original home of the potato in South America in an effort to obtain disease-resistant types.

**POULTRY.** See LIVESTOCK.

**POULTRY DISEASES.** See VETERINARY MEDICINE.

**POWER DEVELOPMENT.** See POWER PLANTS; STEAM TURBINES; WATER POWER.

**POWER PLANTS.** Because of the excess capacity among central stations, the extensive development of hydro power in the years immediately preceding, and curtailed industrial output, there was very little activity in the field of steam power-plant construction in the United States during 1932. Such as there was included, among the more important work, the letting of a contract for a 35,000-kilowatt steam plant at Buzzards Point, Md. for the Potomac Electric Company of Washington, D. C.; a 75,000-kilowatt unit for the Kearny Station of the Public Service Electric & Gas Company of New Jersey; and a 160,000-kilowatt addition to the Richmond Station of the Philadelphia Electric Company. In addition to this new work, several new stations already under construction were placed in service during the year, notably, a 25,000-kilowatt steam plant for the city of Tacoma; the 360,000-kilowatt addition to the Hudson Avenue Station of the Brooklyn Edison Com-

pany; a 12,000-kilowatt, 1400-pound pressure unit in the Deepwater Station of the Houston Lighting Company (Texas); an 18,000-kilowatt high-pressure extension to the Burlington, N. J. Station; Huntly Station No. 2 at Buffalo; and a 25,000-kilowatt addition to the Pasadena, Calif. Municipal Plant.

The central-station output for 1932, according to statistics compiled by the National Electric Light Association, was 78,000,000,000 kilowatt-hours. This represented a reduction of 9 per cent from the corresponding figures for 1931 and 13.3 per cent under 1929 which was a peak year in electrical production. According to the records maintained by the U. S. Geological Survey, 59 per cent of the total central-station production was from fuel and 41 per cent from water power.

Among the industrial power plants a few new installations were undertaken, but the new work was confined largely to replacements of obsolete equipment. In a number of cases turbines or steam engines were installed to replace purchased power. Indications are that, as business conditions improve, activity in power plant construction will be confined largely to the industrial field for a considerable period. This prediction is supported by the fact that industry contains much obsolete power equipment, which must be modernized to meet the inevitable competition, and because there is already a large excess of central-station capacity.

Among institutions, both public and private, there was greater power activity during 1932 than in many other fields. This was in part attributable to public works programmes. The States of New York, Ohio, and Missouri carried out extensive rehabilitation programmes affecting the power facilities of their prisons, hospitals, and other public buildings. In New York City the huge medical centre, comprising the New York Hospital and Cornell Medical College, was opened in September and is served by one of the largest institutional power plants in the country, namely, 7500 horsepower in steam engines. The Federal Government also initiated work on a large number of public buildings in various localities, many of which involved large steam heating plants. The largest and most important of these is a central heating plant at Washington, D. C. to serve what is known as the Triangle Group of 22 new buildings, projected or now under construction. Power will be purchased, but six large high-pressure boilers, each capable of generating 237,000 pounds of steam per hour, will be installed for heating and other services. Other large central heating plants undertaken or placed in service during the year were one at Duluth and the plants serving the Union Railroad Stations in Chicago and in Cincinnati.

During the year work progressed actively on the two mercury-vapor power plants, one at the works of the General Electric Company at Schenectady and the other at the Kearny Plant of the Public Service Electric & Gas Company of New Jersey. Each is of 20,000-kilowatts capacity. That at Schenectady will supply power from the mercury turbine to the lines of the New York Power & Light Company and steam to the works of the General Electric Company, whereas that at Kearny will generate power from the mercury turbine and deliver steam to the existing steam turbine units in that station. At each of these installations the mercury boiler contains 270,000 pounds of mercury, the two together representing

an amount equivalent to 89 per cent of the total annual consumption of mercury in the United States, or enough to supply 50 million thermometers.

Abroad, a steam power project of widespread interest that went into operation during the year was that at Magnitogorsk in the heart of the mining district of Siberia, 1200 miles east of Moscow. This project forms part of the five-year plan of the Soviet Government. There are three steam plants aggregating 600,000 kilowatts ultimate capacity which will supply power to the steel mills and serve the community with electricity and steam for heating. These plants were designed by and constructed under the supervision of American engineers, but much of the equipment is of German manufacture. They operate at 425 pounds steam pressure, 800 degrees F. steam temperature, and burn both blast-furnace gas and pulverized coal. The first of these plants is now in operation.

Other new foreign stations of interest are the 110,000-kilowatt addition to the Arrighi Station of the Union d'Electricité, near Paris; the Scheele Station, near Antwerp, which operates at 610 pounds, 840 degrees F. and has three 30,000-kilowatt units and an ultimate capacity of 500,000 kilowatts; and the Battersea Station of the London Power Company, operating at 570 pounds steam pressure and 850 degrees F.

Central-station practice in the United States is still undergoing development to effect greater simplicity, lower investment costs, still higher efficiency and, withal, sustained reliability. High pressures and high temperatures have shown themselves to be both practicable and economical; outages of high-pressure equipment are now no greater than those of medium pressure, and several of the high-pressure stations are operating regularly at well under a pound of coal per kilowatt-hour, or slightly over 12,000 b.t.u. per kilowatt-hour. The Delray Station of the Detroit Edison Company has one unit operating at 1000 degrees F. steam temperature, and a considerable number of plants are in regular service at 1200 to 1400 pounds steam pressure. In the newer plants the tendency is to employ steam temperatures of 800 to 850 degrees. With the higher temperatures and moderate steam pressures it is possible to avoid the complication of reheating the steam between the high and the low-pressure elements of the turbines. The advent of high temperatures and high pressures has brought about a complete redesign of piping, valves, and fittings. Whereas a good grade of high-carbon steel was formerly used, the new conditions demand alloy steels of various compositions which have been developed as a result of extensive research. Investigations are being carried on to determine the creep of these metals under long sustained high temperatures and pressures.

Both in this country and abroad considerable attention is being given to effective means of removing fly ash and cinders from the flue gases to obviate a nuisance to the surrounding locality. This is especially true where pulverized coal is burned and the boilers are forced to high ratings. Many devices are on the market for arresting the fly ash before it leaves the stack, but their efficiency appears to be directly proportional to their cost. Hence, considerable research is going on with a view to developing a reasonably effective system of moderate cost.

**PRAIRIE PROVINCES.** The name applied to the three Canadian Provinces of Manitoba, Saskatchewan, and Alberta (q.v.). Population (1931 census), 2,353,529 compared with 1,956,082 in 1921. See CANADA.

**PRATT INSTITUTE.** A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1932 autumn enrollment was 4608, distributed as follows: Arts, 1900; household science, 946; science and technology, 1737; library school, 25. There were 181 members on the faculty and 12 special lecturers. The library contained 145,000 volumes. President, Frederic B. Pratt, A.M., LL.D.

**PREHISTORIC MAN.** See ANTHROPOLOGY.

**PRESBYTERIAN CHURCH.** The Presbyterian Church, with the Reformed churches, rests on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. Organizations in the United States bearing the Presbyterian name: The Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); United Presbyterian Church of North America; Cumberland Presbyterian Church; Cumberland Presbyterian Church, Colored; Reformed Presbyterian Church; Reformed Presbyterian Church, General Synod; Associate Synod of North America, also known as the Associate Presbyterian Church; and the Associated Reformed Presbyterian Synod. The Presbyterian churches of the United States have official affiliations with the Alliance of Reformed Churches throughout the World Holding the Presbyterian System.

**PRESBYTERIAN CHURCH, CUMBERLAND.** See CUMBERLAND PRESBYTERIAN CHURCH.

**PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.** This is the largest body of the denomination and is represented by churches in every State of the Union and by official mission stations in Alaska, Cuba, Puerto Rico, and foreign lands. In 1932 its churches in the United States were organized into 46 synods and 291 presbyteries. Statistics for the year ending Mar. 31, 1932, showed a total communicant membership of 2,009,875. The Sunday-school enrollment totaled 1,624,402. As a result of the movement to dissolve churches having a nominal existence and to combine churches where advisable, the number was decreased by 43, giving a total of 9199 including 42 churches organized during the year, as against 72 which were dissolved. The number of ministers in 1932 was 9939.

Contributions during the year amounted to \$50,172,304. Of the total income \$39,562,235 was used for congregational expenses, while \$10,184,430 was devoted to benevolences, including \$3,365,736 given to the board of national missions, \$3,013,521 to the board of foreign missions, \$706,704 to the board of Christian education, and \$256,310 to the board of pensions for current needs, besides \$304,736 additional for the pension endowment fund. The denomination maintains 52 colleges and 13 theological seminaries. Its official organ is the *Presbyterian Magazine* (monthly). Privately-owned periodicals are the *Presbyterian*

*Advance*, the *Presbyterian Banner*, and the *Presbyterian* (all weekly).

The 1932 meeting of the general assembly of the Presbyterian Church in the United States of America was held in Denver, Colo., May 26-June 1.

The Rev. Charles W. Kerr, D.D., of Tulsa, Okla., was elected moderator, and the Rev. Leon D. Young, D.D., of Dallas, Tex., was made vice moderator. The assembly voted continuation of the spiritual emphasis movement and summoned the entire membership of the church to penitence and prayer with the declaration, "If we return unto God, he will return unto us." It adopted a plan for fostering a great spiritual awakening and the renewal of the evangelistic spirit. The official boards in their annual reports testified to courageous advance in missions and expressed a determination to educate to evangelize. General progress in church unity was attested. Specifically, a plan of union was presented for organic union of the United Presbyterian Church of North America and the Presbyterian Church in the U. S. A. It was reported that the general assembly of the United Presbyterian Church, sitting at the same time, had approved this plan. Both of these assemblies deferred final action until the assemblies of 1933.

The assembly voted continuation of its membership in the Federal Council of the Churches of Christ in America, and in response to criticism of radio utterances adopted a recommendation that the Federal Council, in providing religious services over national broadcasting chains, be requested to provide services thoroughly evangelistic and positively Christian. The assembly adopted a special report on social and industrial relations, setting forth 16 ideals and objectives concerning the relation of capital and labor. A permanent committee on social and industrial relations was placed in charge of the Rev. John McDowell, D.D. The assembly declared its abhorrence of war and pledged its undivided support to all efforts and agencies for peace and international goodwill. It registered undivided loyalty to the Constitution of the United States "in a day when forces are at work undermining the constituted and historic authority of our nation," and pledged unequivocal endorsement of the Eighteenth Amendment and prohibition. The offices of the general assembly are in the Witherspoon Building, Philadelphia, Pa. Two of the official boards are housed there, and two in the Presbyterian Building, New York City.

**PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH).** This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1932 of 17 Synods and 90 Presbyteries, with 3540 organized churches, 2431 ministers, and 468,532 members. The ruling elders numbered 16,041 and deacons 18,080. Contributions for current expenses amounted to \$7,816,420, and for benevolences to \$3,247,164. In 1932 the church was supporting 420 missionaries in Africa, Brazil, China, Japan, Korea, and Mexico; these missionaries were assisted by 3643 native workers. In the six countries there were 51,820 church members and 99,153 Sunday school members.

The church maintains four theological seminaries, one training school for lay workers (white), one training school for lay workers (colored), 18 colleges, 13 junior colleges, 12 sec-

ondary schools, 19 mountain schools, two Mexican Mission schools, and 15 orphans' homes and schools. It publishes the *Presbyterian Survey*, which is the medium of communication of all departments with the membership of the church. Privately owned papers of the denomination are the *Christian Observer* and the *Presbyterian of the South*.

The general assembly of the Presbyterian Church in the United States met in Montreat, N. C., May 26, 1932. The Rev. William Crowe, D.D., St. Louis, Mo., was elected moderator for this meeting to succeed Ruling Elder R. A. Dunn, LL.D., Charlotte, N. C. The offices of the general assembly are located at 720 Kirby Building, Dallas, Tex. The Rev. J. D. Leslie, D.D. was stated clerk.

**PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED.** A member of the family of Presbyterian churches, of Scottish origin, formed by the union of the Associate and the Associate Reformed Churches effected in Pittsburgh in 1858.

The general assembly convened in Beaver, Pa., May 25, 1932. On that date there were in the United States 11 synods, 56 presbyteries, 874 congregations, 891 ministers, 5023 ruling elders, and a church membership of 178,177. The total membership, including missionary fields, was 243,828. The Sabbath school enrollment was 204,261, while the young people's societies numbered 1043 with a membership of 26,746. Contributions for the year 1931-32 totaled \$5,159,950, and missionary contributions \$1,761,434. Among matters of outstanding significance in the action of the Beaver assembly was the adoption of plans for a Diamond Jubilee celebration of 75 years of denominational existence in Pittsburgh, Pa., in May, 1933. The three church-wide annual gatherings, the general assembly, the Women's General Missionary Society, and the National Young People's Convention, were all to convene simultaneously. Action was also taken providing for pastoral settlement of ministers under a definite-term call, ordinarily five or seven years, at the end of which time the term of settlement expires and the relationship is dissolved, unless there is an official request for its continuance another term. (For plan of union, see PRESBYTERIAN CHURCH IN THE U. S. A.)

The denomination supported 427 men and women in four foreign mission fields and 312 men and women in homeland missions. It carried on medical work in 32 foreign hospitals and dispensaries, conducted educational work in 397 schools at home and abroad, maintained nine colleges and four theological seminaries at home and abroad, and reached 39,363 young men and women in its schools and colleges. The official organ of the church is the *United Presbyterian*, a church-owned, yet independent weekly, published in Pittsburgh. The moderator of the general assembly in 1932 was the Rev. Charles S. Cleland, D.D., of Philadelphia, Pa., and the stated clerk was the Rev. O. H. Milligan, D.D., Avalon, Pa. Headquarters of the board of administration are at 705 Publication Building, Pittsburgh, Pa.

**PRESIDENTIAL POLL.** The accuracy of straw polls, and their value as an index to the

popular will, were warmly debated in this "year of polls," as somebody termed it. Distinctively an American expedient for anticipating a national verdict, the straw poll seemed to be more than ever in demand as a medium of expression as well as a source of information at this time of acute unrest and anxiety. It became on the one hand a rallying point of political attack and defense, on the other hand a theme of academic study between book covers.

One comment of the time was to the effect that *The Literary Digest's* Presidential poll completed in the Fall what its PROHIBITION POLL (q.v.) had commenced in the Spring, and the two were credited with playing a cumulative part in preparing the nation for the peaceful revolution of November, with its sweeping overturn in party rule and its absolute mandate for the repeal of the Eighteenth Amendment.

Never before had two polls of such vast dimensions—each requiring the postal distribution of more than 20,000,000 personally addressed envelopes containing prepaid postcard ballots—been engineered in the same year. Only an unmistakable and insistent, widespread popular demand could have brought about that double enterprise, which was further stimulated by the opportunity it afforded for providing extra employment at a time of sharp need.

To a large extent the Presidential poll inherited the fruits of its predecessor, the Prohibition poll, for the latter revealed the state of the public mind toward the Eighteenth Amendment in ample time to be of service at the National Conventions in June. Thereby history was made, for the platform builders of both parties responded with wet planks—the Republican for a qualified restoration of liquor control to the States, the Democratic for "naked" repeal.

In the Presidential campaign, Prohibition figured in two ways. It entered into the general revolt against hard times, in a special sense whereby many voters looked to Repeal as a symbol of returning prosperity; and also it continued to hold a sharp edge as an issue in its own right, on the general merits of the whole question. But most of the campaign talk was of the depression, and what had been done or not been done about it, and what might, could or should be done to cure or relieve it.

Such was the complexion of the campaign in mid-September when *The Literary Digest* launched its Presidential poll, an event which was heralded far and wide as an important accessory to the official campaign, one which would throw an interpretive light on its progress and foreshadow its result. Many newspapers throughout the country reminded their readers of the accuracy with which the *Digest* polls in 1924 and 1928 had forecast the victories of Coolidge and Hoover respectively. It was recalled how bitterly the losing party in those campaigns had sought to discredit the Presidential polls. And now, in 1932, that party looked like a winner. Said a writer in the *Chicago Journal of Commerce*:

"How much, we wonder, would not one of the major parties pay to have such a poll avoided in this campaign?"

*The Literary Digest* itself remarked:

"Some critics regard this year's election as so subject to sudden reversions of public sentiment that they argue against the *Digest* poll's being as accurate a barometer as it has been in the past.

"There were some who argued that way in 1928.

"It is not to be expected," said the *Houston Post-Dispatch* in that year, "that the *Literary Digest* poll will foreshadow the 1928 results with such close fidelity as the 1924 poll foreshadowed the results of that year."

"History was to tell a different story, and Josephus Daniels's paper, the *Raleigh News and Observer*, was to exclaim:

"In view of the accuracy of the *Literary Digest* polls in 1924 and 1928, it might be a good idea hereafter quadrennially to quit holding elections and accept *The Digest's* polls as final. It would save millions in money and time."

Viewing the 1932 outlook, political writers in Republican papers refrained for the most part from making rosy predictions, except with the proviso that business should take an upward turn of sufficient strength to convince a majority of the people that the bottom of the depression had been passed. To some it was an article of faith that such an upturn would take place before election day. Such faith was sorely tried when Maine elected a Democratic Governor.

The first report of *The Literary Digest's* poll, a small, preliminary tabulation of scattered ballots from Indiana, New York, Ohio, Pennsylvania, and West Virginia gave Hoover a trilling lead. He was ahead in New York and Indiana, and it was his New York lead that gave him a shade the better of the total count.

Small as the figures were—Hoover, 28,193; Roosevelt, 27,654—the Hoover advantage raised Republican hopes. However, the country was warned by *The Digest* not to draw conclusions from such a small and early count, and the warning was justified in the following week when a second tabulation, with eleven States represented on a small scale, gave Hoover 100,323 and Roosevelt 102,185.

Pennsylvania, which was to figure at the end as the paradox of the poll and conundrum of the election, now claimed the attention of the country by laying the nest-egg of a Roosevelt majority, giving him 21,833 ballots against 17,441 for Hoover. This Democratic lead in the very fortress of the Republican national organization had grave implications. "If Pennsylvania should continue to favor Roosevelt in greater numbers up to election day," remarked *The Digest*, "the result would be equivalent to a revolution in a good-sized country. The Keystone State points with pride to the fact that it supported Lincoln, Grant, Hayes, Garfield, Blaine, Harrison, McKinley, Roosevelt, Taft, Hughes, Harding, Coolidge, and Hoover."

It was suggested that perhaps the old Pennsylvania would reappear in the following week's poll figures. But it didn't. The Roosevelt lead increased steadily to the very end of the poll. Hoover finished with 93,057 Pennsylvania votes, Roosevelt with 124,675.

But then came the great mystery. On election day, Roosevelt was counted out in Pennsylvania, and Hoover declared the winner by a scanty majority. The Quaker State rang with charges of padded registration lists and manipulation of the returns. Mr. S. Davis Wilson, special counsel for the House Elections Investigating Committee in Washington, was quoted as saying that "a recount would show enough illegal votes for President Hoover to swing the state to Roosevelt"; also that his investigators "had uncovered 40,000

votes improperly cast for Hoover in Philadelphia alone."

On a much smaller scale, Delaware passed through a similar capsize, voting for Roosevelt in the poll and being counted for Hoover in the election. Washington dispatches told of irregularities in Wilmington being reported to the House Elections Investigating Committee. Four Army officers, watchers at the polls, said they "had seen votes bought for one or two dollars, with a couple of drinks on the side." All such revelations were soon forgotten, however, in the excitement over the Roosevelt landslide.

From its earliest stages the poll gave abundant evidence of the inter-party drifts which had set in since 1928—particularly, of course, the great swing away from Hoover.

In presenting its second report of the poll, *The Digest* commented further:

"An extraordinary thing about Roosevelt's apparent majority in Pennsylvania, as it stands, is that it includes more former Republicans than former Democrats—10,211 of the former and 7703 of the latter. But many of these 'Republicans' may be Democrats who became Hoover voters four years ago."

The same phenomenon was showing itself in other States. In fact, the pronounced Republican-to-Democratic drift, as indicated by the ballots and tabulated under "How the same voters voted in 1928," was one of the revelations of the poll which captured the keenest interest of statisticians, election prophets, and the newspapers. In the completed poll, the states in which Roosevelt's vote included larger numbers of 1928 Republicans than of 1928 Democrats were California, Illinois, Iowa, Kansas, Michigan, Nevada, North Dakota, Pennsylvania, South Dakota, Washington, and Wisconsin. The balance was very close in Idaho, Maine, Montana, New Jersey, Ohio, and Vermont.

One of the curiosities of the earlier stages of the poll was that each candidate was running ahead in his rival's home State, but Roosevelt soon forged to the front in New York, while continuing to hold his lead in California. Another oddity was that Maine, despite its election of a Democratic Governor—its fourth since the civil war—went into the Hoover column and stayed there to the bitter end.

In mid-campaign the accumulating evidences of a Democratic landslide brought protests from the spokesmen of the losing party, who sought to discredit the poll's accuracy as a barometer of the public mind. President Hoover, more practical, made a radical change in his campaign programme. Emerging from the seclusion of the White House, he embarked on an energetic speaking tour in defense of his administration. "We have overcome the major financial crisis," he proclaimed in the agricultural belt of the middle west, where the people had recently cheered for Roosevelt, with his promise of a "new deal," his solicitude for "the forgotten man" and his attempt to link Republican rule with the economic collapse and with "evasion" and "indirection" in the matter of Prohibition. On that issue Mr. Hoover enunciated a new platform of his own, somewhat wetter than that of his party. Also he observed the custom of prophesying calamities in case of a victory by the opposing party.

The fact of the President having taken hold of his own campaign aroused his supporters to new activity. Administration and optimism were

voiced by Republican speakers and newspapers. The impression went around that Mr. Hoover's speeches had checked the tide to Roosevelt and turned it back to himself. "Signs multiply that a shift to Mr. Hoover is under way and gaining momentum," said the New York *Herald Tribune*.

Successive reports of the poll, however, failed to show any signs of a shift in the voting.

It was at this stage of the poll that a New York brokerage house deceived thousands throughout the country by circulating in a market letter the false report that 35,000 Roosevelt voters in the poll had written to *The Literary Digest* asking to have their ballots "changed" to Hoover—despite the obvious absurdity, as *The Digest* noted in its exposure of the canard, of supposing that any sensible person could expect to "change" an anonymous ballot! At the time the falsehood was launched, *The Digest* had not, it added, received a single letter of the kind described.

Coming to the final report of the poll, we find a grand total of 3,064,497 ballots, surpassing all previous Presidential polls in the number of ballots returned out of the 20,000,000 sent out. Its nearest competitor was *The Digest's* Hoover-Smith poll of 1928, with a return of 2,767,263 ballots.\*

The score of the major candidates stood thus: Roosevelt was ahead in 41 States, Hoover in seven.

The Roosevelt States counted for 474 Electoral votes, the Hoover States for 57.

Roosevelt's total popular vote was 1,715,789, Hoover's was 1,150,398.

Roosevelt's percentage of the grand total of ballots returned was 55.99, Hoover's was 37.53. (The minor candidates accounted for the balance.)

"It would be a miracle," said *The Digest*, "if every state of the forty-eight behaved on election day exactly as forecast by the poll." And the magazine went on to specify Massachusetts and Rhode Island, which were in its Hoover column. "These two states . . . were also in the Hoover column of our 1928 poll, with still larger Republican majorities, but both states were carried by Smith. We have polled the two states in exactly the same way that we polled them four years ago. A study of the returns in relation to the official vote of 1928, and also to the ballot declarations of how the same voters voted in 1928, convinces us that in those states our ballots have somehow failed to come back in adequate quantity from large bodies of Democratic voters. For these reasons," *The Digest* concluded, "we consider that Massachusetts and Rhode Island may be expected to appear in the Roosevelt column on election night." And history was to justify that expectation.

The same conditions applied to Connecticut, New Hampshire, and New Jersey, any of which, *The Digest*, predicted, might be found in the Roosevelt column. And Election night found New Jersey there. It also found Pennsylvania and Delaware in the Hoover column. But we have had some hints of why such a reversal might have been expected in both those States.

*The Digest* rested its case with the public, saying:

"All we know is what we read in the papers," and

\* However, the Prohibition polls of 1930 and 1932 exceeded all the Presidential polls in this particular, each of them almost hitting the five-million mark.

some of the Philadelphia papers are quite outspoken on the causes which, they say, underlie the amazing shift from the substantially Rooseveltian Pennsylvania of the *Digest* poll to the scantily Hooverian Pennsylvania of Election Day.

Of course, *THE DIGEST* takes no side in the Quaker State's always interesting political battle-ground. We think that our readers are entitled to have all the evidence in the case, but we draw no conclusions of our own.

It is pointed out in the Philadelphia *Record* that a local poll by that newspaper, and other newspaper polls in the State, agreed with the *Digest* poll in forecasting a Roosevelt victory. But it is added that all these polls "dealt only with actual figures, and without allowance for political machines and the controlled vote in boss-ridden Philadelphia and other organization-controlled counties."

The writer of this article, Mr. I. K. Fagan, opens with a summary of our poll results, thus:

The avalanche of votes that swept Franklin D. Roosevelt into the Presidency Tuesday by the greatest landslide in the history of the country vindicated with a vengeance the remarkable accuracy of *THE LITERARY DIGEST's* forecast.

"*THE DIGEST* poll predicted Roosevelt would carry 41 States. He won 42.

"*THE DIGEST* said he would win 474 electoral votes. He got 472.

"*THE DIGEST* listed in the Hoover column the States of Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, and New Jersey.

"Hoover actually won Maine, Vermont, New Hampshire, Connecticut, Delaware, and Pennsylvania.

"*THE DIGEST* commented editorially, however, that Roosevelt probably would win Massachusetts and Rhode Island, and might carry New Jersey.

"Again *THE DIGEST* was right. These three States went to Roosevelt by resounding margins.

"*THE DIGEST* was wrong only on two States, Delaware and Pennsylvania, which it gave to Roosevelt.

"In the case of Delaware, it said the vote would be close.

"It was the Pennsylvania prediction that proved the enigma of the poll. All indications pointed to the startling conclusion that Roosevelt would win this rock-ribbed Republican State.

"In fact, *THE DIGEST* said, in its final summary, that 'We know of no reason why the poll should go very far astray in the figures and percentages from Pennsylvania.'

"Actually, Hoover carried Pennsylvania by a margin exceeding 160,000. However, the *Digest* poll dealt with cold figures. It did not take into consideration the most important factor in Pennsylvania politics—the Organization machine, both in the city and State, the machine that in the past has made majorities to order."

Among thousands of letters on the subject was one from Wilkes-Barre, containing this passage:

"If we could eliminate the padded registrations from the official account, I believe that the results from Pennsylvania would harmonize very close to 100 per cent. with the *LITERARY DIGEST* poll, and give the State to Mr. Roosevelt. For verification I can give you, should you wish it, a considerable amount of data in the form of evidence that I have laid before the District Attorney of this county, from districts in the city of Wilkes-Barre."

But much water has passed under the bridge since then, and few would be hard-hearted enough to grudge Mr. Hoover the satisfaction of carrying Pennsylvania and Delaware. Despite the overturn in those two States, the *Digest* poll came out with figures so amazingly close to those of the election that the proverbial accuracy of *Digest* polls was more than ratified.

Not until early in January was the complete official vote for President compiled by the Associated Press. In printing this table, *The Digest* drew a comparison between the official returns and the figures of its Presidential poll, thus:

*THE DIGEST's* balloting gave Mr. Roosevelt 1,715,789 votes, or 59.86 per cent of the votes cast for the two major party candidates. It gave Mr. Hoover 1,150,398 votes or 40.14 per cent. of the total.

Now see how closely this proportion holds in the official vote just made public. We take the votes for the two major candidates alone for purposes of comparison. Mr. Roosevelt receives 22,813,786 or 59.14 per cent. Mr. Hoover holds 15,759,266 votes, or 40.86 per cent.

Just to make it more clear we will take the Roosevelt percentages—59.86 per cent in the *Digest* poll; 59.14 per cent in the actual election. The difference between the two percentages comes to only 0.72, which is all that the

**DIGEST** straw vote lacked of predicting Mr. Roosevelt's share of the popular vote of the whole country.

When it comes to the various States, we remember that **THE DIGEST** predicted accurately how each State would go with the exception of two that went for Hoover in the straw vote and for Roosevelt in the election, and two others that went for Roosevelt in the straw vote and Hoover in the election.

In the case of the official popular vote in the several States, naturally **THE DIGEST's** balloting paralleled the final figures more closely in some States than in others. As a matter of curiosity we note from the official figures that the **DIGEST** vote was practically one hundred per cent. correct in Missouri—which is a big State. Our vote gave Mr. Roosevelt 64.46 per cent of the total. Well, on election day he actually received 64.48 per cent. Less than one percentage point off were also Idaho, Iowa, Kansas, Minnesota, Nebraska, Wisconsin, and Wyoming.

**PRESIDENTS OF COLLEGES.** See **UNIVERSITIES AND COLLEGES**, and articles on each college.

**PRIESTLEY MEDAL.** See **CHEMISTRY, INDUSTRIAL.**

**PRIMITIVE METHODIST CHURCH.** See **METHODISTS.**

**PRINCE EDWARD ISLAND.** An island in the Gulf of St. Lawrence, constituting one of the Maritime Provinces of Canada. The smallest of the nine provinces; area 2184 square miles; population (1931 census), 88,038, a decrease of 577 from the 1921 census. The capital, Charlottetown, had 12,361 inhabitants in 1931 (10,814 in 1921). Living births in 1930 numbered 1749; deaths, 961; marriages, 488. The 472 public schools had 17,277 pupils in 1930.

Approximately 90 per cent of the population is engaged in agriculture and 94.2 per cent of the farmers own their farms. Stock raising, fishing, and silver-fox breeding are other leading industries. Field crops valued at \$6,828,700 were harvested from 494,351 acres in 1931. The fisheries output was valued at \$1,141,279 in 1930. The value of fur-bearing animals on farms in 1930 was \$2,238,523; the value of 8962 pelts taken in the year ending June 30, 1930 was \$646,685. With 267 manufacturing establishments, the gross value of factory output in 1930 was \$4,254,966, of which \$1,708,139 was the value added in process of production.

Preliminary figures for the fiscal year ended Dec. 31, 1930, placed ordinary provincial revenues at \$1,148,749 and ordinary expenditures at \$1,133,366. The government is administered by a lieutenant-governor, appointed by the Dominion, and a legislative assembly of 30 members elected for four years. Half of the assembly is elected by real property holders, and half by universal male and female suffrage. In the Dominion Parliament at Ottawa the Province is represented by four members in the Senate and four members in the House of Commons. Lieutenant-Governor in 1932, Charles Dalton. Premier Attorney and Advocate General, J. D. Stewart. See **CANADA.**

**PRINCETON UNIVERSITY.** A nonsectarian institution of higher learning for men in Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1932 was 2597, of whom 2325 were undergraduates and 272 were graduate students and fellows. The faculty numbered 313; there were also 29 assistants and 39 administrative officers.

The endowment in 1932 was \$27,172,009; the total income, \$2,990,858; and the total expenditure, \$2,879,756. Bequests and gifts amounted to \$1,186,183 for endowment, \$128,215 for current expenses, \$48,898 for student aid, and \$54,235 for buildings. Among the bequests were \$500,000 from the estate of Thomas D. Jones, \$168,789

from Thomas D. and Gwethalyn Jones, and \$370,920 from the estate of Henry C. Frick. The library in 1932 contained 670,000 volumes, exclusive of pamphlets, broadsides, and manuscripts. Acting president, Edward Dickinson Duffield, A. M., LL.D.

**PRINGLE, REAR ADMIRAL JOEL ROBERTS POINSETT.** An American naval officer, died in San Diego, Calif., Sept. 25, 1932. He was born in Georgetown, S. C., Feb. 4, 1873, and was graduated from the U. S. Naval Academy in 1892. Commissioned an ensign in the Navy two years later, he was advanced through the grades to vice admiral in 1932, being appointed commander of battleships of the Battle Force in June and also commander of battleships of the Pacific Fleet in August of that year. During the World War he commanded the *Diado* and later the destroyer tender *Melville*. On his promotion to rear admiral in 1927 he was made president of the Naval War College at Newport, R. I. In 1930 he was appointed commander of battleship division 3 of the Battle Force of the U. S. Fleet, his squadron consisting of the *New York* (flag ship), *Oklahoma*, *Nevada*, *Pennsylvania*, and *Arizona*.

**PROHIBITION.** it was apparent from the events of the year 1932 that prohibition had reached the turning point in its history. The cumulative effects of the depression, which had rendered entirely nugatory the vaunted economic claims for the amendment—that it was intimately linked with the new economic era of prosperity, that it released large sums of money heretofore spent on drink for the acquisition of new consumption goods, that it was largely responsible for great increases in the acquisition of life insurance, savings bank accounts, and higher school attendance rates—in large part contributed toward the creation of an articulate unfavorable sentiment. This expressed itself, over the year, in many ways: in a series of victories gained by the wets in the lower house of Congress; by the unexpected statement issued by John D. Rockefeller, Jr., on the eve of the meeting of the two national nominating conventions, urging repeal of the Eighteenth Amendment; by the stand taken by both national parties in their platforms, and in the acceptance address of President Hoover; by the overwhelming victory of the Democratic party, in a real sense considerably due to the unequivocal stand which it had taken on the question of repeal; by the repeal of State enforcement laws in nine commonwealths as a result of the action of their electorates; and finally by the preparations wet leaders were making in Congress not only to amend the Volstead Act to legalize the manufacture and sale of real beer but also to repeal immediately the Eighteenth Amendment. As the year closed it was apparent that Americans were witnessing the final act of a strange and exciting drama which had had its inception in 1913 when the Anti-Saloon definitely launched its campaign for nation wide prohibition through the enactment of Federal rather than State legislation. Whether or not the wets would meet with an easy victory in the States on the repeal of the

Eighteenth Amendment question, it was impossible to foretell as the year closed. Undoubtedly the drys were prepared to contest the field stubbornly. But with the hope that the repeal of the Eighteenth Amendment and the legalization of the liquor industries would bring additional revenues into the coffers of the national government and would furnish employment for capital and labor in countless places, there existed powerful arguments for the pressing of the issue by the wets.

In the spring of the year, the publishers of *The Literary Digest* undertook a Prohibition Poll, for the results of which see this topic below.

**THE RESULTS OF PROHIBITION.** These columns in previous years have indicated that, while prohibition was the law of the land, not only was there flourishing a powerful illicit liquor traffic but also that the American public had sloughed off none of its old drinking habits. The fact of the matter is, observant persons had every reason to believe that Americans, if anything, were drinking more hard liquor during the prohibition era than they had before and that the only real sufferers of enforced temperance were those persons who, deprived of cheap beer, found it impossible to pay for the dearer illicit spirits. A study published during the year by Dr. Clark Warburton, called *The Economic Results of Prohibition*, for the first time furnished what appeared to be reliable estimates of the nation's drinking habits during the prohibition period. At the same time Dr. Warburton thoroughly disproved the economic claims of the drys that prohibition was responsible for the period of prosperity and had diverted moneys formerly spent on liquor into the new channels of automobile, radio, and electrical appliance purchases. According to Dr. Warburton's calculations only the per capita consumption of beer suffered from nation-wide prohibition, the reduction being from 20.53 gallons per year over 1911-14 to 6.27 gallons per year over 1927-30. On the other hand, the per capita consumption of wine had increased from .59 gallons per year over 1911-14 to 1.02 gallons per year over 1927-30; and the per capita consumption of spirits had increased from 1.47 gallons per year over 1911-14 to 1.62 gallons per year over 1927-30. Dr. Warburton estimated that the nation had spent in the prosperous year 1929 nearly \$5,000,000,000 on drink and that in 1930 the expenditure had been \$4,000,000,000. This was about what the liquor bill would have been without national prohibition, the only difference being that the working classes, deprived of their beer, had spent probably \$1,000,000,000 less than they might have had prohibition never been inaugurated, while the professional and salaried classes had spent at least \$1,000,000,000 a year more than they might have.

**POSITION OF THE A. F. OF L. AND THE AMERICAN BAR ASSOCIATION.** The American Federation of Labor was plainly disappointed by the failure of Congress to modify the Volstead Act and legalize the manufacture and sale of 2.75 per cent beer; and both its executive council and the convention of the organization itself again urged upon the national legislature the necessity for quickly legalizing beer as a means of industrial and fiscal relief. The A. F. of L., in favoring the return of beer, based its advocacy on two grounds: first, that the return of beer was a true

temperance measure and would help rout the racketeers who were largely drawing their strength from the illicit liquor traffic; second, that the amendment of the Volstead Act would create thousands of new jobs in breweries, machine shops, cooperage works, and on transportation and freight lines, and at the same time contribute a sizeable revenue to the Federal treasury. Said President William Green, in explaining the stand of the A. F. of L.: "We shall press this issue because it is part of our employment programme inasmuch as it will put men back to work. Jobs are better than relief."

At its annual meeting in October, the American Bar Association agreed that while gangs and their tactics were not new to American history, responsibility for the rise to affluence of gang leaders could be placed directly at the door of prohibition. Because of the huge profits connected with organized bootlegging sales the report of the Association's section on criminal law and criminology declared: "gangs had obtained a foothold in community life and were succeeding in purchasing immunity from punishment by the corruption of law enforcement authorities." The report went on to say: "... we simply point out what we believe to be a fact, that prohibition brought about a condition which made it easy for the gangster to obtain a large personal organization at a small risk. . . ." As a remedy the report suggested the elimination of corrupt judiciaries and the concentration of criminal work in courts created for the purpose and handling no other business.

**PRESIDENT BUTLER'S PROGRAMME.** President Nicholas Murray Butler, of Columbia University, placed before the American public a programme for the control of the liquor traffic by the States in the event of the repeal of the Eighteenth Amendment. President Butler's plan called for the following: 1. The erection of State corporations in which there was to be deposited complete control over the liquor traffic. 2. Each State was to be divided into districts where there were to be established warehouses for the purpose of dispensing liquor. 3. The saloon was to be outlawed and drink was to be sold largely for home consumption and in eating places when meals were served, following the Swedish and Quebec plans. 4. In order to encourage temperance relatively high prices were to be charged for the hard liquors and low prices for beer and wine. 5. No liquor was to be sold in any locality which had voted against it. 6. Both national and State governments were to have the right to tax drink. 7. Dry States were to receive adequate protection from the transportation of liquor from wet States. This merely meant that the federal authorities were to be expected to enforce the Webb-Kenyon law of 1913 and the Reed Amendment of 1917.

**PROHIBITION IN CONGRESS.** Prohibition appeared again and again during the proceedings of the long session of the Seventy-Second Congress, test votes being taken in the House on a number of occasions, and in the Senate twice. While the wets encountered defeat in every instance, the size of the votes polled by them was heartening to their cause. Before the meeting of the national conventions and the ensuing presidential election, the drys were stubbornly and successfully contesting the issue; but the overwhelming popular expression in favor of modification and repeal, as evidenced by the returns

of the November elections, apparently had discouraged them, for as the year closed every indication pointed to the early success of a modification measure, certainly in the House and probably in the Senate as well. The first prohibition test in the Senate in twelve years, which took place in January, was on the proposal of Senator Hiram Bingham that the Senate "would welcome" any action by the governors in recommending to their legislatures steps to permit referendums on repeal or modification of the Volstead Act. The wets lost by a vote of 55 to 15. In May, the Senate again voted on the question, this time in connection with Senator Tydings' proposal that beer with an alcoholic content of 2.75 per cent be legalized for revenue purposes. Again the dries won, the vote being 61 to 24. In the House the first test vote came in March when the question before the body was to take up for consideration the Beck-Linthicum resolution, which called for submission to the States of a constitutional amendment permitting each State to license or outlaw the liquor traffic as it chose. The dries here, too, won, the vote being 227 to 187. Voting for consideration of the resolution were 97 Republicans and 90 Democrats. Against it were 112 Republicans, 114 Democrats and 1 Farmer-Laborite. The House majority mustered by the dries was 40, which was the lowest they had succeeded in lining up since the prohibition statutes were enacted. In May, the House once again turned its attention to prohibition when it voted on the O'Connor-Hull bill to legalize beer with an alcoholic content of 2.75 per cent by weight and tax it \$7.50 a barrel or 3¢ a pint. The dries once again won, the vote being 228 to 169.

**THE POSITION OF MR. JOHN D. ROCKEFELLER, JR.** On June 6, John D. Rockefeller, Jr., a lifelong dry, who together with his father for a long time had supported the Anti-Saloon League, made public a letter that he had written to President Nicholas Murray Butler, in which he openly advocated the repeal of the Eighteenth Amendment. Insisting that the law was not receiving the public support he had anticipated; that while the saloon had been abolished the speakeasy had taken its place; that a large illicit liquor traffic had sprung up to furnish requirements of Americans for alcoholic beverages; that many otherwise reputable citizens were openly showing their contempt of the Eighteenth Amendment by drinking in public places and purchasing the wares of bootleggers; that respect for all law has diminished, and that crime has "increased to an unprecedented degree"—prompted by these considerations Mr. Rockefeller urged the repeal of the Eighteenth Amendment. He was not denying the many good results of the law, but he had come to the conclusion that the ensuing evils were outweighing the benefits. Therefore, he urged repeal without waiting for the perfection and adoption of an alternate method. On this point he said: "In my judgment it will be so difficult for our people as a whole to agree in advance of what the substitute should be, and so unlikely that any one method will fit the entire nation, that repeal will be far less possible if coupled with an alternate measure. For 'that reason I the more strongly approve the simple, clear-cut position you [President Butler] are proposing to recommend and which I shall count it not only a duty but a privilege to support.' Mr. Rockefeller

concluded: "My hope is that the tremendous effort put forth in behalf of the Eighteenth Amendment by millions of earnest, consecrated people will be continued in effective support of practical measures for the promotion of general temperance. To that cause my own efforts will ever be devoted."

The dries received the statement more in sorrow than in anger. They pointed out that repeal without agreement on an alternate measure meant the return of the saloon. They insisted that the increase in crime and lawlessness could not be coupled with drinking under prohibition, and that there were real, if intangible, results of the experiment which must be destroyed with the scuttling of the 18th amendment. The wets were, of course, jubilant, Mrs. Charles H. Sabin, National Chairman of the Women's organization for National Prohibition Reform, congratulated Mr. Rockefeller on his courage, and Mr. Henry H. Curran, president of the Association Against the Prohibition Amendment, declared that "the Rockefellers joined the great company of thoughtful American men and women who realize that the safety of our country requires that we correct this hideous mistake without more delay." The *Philadelphia Public Ledger* summed up the attitude of intelligent observers when it declared:

Mr. Rockefeller's unexpected declaration is in accord with the strengthening trend of public opinion as expressed in a recent nation-wide poll and in the pronouncements by so many State political organizations of both parties. And the solution of the Prohibition problem is fast becoming an issue which neither national party can ignore.

**POSITION OF THE LEADING PARTIES ON PROHIBITION.** As a result of the developments of the first half of the year, the action taken by the two leading parties at the nominating conventions was not altogether unexpected. While the Republican plank adopted at Chicago on June 15, was not as bold as the Democratic and ringed its recommendation around with many reservations, nevertheless it was a repeal plank. The Democratic plank adopted on June 30, also in Chicago, was clear and straightforward. Both planks declared for the submission of a new amendment to the constitution—an amendment which would allow the people of the country, functioning through State conventions called for that purpose, to pass on the repeal of the Eighteenth Amendment.

The Democrats favored outright repeal, leaving the control of the liquor traffic to the States. The Republicans did not favor the end of national prohibition altogether though they were in favor of permitting the States to legalize the sale of liquor if they so wish, promising, however, to furnish safeguards against the return of the saloon. The Democrats also proposed the outlawing of the saloon, but they were opposed to action being taken by the Federal government either through the embodiment of such a prohibition in the national constitution or by national law. In one other particular the Democratic plank was more clear-cut, its final sentence being: "Pending repeal, we favor immediate modification of the Volstead Law to legalize the manufacture and sale of beer and other beverages of such alcoholic content as is permissible under the Constitution, and to provide therefrom a proper and needed revenue."

On the question of modification of the Vol-

stead Act the Republican party on the other hand was silent. In another particular the Democrats appeared to be more forthright, their plank plainly declaring in favor of the repeal of the Eighteenth Amendment; the Republican plank on this point was silent. However, President Hoover, in his acceptance speech, redressed the balance when he, too, declared in favor of the repeal of the Eighteenth Amendment when and if a resolution to that effect was to be submitted to the States. Thus, the electorate was actually confronted by two repeal planks and as the cam-

amendment of the constitution. The returns showed the election of 61 wet Senators and 243 wet Representatives. Only 30 outright dries were assured of seats in the Senate while in the House the number was but 29. In the House more than 100 dries lost their seats; in the Senate prominent dries, like Senator Smoot of Utah, and Senator Watson of Indiana, went down to defeat. The accompanying table, prepared by the *New York Times*, showed the probable wet-dry line-up in the Seventy-Second and Seventy-Third Congresses.

HOW CONGRESS MAY STAND ON PROHIBITION

paign progressed it became increasingly apparent that whichever won, repeal sooner or later would be the order of the day.

RESULTS OF THE ELECTION. Because of the outspoken stand in favor of repeal taken by Governor Roosevelt, the Democratic victory at the polls in November was rightly interpreted as a vote in favor of the repeal of the Eighteenth Amendment. Wets had cause for rejoicing not only because of Governor Roosevelt's success but also because of the election of a wet house for the Seventy-Third Congress. The fact is, returns indicated great enough strength in the House to put through a modification law and a resolution for the repeal of the Eighteenth Amendment; in the Senate the wets apparently lacked only three votes short of the two-thirds needed for the

There were other victories for the wet cause. Eleven States held prohibition referendums, namely: Louisiana, Michigan, New Jersey, California, Washington, Oregon, Colorado, Arizona, North Dakota, Connecticut, and Wyoming. Nine of them voted to repeal State enforcement laws and in every instance these referendums were successful. In Connecticut and Wyoming the vote was concerned only with the testing of local sentiment or of appeal to Congress to take action. Here, too, success perched on the wet banners. In a number of instances the wet vote was overwhelming. Thus New Jersey voted 10 to 1 in favor of the repeal of the State enforcement law; in Louisiana the majority in favor of repeal was 12 to 1; in California it was 3 to 1; in Michigan, Washington, and Arizona it was

2 to 1. In Colorado, North Dakota, and Oregon, the vote was 5 to 4 in favor of repeal of the State law. The case of North Dakota was particularly interesting for that commonwealth had enacted a State law thirty years before the Eighteenth Amendment was written into the Federal Constitution—being the third State in the Union to do so. Oregon, Washington, Colorado, and Arizona had joined the dry column as early as 1914, and Michigan had done so, by constitutional amendment, in 1916. The interpretation of the New York *Times* on this overwhelming indication of public sentiment expressed a general opinion. It said: "It is impossible to read such results in States long classed as dry without concluding that in this immense shift of popular sentiment we are witnessing the actual break-up of the post-war system of prohibition. The country has now an indication of what can happen in 'dry territory' when either the old Congress or the new submits repeal of the Eighteenth Amendment to the States."

**THE RETURN OF BEER.** As the year drew to a close it was plain that, so completely had it been convinced by the results of the November elections, the Seventy-Second Congress was prepared to modify the Volstead Act and legalize the manufacture and sale of beer, if agreement was at all possible as to the alcoholic content of the beverage, and the basic tax to be imposed upon it. Indeed, early in November, Chairman Collier, of the House Ways and Means Committee, announced that he had already called a meeting of his committee for December 7 to conduct hearings on a beer bill for tax purposes. He, himself, favored the general provisions of the earlier defeated O'Connor-Hull bill, which had provided for the legalization of beer with an alcoholic content of 2.75 per cent by weight to be taxed at the rate of \$7.50 a barrel. The alarming condition of the Federal Treasury as the first half of the fiscal year 1932-33 was drawing to a close, and the continuance of the depression, making necessary extraordinary forms of unemployment relief, were largely responsible for Congress's attitude. As November closed, the Federal deficit already was \$750,000,000 with a probable deficit at the end of June 30, 1933 of from \$1,500,000,000 to \$2,000,000,000. Naturally some of the predictions of enthusiastic wets were wide of the mark. Friends of the modification of the Volstead Act insisted that a beer tax could bring in as much as \$750,000,000 annually; others went so far as to claim that it would balance the budget.

From some quarters reports were issued to the effect that legalization of beer would furnish employment to at least 1,000,000 persons, directly in the brewing and malting industries and also in allied activities like cooperage works, machine shops, glass works, etc. In the first flush of enthusiasm hope naturally ran high, yet reasonable persons insisted that the creation of too great a degree of expectancy might be more harmful than not. It was pointed out that in the heyday of its career, that is, in 1914 before the inception of the intensive drive for nation wide prohibition, the brewing and malting industries did not employ more than 90,000 persons or utilize more than \$850,000,000 in capital. It was also to be recalled that the legalization of beer did not mean the creation of a new industry from the ground up, actually a brewing industry both in its legal and illegal aspects already existed. In

view of the fact that many brewers had accepted the standard of one-half of 1 per cent alcoholic content set up by the Volstead Act and had turned to the manufacture of near beer, it would be comparatively easy for them to start immediately the production of real beer. This meant merely the elimination of but one step in the process, that is to say, de-alcoholization of the beverage. In New York City alone there existed already fourteen breweries manufacturing near beer which at very short notice could turn out the real product to supply the needs of the whole Metropolitan area, if not a larger zone. Also, it was hard to expect that the legalization of beer would immediately drive out of business all those illicit wild-cat and alley breweries which were already manufacturing. Their operators had a large capital stake in their industry and no doubt they would contest the field with the legitimate breweries either by force or by underselling. Thus, the economic benefits of the return of beer were, to say the least, hard to chart, and the statements of brewers that there were to be large capital outlays and opportunities for the employment of many men were beginning to be received with considerable skepticism as the year closed.

To estimate the probable consumption of beer in order to calculate the return from a beer tax also had its difficulties. It is true that in 1911-14 the average annual consumption of beer was in the neighborhood of 2,000,000,000 gallons, making a *per capita* consumption of 20.5 gallons and that this ratio, applied to the 1933 population, would make an estimated consumption for the year of 2,500,000 gallons. At a tax rate of \$7.50 a barrel this would mean an estimated revenue of almost \$600,000,000. It is important to remember, however, that there existed a number of factors to make such estimates not at all probable. In the first place, the area of sale would be definitely limited to those States which had repealed their State enforcement laws and at the end of 1932 there were only fifteen such, holding in all not more than 36 per cent of the population. In the second place, with the continuance of the outlawing of the saloon there was eliminated from the scene the chief dispensing agency, for in pre-prohibition days beer had largely been drunk either at the bar or had been taken home in containers. The limitation of the sale of beer to eating places in connection with meals and to bottled beverages for home consumption must inevitably cut into bulk sales.

Other factors likely to affect the sale were: the high price of beer necessitated by the 3¢ a pint tax generally favored in Congress; the continuance of the depression which would stand in the way of the substitution of the more expensive beer for the less expensive coffee as a table beverage; and the fact that during the period of prohibition American drinking habits had changed and Americans had learned to become fond of hard liquor. All these considerations required weight in the determination of probable consumption of beer for tax purposes. The author of this article, writing in *Current History Magazine* for January 1933, believed that for the next year, at any rate, not more than 1,000,000,000 gallons of beer would be consumed; at a tax rate of 3¢ a pint, this would bring into the Federal coffers between \$240,000,000 and \$200,000,000. Any expectation on the part of Congress that the return would be heavier would only suc-

ceed in making the Federal fiscal outlook more dismal than it already is.

On December 5, on the same day that it had originally convened for its short session, the House of the Seventy-Second Congress was called upon by Speaker Garner to take action on a resolution providing for the repeal of the Eighteenth Amendment. The resolution received consideration immediately due to a special rule enacted by a two-thirds vote, and debate on it was limited to forty minutes. The resolution called for a straight repeal of the Eighteenth Amendment without qualifications or modifications of any form. The result of this test showed that the wets lacked just six votes short of the necessary two-thirds to pass the repeal resolution; for 272 members voted in favor of the resolution and 144 members voted against. It is important to note that of the 144 voting in the negative, 81 were lame ducks who would not return to the Seventy-Third Congress. On the other hand, 69 lame ducks cast their vote for repeal. The Democrats were overwhelmingly for repeal, 168 voting for the resolution and 44 against. The Republicans, on the other hand, divided almost equally, 103 of them voting for and 100 against. One member of the Farmer-Labor party voted for repeal. The vote showed that the opponents of repeal came largely from the South and West, 35 of the Democrats voting nay coming from the South and the remaining 9 from the Middle Western, and Rocky Mountain States. Of the 100 Republicans voting in the negative, 64 were furnished by Western Republicans.

By a vote of 17 to 7, on December 15, the House Ways and Means Committee favorably reported on the Collier bill legalizing the manufacture and sale of beer. Following a week of hearings, in which representation was made that the legislation of beer would restore an important industry, put large numbers of persons to work in brewing and malting and allied activities, and furnish a sizeable revenue to the government, the House Ways and Means Committee drew up the Collier bill. This measure contained the following provisions: legalization of the manufacture of beer containing an alcoholic content of 3.2 per cent by weight or 4 per cent by volume; a tax of \$5 per barrel containing not more than 31 gallons; a brewer's license tax of \$1000; a tax of \$20 on retailers dispensing malt liquors; protection of dry areas against the shipment or transportation of beer into their territories from wet areas; penalties for violation of the prohibition against shipment into dry territories; and the law to take effect 30 days after its enactment. The House report accompanying the bill estimated that the revenues produced by the beer tax would be \$200,000,000 annually. The report insisted that 3.2 per cent beer was not intoxicating and could be so described in the enforcement law enacted under the Eighteenth Amendment. The report declared that the change in sentiment on the part of "a majority of the people" of the country on prohibition "can hardly be controverted." The Committee, therefore, in recognizing this change of opinion, was merely indicating its responsiveness to public sentiment. The report pointed out that there was every reason to believe that as a result of the legislation of beer, certain farm and general economic benefits might be expected in view of the fact that large quantities of malt, rice, corn, hops, and various other grains would be used in

making the beverage. The report also quoted estimates that the brewing industry would return 75,000 men to work and stimulate employment by 225,000 more in allied industries. Brewers had promised to spend \$360,000,000 in capital investments for rehabilitation and remodeling within the next year. It is important to note that the Collier bill made no mention of the legalization of naturally fermented wines (that is to say, wine up to an alcoholic content of 14 per cent), nor did it take definite action toward the outlawing of the saloon.

On December 21, by a vote of 230 to 165, the House passed the Collier bill as reported out of the Ways and Means Committee, the Democratic leadership succeeding in killing all efforts to amend the measure from the floor. On the final reading of the bill 133 Democrats, 96 Republicans, and 1 Farmer-Laborite voted in the affirmative while 64 Democrats and 101 Republicans voted in the negative. But the year closed without either repeal of the Eighteenth Amendment or the legalization of beer being effected, for the Senate took no action in the final days of 1932. Whether the wets were to gain that victory which the presidential election of 1932 seemed to promise them therefore still remained in doubt. There was no question, however, that the year 1933 was to see written the most important chapter in this interesting and amazing chronicle of recent American history. See UNITED STATES.

FOREIGN NOTES. In line with the national referendum adopted in 1931, the *Finnish* parliament in April legalized the liquor industry, establishing it on a system somewhat comparable to that existing in Sweden. There was set up a state monopoly through whose offices passed the alcoholic beverages placed on sale in restaurants and retail shops. The law restricted the number of drinking days to 183, retail shops being closed from Saturday through Monday. Unlike Sweden, however, individual purchases were not put on a quota basis. Results of the operations of the new dispensation apparently were mixed. Reports were to the effect that drunkenness and arrests for violent crimes were on the decrease. On the other hand, despite the fact that the monopoly's retail shops were selling hard liquor at comparatively cheap prices, moonshining and bootlegging continued to flourish, the government finding it particularly difficult to cope with smuggling of hard liquors from other Baltic and the Scandinavian countries. The adverse economic situation, which had thrown so many people out of employment, was no doubt one of the important reasons for the continuance of the illicit liquor traffic. It was difficult to say whether a rigid system of control, with all its limitations as to closing days, restricted hours of sale, and the outlawing of saloons would in the end furnish the key to the problem. Finland had not yet completed its first year under the new system and, therefore, judgment on the part of impartial observers was still suspended.

On December 8, the Finnish parliament drastically amended the state liquor law in order to halt the smuggling of illicit liquors, of which mention has been made above. The amendments permit the sale of liquor throughout the year, except on Sundays, holidays, and eight other special days; also daily hours of sale were extended to 17 instead of the former 15, the extension applying to the night hours. The legis-

lation was enacted largely as a result of the stand taken by the government liquor monopoly, which had insisted that it could not compete with the smugglers unless night drinking was permitted and the number of days of sale increased. See FINLAND under *History*.

In *Switzerland*, as a result of the mandate of the constitutional amendment of 1930, the parliament passed a law extending the scope of the federal liquor monopoly. The new statute, by including liquor distilled from fruits within the scope of the state monopoly, strengthened the country's liquor policy of national control of sources of supply. One provision of the law was that the government in time was to acquire all those distilleries which were offered for sale to the liquor administration; another was the prohibition of the opening of new distilleries. In effect, the law extended the monopoly's control of "manufacture, refining, import, export, transit, sale, and taxation, to liquors distilled from fruit products. Also wine, more than 12 per cent alcoholic content, was to be subject to tax, but less potent wine as well as beer and cider were to continue to be free of monopoly control or taxation. Under the new law the Federal government, instead of continuing to turn over all of the monopoly profits to the cantons, was to impound half the proceeds in its fund for old-age insurance and widows' and orphans' pensions. Farmers operating stills were to be allowed to continue making spirits, but only of Swiss materials. All home-made liquor required for household or agricultural use was not to be taxed; the surplus the state was prepared to purchase from the farmers.

**PROHIBITION POLL**, "THE LITERARY DIGEST'S CULMINATING. With the dawn of 1932 came increased signs of popular unrest over the problem of National Prohibition. It seemed to all who had opportunities in some measure to explore or sample the public mind, that the drift of feeling against the Eighteenth Amendment and the Volstead law had gathered such strength that it was bound to declare itself in decisive action sooner or later—and this was a Presidential year.

The Congress showed no sign of knowing anything about this revulsion of popular sentiment, but continued to obstruct, with the adamant inertia of a drilled majority, all attempts at bringing about a reconsideration or modification of Prohibition in itself or in any of its ramifications.

Future historians may interest themselves in the question of how largely the industrial depression may have helped to swell the anti-Prohibition tide. Important conclusions on this point may be drawn from a comparison between *The Literary Digest's* Prohibition polls of 1930 and 1932, the latter of which was to play a decisive historic part in the events leading up to the National Conventions in June and the Presidential Election in November.

Of 4,668,537 ballots mailed back to *The Digest* in the spring of 1932, 3,431,877 were marked for Repeal of the Eighteenth Amendment, and 1,236,660 for Continuance of Prohibition. That was 73.51 per cent for Repeal. The 1930 poll had shown a combined 69.54 per cent of its ballots for Repeal, or (and) a middle question involving Modification of the Volstead law in favor of light wines and beer. The depression was in its infancy at the time of the 1930 poll, and was

not expected to last much longer, yet the drift against Prohibition was within 5 per cent of the strength it was to reach after two more years of industrial stagnation and general distress. Trained observers have drawn the inference that the depression played a smaller part in the matter than might be supposed. In this connection it is pointed out that a still earlier Prohibition poll—one of small dimensions conducted by *The Literary Digest* in 1922—had also been emphatic for repeal or modification.

The events of 1932 were to bring the history of Prohibition to a startling and dramatic climax. Already in January the public impatience was expressing itself in demands for some sort of a plebiscite on the question. Many talked and wrote loosely of a "national referendum." Others, who knew that the Constitution of the United States has no provision for a referendum on any question, joined in a widespread appeal for a *Literary Digest* Prohibition poll. It was pointed out that in a few weeks *The Digest* could canvass an enormous cross-section of the entire nation and obtain an unequivocal expression of current opinion. Letters to this effect poured in to the editors, and the same suggestion was echoed in newspapers all over the country. *The Digest* made some tests by mail, and the response more than confirmed the impression that the country was at fever heat on the subject.

In February *The Digest* mailed out 20,706,352 post-card ballots to every community, large and small, in the United States. The ballots differed from the 1930 ballots in one important particular. The 1930 ballots bore three questions, as we have noted; the 1932 ballots only two. This change was made for these reasons:

In the beginning of the 1930 poll it was assumed that the middle vote, calling for "modification" (light wines and beer), was to be reckoned as part of the "wet" vote, but as the poll progressed, the Prohibition leaders began to claim the modificationists as their own, on the ground that these middle voters still wanted the Eighteenth Amendment. Thus the issue became confused. That confusion was to be dissipated, as we shall see, by the results of the 1932 poll, of which the ballots presented the simple alternative of (1) Continuance of Prohibition and (2) Repeal of the Eighteenth Amendment.

"This time there'll be no bone of contention," *The Digest* remarked in announcing the poll. That was on February 13. A week later came the first small report, from eight States. After that the tally waxed greater in volume weekly—and each week it looked more like a landslide for the repeal of the Prohibition Amendment. Prohibition organizations redoubled their activities, political and propagandist, and strove mightily to discredit the findings of the poll, and even to throw doubts on the non-partisan spirit which had been the *Literary Digest's* guiding star for forty years. Anti-Prohibition organizations increased in number and energy. Statesmen of the two major parties evinced anxious interest in the poll figures, with an eye to the National Conventions coming in June. Reports that the Republican party chiefs were planning a plank for the resubmission of the Eighteenth Amendment brought vigorous threats from prominent dry leaders. Meanwhile a number of Congressmen quietly appealed to *The Digest* for special enlightenment on the dry-wet voting in their home districts.

Those interested in discrediting the poll launched a number of canards, among which only one had a certain color of plausibility which makes it worth recording. It was asserted that *The Literary Digest's* ballots did not reach women in sufficient quantity to give them an adequate voice on Prohibition. *The Digest*, it appeared, had not "sorted out the sexes" in its roster of 20,706,352 names and addresses, but it was convinced that the women of the country were getting their share of ballots. It met the challenge seriously and in a practical way, the result of which it recounted thus:

We decided to poll all the registered voters, men and women—the women separately from the men—in one representative city.

We selected one of the oldest Prohibition centers in the whole country, and one of the most downright American, "from 'way back"—Portland, Maine.

The canvass was so arranged that we could distinguish the women's ballots from the men's, while still preserving the secrecy of the ballot. Another important part of the program was that we were polling the rest of the State of Maine (minus Portland) with our own regular mailing list.

The results of this double operation were most revealing and decisive.

Taking the city as a whole, without distinction of sex, we find that out of 6,909 of Portland's registered voters who have sent in ballots at this writing, 2,096 vote for Continuance of the Eighteenth Amendment, 4,813 for its Repeal.

Now, separating the men and women, we get these figures:

Men—14,598 Mailed, 3,981 Replies = 27.3 per cent.  
Continue 970 = 24.36 per cent.  
Repeal 3,011 = 75.64 per cent.  
Women—11,958 Mailed, 2,928 Replies = 24.48 per cent.  
Continue 1,126 = 38.45 per cent.  
Repeal 1,802 = 61.55 per cent.

The first thing to strike us is that the women don't vote so very differently from the men. Their majority is on the same side as the men's majority. They're not so emphatically wet as their husbands, fathers, and brothers, but their wetness is decisive.

Their response in the way of voting is a trifle less than that of the men, but surprisingly high.

Turning now to the State of Maine, without Portland and without sex distinction, we find that out of 25,689 ballots returned to date, 7,826 are for Continuance, 17,863 for Repeal—a wet percentage of 69.54.

Finally, taking Maine as a whole, Portland included, we find that in a total vote to this writing of 32,598, the figures are 9,922 for Continuance, 22,676 for Repeal—a wet percentage of 69.57.

Note, if you please, the virtually exact correspondence in dry-wet proportions between the total vote of Maine (outside of Portland) and the total vote of Portland, where women voted on an equality with men. The percentages work out as follows.

State of Maine, for Repeal, 69.54

City of Portland, for Repeal, 69.67

This corroboration of the poll's accuracy was cited extensively in the heated discussions leading up to the National Conventions and during the Presidential campaign.

An extraordinary feature of the poll throughout the greater part of its life was that it brought to light only one dry State—Kansas—until the ninth weekly report, when Kansas was joined by North Carolina. And those two States emerged in the final report, on April 30, as the sole champions—by narrow margins—of the Eighteenth Amendment, against 46 States with majorities for Repeal.

*The Digest* presented this comparison between the percentage results of its two large Prohibition polls:

1930	Per cent	1932	Per cent
For Enforcement ..	30.46	For Continuance ..	26.49
For Modification ..	29.11	For Repeal .....	73.51
For Repeal .....	40.43		

Those who in 1930 argued that the Modification vote should be counted as dry, now counted

it as having been wet. Otherwise the apparent wet gains in the intervening two years would have been, of course, fabulous. Probably some color of dryness did enter into that middle column, but how much can only be guessed. The two-question ballot proved its value, although in the course of the poll it was attacked by both wets and drys, each faction accusing it of favoring the other.

#### FINAL REPORT OF THE LITERARY DIGEST PROHIBITION POLL

[For Continuance or Repeal of the Eighteenth Amendment]

State	Continuance	Repeal	Total
New England .....	76,432	273,956	350,388
Maine .....	10,877	24,794	35,671
New Hampshire ..	6,820	14,529	21,349
Vermont .....	4,937	11,329	16,266
Massachusetts .....	39,184	143,950	183,134
Rhode Island .....	3,431	18,395	21,826
Connecticut .....	11,883	60,959	72,842
Middle Atlantic ....	240,192	995,725	1,235,917
New York .....	76,922	426,694	503,616
New Jersey .....	29,953	174,806	204,759
Pennsylvania .....	133,817	394,225	527,542
East North Central .	286,758	901,349	1,188,107
Ohio .....	106,367	280,196	386,563
Indiana .....	66,126	140,100	206,226
Illinois .....	53,748	228,972	282,720
Michigan .....	39,815	141,553	181,368
Wisconsin .....	20,702	110,528	131,230
West North Central .	183,814	377,535	561,349
Minnesota .....	31,475	101,694	133,169
Iowa .....	32,480	57,874	90,354
Missouri .....	43,890	106,519	150,409
North Dakota .....	6,810	21,205	28,015
South Dakota .....	7,110	15,159	22,269
Nebraska .....	19,790	33,222	53,012
Kansas .....	42,259	41,862	84,121
South Atlantic ....	141,643	267,105	408,748
Delaware .....	2,442	6,425	8,867
Maryland .....	14,818	46,964	61,282
Dist of Columbia .	3,009	10,509	13,518
Virginia .....	27,721	47,617	75,338
West Virginia .....	23,662	44,741	68,403
North Carolina .....	32,429	32,361	64,790
South Carolina .....	12,282	18,361	30,643
Georgia .....	14,038	25,479	39,517
Florida .....	11,742	34,648	46,390
East South Central .	82,063	118,527	200,590
Kentucky .....	26,143	53,662	79,805
Tennessee .....	27,479	29,122	56,601
Alabama .....	16,894	20,438	36,832
Mississippi .....	12,047	15,305	27,352
West South Central .	96,185	154,019	250,204
Arkansas .....	14,817	16,202	31,019
Louisiana .....	7,510	33,286	40,796
Oklahoma .....	25,026	30,004	55,030
Texas .....	48,832	74,527	123,859
Mountain .....	36,058	85,053	121,111
Montana .....	4,859	19,995	24,854
Idaho .....	5,818	10,710	16,023
Wyoming .....	1,832	6,420	8,252
Colorado .....	14,870	22,887	37,757
New Mexico .....	1,587	4,781	6,368
Arizona .....	2,552	7,027	9,579
Utah .....	4,650	10,281	14,931
Nevada .....	395	2,952	3,347
Pacific .....	77,452	242,163	319,615
Washington .....	15,858	48,973	64,831
Oregon .....	11,446	26,271	37,717
California .....	50,648	166,919	217,567
State Unknown ....	16,063	16,445	32,508
Final totals ....	1,286,660	3,481,877	4,668,537

Regarding the above comparison between the 1930 and 1932 percentages, *The Digest* made this interesting discovery:

Curiously enough, some very close correspondences emerge from a comparison of the above figures and the returns of the national plebiscite in Finland, whereby that country, last winter, abolished Prohibition after trying it for twelve years. Here are Finland's totals and percentages:

Retain .....	217,019.....	28.1 per cent
Modify .....	10,915.....	1.4 per cent
Repeal .....	544,967.....	70.5 per cent

The Finland dry percentage, it will be noted, falls between the American dry percentage of our 1930 poll and that of our 1932 poll. The Modify-Repeal percentage falls between our 1930 Modify-Repeal percentage and our 1932 Repeal percentage. Thus:

DIGEST, 1930	Per cent	Finland	Per cent
Modify-Repeal ..	69.54	Modify-Repeal ...	71.9
DIGEST, 1932	Per cent		
Repeal .....	73.51		

A valuable feature of the final tabulation of the poll (See page 696) is the geographical grouping of the States, and the furnishing of regional totals as well as State totals.

### PROTESTANT EPISCOPAL CHURCH.

A religious body representing the Anglican communion in the United States, of which the Church of England is the parent church, and which was brought to America by the Jamestown colonists in 1607. Despite the absence of a colonial episcopate the church, under English clergymen, maintained a firm foothold for 170 years. In 1785 the first American bishop was consecrated in Scotland, and three years later two more were consecrated. The church completed its organization at a convention in Philadelphia in October, 1789, at which the constitution and name were adopted and the Book of Common Prayer was set forth.

In 1932 the total number of communicants of the Episcopal Church, in 8307 parishes and missions, was 1,319,183, an increase of 7179 over the preceding year. The clergy numbered 6388; 181 priests were ordained during the year, while the 15 theological seminaries of the church reported 536 candidates for orders. In the 5000 church (Sunday) schools 501,866 pupils were enrolled. Baptisms during the year numbered 64,431, and confirmations 64,601. The government of the church centres in a general convention which meets triennially, the next session (the fifty-first) to be held in Atlantic City, N. J., in October, 1934. The affairs of the church between sessions are conducted by a National Council which is also the board of directors of the Domestic and Foreign Missionary Society.

Operating on a balanced budget, the church in 1931 reported total expenditures amounting to \$3,695,033. Of this sum, the total expenditure for missions, domestic and foreign, was \$2,726,097, divided in practically even amounts between the two fields. The foreign-mission fields included Japan, China, Liberia, Mexico, the Philippines, Alaska, Hawaii, Brazil, the Canal Zone, Cuba, Puerto Rico, Haiti, the Dominican Republic, the Virgin Islands, and Palestine; in addition, there were establishments in 10 important European centres. Domestic missionary activities included work among the foreign born, Indians, Negroes, mountaineers, mill workers, in addition to a wide range of social service. American missionaries abroad numbered, men and women, respectively, 184 and 231; native staff abroad, 1312 and

738. During the year, 58 new missionaries were appointed.

The National Council is assisted by coöperating agencies, including the Woman's Auxiliary; the Brotherhood of St. Andrew; the Church Army; the Daughters of the King; the Guild of St. Barnabas (for nurses); the Girls' Friendly Society in the United States (for girls and young women); the Young People's Fellowship (for young men and women); the Church Mission of Help; the Seamen's Church Institute of America; and the American Church Institute for Negroes. Official periodicals are *The Spirit of Missions* and *Bulletins* of the National Council, together with material dealing particularly with each department of the Council. Several independently owned publications make an important contribution to the life of the church: *The Living Church*, *The Churchman*, *The Witness*, *The Southern Churchman*, weeklies; *American Church Monthly* and *The Chronicle*, monthlies.

The year 1932 was marked by the death of only one bishop: The Rt. Rev. Cameron Mann, D.D., bishop of South Florida, who was succeeded by his coadjutor, the Rt. Rev. John D. Wing, D.D. During the year, the Bishop of Sacramento, the Rt. Rev. William H. Moreland, D.D., presented his resignation. It will be ratified at the next meeting of the House of Bishops. New members of the House of Bishops consecrated during 1932 were: The Rt. Rev. Benjamin M. Washburn, D.D., Bishop Coadjutor of Newark, and the Rt. Rev. Ralph E. Urban, Suffragan Bishop of New Jersey. The headquarters of the National Council, of which the Presiding Bishop, the Rt. Rev. James DeWolf Perry, D.D., Bishop of Rhode Island is president, are in the Church Missions House, 281 Fourth Avenue, New York City.

### PROTOZOA. See ZOÖLOGY.

**PRUSSIA**, prûsh'â. A constituent republic of the German Reich. Formerly a kingdom of the German Empire, it was proclaimed a republic Nov. 13, 1918. Area, Dec. 30, 1930, was 113,036 square miles. Total population (1925 census), was 38,175,989. Births in 1930 numbered 713,322, deaths 454,516, marriages 350,347. Chief cities, with their populations (1925 census): Berlin, the capital 4,024,286; Cologne, 700,222; Essen, 629,564; Breslau, 599,770; Frankfurt-on-Main, 540,115; Dortmund, 525,837; Düsseldorf, 464,543; and Hanover, 425,274. Public elementary schools in 1926 enrolled 4,169,481 pupils, and the private elementary schools, 13,925. There were 55,498 students in 14 universities in 1930-31 and about 720,886 pupils in various secondary and preparatory schools in 1926.

Agriculture, mining, and manufacturing are the principal industries. The chief crops, with the yields in metric tons, in 1930 were: Wheat, 2,320,566; rye, 5,710,115; barley, 1,588,255; oats, 3,838,436; potatoes, 31,966,252; meadow hay, 11,569,398. Vineyards yielded 13,085,837 gallons of wine, valued at 29,432,014 Reichsmarks (1 Reichsmark equaled \$0.2382 at par). In the fiscal year 1931-32, the budget of the Prussian Government was estimated to balance at 3,920,348,760 Reichsmarks. The public debt on April 1, 1931 aggregated 623,440,338 Reichsmarks.

The Constitution of Nov. 30, 1920, vests legislative power in a Diet (*Landtag*) of 422 members, elected by direct suffrage, and a State Council (*Straatsrat*) elected by the Provincial Assemblies. The Diet elects the Premier, who appoints the members of his Cabinet. The Diet

elections of April 24, 1932, returned 102 National Socialists, 93 Social Democrats, 87 Centrists; 57 Communists, 31 Nationalists, 7 People's party, 2 State party, and 3 others. Premier in 1932, Otto Braun (Social Democrat). See GERMANY.

**PSYCHIATRY.** See **PSYCHOLOGY.**

**PSYCHICAL RESEARCH.** The past year, though on the whole a quiet and uneventful one, was marked by several incidents of importance. First must be mentioned the Jubilee of the Society for Psychical Research. Founded in London in 1882 by a group of able men, the chief of whom were Prof. Henry Sidgwick, F. W. H. Myers, and Prof. Sir William Barrett, F.R.S., the society has steadily maintained its high critical standards, worthy of those of any scientific society in any field. It has done so in the face of opposition from two sides: a now fast diminishing contempt from the side of orthodox science and an often virulent dislike on the part of spiritualists and others willing to go further than the facts appear to warrant on a conservative estimate. Of these two types of opposition, it is probable that the latter has done the more harm, by bringing the subject in general into disrepute. Besides the founders named above, the Society for Psychical Research has had as Presidents such physicists as Balfour Stewart, Lord Rayleigh, Sir William Crookes, Sir Oliver Lodge; such philosophers as the Earl of Balfour, Henri Bergson, and F. C. S. Schiller; such biologists as Charles Richet and Hans Driesch; and such psychologists as William James, William McDougall and T. W. Mitchell. It is impossible in a brief space to give even a summary account of the work done by the society and reported on in its *Proceedings* and *Journal*, now extending jointly to nearly seventy volumes. In vol. xli (July, 1932) of the society's *Proceedings* will be found a valuable survey of the society's work, written, from first-hand knowledge of the entire period, by Mrs. Henry Sidgwick. This is followed by a classified list of the contents of the society's *Proceedings* and *Journal*.

In the field of investigation the most important event was undoubtedly the result of sittings with the medium Rudi Schneider, briefly referred to in last year's article, and now fully reported on by E. and M. Osty in their book *Les Pouvoirs Inconnus de l'Esprit sur la Matière*. The conditions of the investigation were briefly as follows: For the purpose of controlling the medium a simple apparatus similar to certain types of burglar detectors had been installed. It consisted of an infra-red ray directed at a photo-electric cell, which recorded any interference with the beam. The cell was at first connected with a bell and a flashlight apparatus. During these sittings the bell rang and flashlight exposures were repeatedly made. This clearly indicated that the infra-red beam had been interfered with, that is, absorbed or refracted by an interposed substance of some kind. Yet when the plates so exposed were developed it was found that no such substance was visible. The photographs showed the entire area concerned, including the medium, but nothing extraneous was visible in the infra-red beam.

Further to test the nature of this non-photographable substance, the photo-electric cell was connected with a galvanometer, which measured and recorded the extent and frequency of the absorptions of the infra-red beam. It was discovered that the substance did not usually

enter into the infra-red ray, absorb a certain percentage of it, and remain constant. On the contrary, the substance oscillated rapidly in the extent of its absorptions, which ranged between about 30 per cent and about 75 per cent. These oscillations were found to occur at a rate of between 120 and 420 per minute. Later the medium's rate and volume of respiration were measured. The volume showed nothing particularly out of the ordinary. But the rate was found to be very much larger than normal, rising from the medium's normal 12 to 14 per minute to a rate in trance of between 120 and 300 respirations per minute, rising as high as 350. It was also found that the invisible and non-photographable substance in the infra-red beam oscillates at a rate uniformly and exactly double the medium's rate of respiration. That is, every inhalation and exhalation corresponds to an oscillation in the infra-red ray.

This is how the case stands at present. The investigation is to be resumed early in 1933, and next year's article may report discoveries of exceptional importance. In any case the results described already in themselves open up a new era in the investigation of parapsychical phenomena.

Many critics have already so often said, after successive revelations of suspicious incidents, that the career of the Boston medium Margery has come to an end, that one hesitates to repeat the statement. But this time it is difficult to see how the mediumship can survive the discovery made by Mr. E. E. Dudley, at the time a warm supporter of the Margery mediumship, that the fingerprints of the "spirit" supposed to manifest himself at the Margery sittings, are in fact those of an identified living man. The facts are quite clear and conclusive and the remaining supporters of the medium Margery have made no attempt to disprove them, nor does it seem possible that they should be able to do so. The only serious suggestion put forward by defenders is that the whole fingerprint system is fallacious. The student may weigh for himself the rival claims of that system and of the Margery mediumship. It may be hoped that this marks the final closing of not the least unsavory chapter in the annals of psychical research.

Mr. S. G. Soal published a long report in the *Proceedings* of the S.P.R. of his widespread and long-continued experiments in telepathy. In brief, the object of the experiment was to discover whether the faculty of telepathy exists in only rare individuals or under exceptional circumstances, or whether it is present in however minute a degree in all human beings. The experiment shows conclusively that the latter possibility must be rejected.

In the same *Proceedings* Mr. Theodore Besterman published a report of his experiments in the psychology of testimony as applied to parapsychical phenomena. An average sitting for such phenomena was reproduced, and the sitters were asked to answer a questionnaire dealing with the phenomena at the sittings. The testimony so rendered was correct in proportions ranging from 5.9 per cent to 61 per cent, averaging 33.9 per cent. The answers are analyzed in detail and the conclusions are that there is a slight tendency to underrate the number of persons present, that apparently irrelevant disturbances are largely ignored, that sitters are very little able to report conditions of visibility, that reports of audi-

tory conditions are erratic, that short periods of time are either greatly underrated or greatly exaggerated, etc.

Among other noteworthy books published during the year are C. E. Bechhofer Roberts, *The Truth about Spiritualism*; Sir Oliver Lodge, *Past Years and Letters from Sir Oliver Lodge*; E. Selous, *Thought Transference (or What?) in Birds*; P. Thomas Bret, *Précis de Métapsychique*, vol. iii; and an important pronouncement by the philosopher Hans Driesch, *Parapsychologie: Die Wissenschaft von den "Okkulten" Erscheinungen*, in which the whole field is surveyed cautiously and critically, and in which the writer comes to an affirmative conclusion in respect of certain of the phenomena.

**PSYCHOANALYSIS.** See **PSYCHOLOGY**.

**PSYCHOLOGICAL ASSOCIATION, AMERICAN.** See **PSYCHOLOGY**.

**PSYCHOLOGY.** NOTES AND NEWS. The fortieth annual meeting of the American Psychological Association was held at Cornell University, Ithaca, New York, on September 8-10. There was a registered attendance of 612 persons. Dr. Joseph Jastrow, one of the original founders of the association, spoke informally concerning the early history of the association in celebration of the 40th anniversary. The presidential address was delivered by Professor W. R. Miles, Yale University, on "Age and Human Ability." The newly elected president for the year 1932-33 was Prof. L. L. Thurstone, University of Chicago. An invitation was accepted from the University of Chicago to hold the 41st annual meeting at that institution on September 7-13, 1933.

One hundred and six papers were read in a series of 17 sessions. Animal psychology predominated, with three sessions and 22 papers devoted to the subject. Two sessions with 13 papers were assigned to Sensory Phenomena, and two with 10 papers to Clinical Psychology. Single sessions (3 to 8 papers each) were assigned to General Problems, Child Psychology, Abnormal Psychology, Applied Psychology, Physiological Psychology, and to the more specialized topics of Mental Tests, Memory, Learning, Efficiency, and Personality. Taking the programme as a whole, there appeared to be a trend away from Mental Tests and in the direction of experimental techniques.

The Tenth International Congress of Psychology was held at the University of Copenhagen from August 22 to 27. The representatives of the United States Government were Carl E. Seashore, Dean of the Graduate School, University of Iowa, Herbert S. Langfeld, Princeton University, Walter R. Miles, Yale University, Margaret F. Washburn, Vassar College, Harry P. Weld, Cornell University.

On account of the death on July 2, 1931, of the President of the Congress, Professor H. Höfding, the Chairman of the Danish National Committee for the Congress, Professor Edgar Rubin, presided. The Congress was greeted at its opening session by His Majesty, the King of Denmark.

One hundred and fifty-seven papers were read by psychologists from England, United States of America, Germany, Russia, Italy, Denmark, Holland, Belgium, Austria, Poland, India, Switzerland, Spain, Hungary, Bulgaria, Yugo-Slavia. There was a total attendance of 500 persons.

The next International Congress is to be held in 1936 at Madrid under the presidency of Prof. L. Mira of the University of Barcelona.

One of the notable events of the year was the

completion of the series of thirty radio addresses under the auspices of the National Advisory Council on Radio in Education, begun in the preceding year. The topics covered were Animal Behavior, Educational Psychology, Problems in Personality, and Industrial Applications. Universities, public libraries, and other agencies assisted in bringing these addresses to the attention of the public. As an aid in following the lectures and in providing references for further reading, Listeners' Notebooks were prepared, 45,000 of which were distributed. The lectures were also printed and distributed to the number of approximately 65,000 copies. Later, the thirty addresses, together with the introductory chapters of the Listeners' Notebooks, were published in book form under the title *Psychology Today* (University of Chicago Press, 1932, pp. 495). A proposal to continue the radio talks during the year 1932-33 was under consideration by the National Advisory Council on Radio in Education.

The 100th anniversary of the birth of Wilhelm Wundt, born August 16, 1832, was celebrated in the Leipzig laboratory in October. Wundt became Professor of Philosophy at Leipzig in 1875, and founded the world's first psychological laboratory in 1879.

The following prominent psychologists died during the year: Edgar J. Swift, Emeritus Professor of Psychology, Washington University, August 30, best known for his early studies in the field of learning and his later applications of psychology to the problems of everyday life; Leonard T. Troland, Lecturer in Psychology, Harvard University, Director of Research, Technicolor Motion Picture Corporation, Hollywood, Calif., May 27, investigator in the field of visual phenomena and author of systematic treatises on Psychology; June E. Downey, Professor of Psychology and Philosophy, University of Wyoming, October 11, originator of one of the early forms of the Personality Test, and investigator in the field of right- and left-handedness; Anton A. Grunbaum, Director of the Psychological Laboratory at Amsterdam, Holland, Jan. 10, 1932, a student of the Würzburg School who made many contributions to the study of the higher thought processes, and in later years directed his interest toward problems in Abnormal Psychology; Max von Frey, University of Würzburg, January 25, primarily a physiologist, he was best known to psychologists through his classical work on the senses.

The first issue of the *Psychoanalytic Quarterly* appeared in April, 1932. The journal was planned to publish, besides original articles, book reviews, news items and books, particularly translations not otherwise accessible to English readers. These books would be presented in installments. (*Psychoanalytic Quarterly* Press, Albany, N. Y.)

The first number of *Personality: A Quarterly for Psychodiagnostic and Allied Studies* appeared in the United States in 1932. It was edited by Robert Saudek of London and a large staff of collaborators. It was planned to issue simultaneously an English and a German edition of this new journal. The publication was inaugurated by the Duke University Press, Durham, N. C.

A memorial volume, *Twenty-five Years* was published by the Vineland Training School, Vineland, New Jersey, 1932, commemorating the establishment of the Vineland Laboratory by H. H. Goddard in 1906. The volume presented the nine papers delivered at a formal conference, includ-

ing a résumé of the research accomplished and published, and a survey of research opportunities offered by the institution.

The second edition of the *Psychological Directory* (Clark University Press, 1932) came from the Press. Pertinent information, together with complete bibliographies of publications, was furnished for 2400 psychologists from 40 countries. The first edition of this work (1929) contained 1250 names from 24 countries. It was reported that another volume would shortly appear containing data for deceased psychologists back to antiquity.

Announcement has been made of the publication of *Revista Italiano di Psicoanalisi*, the official journal of the Italian Psychoanalytic Society.

There was originated in Chicago the Chicago Society for Personnel Study, consisting of psychiatrists, psychologists, sociologists, educators, physiologists, and others, with the hope of integrating the sciences in a scientific body devoted to the study of personality in all its phases, normal and abnormal, child and adult.

The Clark University Press published volume ii of *Autobiography in Psychology* (1932). It contained historical accounts of 15 psychologists, of whom eight were American, two were English, two were German, one was French, one Italian, and one Danish.

Announcement was made of the organization in Chicago of an Institute for Psychoanalysis. The Institute was planned to engage in teaching and research to the end that competent practitioners might be available, that medical men might learn to appreciate the need for analysis, that the scientific basis upon which it rests might be strengthened, and that the proper coordination with the scientific disciplines might be established. The Director of the Institute was Dr. Franz Alexander. He was supported by a staff of 13 lecturers, associates, and consultants. The Board of Trustees and the Advisory Board contained the names of many prominent professional and business men.

**GENERAL AND THEORETICAL PSYCHOLOGY.** The trend of interest in theoretical psychology continues to be in the direction of organismic conceptions, whatever the variety of names that may be applied to it. The German psychologists hold to certain unique systematic concepts which can be translated as "Totality Psychology" (e.g. F. Sanders, *Ganzheit*, and Gestalt, *Archiv für des gesamte Psychologie*, 1932, vol. 85, pp. 237-260) which assumes a transphenomenal psychical principle and which gives all our acts relation and meaning. There was also the "Understanding Psychology" (e.g. H. Seelbach, *Verstehende Psychologie und Individual-Psychologie*, *International Zeitschrift für Individual Psychologie*, 1932, vol. 10, pp. 262-288) which assumed understanding and the mental life generally to be a function not explicable in terms of cause and effect.

In strong contrast to this philosophical trend among the German psychologists, was the behavioristic concept of totality or wholeness. This was illustrated in the work of E. C. Tolman (*Purposive Behavior in Animals and Men*, New York, 1932), who presented what he called a molar behaviorism in contrast to the molecular behaviorism of Watson. By this he meant that behavior "is more than and different from the sum of its physiological parts. Behavior, as such,

is an emergent phenomenon that has descriptive and defining properties of its own."

The organismic concept with a strictly biological trend seemed to be gaining ground. It rested heavily upon the biological theories of the development of the organism and the physiological theories of neural function. This point of view was well presented in several articles by O. C. Irwin, on the Organismic Hypothesis and Differentiation of Behavior (*Psychological Review*, 1932, vol. 39, pp. 128-146, 189-202, and 387-393). He first attacked the reflex chain theory with its "atomistic implications" and substituted the concepts of Child, Herrick, Coghill, and others on the functioning of the organism as a whole. He then substituted the theory of mass action for the older reflex arc concept. Finally, he argued that behavior patterns are differentiated from a primitive general matrix of behavior rather than built up from reflex units.

In strong contrast to this systematic organismic outlook was that of E. B. Holt (*Animal Drive and the Learning Process*, New York, 1931) who used much the same source material drawn from the biological and physiological laboratories, but constructed a system upon the circular reflex, the chain reflex, and the conditioned reflex. With these resting upon the theory of neurobiotaxis, Holt constructed a purely mechanistic organization remarkably complete and convincing as far as it went. A second volume was promised to carry the interpretation still further.

Gestalt psychology appeared to be attracting somewhat less attention both in the realm of theoretical discussion and of laboratory research. A critical discussion of the concepts of Gestalt appeared in *Die Lehre von der Gestalt* by M. Scherer (Berlin, 1931). Experimental studies continuing the work of Koffka and his associates appeared in "Beiträge zur Psychologie der Gestalt" (*Psychologische Forschung*, 1931, vol. 15, pp. 194-274).

**SOCIAL PSYCHOLOGY.** The year 1932 gave but little consideration to general and theoretical problems in social psychology. Two studies of general questions may be cited, however. First is that of L. L. Bernard ("The Evolution of Social Consciousness and of the Social Sciences," *Psychological Review*, 1932, vol. 39, pp. 147-164) and next that of M. F. Washburn ("Ejective Consciousness as a Fundamental Factor in Social Psychology," *Psychological Review*, 1932, vol. 39, pp. 395-402). Of rather general import was the symposium on "Contributions of Psychology to the Understanding of Problems of Personality and Behavior," presented at the Ninth Annual Meeting of the American Orthopsychiatric Association held in Baltimore on Feb. 20, 1932. Four papers were read followed by extended discussion. They dealt with modern schools of psychology, the evolution of personality, norms of development, individual differences and biological foundations of personality.

*American Social Psychology: Its Origins, Development and European Background* (New York, 1932) was of some historical interest in its attempt to determine the ancestry of the rather vaguely delineated science.

The main interest of social psychologists in 1932, as in several previous years, has been directed toward the analysis and measurement of personality and its component parts. The measuring devices have, in the main, taken the form of scales. For example, there were described scales

for measuring emotional maturity (R. R. Willoughby, *Journal of Social Psychology*, 1932, vol. 3, pp. 3-36); "Scales for Measuring Persistence" (C. K. A. Wang, *Journal of Social Psychology*, 1932, vol. 3, pp. 79-90); "Scales for Measuring the Attitude toward Prohibition" (H. N. Smith, *Journal of Abnormal and Social Psychology*, 1932, vol. 26, pp. 429-37); and "Scales for Personal Values" (P. E. Vernon and G. W. Allport, *Journal of Abnormal and Social Psychology*, 1932, vol. 26, pp. 232-248). In addition to these scales, many tests were designed for the measurement of special social traits, such as cruelty, compassion (J. W. Hawthorne, *Journal of Social Psychology*, 1932, vol. 3, pp. 189-211). The problems involved in such measurements were dealt with by M. A. May in "Problems of Measuring Character and Personality" (*Journal of Social Psychology*, 1932, vol. 3, pp. 131-145).

The depression turned attention to certain pressing problems arising from lack of employment. Notable among studies of this type was *The Minnesota Unemployment Research Project* described briefly by D. G. Paterson (*Personnel Journal*, 1932, vol. 10, pp. 318-328); also, *The Duluth Casual Laborer Group* studied and reported by A. H. Hansen, M. R. Trabue, and H. S. Diehl (University of Minnesota Employment Stabilization Research Institute, 1932, vol. 1, No. 3). Samplings of the unemployed were given a great variety of tests in order to determine their relative fitness to compete with the average man. The group was found to possess occupational resources below the average.

EDUCATIONAL PSYCHOLOGY (including Mental Tests). The year 1932 has produced an abundance of literature both in the nature of general discussions of theory and practice and specific studies of classroom problems, as well as researches in the field of measurement. *Modern Psychologies and Education* (C. E. Ragsdale, New York, 1932) examined the psychological theories underlying modern educational methods. An attempt was made to list those psychological principles which could then be accepted by educators. The problems underlying the education of the backward child, an ever-present problem in education, were dealt with by D. K. Fraser in *Education of the Backward Child* (London, 1932). Of particular interest was the report of Child Training in the Soviet Union ("Kindererziehung in der Sowjetunion" by R. Adler, *International Zeitschrift für Individuelle Psychologie*, 1931, vol. 4, 297-309). The leaders of this work did not believe in the use of intelligence tests for determining natural fitness but assumed the educability and socialization of all children. The general methods employed were reported to develop a desire for knowledge, independence and self-confidence. The report of a special Commission on Character Education appointed by the National Education Association appeared in the Tenth Yearbook, Department of Superintendence, Washington, D. C., 1932. It included chapters on the problems of developing character, on character research and character measurement by such devices as tests, questionnaires and rating scales.

The White House Conference on Child Health and Protection made public the report of its *Committee on Growth and Development* (Century Company, 1932) in four volumes covering respectively, General Considerations, Anatomical and Physiological Factors, Nutrition and Appraisal of the Child. These documents contained

material of lasting value for the student and teacher of the child.

The *Handbook of Child Psychology* (edited by C. Murchison, Worcester, Mass., 1932) provided an authoritative account of seventeen special fields within Child Psychology by as many specialists. Among the topics given expert treatment were language development, children's drawings, games and amusements, children's dreams, children's morals, their physical growth and development, eating, sleeping, and the process of conditioning emotions in the child. Extensive reference lists were provided in connection with each topic.

In the more specialized field of learning, the search for fundamental principles continued along with special studies of such factors as repetition, satisfaction, and retroactive inhibition. A general treatment of the whole problem of learning, and embodying recent researches on learning was published in *The Fundamentals of Learning* by E. L. Thorndike (New York, 1932). This book afforded a good view of the status of the learning problems. A more practical treatment of the subject of efficiency in the process of learning was presented by W. F. Book in *Economy and Technique of Learning* (New York, 1932).

The student conversant with recent trends in educational psychology has become accustomed to finding his firmly established notions of the laws of learning called seriously into question. The effects of repetition, of pleasant effects, of primacy, of recency, had all been minimized by one or other authority. One of the last to go was the effect of the passage of time upon amount remembered or the so-called "Law of Forgetting." The year 1932, however, saw an even more fundamental concept questioned, namely, that habits are established by practicing them. K. Dunlap in *Habits* (New York, 1932) reported that habits, whether good or bad, can be broken by practicing them. This paradoxical conclusion was supported by experimental researches as well as by argument. The idea was certain to elicit discussion and attack from those who saw their last stronghold of traditional psychology being stormed.

No report could be made of the great number and variety of mental tests developed and employed during the year. A ready reference to such material was made available, however, in a survey of "Educational Tests" which appeared in the *Psychological Bulletin* (1932, vol. 29, pp. 120-146). One hundred and sixty-eight studies were reviewed, covering tests for survey and experimental purposes, for diagnosis and remedial purposes, for prognosis and guidance, for improving marks and marking systems.

ABNORMAL PSYCHOLOGY (including *Psychoanalysis*). The most notable event of the year 1932 was the inauguration of a survey of the field of psychiatry by a group of experts within psychiatry and related fields. This survey was supported by one of the large foundations and was prosecuted under the auspices of the National Research Council (Washington, D. C.). Critical evaluations of psychiatric theory and practice were made from the point of view of Medical Psychiatry, Neurology, Psychoanalysis, Psychobiology, Clinical Psychiatry, and Research in Psychiatry. It was intended to have these reports subjected to discussion by groups of specialists and differences ironed out in order to provide a concerted programme of research and development in this important field.

A significant event in the history of Psychoanalysis in the United States was the opening of the Institute for Psychoanalysis in Chicago (see *Notes and News* above). The following paragraph taken from a formal announcement indicated the scope of the new project: "The Institute for Psychoanalysis in Chicago plans research which cannot be carried on in private practice. In the beginning it will concentrate on psychobiological problems, but it hopes later to extend studies into the field of the social sciences. If these plans can be realized satisfactorily, the Institute will contribute to the assimilation of psychoanalysis in the system of sciences to an unprecedented degree. The related disciplines will really appreciate psychoanalysis only if they can obtain from it substantial help for the solution of their own special problems."

At last Freud's own mechanisms have been turned against himself. E. Michaelis (*Freud: son visage and son masque*, Paris, 1932) psychoanalyzed the master and found that the external contradictions disclosed in Freud's writings were the expressions of an internal contradiction, a conflict, a lack of inward integration. Just as the discovery of conflicts in the minds of great historical characters has opened the way for an interpretation of their achievements, so Freud's inner conflicts offer the best basis for an understanding of his psychoanalytic system (see also C. G. Jung, *Sigmund Freud in his Historical Setting, Character and Personality*, 1932, vol. 1, pp. 48-55).

After two and a half years of labor a new classification of mental disorders has been published (see G. W. T. Fleming, *The Revision of the Classification of Mental Disorders*, Report by the Clinical Psychiatry Sub-Committee of the Research and Clinical Committee, *Journal of Mental Science*, 1932, vol. 78, pp. 387-391). The aim had been to develop a system which should be as simple as possible. The grand divisions of the classification are: amentia, neuroses, and psychoneuroses, schizophrenic psychoses, psychopathic constitution, affective and emotional psychoses, toxic psychoses, epileptic psychoses, organic brain disease psychoses, and other miscellaneous types.

The publication of a *Directory of Psychiatric Clinics in the United States* (New York, 1932) was a matter of some interest to psychologists, since such a clinic was defined as "one having a psychiatrist in attendance," and would in many cases include psychologists on its staff. This was the third edition of this work, and contained record of 674 clinics.

Announcement was made of the establishment of a chair of Psychological Medicine at the Long Island Medical College. The first incumbent of this position was Dr. Alfred Adler of Vienna.

*The Medical Value of Psychoanalysis* (F. Alexander, New York, 1932) represented an interesting attempt on the part of its author to present a clear statement of psychoanalysis for the understanding of medical men and students, presumably with the purpose of introducing the psychoanalytic technique into the routine of the general practitioner. It had apparently become feasible to withdraw this practice from the exclusive control of the psychoanalytic specialist. The book by J. R. Oliver (*Pastoral Psychiatry and Mental Health*, New York, 1932) went even farther afield, in attempting to provide the clergyman with some technical knowledge of vari-

ous forms of mental illness, in order that he might recognize them and check them in their incipient stages.

There appeared during the year a comprehensive account of certain studies in Abnormal Psychology carried on in Russia under the direction of A. R. Luria (*The Nature of Human Conflicts*, 1932, New York, translated by W. H. Gannt). The researches were concerned with the breakdown of motor control under emotional stress. The method consisted of the registration of voluntary and involuntary movements of the right and left hands respectively during the word association test. Emotional and normal states showed clear-cut differences in motor response.

A general discussion of the problems of mental deficiency in the U.S.S.R. was contained in a report on what was called the "defectology movement" (D. J. Azboukier, *The Defectology Movement and Higher Defectology Instruction in the U.S.S.R. and in Other Countries*, Trudy II, University Moskva, I, 107-113). There was an account of examination methods and institutions compared with those of other countries. There were over 200 schools for defectives of various sorts, employing 1500 instructors (see also W. Eliasberg, *Beobachtungen zur psychischen Hygiene und zur Psychotechnik im neuen Russland, Zeitschrift für psychologischen Hygiene*, 1932, vols. 5, 10).

An attempt was made to determine the psychological effects of the drugs that had come, within the last several years, to play such an important part in the experimental treatment of the mental diseases (see R. W. Bohn, "Sodium Amytal Narcosis as a Therapeutic Aid in Psychiatry," *Psychiatric Quarterly*, 1932, vol. 6, pp. 301-309 and E. Lindemann "Psychological Changes in Normal and Abnormal Individuals under the Influence of Sodium Amytal," the *American Journal of Psychiatry*, 1932, vol. xi, pp. 1083-1091). Among other changes he found a decrease in inhibition accompanied by a feeling of freedom and well-being.

**APPLIED PSYCHOLOGY.** Applied Psychology as a discipline had become so extensive and diversified that by 1932 the various subdivisions such as Industry, Business and Law had attained an independent status and bulked as large as the whole of Applied Psychology of a few years earlier. An excellent survey of the field of Industrial Psychology was published during the year (M. S. Viteles, *Industrial Psychology*, New York, 1932). The author was forced to exercise restraint in the selection of his material in order to keep it within the limits of a volume of 650 pages. The book contained a good treatment of the important question of maladjustment of the worker and the motives that lead to satisfaction and dissatisfaction.

Research activities, as in the past few years, have been devoted primarily to measurement and the development of tests. Two new fields had attracted the attention of the applied psychologist, those of the dentist and the mortician. Tests had been proposed in Germany for the elimination of persons not suited for the dental profession (see "Germany's Elimination Test for Dentists" by H. Keller and C. O. Weber, *Journal of Applied Psychology*, 1932, vol. 16, pp. 465-474, also "Eignungsprüfung beim Reichsverband der Deutschen dentisten," Anon. *Industrielle Psychotechnik*, 1931, vol. 8, pp. 347-351). There were measures of intellectual and educational level, of

sensory acuity and manual skill. E. B. Clark began in 1931 to report a series of studies on the "Color Problem in Dentistry" (*Dental Digest*, 1931, vol. 37, pp. 499-509, 571-582, 646-660, 732-741, 815-826; and *Journal of the American Dental Association*, 1931, vol. 18, pp. 2093-2103) which opened up a relatively new field for measurement. He attempted to establish a kind of scale for tooth color and shade which could be used in what had come to be known as dental ceramics.

In a series of three articles G. W. Frear (*Mortuary Management*, 1932) attempted to make certain practical applications of psychology; whether this lead would develop into another full fledged field remained a question.

In the field of industrial psychology attention continued to be directed to the personality factors in adjustment to working conditions. Among such studies, one of the best was that of R. B. Hersey (*Workers' Emotions in Shop and Home: A Study of Individual Workers from the Psychological and Physiological Standpoint*, Philadelphia, 1932). He made an intensive study of the emotional life of about thirty workers in a railroad shop, developing a record from day to day by way of observation and introspective report. Ten detailed case studies were included in the volume. He noted a need for a more intimate appreciation of the emotional fluctuations of the worker which affect his output, and was impressed with the periodicity of these fluctuations. In "Efficiency, Work, Satisfaction, and Neurotic Tendency," R. N. McMurray (*Personnel Journal*, 1932, vol. 11, pp. 201-210) expressed the view that there had been an over-emphasis upon neurotic tendency in accounting for differences in performance and differences in satisfaction from work, which distracted attention from the significance of environmental factors. F. Haeger ("Das Leistungsgefühl," *Psychotechnische Zeitschrift*, 1931, vol. 6, pp. 148-152) emphasized the importance of self-confidence in its effect on the worker's attitude. A. W. Kornhauser and A. A. Sharp ("Employee Attitudes: Suggestions from a Study in a Factory," *Personnel Journal*, 1932, vol. 10, pp. 393-404) discovered a serious cause of unsatisfactory attitudes of the workers in the nature of the supervision which was exercised over them.

Among the more specialized fields of investigation that of the problem of automobile driving occupied a prominent place in the activities within the United States and foreign countries. Tests for drivers, analysis of accidents and accident statistics, legibility of road signs and license plates, effectiveness of color signals, the influence of visual defects upon driving efficiency, and the examination of accident-prone drivers were the matters most frequently investigated. The human element as distinguished from the mechanical was made to bear the burden of responsibility for the mounting accident rate. (See *Transactions of the Societa Italiana di Medicina Sociale*, 1932, for several Italian Studies, and the *Psychotechnische Zeitschrift*, 1932, for a report of German work.)

The publication in 1932 of a bibliography of the literature bearing upon the question of human energy cost in industry called attention to a relatively new attitude toward the problem of fatigue. (R. M. Page, *Measuring Human Energy Cost in Industry: A General Guide to the Literature*, Genetic Psychology Monographs, 1932,

vol. xi, nos. 5 and 6). The bibliography contained 649 titles and was rather fully annotated.

*The Personnel Bibliographical Index* (Bureau of Education Research, Columbus, Ohio, 1932) gave an excellent survey of the literature on Personnel problems. It was a volume of 433 pages containing an annotated bibliography of thousands of books and articles cross indexed, and classified according to author and subject. It was planned to publish supplements biennially in order to keep the Index up to date.

**PUBLIC AFFAIRS**, INSTITUTE OF. An organization inaugurated in 1927 at the University of Virginia, Charlottesville, for the purpose of advancing the popular understanding of public questions and stimulating in the public mind a more vital interest in public matters, particularly the domestic problems of the United States. The attendance at the 1932 session, held from July 3 to 16, consisted of 560 registered members and 1204 registered visitors from 30 States, the District of Columbia, Cuba, South Africa, New Zealand, Puerto Rico, Peru, Mexico, Costa Rica, and England. Membership in the institute is open to men and women who have taken part in public life and to those who are interested in any phase of public affairs.

The programme of the 1932 session was planned in accordance with the announced purpose of the institute to limit its discussions primarily to a study of governmental problems of national, State, and local concern and to certain economic and social conditions underlying them. It consisted of eight round tables, dealing with the following subjects: "The Anti-Trust Laws"; "The Country Church and the Rural Ministry"; "County Government"; "Our Latin-American Relations"; "Economic Recovery"; "Municipal Administration"; "Religious Education"; "Unemployment"; and five special conferences on the following topics: "Regulating Women's Work by Law"; "Conference on World Economics"; "Conference on Studying Public Affairs the Year Around"; "Adult Education in Action"; "Conference of Club Activities and Problems." In addition to the leaders of these round tables and conferences there were 151 invited speakers at their sessions as well as 24 evening speakers.

The officers of administration in 1932 were: Dr. John Lloyd Newcomb, acting president of the University of Virginia; Dr. Charles G. Maphis, dean of the summer quarter and director of the institute; Eleanor McKenney Gibson, secretary of the institute; a committee from the rector and visitors of the University of Virginia; and an advisory board composed of 24 prominent educators and recognized leaders in public affairs, selected from all sections of the United States and from the two political parties. Headquarters are at the University of Virginia, Charlottesville, Va.

**PUBLIC FINANCE**, UNITED STATES. Depression conditions, which had strongly made themselves apparent during 1931, reached what was thought by expert observers to be possibly their maximum in 1932, with a large deficit which grew steadily throughout the fiscal period, and defied the power of Treasury officers to forecast with any degree of accuracy. Definite tendency to shortage of revenue on a large scale, apparent during the preceding year, with the resulting adoption by Congress of the so-called "bonus bill," led to a decline of revenue that did

not reach full maximum until the results of the business reaction and of the stock market shrinkage had been fully reflected in income-tax payments. It was plain from June, 1931, however,—the beginning of the fiscal year 1932—that the Treasury would be subject to an unexpected and probably unprecedented falling off of income; and, from the early autumn of 1931 accordingly, the department began casting about for means of meeting the shortage of receipts. Factors of revenue decline which had originally shown themselves months before, were beginning to assume their complete development by about the end of 1931, and excise taxes—including tobacco receipts as well as other forms of local taxes, receipts from land and real-estate taxation and others—were reduced to low points. At the same time, there were many drafts on the Treasury that, in ordinary times, might not have been esteemed very severe, but on this occasion proved exceedingly hard to endure. The administration of President Hoover had committed itself to a policy of constructing unnecessary public buildings, and otherwise expending money on work designed to enlarge employment for the rank and file of the community. An extravagant programme of construction of new public buildings in Washington had been undertaken, and was pushed forward toward completion. At the same time, the absence of the incomes, previously received from foreign countries, through the payment of debt-installments, rendered conditions still worse. Thus the government, in spite of feeble attempts at economy, was really more extravagant than ever, and at the same time, all revenues, including that from customs, were proving less satisfactory than at any time in the past.

Total ordinary receipts for the year ending June 30, 1931, amounted to \$2,121,228,000 and were thus about \$1,196,005,488 less than those for the corresponding period a year earlier. Expenditures for the year were \$5,008,590,305 or about \$786,639,966 greater than for the preceding year. The result was a deficit of \$2,885,362,299—a net figure, after making allowance for all deductions due to the transactions in the public debt. It was natural that a large part of the reduction of income should take place in income and profits taxes which declined by \$803,100,000 and reached a level of \$1,057,300,000 while customs amounted only to \$327,700,000 showing a falling off of \$50,600,000.

of the country than had been the case in previous periods, owing to the fact that now, for the first time since the depression, the government revenue was reflecting some of the real business changes that had occurred.

No study of the general situation will, moreover, be accurate without remembering that the government found itself driven to adopt what was equivalent to a discredited device known widely in Europe—that of the "supplementary budget." The efforts to bring about a budgetary balance were neutralized about as fast as made, through the adoption of costly supplementary legislation by Congress in providing for new outlays designed to help the economic situation, yet incidentally resulting in aggravating the seriousness of the position of the different economic groups in the community. Among such acts of legislation were those providing for the Reconstruction Finance Corporation, the recapitalizing of the farm-land banks, the establishment of the Home Loan Banks, the provision of relief funds for disbursement through the States under given conditions, and a variety of other costly outlays and undertakings of one sort or another. These speedily resulted in creating a body of expenses frequently referred to in a complimentary way as "self-liquidating" but actually—in all probability—representing for the most part unproductive investments.

The forepart of the fiscal year (after July, 1931) was already so unfavorable that the Treasury department was ready at the opening of the new session, to offer to Congress estimates designed to provide the basis for a new budget. They included revisions of income-tax rates, a sales-tax plan, new excise taxes, and a variety of additional exactions. The House of Representatives was recalcitrant and unwilling to accept these suggestions, and eventually sales taxation was dropped and a revision of income-tax rates took its place with additions to excise taxation over a considerable area. But these, naturally, were, for the most part, of a nature which must take effect in a later year. Congress, in spite of bitter recrimination and long continued debate, was unable to adopt the new revenue act until June 6, 1932, or just before the close of the fiscal year here under discussion, so that, so far as actual budgetary results are concerned, the outcome of the year was, to all intents, based upon previous legislation. The new income tax had been intended to go into effect retroactively, but

## ORDINARY RECEIPTS, FISCAL YEARS 1920 TO 1932

[On basis of daily U. S. Treasury statements (unrevised)]

Year ending June 30—	Customs	Income and profits taxes	Miscellaneous internal revenue	Miscellaneous revenues, including Panama Canal Proceeds		Total

\* Includes refunds and drawbacks under Bureau of Industrial Alcohol.

<sup>b</sup> Represents the share of the United States charged against the General Fund of the Treasury. The expenditures chargeable against the revenues of the District of Columbia under "trust funds" amounted to \$39,524,773.60 for the fiscal year 1932.

while the new excises were ordered to become effective on June 21, 1932. Thus the changes made were future and not actual so far as the real current incomes of the year were concerned.

**FEDERAL EXPENDITURE.** A study of federal expenditures in detail illustrates the situation, already referred to in general terms as indicating the extravagant tendencies of Congress. The figures submitted by the Secretary of the Treasury in his annual report made at the opening of the new session in December, 1932 showed that:

**ORDINARY RECEIPTS, EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS, AND SURPLUS 1920 TO 1932**

[On basis of daily Treasury statements (unrevised)]

Fiscal year	Total ordinary receipts	Expenditures chargeable against ordinary receipts	Surplus
1920 ...	\$6,694,565,888	\$6,482,090,191	\$212,475,197
1921 ...	5,624,932,960	5,558,209,189	86,723,771

1932 ...	2,121,228,006	5,006,590,305	2,885,362,299*

\* Deficit.

While total Federal expenditures increased \$1,158,000,000 from 1929 to 1932, the expenditures for major activities undertaken or accelerated to afford relief from the depression and for the postal deficiency showed a combined increase of \$1,189,000,000. The remaining Federal expenditures declined slightly, from \$3,555,000,000 for 1929 to \$3,524,000,000 for 1932.

In the major expenditures largely attributable to the depression are included expenditures of \$500,000,000 for the capital stock of the Reconstruction Finance Corporation, \$125,000,000 for additional capital stock of Federal land banks, \$186,000,000 for net loans under the agricultural marketing act, an increase of about \$306,000,000 in expenditures for public works, and an increase of \$117,000,000 for the postal deficiency after deducting about \$52,000,000 from the postal deficit for 1929 for payment of so-called back railway mail pay to inland carriers under authority of the joint resolution approved June 6, 1929.

Service of the public debt including sinking fund and other debt retirements accounted for \$1,012,000,000 of the expenditures for 1932, a reduction of about \$216,000,000 from 1929. This decrease resulted from reduced payments for interest, reflecting lower rates on Government issues, and from decreased retirements from repayments of principal from foreign governments owing to the suspension of foreign debt payments due in the fiscal year 1932.

Another major class of governmental outlays is for national defense and the care of war veterans. Expenditures under this category totaled about \$1,631,000,000 for 1932, or about \$233,000,000 more than for 1929.

The balance of the Federal expenditures aggregated about \$821,000,000 in 1932 as compared with \$929,000,000 in 1929, a decrease of \$48,000,000. Certain expenditures included in this total do not represent Government activities and may be classified as nonfunctional. Thus expenditures for trust fund accounts represent moneys payable to or for the use of beneficiaries of the trust and are not classified as general expenditures of the Government. These include such items as expenditures on account of the Government life insurance fund, trust funds for the benefit of the Indian tribes in connection with the sale of Indian lands, and expenditures of the District of Columbia government from taxes levied in the District. Refunds of receipts include repayments of taxes erroneously collected. Other expenditures under this general classification include, for both years, the purchase of certain obligations by the Government; for 1929 payments of so-called back railway mail pay and for 1932 the payments authorized under the settlement of war claims act of 1928. The total of the major nonfunctional items was \$417,000,000 in 1929 and \$262,000,000 in 1932, a decrease of about \$155,000,000.

Other expenditures, largely for departmental activities, were \$619,000,000 for 1932, an increase of \$107,

000,000 over 1929. Expenditures for the Shipping Board, which include construction loans for the development of merchant marine, were responsible for \$86,000,000 of this increase, war expenditures for departments and other accounts not elsewhere certified were about \$71,000,000 larger for 1932 than for 1929. The latter class of expenditure aggregated about \$567,000,000 for 1932, or about 16.1 per cent of total Federal expenditures exclusive of the major items due to or affected by the depression. The activities which were supported by this \$567,000,000 of expenditures include the legislative and judicial branches of the Government, the fiscal administration and control of banking and currency, foreign relations, civil pensions and allowances, and other governmental activities in connection with conservation of natural resources, education, promotion of public health, Indian affairs, aids to agriculture, labor, aviation, and industry.

In such conditions, the deficit of the preceding year, already thought of as very large and aggregating \$902,000,000, was plainly bound to receive a great increment. It was still possible to assert that this deficit was not really what it seemed, since it had been caused by the prepayment of the bonus to the "veterans" in a sum somewhat similar to the amount of the deficit; so that, from one point of view, it was possible to consider the country as having really advanced some funds for the early settlement of an outstanding debt which would have had to be disposed of at some time. In 1931, however, there could be no question as to the real character of the situation. Instead of being able to make apparent reductions of debt by paying off outstanding certificates of indebtedness at dates of maturity, even if increases took place at other dates, the Treasury fell into a definite condition of continuous shortage with resort to every kind of borrowing expedient authorized by existing legislation. Unquestionably, as now admitted by practically all, the practice of borrowing largely on short-term at the banks was proving disastrous, and should never have been allowed to intrench itself in public practice. It now, nevertheless, had to be reckoned with as a condition not a theory, and when treasury authorities were urged to fund the entire body of outstanding short term debt into long term bonds to be sold to investors, they hesitated. Thus, throughout the year, the policy of compelling the banks to absorb enough short-term obligations to permit the treasury to meet its recurring needs continued. The policy, dangerous as it was, found an aggravation in the inflation doctrines accepted by Federal Reserve Banks which permitted the adoption of the plan of heavy purchases and holdings of government obligations not only by the member banks but by the reserve banks themselves. Thus it was practicable to make an appearance of solvency and soundness which was belied by the fact that, as time went by, the short term debt became less and less manageable.

**LEGISLATIVE PROSPECTS.** The year was noteworthy in that it produced the revenue act of 1932 which effected one of the largest increases ever imposed by the Federal government in time of peace. The terms of this enactment are reviewed in the article *Taxation*, and at this point it is enough to say that the measure included enlargements both of income tax rates and of excise and other taxation, including a notable restoration of the so-called "nuisance taxes" governing admissions, stamp taxes, and others. The additions, however, did not supply any new revenue during the fiscal year 1932, and but little during the calendar year 1932. As experience accumulated during the later months of 1932 more-

over, and as it became apparent that the deficit for the year would still run into enormous figures, it became plain that additional taxes would

be required. At the session of Congress which opened in December, 1932, plans were at once taken in hand for the imposition of additional

taxes, but developments indicated that actual measures would be deferred until the new administration, elected in the fall of 1932 had taken office on Mar. 4, 1933. This administration, however, both in the Democratic platform, and in the campaign addresses of the candidates, stood pledged to a reduction of at least 25 per cent in existing administrative costs, and the question of taxation necessarily had to be deferred until it could be ascertained how far compliance with these pledges would prove practicable.

**PUBLIC LANDS.** See LANDS, PUBLIC.

**PUBLIC RELIEF.** See UNEMPLOYMENT.

**PUBLIC UTILITIES.** See POWER PLANTS; MUNICIPAL OWNERSHIP.

**PUBLISHING.** See LITERATURE, ENGLISH AND AMERICAN.

**PUERTO RICO**, pwër'tō rē'kō. An island in the West Indies, ceded by Spain to the United States under the treaty of Dec. 10, 1898. The official name of the island was changed from Porto Rico to Puerto Rico by joint resolution of the U. S. Congress, approved by the President May 17, 1932. Capital, San Juan.

**AREA AND POPULATION.** The smallest but the most densely populated of the four islands composing the Greater Antilles, Puerto Rico lies 480 miles east of Cuba and 1380 miles southeast of New York City. The island is about 100 miles long and 35 miles wide, with an area of 3435 square miles, or approximately the size of Connecticut. The estimated population on June 30, 1932, was 1,599,142. At the census of 1930, the population was 1,543,913, or 449.5 per square mile, as compared with 1,299,809 (378.4 per square mile) at the census of 1920, an increase for the decade of 244,104, or 18.8 per cent. The population in 1930 was 74 per cent white, 20 per cent Negro or mulatto, and the remainder Chinese, Japanese, and Hindus. The leading cities, with their populations in 1930, are: San Juan, 114,715 (71,443 in 1920); Ponce, 53,530 (41,912); Mayaguez, 37,060 (19,124). For the period 1927 to 1931 births averaged 57,142 annually, and deaths 33,092, the annual excess of births being 24,050. The average birth rate per 1000 inhabitants was 37.4 and the death rate 21.7.

**EDUCATION.** About 40 per cent of the population over 10 years of age were illiterate in 1931, a figure representing a substantial reduction during the preceding quarter century. Enrollment in the public schools during the 1931-32 school year was 229,169, an increase of 2954 over the preceding year. There were in operation 23 public high schools; 20 incomplete, or continuation, high schools; 39 second-unit rural schools; 1813 elementary urban schools; and 1899 elementary rural schools. The total teaching staff was 4601 (an increase of 78 over 1930-31), of whom 4429 were paid by the insular government and 172 by municipal governments. Expenditures for educational purposes from insular funds in 1931-32 amounted to \$4,363,007; from municipal funds, \$1,166,693. Enrollment in the University of Puerto Rico in 1931-32 was 2308, as compared with 1703 in 1930-31.

**PRODUCTION.** Agriculture is the main support of the population; there were 52,113 farms in 1930, as compared with 41,078 at the census of 1920. Sugar, tobacco, citrus fruits, and coffee are the major crops, while cotton, cacao, coconuts, beans, plantains, and fresh vegetables are important secondary crops. Dairying is a growing

industry. For the 1931-32 season, sugar production was 992,432 short tons (784,000 in 1930-31); tobacco, about 5,500,000 pounds (37,293,000 in 1930-31); coffee, about 9,000,000 pounds (13,735,000 in 1930-31); sea-island cotton, 3445 bales (1931 calendar year) (2642 bales in 1930). Shipments of fresh and preserved fruit for the year ended June 30, 1932, were valued at \$4,321,135. The 1931-32 sugar crop was the largest on record and the price received for it was the lowest since 1898. The drastic reduction in the tobacco crop was due to a growers' strike, caused by low prices. The livestock census of 1930 showed 310,514 cattle, 103,689 swine, 55,573 goats, 3949 sheep, 49,545 horses, and 6122 mules. While the number of cattle had increased since 1920, the number of all other livestock had decreased.

Sugar, cigars and cigarettes, garments, fine needlework, and canned and preserved fruits are the chief manufactured products. The output of cigars was 215,390,000 in 1930-31 (201,109,000 in 1929-30); cigarettes, 242,080,000 (260,390,000 in 1929-30). The needlework industry, which employed about 50,000 persons, exported products valued at \$12,093,000 to the mainland in 1931 (\$12,883,000 in 1930). Due to overpopulation and other factors, health, living, and laboring conditions in Puerto Rico were much less satisfactory than in the United States. Malaria, hookworm, malnutrition, and tuberculosis affected a large percentage of the population, and the death rate from malaria in 1931 was the highest ever registered. There was much unemployment. Wage scales during 1931 were: Common plantation labor, \$0.50 to \$1.50 per day; foremen and gang bosses, \$2 to \$2.50; skilled mechanics and artisans, \$3 to \$5 per day.

**COMMERCE.** For the year ended June 30, 1932, Puerto Rico's trade with the United States and foreign countries amounted to \$147,698,039, compared with \$174,838,337 in 1930-31, a decrease of about \$27,140,298, or 16 per cent. Imports declined to \$61,281,101 from \$76,437,410 in 1930-31, while exports fell to \$86,416,938 from \$98,400,927 in the previous year. The excess of commodity exports over commodity imports was \$25,135,837, or 17 per cent of the total trade. Trade with continental United States represented 92.4 per cent of the total 1931-32 trade. Shipments to the United States were valued at \$83,045,863, or 96.8 per cent of all exports and imports from the mainland were valued at \$52,826,794, or 86.2 per cent of the total. Puerto Rico in 1931-32 supplanted Cuba as the leading customer of the United States in Latin America; its per capita purchases of United States goods were \$34.20, as compared with per capita purchases of all Latin American countries from the United States amounting to about \$2.50.

The island's chief exports during 1931-32 were: refined and raw sugar, 814,660 long tons valued at \$55,118,211 (720,380 long tons valued at \$54,367,401 in 1930-31); coffee, 589,502 pounds worth \$154,903; (1,977,659 pounds worth \$546,438 in 1930-31); leaf tobacco, 12,028,566 pounds valued at \$5,782,151 (19,928,726 pounds valued at \$12,053,863 in 1930-31); fruit, \$5,792,433 (\$5,994,464 in 1930-31); cigars, \$2,403,532 (\$3,899,556 in 1930-31).

**FINANCE.** The Governor reported that the condition of the insular treasury at the close of the fiscal year ended June 30, 1932, was "satisfactory beyond all expectations." The revenue of \$12,662,360 was the largest ever collected in one year,

and \$1,608,162 more than that collected during 1930-31. Including proceeds of the coffee fund (\$72,476), and the surplus in the insurance fund (\$18,663), total receipts into the general fund were \$12,753,399, which, added to the balance on hand July 1, 1931, brought total general-fund resources for the year to \$13,306,426. Total cash disbursements during the year were \$12,305,597 and transfers to various trust funds were \$126,407, making total disbursements and transfers of \$12,432,084. The treasury balance on July 1, 1932, was thus \$874,422. The final excess of resources over the general fund appropriation liabilities was \$638,239, or an increase of \$434,269 as compared with the resources on July 1, 1931. The budget estimates for 1932-33 called for expenditures of \$10,287,835.

The bonded indebtedness of the insular government on June 30, 1932, amounted to \$28,761,000, compared with \$29,097,000 on June 30, 1931. During the fiscal year, bonds amounting to \$570,000 were issued and bonds amounting to \$906,000 were redeemed. Taking into consideration a decline in the sinking funds for bond redemption from \$1,458,577 on June 30, 1931, to \$1,370,528 on June 30, 1932, the net change in the bonded indebtedness during the year was a decrease of \$247,951. As for the municipalities, their aggregate indebtedness on June 30, 1932, was \$18,882,541, plus interest payable amounting to \$40,008, as compared with their indebtedness of \$19,957,352, plus accrued interest of \$27,603, reported on June 30, 1931.

COMMUNICATIONS. Railways in 1931 extended about 463 miles, of which 306 miles were public-service lines. During 1931-32 about 183 miles of highway were asphalted with funds of the Puerto Rican Hurricane Relief Commission, making a total of 1263 miles of hard-surfaced roads. A total of 1097 vessels, with a net tonnage of 1,241,572, entered the ports in the foreign trade during 1931, and 1123 vessels, of 1,461,105 net registered tons, cleared.

GOVERNMENT. Puerto Rico is governed in accordance with the Jones Act passed by the United States Congress Mar. 2, 1917, and subsequent amendments. Executive power is vested in a governor appointed by the President of the United States and legislative power in a legislature of two elective houses—a senate of 19 members and a house of representatives of 39 members, all elected for four years. A resident commissioner, elected by the people for a term of four years, represents the island in the United States Congress. The six departmental heads form an executive council, presided over by the Governor. The Jones Act conferred United States citizenship collectively upon the people of the island. Gov. Theodore Roosevelt resigned Jan. 18, 1932, to become Governor General of the Philippines, and was succeeded by James R. Beverley, who assumed the office Jan. 30, 1932. Mr. Beverley had served as attorney general of Puerto Rico since May 22, 1928.

#### HISTORY

POLITICAL DEVELOPMENTS. While the chief issue in the election of Nov. 8, 1932, was the political future of Senator Antonio R. Barcelo, long the acknowledged political boss of the island, the Senator's fate was intimately connected with the question of the future status of Puerto Rico. The campaign emphasized the fact that the existing political relationship between

island and mainland was of a temporary nature, and that Puerto Ricans were divided into four groups on the issue of their political future. These groups were: (1) the Union-Republicana party, led by Sen. Rafael Martinez Nadal, advocating statehood or complete local autonomy, but with permanent association with the United States; (2) the Socialists, led by Sen. Santiago Iglesias, who strongly favored permanent association with the United States but who were more interested in economic than in political problems; (3) the Liberals, headed by Senator Barcelo, who favored ultimate independence but were willing to accept the existing system pending realization of their aim; and (4) the Nationalists, led by Pedro Albizu Campos, who demanded immediate and complete independence, and announced their intention of refusing to accept offices under the existing governmental setup.

The Union-Republicana and the Socialists formed an alliance during the campaign, with the primary objective of unseating Senator Barcelo. They succeeded in their aim. While the Liberals remained the largest political unit in the island, capturing some 166,000 votes out of the 388,000 cast, the opposing Coalition won some 205,000 votes, of which about 110,000 were cast by Union-Republicans and about 95,000 by Socialists. The coalition held a safe majority in both houses of the new Legislature. In the Senate, which Senator Barcelo had presided over from 1917 to 1929, the Liberals held only five seats out of 19; in the House of Representatives they held nine out of 39. Señor Iglesias was elected to the post of Resident Commissioner at Washington by a large majority. Meanwhile the Nationalists, who had secured 30,000 signatures to their registration petition, polled only a few more than 5000 votes. Despite the intense rivalry displayed in the campaign and the fact that more than 85 per cent of the qualified voters cast their ballots, the election was unusually quiet. It was the first election in which women exercised the right of suffrage.

During the political campaign, there came an announcement in Spanish-language newspapers in New York City (June 28), of the offering of 5,000,000 gold pesos (\$5,000,000) of bonds by the Nationalist party to "finance the fight for Puerto Rican independence." The bonds were issued in Puerto Rico on Nov. 16, 1930, but had not been publicly offered there. The platforms of the two major political parties in the United States took notice of the situation in the island. The Democratic party for a third time went on record as favoring "ultimate Statehood for Puerto Rico," while the Republican platform declared the Puerto Ricans were entitled to "a good-faith recognition of the spirit and purposes of their Organic Act." The Republicans favored "inclusion of the Island in all legislative and administrative measures enacted or adopted by Congress or otherwise for the economic benefit of their fellow citizens of the mainland," and the restriction of appointments so far as possible to persons of at least five years' residence in Puerto Rico.

LEGISLATION. During the fourth and last regular session of the Legislature (February 8 to Apr. 15, 1932), a law was passed establishing a permanent emergency fund. The law provided that at the close of operations of each fiscal year there should be transferred to the emergency

fund any part of the cash balance of the general fund, plus advances to other funds reimbursable to the general fund exceeding the balance of the appropriations provided for in the budget and of all other appropriations in force. When the Legislature neglected to act upon Governor Beverley's recommendations for revision of the election laws, the Governor called a special session, which convened June 21, 1932. Two election laws were then enacted by the Legislature and approved by the Governor. They were designed to give all important political groups fair representation in the insular and local election boards and in polling places, and to extend the time given by law to the insular board of elections to exclude new registrants from the election lists.

Among other measures passed at the several legislative sessions were: (1) an act to authorize the treasurer to purchase in the open market insular and municipal bonds, to consolidate issues, and to borrow money temporarily in anticipation of tax collections; (2) an act canceling and remitting certain taxes owed by coffee and coconut plantations; (3) an act levying a special tax of 2 per cent on the assessed valuation of every cuerda (acre, approximately) of coffee land in order to create a coffee insurance and rehabilitation fund.

**THE 1932-33 BUDGET.** A steady decline in budget receipts during the 1932-33 fiscal year led Governor Beverley to take drastic economy measures to balance revenue and expenditure. The Treasury's original estimate of revenues for the year was \$10,450,000. Nevertheless, the Legislature authorized appropriations of \$12,119,060. Before the budget was signed the Governor slashed \$900,000 from the appropriations, chiefly through salary reductions. In December, 1932, the Treasury issued a new estimate of revenues for the year, which was about \$1,257,000 below the previous estimates. With a budget deficit of \$1,000,000 in prospect, Governor Beverley informed the Legislature that new economies aggregating \$1,000,000 would have to be put into effect for the remaining seven months of the fiscal year.

**BIRTH CONTROL ADVOCATED.** Governor Beverley's report for the 1931-32 fiscal year aroused a considerable stir among religious groups in the United States because of his implied advocacy of birth control as a means of meeting the island's serious problem of overpopulation. Calling attention to the rapid increase in population to a density of 465.5 per square mile, the Governor said that this was "too large for an area which is and must always remain largely agricultural." The government, he said, had attempted to solve the problem by the encouragement of new industries and the expansion of established ones, but other solutions were required. "Without some extraordinary and unexpected changes in economic conditions, further net additions to population in the island must inevitably result in greater distress and poverty and ultimately in a rising death rate. The population question is fundamental and is intimately related to the standard of living, to labor conditions, and especially to health conditions." In his inaugural address, the Governor stressed the necessity for birth control, but the Legislature took no action.

Opposing the Governor's proposal of birth control legislation, the Rev. A. J. Willinger, Roman Catholic Bishop of Ponce, asserted that regulation of marriage rather than birth control offered

a solution to the island's population problem. He said the policy of absentee landlordism by large corporations had reduced many inhabitants to virtual peonage and was responsible for many illegal and consensual marriages. He recommended that such marriages be prohibited.

**THE 1932 HURRICANE.** Before Puerto Rico had recovered economically and financially from the disastrous hurricane of 1928, the northern part of the island was devastated on Sept. 26, 1932, by another great storm. In a preliminary report to the Legislature, called in special session October 18 to enact relief legislation, Governor Beverley reported that the hurricane had inflicted damage to the extent of \$30,000,000, of which \$20,437,000 represented damage to crops (\$11,553,000 damage to sugar cane). He estimated that 245 persons had been killed, 3329 injured, 36,249 buildings destroyed, 3,046 buildings damaged, 18,957 families rendered homeless, and 41,516 families left without food. The area of the storm was considerably smaller than that of 1928. Nevertheless, it was reported to have destroyed about 20 per cent of the coffee crop, a considerable part of the sugar crop, and almost all of the grapefruit groves when but 15 per cent of the greatest grapefruit crop in the island's history had been shipped and packed. As a result of the storm, the economic outlook of the island was reported worse than after the 1928 hurricane. The Banco Agrícola y Territorial of San Juan, one of the oldest banking institutions in the island, closed its doors September 29, increasing the credit stringency. The Reconstruction Finance Corporation at Washington extended a loan of \$360,000 to meet emergency relief needs from October 17 to November 30.

**GOVERNMENTAL APPOINTMENTS.** Effective Mar. 30, 1932, Charles E. Winter, of Wyoming, succeeded Governor Beverley as attorney general. Associate Justice Jacinto Texidor of the Supreme Court died Oct. 5, 1931, and was succeeded (Apr. 11, 1932), by Félix Córdova Dávila, Resident Commissioner of Puerto Rico in Washington. To complete Señor Córdova Dávila's unexpired term in Washington, the Governor appointed José L. Pesquera, who assumed office Apr. 28, 1932.

Consult Bailey W. and Justine W. Diffie, *Porto Rico: A Broken Pledge* (New York, 1931).

**PUGILISM.** See BOXING.

**PULITZER PRIZES.** A series of awards established in 1915 by the will of Joseph Pulitzer, publisher of the *New York World*, to be presented annually by Columbia University on recommendation of the advisory board of the Pulitzer School of Journalism, for outstanding achievements, in letters and journalism. The value of the prizes in the group devoted to letters is \$1000, with the exception of that for the best work on the history of the United States which is \$2000. The value of the prizes in the journalistic group is \$500, with the exception of that for the best example of a reporter's work during the year which is \$1000.

In November, 1931, the announcement was made that in the award for novels, the prize, previously restricted to an American author whose novel "best presented the wholesome atmosphere of American life," would thereafter be awarded for the best novel, regardless of theme, published during the year by an American author. Acting under this modification of the original provision, the jury gave the 1932 prize for the best novel to Pearl S. Buck, whose novel,

*The Good Earth*, presents a true picture of peasant life in China. The award has been widely criticized, not as to literary merit, but for the radical departure taken by the jury from the original provision of the founder of the prize. Other recipients in the group devoted to letters were: George S. Kaufman, Morrie Ryskind and Ira Gershwin, joint authors of the play *Of Thee I Sing*, which it was adjudged best represented "the educational value and power of the stage"; Gen. John J. Pershing, whose *My Experiences in the World War* was pronounced the best book of the year upon the history of the United States; Henry F. Pringle, whose *Theodore Roosevelt* won the prize for the best American biography, "teaching patriotic and unselfish service to the people, illustrated by an eminent example"; and George Dillon, whose *The Flowering Stone* was pronounced the best volume of verse published during the year by an American author.

In the field of journalism, the gold medal for "the most disinterested and meritorious public service rendered by an American newspaper during the year," was awarded to the Indianapolis (Ind.) *News* for its work as a contributing force in the elimination of waste in city management and reduction of taxes in 86 counties in Indiana. The "best example of correspondence during the year," was jointly adjudged to Walter Duranty for his dispatches to the New York *Times* portraying conditions in Russia, and to Charles G. Ross for his article in the St. Louis *Post-Dispatch* entitled "The Country's Plight—What Can Be Done About It?" No award for the best editorial article written during the year was made. The award for the best example of a reporter's work during the year was shared by five men on the Detroit *Free Press*, W. C. Richards, D. D. Martin, J. S. Pooler, F. D. Webb, and J. N. W. Sloan, who had pooled their efforts in a "spot news story, written against press time, of the parade of the American Legion during the 1931 convention in Detroit." The best cartoon published in any American newspaper during the year 1931 was adjudged to have been the cartoon by John T. McCutcheon entitled, "A Wise Economist Asks a Question," which appeared in the Chicago *Tribune*.

**PURDUE UNIVERSITY.** A State technological institution in Lafayette, Ind., founded in 1869. The main purpose of the institution has been to train men for service in the fields of engineering, agriculture, and applied science and women in the fields of home economics and general science. The enrollment for the autumn of 1932 was 4056, of whom 3406 were men and 650 women; registration in the 1932 summer session was 764. There were 336 members on the faculty and in addition 81 assistants. The endowment amounted to \$340,000 and the income for the year was \$3,759,041. The library contained 108,218 volumes. President, Edward C. Elliott, Ph.D., LL.D.

**QUEBEC, kwé-béc'.** The largest Province in Canada; bounded on the west by Hudson Bay and Ontario, on the north by Hudson Strait, on the east by Labrador, and on the south by New Brunswick, the United States, and Ontario. Area, 594,434 square miles; population (1931 census), 2,874,255 (2,360,665 in 1921). Chief cities with populations (1931 census): Montreal, 818,517 (618,506 in 1921); Quebec, 130,594 (95,193 in 1921); Verdun, 60,745 (25,001); Three Rivers, 35,450 (22,267); Hull, 29,433 (24,117); Sherbrooke, 28,993 (23,515). In 1929, there were in the Province 8200 schools of all kinds, with 624,601 pupils and 24,168 teachers. There are four universities: McGill (Montreal, Protestant), with 3949 students in 1929-30; Lennoxville (Protestant), 165 students; Laval (Quebec, Roman Catholic), 7233; University of Montreal (Roman Catholic), 9567.

The basic industry of Quebec Province is agriculture; the total area of field crops in 1931 was 5,681,062 acres and the value \$72,801,000. The production of tobacco in 1931 amounted to 6,340,000 pounds from 55,060 acres. In 1930, the 1906 fur farms had fur bearing animals valued at \$3,686,377. The value of 277,410 pelts taken in 1929-30 was \$1,658,358. Quebec has a total forest area of about 243,714 square miles and, in 1930, produced 1,833,000 tons of wood-pulp valued at \$58,703,067; paper (including newsprint), was valued at \$90,668,181; lumber and sawmill products, \$34,349,164. Fish products in 1930 were valued at \$2,502,998.

Mineral production in 1931 was valued at \$35,673,395. Asbestos, copper, gold, silver, mica, and zinc are the principal minerals produced. The asbestos output, under normal conditions, comprises 85 per cent of the world total. In 1930 the 7410 manufacturing establishments had a capital investment of \$1,727,064,388, employees numbering 213,467, and a value of output of \$1,022,280,087 gross and \$560,036,409 net. The financial report for the fiscal year ending June 30, 1932, showed a deficit of \$584,709 (the first in 34 years) due to reduced revenue from succession duties, liquor sales, land and forests, mines, and automobiles; ordinary receipts amounted to \$36,941,020 and ordinary expenditures totaled \$37,525,729.

Quebec is governed by a lieutenant-governor and a responsible ministry, assisted by a legislative council, appointed for life by the Lieutenant-Governor, and a legislative assembly of 90 members elected for five years. The 18th Legislature, elected Aug. 24, 1931, was constituted of 79 Liberals and 11 Conservatives. The Province is represented in the Dominion Parliament at Ottawa by 24 members in the Senate and 65 members in the House of Commons. Lieutenant-Governor in 1932, H. G. Carrol. Premier, Attorney-General, Minister of Municipal Affairs, and Provincial Treasurer, L. A. Taschereau (Liberal). See CANADA.

**QUEEN'S-CHICORA COLLEGE.** A college for women in Charlotte, N. C., founded in 1857; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1932 was 318. There were 38 members on the faculty. The endowment amounted to \$336,000. The library contained 13,000 volumes. President, William H. Frazer, D.D., Litt.D.

**QUEENSLAND.** A State of the Australian Commonwealth, occupying the northeastern part

of the continent. Area, 670,500 square miles; population estimated at 965,934 (exclusive of full-blood aborigines) on Mar. 31, 1932 compared with 755,972 at the census of 1921. In 1931 there were 17,833 births, 7525 deaths, and 5951 marriages. Brisbane, the capital, had 317,150 inhabitants on Jan. 1, 1932.

Agriculture, stock raising, and manufacturing are the leading industries. The estimated yield of wheat for 1931-32 was 3,851,000 bushels from 290,000 acres. Sugar cane, cotton, wheat, corn, and hay are the principal crops. The 1931 wool clip (as in the grease) totaled 182,061,407 pounds. Livestock for 1931 numbered 20,873,534 sheep, 5,598,627 cattle, and 462,147 horses. The total mineral production for 1931 was valued at £1,265,225 compared with £1,241,125 for 1930. The principal minerals were coal, gold, silver, and lead, copper, and tin.

The value (British currency values) of direct overseas imports was £3,746,018 for 1931-1932 and £5,556,434 for 1930-31; direct overseas exports were valued (Australian currency values) at £16,105,752 for 1931-32 and £16,935,181 for 1930-31. Revenue for 1931-32 amounted to £12,994,113; expenditure, £15,069,293; net public debt, £111,423,409.

Executive power is vested in a governor, who acts through a responsible ministry, and legislative power in a legislative assembly of 72 members elected for three years. Governor, Sir L. O. Wilson who succeeded Sir Thomas Goodwin in June, 1932. Premier, Forgan Smith. See AUSTRALIA under *History* for the result of the State election of June 12, 1932.

**QUICKSILVER.** The world production of quicksilver in 1931 with no reports available from Russia, Algeria, and a few countries of minor production importance, was approximately 96,972 flasks of 76 lbs. each. On the basis of their output for 1930, the additional production of Russia and Algeria (3278 and 325 flasks respectively in 1930) may have raised the total figure for the year to slightly in excess of 100,000 flasks, or a total decrease of about 10 per cent from the 1930 production of 110,108 flasks. In 1931, according to the U. S. Bureau of Mines, Italy was the leading producer with 37,652 flasks (56,069 in 1930); the United States was second with 24,947 flasks (21,553 in 1930); Spain with 19,786, and Mexico with 7292. The domestic production represented an increase of about 15 per cent in quantity, but a decrease of about 13 per cent in value. The nominal value in 1931 was \$2,179,145, as against \$2,428,789 in 1930. The average quoted price of mercury was 24 per cent lower in 1931 than in 1930, and declined from the high monthly average of \$103 a flask at New York in January to \$66 in December.

California was the leading producing State with an output of 13,448 flasks (54 per cent of the total), an increase of 17 per cent over 1930. Oregon registered the largest proportionate increase in production, advancing to second place with an output of 5011 flasks (72 per cent more than in 1930). Nevada dropped from 3282 flasks in 1930 to 2217 in 1931, and Washington dropped from 1079 flasks in 1930 to 560 in 1931. The production for Texas, Arizona, Arkansas, and Alaska amounted to 3711 flasks.

Apparent consumption throughout the world declined approximately one-third in 1931, compared with the preceding year. Production, however, increased rapidly in the United States and

Mexico to the extent that these countries were able to export considerable quantities. These increased supplies on the European market caused further declines in prices which continued during 1932. In January, 1932, the monthly average price in New York declined from the average of \$66.11 of the previous month to \$64.90. The price rose in March and April to over \$72 a flask, declining to an extreme low in August of \$47.44 and closing the year at \$48.50.

**RADCLIFFE COLLEGE.** A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1932 was 1038 distributed as follows: Regular students, 779; graduate students, 214; special students, 45. Instruction was given to the students of the college by 300 teachers from Harvard University. The productive funds amounted to \$4,517,922, and the income, including tuition, for college purposes, was \$565,563. The library contained approximately 69,500 volumes, exclusive of pamphlets. In the fall of 1932, as the result of a grant of \$500,000 from the General Education Board, the college opened for use a laboratory for chemistry and physics. President, Ada Louise Comstock, A.M., Litt.D., L.H.D., L.L.D.

**"RADIATOR."** See RADIO.

**RADIO.** The most widely discussed item of news of the year was the argument before the Supreme Court and the consent decree by which the General Electric Co. and the Westinghouse Co. withdrew from any connection with the Radio Corporation and distributed their shares of Stock in the Radio Corporation to their individual stockholders. This is said to be one of the most important effects of our anti-trust laws. This leaves the Radio Corporation free to manufacture and to license under the patents assigned to it by the parent companies and to conduct its communication and talking movie business. The presidential campaign brought much activity and business to the broadcasting companies and it is estimated that \$5,000,000 was spent on broadcasting political speeches. In some of the chain hook-ups involving from 40 to 80 stations the charges are from \$10,000 to \$15,000 per hour.

A new type of vertical antenna or "Radiator" was installed by some of the broadcasting stations, for example, WABC. It is claimed that this gives a much more uniform and powerful signal in all directions. The popular style in receiving sets this year was of the super-heterodyne type using screen-grid tubes and included automatic volume control, compensated audio system, automatic noise suppressor and some sets contained as many as 12 tubes. Short-wave converters were also available which made it possible to receive the international broadcasts at about 50 meters wave-length on the standard receivers. A new scheme was announced as practical by which it will be possible to operate as many as 3000 receiving sets from one antenna. This will be desirable for large apartment houses. Stations WGY at Schenectady and WCAU at Philadelphia increased their power to 50 kw. High power seems to be more desired in Europe than in the U.S.A., for instance, a 60-kw. station for 533 meters was installed in Munich and the Duchy of Luxembourg has a new station in 200 kw. which is being used at times although not for-

mally approved by the International authorities. A new short-wave broadcasting station (50 m.) was installed at Daventry, Eng., intended to reach the most outlying portions of the British Empire.

The use of radio broadcasting by the police has greatly increased. New York City has 50 or 60 cars equipped with receivers to receive orders continuously from headquarters while cruising, each in its own assigned territory and prepared to be on the scene of a crime within a few minutes of its commission if reported to the police by telephone.

The Dept. of Commerce operates 2 kw. transmitters at the principal airports in order to transmit weather reports to planes en route. The newer antennæ for these stations are of the vertical type, supplanting the loop type.

Portable radio sets have been supplied to the Coast Guard which rate at 5 watts and weigh only 65 lbs. They operate at wave-lengths from 75 to 120 m. and over a distance as great as 200 miles.

**RAILWAY ACCIDENTS.** The U. S. Interstate Commerce Commission, in its annual statement of railway casualties, reported for 1931 a grand total of 4851 persons killed and 20,057 injured on railways in the United States, as shown in the accompanying classification.

<i>Class of persons</i>	<i>Number of persons killed</i>	<i>Number of persons injured</i>
Trospassers . . . . .	2,334	2,965
Employees . . . . .	514	9,576
Passengers . . . . .	40	2,102
Persons carried under contract, such as mail clerks, pullman conductors, etc. . . . .	9	350
Other nontravellers . . . . .	1,956	5,064
Total . . . . .	4,853	20,057

The corresponding totals for the calendar year 1930 were 5171 persons killed and 25,562 persons injured. In addition, there were 246 persons killed and 15,599 injured in nontrain accidents in comparison with 310 killed and 23,868 injured in such accidents during the preceding calendar year. There were 13 employees killed and 394 injured in coupling or uncoupling locomotives and cars as compared with 30 killed and 604 injured during 1930. Casualties to employees due to coming in contact with fixed structures resulted in 18 killed and 232 injured. There were 31 employees killed and 1906 injured in getting on or off cars and locomotives. The increased safety to the traveling public deserves special mention. During the year covered by this report steam railroads carried 599,226,754 passengers 21,933,344,963 miles with but 40 fatalities or 1 for each 548,333,024 miles traveled.

Serious railway accidents in the United States in 1932 included the following:

*June 7.* A passenger express train of the Pennsylvania Railroad, bound from Atlantic City to New York, plowed into a loaded coal car that with nine others of a 100-car freight train had jumped the track a few moments

earlier. Fifty-six persons, including the crew of the passenger locomotive, were injured.

*June 30.* A fast electric passenger car and a heavily loaded freight car of the Cincinnati & Lake Erie Railroad met in a head-on collision near Hamilton, Ohio. Seven persons were killed and five injured.

*October 26.* An east-bound express train of the Long Island R.R. jumped the track near Montauk, L. I., and turned over. The engineer and fireman were killed. No passengers were on the train at the early hour, and the train crew were all in the last coach which stayed on the track.

*December 21.* At a rail crossing near Lima, Ohio, a west-bound Erie R.R. passenger train was ditched. Three railway employees were killed, and several passengers cut and bruised.

Among serious railways accidents in other parts of the world in 1932 were the following:

*January 7.* Fifty persons were killed and many injured in a double accident near Moscow, Russia, in a collision between a passenger train and a freight train. The casualty list was increased because rescuers placed many of the injured on a parallel track where they were run over by the relief train from Moscow.

*March 22.* A northbound train of the London, Midland & Scottish Ry., left the rails in Bedfordshire at a switch, resulting in the death of the engine crew and four others, and seriously injuring six.

*May 15.* An undetermined, but large number of persons were killed on a Soviet railroad at the Zelonaya station between Kharkov and Dnieperpetrovsk when two crowded passenger trains crashed together. Scores of the passengers were crushed beyond recognition. Intoxication of the station employees was claimed.

*May 23.* Forty persons were killed and more than a hundred injured in a wreck on the Chinese Eastern Railway, a hundred miles southeast of Harbin, when a freight train crashed into a passenger train that had been derailed.

*July 9.* Three persons were killed and 19 injured near Angora, Turkey, when the locomotive and three passenger coaches were derailed.

*September 14.* In Algeria, a train carrying 500 officers and members of the French Foreign Legion, left the track after heavy rains in the mountainous region between Turrene and Zeboun, plunging into a ravine. A hundred and twenty Legionnaires were reported killed and 150 seriously injured.

*October 17.* Eight were killed and 20 injured as the result of collision between a passenger train and a freight train in Manche, France.

Seven miles from Moscow, Russia, a long and crowded passenger train drawn by two locomotives crashed into a freight train. Many people were killed; but, as in earlier railway accidents of the year, the Soviet government made no official announcement of the casualties.

At Entre Rios, Brazil, six were killed, and more than a dozen soldiers injured in the explosion of an ammunition train following a wreck.

In Rumania, a passenger train, derailed by a defective switch, was overturned and caught fire, 17 were killed, 14 seriously injured, and many were painfully hurt.

*November 21.* At Covasna, Rumania, two coaches of the Mountain Cable Ry. ran wild and crashed; two women, flung out, were dashed to death.

*December 13.* A collision at the Guetach Tunnel, Switzerland, caused the death of 10, with 11 seriously injured.

*December 16.* A washout near Perpignan in the French Pyrenees, derailed a train from Paris, causing the death of seven, with 30 injured.

**RAILWAYS.** By October, 1932, loss of credit, loss of earning power, and loss of buying power of the companies owning the steam railways of the United States was generally thought to be so important a factor in the economic situation of the country that the insurance companies, large creditors of the railway companies through the ownership of railway bonds, agreed on a committee to investigate and report on the situation.

The men selected as members of this committee were: Former President Calvin Coolidge, chairman; Alfred E. Smith, Bernard M. Baruch, Alexander Legge, and Clark Howell.

The name of the committee contained in the announcement of its first meeting given out by its Chairman was the National Transportation Committee.

The importance of the subjects to be studied

is indicated by the past record of the members who were selected and consented to serve.

Calvin Coolidge is an ex-president of the United States and has the confidence of a large enough majority of the voters of the country to give him the choice, he and many others thought, of being President of the United States again or not. Bernard M. Baruch was Chairman of the War Industries Board. Alfred E. Smith is an ex-Governor of the State of New York. Alexander Legge is Chairman of the Farm Relief Board. Clark Howell is Editor and Publisher of the Atlanta (Ga.) *Constitution*.

The facts that led to the appointment of this committee are reflected in figures, some of them available to the public later. These facts are:

Pennsylvania Railroad stock was selling at 15 (par 50), New York Central stock was selling at 25 (par 100), Illinois Central stock was selling at 15 (par 100).

Pennsylvania General 4½ bonds were selling at 81, New York Central Refunding 4½ bonds were selling at 46, Illinois Central First Mortgage 3½ bonds were selling at 75.

These prices reflect the credit of a bankrupt. There were 700,000 fewer men employed on railways than there were five years earlier.

The reports of the larger railroads to the Interstate Commerce Commission, combined for the first nine months of 1932 were:

#### NINE MONTHS ENDED SEPTEMBER 30

[Millions of dollars]

	1932	1931
Operating revenues .....	\$2,091	\$2,928
Operating expenses .....	1,662	2,266
Taxes .....	198	219
Net operating income .....	152	354

Net operating income is what the company has available from its operations as a railroad to pay interest on its bonds, largely held by savings banks and insurance companies. According to the last available report of the Interstate Commerce Commission, the total interest charges of the larger railroads amounted to \$496,270,070.

Two items from the combined balance sheet of the larger railroads for the end of July, 1932, as given out by the Interstate Commerce Commission showed:

#### ASSETS AND LIABILITIES, JULY 30

[Millions of dollars]

	1932	1931
Assets:		
Cash .....	\$252	\$373
Liabilities:		
Loans (current) .....	270.8	182.2

The purchases by railroads for the first six months of 1932 as compared with the awful year 1931 were:

#### RAILWAY PURCHASES SIX MONTHS

[Millions of dollars]

	1932	1931
Fuel .....	\$ 84,750	\$122,550
Ties .....	14,850	81,350
Rail .....	11,550	88,750
Other material .....	112,555	193,400
Total .....	\$223,700	\$386,050

The outstanding fact about the Railways of the United States in the year 1932 was that that

year marked the turning point, for Government, for the public, and for bankers, from an attitude they had held for at least 50 years.

In brief, this change of attitude on the part of the government was from one of repression, prosecution—that railroad men felt amounted to persecution—to solicitude.

The change in attitude on the part of the public was from one of mingled resentment of oppression and desire to get something out of the big bully by fair means or foul, to a faint realization that the railways were indispensable for at least three reasons: (1) They were the investment in which a large part of the people's savings had been committed beyond recall; (2) the service, transportation, which they rendered was as fundamentally necessary as earth to the farmer; (3) as an employer of labor and a market for manufactures the railways were vitally important. Lastly, the bankers found it no longer profitable to buy railroad securities and resell them to the public.

The appointment of the Coolidge committee was an expression of these changes.

Those directly in charge of the physical railway properties concentrated their efforts on improvement of service and—radical change—cooperation instead of competition. Under the head of improvement of service is the continuation of the work of electrification of the Pennsylvania Railroad between New York City and Washington, D. C. During 1932 the Pennsylvania Railroad spent about \$28,500,000. The total cost had been estimated at \$55,000,000 of which the Federal Government was to lend the company \$27,500,000, and the companies' bankers were to furnish an equal amount but the sale of railway bonds—even Pennsylvania Railroad bonds—was not considered desirable business and no offering of Pennsylvania Railroad bonds was made to the public.

This was but an example of the loss of credit of the railway companies. It was a result not a cause. The Coolidge committee tried to find the causes. Up to the end of 1932 this committee was engaged in the collection of facts from which to form an opinion. In the New York *Times* of Nov. 10, 1932, Chairman Coolidge is quoted as saying, "we plan to ask various groups interested in the subject of the investigation to submit suggestions in writing." No mention is made of the Interstate Commerce Commission, which at considerable expense to the taxpayer and the railways has been collecting facts since 1887.

The Interstate Commerce Commission, when the railway executives asked for a 15 per cent freight rate increase in 1931, let it be known that the commission would approve of a 10 per cent freight rate increase on condition that the money taken in, in excess of what would have been taken in under the rates previously in effect, be put in a pool for the use of companies unable to earn enough net to meet their fixed charges (bond interest). The railway executives compromised by establishing the Railroad Credit Corporation to which the railway companies paid their earnings from the 10 per cent increase in freight rates, receiving credit for the amounts paid in, the Credit Corporation then lent—not gave—the railway companies making application, money to pay their fixed charges.

Up to November, 1932, the Credit Corporation had lent more than \$40,000,000 and the railway executives made an application to the In-

terstate Commerce Commission to continue to charge the 10 per cent increased freight rates but to discontinue the Railroad Credit Corporation and thus each railway would retain for its own use such additional revenues as accrued from the 10 per cent increased freight rates. It was pointed out that the Reconstruction Finance Corporation had both the resources and governmental authority to make loans to railroad companies in need of money which they could neither earn nor borrow from their bankers.

**DEVELOPMENT.** The Pennsylvania Railroad which had definitely authorized, through a resolution of the board of directors, the electrification of its main line between New York City and Wilmington, Delaware (the northern part of the Washington, D. C.-New York City line), had spent about \$28,500,000, up to the end of 1932 on the electrification of the lines around Philadelphia. The company had received a loan of \$27,500,000 from the Reconstruction Finance Corporation. It had finished the greater part of the work of equipping its lines between New York and Philadelphia, 90 miles, for electric operation. The company has announced that it is planning to begin electric operation between these two cities in February, 1933.

The reasons for making this great expenditure at this time are so important that Gen. W. W. Atterbury, President of the Pennsylvania Railroad, summarized them under six heads:

1. The greater economy of electric traction as compared to steam operation in dense traffic territories;
2. The growth of the southern passenger business;
3. The increasing density of both freight and passenger business on our eastern lines and the probability that in the future more rapid movement would be required;
4. The desirability of utilizing the advantages of electric traction in connection with the construction of our new passenger terminals at Philadelphia and Newark;
5. The desirability of building a locomotive that would meet the requirements from the standpoint of weight of train, speed and reliability that we believe will have to be met in this territory in the next 20 years;
6. The probability that the project, if started now, could be completed with a less total expenditure, all matters considered, than if started at a later date.

The alternating current single-phase system of electric traction is being used. This is the system now in use on the Philadelphia suburban lines of the Pennsylvania Railroad and on the Norfolk & Western and Virginian Railways. The direct current system is in use on the New York Central and on the Chicago, Milwaukee, St. Paul & Pacific. Thus the railway companies are divided as to the merits of the two systems, alternating current and direct current. The alternating current system is being installed by the Westinghouse Electric & Mfg. Co. Both this company and the General Electric Company however offer to install either system and have made equipment for both alternating and direct current systems for use in this country or abroad.

As a matter of fact there are two installations, one of the alternating current system and the other of the direct current system in the eastern United States where conditions appear to be similar, although partisans of both systems dispute this, and the cost of the one is almost the same as that of the other.

Besides the Pennsylvania Railroad electrification there are two others that were mentioned in the 1931 YEAR BOOK and are now in operation, namely the northern New Jersey suburban lines of the Delaware, Lackawanna and Western Railroad, and the suburban lines about Philadelphia,

of the Reading Railroad. The Delaware, Lackawanna and Western electrification involved 70 routes, these routes included 160 track miles. The electrification of this mileage cost \$17,437,537, and the amount was raised by the company itself through a bond issue.

The Reading electrification of the lines about Philadelphia involves 144 stations, the exact

#### R. F. C. LOANS TO CLASS I ROADS

Grand total .....	\$342,882,221

mileage is not given out by the company. The cost was \$21,500,000.

As further indication of the character of railway development that was taking place in the United States in 1932, the Union Inland Freight Station in New York City was opened Oct. 3, 1932. This station was installed by the Port Authority of New York and serves for the collection and distribution of outbound and inbound less-than-carload shipments of freight, business heretofore done by the Railway Express and the U. S. Trucking Company from the various individual stations of the railways reaching the port of New York.

**MECHANICAL REFRIGERATION.** Up to June, 1932, there were in operation 86 cars using mechanical refrigeration. Ever since perishable freight began to move in large quantities, fruit from California to the Middle West and Atlantic Seaboard, dressed beef from Kansas City to New York and Philadelphia, to name only two examples, some satisfactory form of refrigeration has been sought. Manufacture and transportation are only two of many costs of ice refrigeration. The chemical action of brine drippings is a large item of cost that is not obvious; there are others. This start in the development of mechanical refrigeration is worth noting.

**LOANS TO RAILWAYS FROM THE RECONSTRUCTION FINANCE CORPORATION.** A list of the loans made to railways by the Reconstruction Finance Corporation was made public in November, 1932. The grand total of the loans was \$342,882,221, which was the result of loans to the smaller companies of \$15,767,642, and of loans to the larger companies of \$327,114,579. There is then the factor of the Federal Government as a large creditor of the railways which is an accomplished fact, for consideration by the Coolidge Commission. The list of federal relief loans is shown in tables on page 715.

**NEW RAILWAY BUILT.** The mileage of new railway built in 1932 was 163 miles which is the smallest new mileage built in any year since railways were proved to be a desirable form of transportation. The mileage built in 1931 was 748. *The Railway Age* record, from which these figures are taken, goes back to 1893. It is very carefully compiled and is dependable. Prior to 1932 the fewest number of miles built was in 1920 with 314 miles built. The greatest mileage built in one year was in 1902 with 6026 miles built. The longest piece of railway completed in 1932 was that on the line of the Fort Worth & Denver City from Childress, Tex., to Pampa, 110 miles. This line was begun in 1931 and a good part of it built in that year but was completed in 1932. *The Railway Age* record is on a completed basis.

**RAILWAY ABANDONED.** The total mileage abandoned in 1932 was 1452 miles. As was to have been expected, the longest line abandoned was in the South, that from Cliffside, Ky., to West Irvine, 76.42 miles.

**FREIGHT CARS.** The total number of freight cars ordered for use in the United States during 1932 was 1968. The number built was 3336 of which 82 were for foreign service, compared with 10,880 for 1931 and 180,154 in 1922, the record year.

**LOCOMOTIVES.** The total number of locomotives ordered for use in the United States in 1932 was 12. This compares with 235 ordered in 1931 and with 6265 ordered in 1905. The number built in

1932 was 120, this compares with 181 locomotives built in the United States in 1931.

**PASSENGER CARS.** The total number of passenger cars ordered in 1932, exclusive of rail motor cars, was 39, all of which were for use in the United States. This compares with 11 ordered in 1931 and with 4514 in 1909, which is the largest number ordered in one year according to the records of the *Railway Age* going back to 1901. There were 39 passenger cars built also in 1932.

**RAIL MOTOR CARS.** The steam railways of the United States ordered 14 rail motor cars and one trailer during 1932, in addition 4 were ordered for use in Canada and 2 for export, a total of 20 motor cars and 1 trailer. Of the motor cars 10 were gas-electric propelled, 7 were gasoline propelled, and 3 were oil-electric propelled.

C. B. Peck, Mechanical Department Editor of the *Railway Age* who writes on Rail Motor Cars in the Annual Statistical Number of the *Railway Age*, says "Although self-propelled rail motor cars were used with considerable success on several railroads nearly 25 years ago, their use never spread beyond a relatively few installations. The present development of self-propelled rail cars has practically all taken place since 1922." Since 1921 there have been 1121 motor cars (rail) ordered for use in the United States.

**INCOME.** Total operating revenues of the steam railways of the United States amounted to \$3,160,000,000 in 1932, a decrease of over 25 per cent from 1931 and over 50 per cent from 1929. A condensed income account for the three years is given.

#### INCOME ACCOUNT [Millions of dollars]

	1932	1931	1929
Total operating revenues . . .	\$3,160	\$4,237	\$6,360
Total operating expenses . . .	2,430	3,266	4,561
Taxes . . . . .	280	308	403
Net railway operating income	330	531	1,274

NOTE.—The net railway operating income is the amount of return on the investment as defined by the Interstate Commerce Commission, that is, it is the amount the company has available for interest on its bonds and any other borrowed money and for dividends.

#### SOURCES OF REVENUES [Millions of dollars]

	1932	1931	1929
Freight . . . . .	\$2,452	\$3,257	\$4,832
Passenger . . . . .	376	551	874
Mail . . . . .	95	105	152
Express . . . . .	54	83	148
All other . . . . .	183	241	354
Total . . . . .	\$3,160	\$4,237	\$6,360

#### DESTINATION OF EXPENSES [Millions of dollars]

	1932	1931	1929
Maintenance of way . . . . .	\$ 355	\$ 536	\$ 865
Maintenance of equipment . . .	629	829	1,212
Traffic . . . . .	96	118	131
Transportation . . . . .	1,170	1,565	2,113
General and all other . . . . .	180	218	240
Total . . . . .	\$2,430	\$3,266	\$4,561

In 1932 for the first time railway companies were required to report to the Interstate Commerce Commission monthly the net income after the payment of fixed charges, bond interest, etc. The total for all Class I (companies earning a million dollars or more a year) railways for the first ten months of 1932 was a deficit of \$147,-

079,000 as compared with a net income (profit) of \$110,128,000 for the first ten months of 1931.

As a matter of fact most railway companies show a surplus which is a mere bookkeeping item and really means that they have earned more, in the past, than they have paid out in interest and dividends and the surplus is in the form of property rather than cash. Superficially the size of the surplus is a measure of credit, but even the refinements of accounting prescribed by the Interstate Commerce Commission show only the cost of property and not its value (in the case of the railway's earning power). More important than the size of the surplus is the policy which has been pursued towards maintenance. Therefore the record of 1932 from this point of view is important. The course in regard to maintenance of way is more informative than that in regard to maintenance of equipment because in the expenditures for equipment there is not the freedom of choice that there is with maintenance of way. A locomotive often requires some repairs to keep it running, a piece of track may be neglected entirely for a while.

**MAINTENANCE.** The expenditures for maintenance of way by all Class I railways in 1932 was 355 million dollars. This was a reduction of 59 per cent from the 865 million dollars spent by these same railways in 1929 but more significant it was a reduction of over 33 per cent from the 536 million spent for maintenance of way in 1931—more significant because in 1929 more than was absolutely necessary was pretty surely spent but in 1931 it was thought that every possible economy had been made. Anything under the 1931 amount was really under maintenance.

**RECEIVERSHIPS.** There were 13 railway companies that went into receivers' hands with a total mileage of 11,817 and a total of \$427,772,150 funded debt and \$198,805,164 stock outstanding. This was for the year 1932.

The company operating the greatest mileage was the St. Louis-San Francisco with 5890 miles and \$268,178,767 funded debt and \$114,701,326 stock. While the depression may have been a factor in bringing about the receivership there were other factors that, in the past, have brought about railway receiverships without a general depression. The Frisco, as the St. Louis-San Francisco railway was called, paid 10 per cent dividends on its common stock during the period of prosperity that preceded the depression and maintained its property, track, locomotives, cars at a low cost—that is it did not build up a surplus in this way (see remarks under **INCOME**). It is a very nice question as to how much of the stockholders' money shall be withheld from them and put into maintenance as a factor of safety.

The receivership of the Central of Georgia with 1944 miles and \$53,722,000 funded debt and \$20,000,000 stock and the receivership of the Wisconsin Central with 1158 miles and \$44,833,000 funded debt and \$27,392,200 stock are better indications of the seriousness of the railway situation generally, than is the bankruptcy of the St. Louis-San Francisco. The Central of Georgia was controlled by the Illinois Central and was well operated and conservatively managed. Its standards of maintenance were high for the business which it did. Its receivership shows the extent of the general depression in the South. The Wisconsin Central was controlled by the Minneapolis, St. Paul & Sault Ste. Marie and was in fact the Chicago entrance for that road. Its receivership

reflects the depression in the wheat growing States.

There were only eight railways sold under foreclosure during 1932. The total mileage was 394 and the funded debt of the old companies was \$4,265,850 and the stock of the old companies amounted to \$4,309,328. None of them was of more than local importance. The best known was the Ulster & Delaware, serving the Catskill Mountain section.

**DIVIDENDS.** There were five railway companies which continued to pay dividends on their common stocks. These were the Norfolk & Western paying \$8 a \$100 share, the Union Pacific paying \$6 a \$100 share, the Chesapeake & Ohio paying \$2.50 a \$100 share, the Reading Railway paying \$1 a \$50 share and the Pennsylvania Railroad paying 50 cents a \$50 share. In addition the Atchison, Topeka & Santa Fe was paying \$5 a \$100 share on its preferred stock.

**TAXES.** Total railway taxes in 1932 amounted to \$280,000,000. The following table shows the number of cents paid in taxes from each dollar of revenue by the railways over a series of years.

Year	Taxes in cents per dollar of revenue	Year	Taxes in cents per dollar of revenue
1932 . . . . .	8.9	1927 . . . . .	6.1
1931 . . . . .	7.8	1926 . . . . .	6.1
1930 . . . . .	6.6	1925 . . . . .	5.9
1929 . . . . .	6.3	1924 . . . . .	5.8
1928 . . . . .	6.4	1923 . . . . .	5.3

**EMPLOYEES.** In August 1932 the number of employees of Class I railways had declined to 996,317. Normally the number of employees of the railways is smaller in the last three months than in the first part of the year but in 1932 it increased to 1,010,440 in September, to 1,033,225 in October and was 1,013,178 in November.

**CLASSES OF FREIGHT TRAFFIC.** It is important that a comparison of railway traffic by classes be made, comparing 1932 and 1931. For passenger traffic revenue is a good measure. The loss in passenger revenue in 1932 as compared with 1931 was 175 million dollars or over 30 per cent. The best comparison for freight is carloading of commodity groups given in the accompanying table.

	Carloads number (thousands)	Per cent of decline, 1931-32	Per cent of years, total 1932 1931
Grain, flour . . .	1,653	18.3	5.9
Livestock . . . .	949	18.3	3.4
Coal . . . . .	5,339	17.8	18.9
Coke . . . . .	224	31.1	0.8
Forest products .	900	38.9	3.2
Ore . . . . .	211	75.9	0.7
Merchandise . .	9,079	17.1	32.2
Miscellaneous . .	9,840	29.0	34.9
Total . . . . .	28,195	24.1	100.0

The commodity figures indicate a cessation of expansion (new construction) in the United States with the loss of iron ore traffic and lumber traffic to the Railways.

**RAINFALL.** See **METEOROLOGY**.

**RAMIE.** See **CHEMISTRY, INDUSTRIAL**, under *Cloth from Grass*.

**RANDOLPH-MACON WOMAN'S COLLEGE.** An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South, founded in 1893. The enrollment for the autumn

of 1932 was 562. The faculty numbered 69. The endowment amounted to \$1,203,565, while the income for the year was \$558,671. The library contained over 37,000 volumes. Acting President, N. A. Pattillo, A.M., Ph.D.

**RANGER FUND.** See ART MUSEUMS.

**RAPID TRANSIT.** On September 10, seven years after the first contract was let, the first section of New York City's new Independent Subway was placed in operation. The Board of Transportation, under whose direction this work has been designed and built, called for bids for operation on April 26. Failing to secure satisfactory tenders the board authorized city operation on June 14 and proceeded to organize an operating division. Actual operation under this organization began as noted above. It is understood that the receipts have been below estimates and it seems probable that New York will continue the five-cent fare, which has been the basis for so much political agitation, only by meeting deficits by taxes as has been the case in the past.

The Independent System will embrace, when completed, 54.3 miles of subway and will cost almost \$650,000,000. The first section opened is the main line in Manhattan from Chambers Street north, mainly under 8th Avenue, to 211th Street. The branches under the Grand Concourse to the Bronx, the Queens branch, and the loops and branches in Brooklyn, are all under contract and rapidly nearing completion. The only section yet to be let is the 6th Avenue connection which has been held up pending the completion of water supply Tunnel No. 2, so that Tunnel No. 1 can be shut off during the construction of this line. Apparently the end of major subway construction in New York is at hand—at least for some years to come.

In Philadelphia, the subway extensions, primarily the Broad Street line to South Philadelphia, the northern extension and the straightening under City Hall, have been going forward. The City Hall work has progressed slowly due to difficulties with existing building foundations. These have been outlined in previous YEAR BOOKS.

An interesting and novel piece of subway construction is going forward in Newark, N. J. The famous old Morris Canal meandered through the city and a subway, built in the abandoned canal bed, forms the main artery for Newark's transit-relief plan. The construction in general follows well established subway standards.

With subway construction in New York nearing completion and so many municipalities in financial difficulties, it would appear that we are liable to experience a lull in subway construction which may continue for several years or more. There are certainly cities where rapid transit facilities are demanded, however, and it will simply be a question of time before public pressure will force a renewal of this most costly type of railroad construction.

**RAYON.** Although the production of rayon during 1932 in the United States fell off about 9 per cent from the peak production of the year previous, nevertheless it showed a distinct gain over all previous years, as the accompanying table, compiled by the *Textile Organon* of the Tubize Chatillon Corporation, indicates. World production of rayon during 1931 was the highest on record, with an estimated total production of 467,500,000 lbs., a gain of 40,000,000 lbs. over

1929. Of the total output, the estimated percentage of the leading producing countries were: United States, 31 per cent; Italy, 16 per cent; Germany, 11.5 per cent; Great Britain, 11.5 per cent; Japan, 8 per cent; and France, 8 per cent. See CHEMISTRY, INDUSTRIAL.

Domestic consumption of rayon in 1932, according to the above publication, was again ahead of production. At the end of the year stocks were in a sound position with only a 3-week supply in sight.

#### ANNUAL RAYON PRODUCTION AND CONSUMPTION

[Units are thousands of pounds]

Year	Domestic production	Imports	Exports	Est. chg. in Dom. stocks prev. Dec. to current Dec.	Domestic consumption
1928	97,900	12,734	196	+ 6,000	104,500
1929	119,500	15,950	223	+ 3,000	132,250
1930	110,000	5,649	345	+ 15,000	100,300
1931	144,800	1,580	314	— 5,000	151,000
1932	131,000	165	690	— 19,000	149,500

The use of rayon in the textile industry is indicated in the accompanying tabulation from *Textile Organon*.

#### DISTRIBUTION BY TRADES

**RAYS, RADIATION.** See PHYSICS.

**REAL WAGES.** See STATISTICS.

**REAPPORTIONMENT.** See LAW IN 1932.

**RECALL.** See MUNICIPAL GOVERNMENT.

**RECLAMATION.** The situation as relates to the greatest American organization engaged in this field, the U. S. Bureau of Reclamation, has been outlined in previous YEAR BOOKS. With practically all their capital tied up in unproductive projects it has been obvious for several years that the activities of this bureau would either have to be radically curtailed or new sources of funds provided. Apparently no new funds can be expected and the great era of government reclamation construction in the United States may thus be drawing to a close.

There, of course, remains the Hoover Dam project, which is under the direction of the bureau, and it seems particularly fitting that this great era of dam and irrigation construction, unparalleled in the history of the world, should be brought to a close by the construction of the greatest dam man has ever attempted to build.

A paper by Herman Stabler, Chief of the Conservation Branch of the U. S. Geological Survey, presented at the American Society of Civil Engineers Convention in Yellowstone Park, has an interesting bearing on the reclamation of public lands in the United States. It was abstracted in *Civil Engineering* for September, 1932.

The combined irrigation and power development of a section of the Rio Grande near Eagle Pass, Tex., the scene of a recent flood, is one of the few projects now under way. The Reconstruction Finance Corporation has assisted in making this plan financially possible and the construction involves one or two features of more than usual interest.

The Zuider Zee project in Holland passed its crucial stage in the completion of the great 18½ mile dike or sea wall which closes the Zuider Zee to the North Sea. Finances may delay the completion and drainage of the enclosed "polders" but the major construction item has been practically completed. It will be remembered that the first section of the work, adjacent to the Island of Wieringen, was completed in 1924. The great dike, however, still remained to be completed. The details of this work, the greatest of its kind in the history of the world, were illustrated and described in the *Engineering-News-Record* of December 1, 1932.

**RECONSTRUCTION FINANCE CORPORATION.** See RAILWAYS; UNITED STATES; WELFARE WORK; BANKS AND BANKING; FINANCIAL REVIEW; PUBLIC FINANCE.

**RED CROSS, THE AMERICAN NATIONAL.** A semi-governmental organization, chartered by Congress in 1905. The charter designates its obligations as follows: "To furnish volunteer aid to the sick and wounded of armies in time of war . . . to perform all duties devolved upon a national society by each nation which has acceded to the treaty of Geneva . . . to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy . . . to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing same."

The year 1932 witnessed a still wider departure in the efforts of the Red Cross to relieve the great distress resulting from widespread unemployment. Of its 3639 chapters 2276 participated in unemployment relief activities under a policy that Red Cross chapters would undertake relief work "where there is suffering and want from any cause and the fundamental local needs are not being met, and there is no duplication of work of other agencies." These chapters in their service to civilians and veterans dealt with more than 2,000,000 persons. More than 90,000 families in 143 counties where coal mining is the chief industry received aid at a cost of \$522,000. There was also carried on the drought relief in Montana, North and South Dakota, Iowa, Nebraska, and Washington, begun in August, 1931; 53,517 farm families were reached at a cost of \$2,266,860, the chief expenditure being for food, \$1,612,584.

In addition to these heavy burdens of relief the Red Cross gave emergency aid in 62 disasters in the continental United States, 28 disasters in insular possessions, and five disasters in foreign countries. There were two major disasters in the United States during the year. One was caused by a series of severe tornadoes in Georgia, Alabama, Tennessee, and isolated sections of other nearby States, killing 370 persons and injuring more than 2000; the Red Cross gave help to 13,-

000 persons, with an expenditure of \$260,068. The other disaster was caused by floods in the tributaries of the Mississippi River in Louisiana and Mississippi, 53,000 persons receiving food, clothing, and shelter from the Red Cross at a cost of \$118,179. The total disaster relief expenditure by the Red Cross in the United States was \$3,597,282; for insular and foreign disasters it expended \$140,870.

Another departure in relief-giving in the history of the United States was when Congress voted a quantity of Farm Board wheat for distribution to the needy and distressed by the Red Cross. Through Congress's first action on Mar. 8, 1932, 40,000,000 bushels of wheat were made available for distribution as flour and bread to the needy and as feed for stock in the drought-stricken counties west of the Mississippi. In July, 1932, Congress voted an additional 45,000,000 bushels of wheat from the Farm Board stocks and also 500,000 bales of cotton to be made into clothing for the needy.

Applications from Red Cross chapters were received for 6,155,618 barrels of flour, and this flour up to Nov. 28, 1932, had been distributed to 4,362,823 families. Prior to June, 1932, feed had been given to 184,188 farmers to the total of 223,903 tons. To supply this flour and feed the Red Cross had used 53,780,866 bushels of the Farm Board wheat.

Distribution of the cotton did not begin until the new fiscal year, but up to Nov. 28, 1932, 3345 chapters and other Red Cross units had received cotton cloth and ready-made clothing from the 500,000 bales of Farm Board cotton appropriated by Congress. This was to be distributed to the 4,150,961 families reported to be in need of clothing. The Red Cross had approved applications up to that time for 49,382,272 yards of cotton goods and 855,791 dozen ready-made garments, chiefly overalls, stockings, and knit underwear.

In addition to these various relief activities, the Red Cross carried on its regular programme of aid to veterans, health, safety, and educational services. Workers in 3126 chapters dealt with the problems of 397,591 ex-service men or their families; and in hospitals, regional offices, etc., aid was given to 83,760 ex-service men or their families. The chapters aided 9782 men in the regular service, and field directors aided 30,009 men at stations and in hospitals. The Nurses' Reserve had an active-list enrollment of 31,545 nurses for disaster or war service. Public Health nurses employed by the Red Cross numbered 745; they made 1,357,355 nursing visits and inspected 949,025 children in schools during 1932. During the year 58,453 persons received instruction in home hygiene and care of the sick; 68,541 in first aid; and 72,780 in life saving, the latter receiving certificates entitling them to wear the Red Cross life saving insignia.

The Junior Red Cross membership numbered 6,775,508 boys and girls in schools, who engaged in varied services to others. The volunteer service rendered by women resulted in 296,406 garments made and 3,810,157 surgical dressings rolled; 76,200 calls were answered by the motor corps and 240,529 persons were fed by the canteen service. Books transcribed into braille for reading by the blind numbered 6351. In the annual roll call in November, 1932, the Red Cross enrolled 4,004,459 members. There are 3639 chapters, with 10,000 branches.

The President of the United States is president of the Red Cross. It is governed by a board of 18, of whom six are appointed by the President. John Barton Payne is chairman of the board; and James L. Fieser, Ernest P. Bicknell, and James K. McClintock vice-chairmen. National headquarters are in Washington, D. C., with branch offices in St. Louis and San Francisco.

**REDFIELD, WILLIAM COX.** An American manufacturer and cabinet officer, died in Brooklyn, N. Y., June 13, 1932. He was born in Albany, N. Y., June 18, 1858, and received a public school education in Pittsfield, Mass. In 1885 he entered the employ of J. H. Williams & Co. of Brooklyn, manufacturers of steel drop forgings, as an accountant. Two years later he became treasurer of the firm and in 1905 president. In 1907 he founded the Sirocco Engineering Co., which was merged the following year with the American Blower Co. He served as vice-president of the latter during 1909-13. From 1905 to 1913 he was also a director of the Equitable Life Assurance Society. His public career began in 1902 when he was appointed commissioner of public works for the borough of Brooklyn during Seth Low's administration as mayor of New York. In 1910 he was elected to Congress as representative from the fifth New York District, and gained a national reputation in that body through his advocacy of a reduced tariff. President Wilson, on his inauguration in 1913, appointed him Secretary of Commerce, which office he held until his voluntary retirement Nov. 1, 1919. He not only reorganized and enlarged the bureau of foreign and domestic commerce of this department but worked for the expansion of American shipping, advocated the Ship Purchase Bill, and sought to increase safety at sea. During the World War he was active in developing the War Trade Board and also mobilized the bureau of standards and the census bureau to aid the Council of National Defense. He was president of the American Manufacturers' Export Association in 1912 and again in 1920, of the National Society for the Promotion of Industrial Education in 1912-16, and at the time of his death of the National Institute of Social Sciences. Also, he was an advocate of trade with Soviet Russia and had served as president of the American-Russian Chamber of Commerce. In 1931 the decoration of the Order of Orange-Nassau was presented to him, on behalf of Queen Wilhelmina, because of his services as president of the Netherlands Chamber of Commerce in New York and as vice-president of the Netherlands-American Foundation. He was the author of *The New Industrial Day* (1912); *With Congress and Cabinet* (1924); *Glimpses of Our Government* (1924-25); *Dependent America* (1926); and *We and the World* (1927).

**REDWOODS.** See **FORESTRY.**

**REED COLLEGE.** A nonsectarian, liberal college of arts and sciences for men and women in Portland, Ore., founded in 1911. The enrollment for the autumn term of 1932 totaled 454 students. The faculty numbered 35, with 12 graduate assistants. The productive funds for 1931-32 amounted to \$1,885,000, while the net income as of Aug. 31, 1932, was \$73,673. The library contained approximately 46,203 volumes. President, Norman Frank Coleman, LL.D.

**REEVES, WILLIAM PEMBER.** A British economist, died in London, May 15, 1932. He was born in Canterbury, New Zealand, Feb. 10, 1857, and

attended Christ's College Grammar School, Christchurch. He studied law but abandoned this profession for journalism, becoming editor of the *Canterbury Times*, and later of the *Lyttelton Times*. As a member of the New Zealand Parliament during 1887-96 he was responsible for the passage in 1894 of the Industrial Conciliation and Arbitration Act, whose outstanding feature was state intervention in the settling of quarrels between capital and labor through boards of conciliation and a court of arbitration. He was Minister of Education, Labor, and Justice during 1891-96, Agent General of New Zealand during 1896-1905, and High Commissioner during 1905-08. He then became director of the London School of Economics, which position he held until 1919. He was also a member of the Senate of the University of London from 1902 to 1919. After 1917 he was chairman of the National Bank of New Zealand. His activity in the politics of New Zealand gave particular value to his books: *The Long White Cloud: A History of New Zealand* (1898), *State Experiments in Australia and New Zealand* (1902), and to his contributions to Kennedy's *Story of the Empire* (1897), and Ashley's *British Dominions* (1911). In verse he wrote *New Zealand and Other Poems* (1898).

**REFORMED CHURCHES** THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF. An organization formed in London, Eng., in 1875 with the one great purpose, to encourage comity, coöperation, and efficiency in the accomplishment of Christian work. In 1932 there were 106 churches connected with the alliance. The members and adherents of the Presbyterian and Reformed churches throughout the world numbered about 60,000,000 including members of the Evangelical Church in Germany. The general secretary is the Rev. W. H. Hamilton of Edinburgh, Scotland, and the American secretary is the Rev. Henry B. Master, D.D., whose offices are at 1012 Witherspoon Building, Philadelphia. The Fourteenth Council of the Alliance is to be held in Belfast, North Ireland, in 1933.

**REFORMED CHURCH IN AMERICA.** Composed originally of settlers from the Netherlands, and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with elements from many other nationalities. Its doctrinal standards are the Belgic Confession, the Heidelberg Catechism, and the Canons of the Synod of Dort. In 1839 it endorsed the Westminster Catechism. The form of government is of the Presbyterian type.

In 1932 the Reformed Church in America reported 727 churches, 848 ministers, 87,539 families, 160,198 communicants, and approximately 170 foreign, and 230 domestic missionaries. The value of property used for worship was placed at more than \$38,000,000 in the Federal census of religious bodies in 1926. There are foreign missions in China, India, Japan, Arabia, and Mesopotamia, the last named being a joint enterprise with the Presbyterian Church in the United States, and the Reformed Church in the United States. There is also a mission in the state of Chiapas, Mexico, administered by the boards of domestic missions. Missions to the American Indians are located in Nebraska, Oklahoma, and New Mexico. Schools are maintained among the mountain people of Jackson Co., Ky., and for the Negroes in Brewton, Ala.

There are theological seminaries in New Bruns-

wick, N. J., and Holland, Mich. The church colleges are Hope, at Holland, Mich.; Central, at Pella, Iowa; and the Northwestern Junior College, at Orange City, Iowa. Rutgers University in New Brunswick, N. J., is historically affiliated with the denomination, although entirely independent of ecclesiastical control.

Contributions reported in 1932 were \$3,613,000 for congregational expenses, \$798,000 for denominational benevolences, and \$160,900 for other benevolent objects. The General Synod met in June, 1932, at Kingston, N. Y. The Rev. Edward Dawson, D.D., of Passaic, N. J., was elected president. The centenary of the board of foreign missions was celebrated and plans were made for the observance of the fiftieth anniversary of the women's board of domestic missions in the year 1932-33. The headquarters of the denomination are at 25 East 22d Street, New York City, where the official paper, *The Christian Intelligencer*, is published.

**REFORMED CHURCH IN THE UNITED STATES.** This church, earlier known as the German Reformed Church in the United States, traces its origin chiefly to the German, Swiss, and French Protestants who settled in America early in the eighteenth century. These pioneers were practically religious in character and made immediate provision for churches and parochial schools. Samuel Guldin, generally acknowledged to be the first German Reformed minister in the United States, preached at Germantown, Pa., in 1718, and John Philip Boehm held the first recorded communion service at Falckner Swamp, Oct. 15, 1725.

Both in doctrine and polity the Reformed Church in the United States is in hearty accord with the other Reformed and Presbyterian Churches. The Heidelberg Catechism is in universal use as the basis of religious doctrine and Christian nurture.

In 1931 the denomination reported 1713 churches, 1346 ministers, and 346,945 communicant members. In the three foreign mission fields—Japan, China, and Mesopotamia—there were 88 missionaries and 408 native workers. There were also 238 home missions, with a communicant membership of 28,886, the work being conducted principally among the Hungarians, Bohemians, Japanese, and Indians of Wisconsin, while higher education was fostered among Negroes in Bowling Green, Ky. The value of church property in the United States, including both churches and parsonages, was \$54,334,862.

The Reformed Church has theological seminaries in Lancaster, Pa., Dayton, O., and Plymouth, Wis. The principal church colleges are Franklin and Marshall College in Lancaster, Pa., Heidelberg University in Tiffin, O., Ursinus College in Collegeville, Pa., Cedar Crest College in Allentown, Pa., Hood College (for the women of the church) in Frederick, Md., and Catawba College in Salisbury, N. C. The official periodicals of the denomination are *The Messenger*, *The Christian World*, *The Kirchenzeitung*, and *The Outlook of Missions*.

At the twenty-fourth triennial sessions of the general synod at Akron, O., June 21, 1932, the Rev. Henry J. Christman, D.D., was elected president. The Rev. J. Rauch Stein, D.D., has been the stated clerk of the general synod since 1908. Headquarters are at 304 Schaff Building, Philadelphia, Pa.

**REFORMED EPISCOPAL CHURCH.** A denomination formed in December, 1873, by clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It is liturgical and evangelical but possesses the historic episcopate. The two synods are New York and Philadelphia, and Chicago, the former comprising churches from New York to Virginia, the latter Illinois and Ohio. (The Synod of Canada was transferred to the Free Church of England in 1930.) Statistics are published triennially, following the meeting of the general council, which will convene for the twenty-seventh sessions in Germantown, Pa., May 17, 1933. The church paper, the *Episcopal Recorder*, has been published continuously in Philadelphia for over a century. Its theological seminary, also in Philadelphia, was founded in 1886. The foreign mission field is the Lalitpur district in India, with over 200,000 inhabitants. The home mission field is among the Negroes in South Carolina, with 35 parishes and missions. The president is Bishop Robert Westly Peach, D.D., of Philadelphia, and the general secretary the Rev. Howard D. Higgins of New York City.

**REINACH, SALOMON.** A French archaeologist, died in Boulogne-sur-Seine, Nov. 4, 1932. He was born in Saint-Germain-en-Laye, Aug. 29, 1858, and attended the lycée Condorcet and the École Normale Supérieure. Appointed a member of the French School of Athens in 1879, he made interesting excavations and discoveries at Myrina, near Smyrna, and elsewhere. In 1882 he became secretary of the archaeological commission of Tunis; in 1886 attaché to the National Museums of France; and in 1888 assistant professor of archaeology at the École du Louvre, Paris. He was appointed associate curator of the National Museum of Antiquities at Saint-Germain-en-Laye in 1893 and curator in 1902. In the latter year he was also made full professor at the École du Louvre and editor of the *Revue archéologique*. He was elected to the Académie des Inscriptions et Belles Lettres of the Institut de France in 1896, and in 1902 was made an officer of the Legion of Honor. He was also a member of the Royal Society of Antiquarians of Ireland, of the Swedish Academy, and of the Archaeological Society of Athens. Outstanding among the 70 volumes which he published are: *Répertoire de la statuaire grecque et romaine* (4 vols., 1897-1910); *Répertoire des vases peints grecs et étrusques* (2 vols., 1899-1900); *Répertoire de peintures du moyen âge et de la renaissance* (5 vols., 1905-22); *Répertoire des reliefs grecs et romains* (3 vols., 1909-12); *Répertoire de l'art quaternaire* (1913); *Apollo, histoire générale des arts* (1904); *Oultes, mythes et religions* (4 vols., 1905-12); and *Orpheus, histoire générale des religions* (1909).

**RENSELAER POLYTECHNIC INSTITUTE.** A nonsectarian institution for the technical training of men in Troy, N. Y., founded in

1924. In 1932 there were 1485 students enrolled. The teaching staff numbered 141. The productive funds amounted to \$8,600,000, and the income for the year to \$786,300. The total value of the property of the institute, including market value of securities and value of buildings and equipment, was more than \$13,200,000. The gifts for endowment during the year amounted to \$383,800, including a legacy of \$205,000 for dormitories. The library contained 23,785 bound volumes and 23,802 pamphlets. During 1932 six new freshman dormitories and two dormitories for upper classmen, and a new club house for students, were finished at a cost of about \$650,000. President, Palmer C. Ricketts, E.D., LL.D.

**REPARATIONS AND WAR DEBTS.** The alarming economic deterioration in Europe during 1931 and the possibility of further collapse caused the British government on Dec. 30, 1931, to summon a conference to consider the problem of German reparation at Lausanne, Switzerland, in January, 1932. The necessity for the reduction of German reparation payments called for under the Young Plan was generally admitted in Europe. However the difficulties of such revision were greatly enhanced by the intimate connection between reparation, the problem of inter-governmental war debts, and the general political situation in Europe. It proved impossible to reach the preliminary understandings essential to the success of the January conference. Accordingly representatives of the French, German, Belgian, British, Italian, and Japanese governments issued in Geneva on February 13 a statement convoking the reparation conference in Lausanne in June. It was stated that the object of the conference was to reach a "lasting settlement" of the reparation problem and an agreement on "measures necessary to solve the other economic and financial difficulties which are responsible for and may prolong the present world crisis." The stage was thus set for the consideration of war debts and other related problems.

In the six months previous to the convening of the Lausanne Conference, there was intensive diplomatic negotiation accompanied by the issuance of statements by the respective governments designed to build up their positions. On January 9, Chancellor Brüning of Germany announced that his country could not pay further reparation. Four days later, Premier Mussolini in Rome suggested the cancellation of inter-governmental debts by the European nations and the establishment of a united front to force concessions from the United States on the war debts owed that country.

Pressure was brought upon the United States government to make debt concessions to Great Britain, France, and Italy which would lessen the burden upon their treasuries incident to the cancellation or reduction of German reparation payments. To this Secretary Stimson responded (January 21) in a memorandum to the French Ambassador reiterating the American thesis that there was no connection between reparations and war debts and that reparations were a purely European concern. The Fascist Grand Council on April 9 declared for definite cancellation of reparations and war debts. Meanwhile elections had been held in Germany and France. These

showed a trend to the Right in Germany, where Lieut.-Col. Franz von Papen succeeded Chancellor Brüning on May 30, and a swing to the Left in France, where Edouard Herriot replaced Premier Tardieu (see FRANCE and GERMANY under *History*). It was the elevation of Herriot which made possible the subsequent agreement at Lausanne.

Unlike Tardieu, Herriot was reconciled to the scrapping of the Young Plan. But he was determined that France's consent would not be given until an understanding was reached with Great Britain concerning the war debts owing to the United States. He also insisted that any agreement must preserve the framework of the Versailles Treaty—a stand designed to head off the German demand for revision of the disarmament and territorial clauses of the peace settlement. The British, in turn, wanted complete cancellation of reparations as a step toward European recovery. En route to the Lausanne Conference, Prime Minister MacDonald and Sir John Simon, British Foreign Secretary, stopped at Paris (June 8) and conferred with Premier Herriot.

**THE LAUSANNE AGREEMENTS.** The Lausanne Conference, which continued from June 16 to July 8, was attended by more than 600 delegates from 13 countries. On its second day, the conference postponed until after its adjournment any European payments on inter-governmental debts due at the expiration of the Hoover Moratorium. The final agreement reached by the conference on July 8 consisted of three parts: (1) A financial agreement with Germany; (2) a political understanding, called the "Gentlemen's Agreement," among France, Great Britain, Italy, and Belgium; and (3) an Anglo-French accord.

The financial agreement with Germany provided for the final settlement of her reparation obligations by the payment of a lump sum of 3,000,000,000 reichsmarks (\$714,000,000). This was to be issued in the form of 5 per cent bonds, guaranteed by the Reich, and delivered to the Bank for International Settlements to be placed in a general fund for European reconstruction. It was stipulated that the bonds were to be issued at 90, not less than three years or more than 15 years after 1932. The allocation of the funds obtained from the sale of bonds was left for future decision by the governments, other than Germany, which signed the agreement. The Lausanne settlement left undisturbed the following German obligations (the annual payments, in millions of reichsmarks, for the year ending June 30, 1933, are shown in parentheses): Service of the Dawes loan (85.2); service of the Young loan (63.8); payments provided under the Belgian Mark Settlement (22.6); mixed claims (40.8); costs of the U. S. Army of Occupation (25.3); total (237.7). In effect, the termination of reparation payments constituted a withdrawal of the German war-guilt charge in the Versailles Treaty which served as the legal justification for the reparation claims of the Allies.

The so-called Gentlemen's Agreement, signed on July 2, involved the war debts owed to the United States. The text was as follows:

The Lausanne Agreement will not come into final effect until after ratification as provided for in the Agreement. So far as the Creditor Governments on whose behalf this *Procès-Verbal* is initialed are concerned, ratification will not be effected until a satisfactory settlement has been reached between them and their own creditors. It will be open to them to explain the position to their respective Parliaments, but no specific reference to it will appear

in the text of the agreement with Germany. Subsequently, if a satisfactory settlement about their own debts is reached, the aforesaid Creditor Governments will ratify and the agreement with Germany will come into full effect. But if no such settlement can be obtained, the agreement with Germany will not be ratified; a new situation will have arisen and the Governments interested will have to consult together as to what should be done. In that event, the legal position, as between all the Governments, would revert to that which existed before the Hoover Moratorium.

The German Government will be notified of this arrangement.

The document was not published until nearly two weeks after the conclusion of the conference. This secrecy, together with the conflicting interpretations placed upon the agreement by British and French spokesmen, aroused much criticism in Europe and America. Premier Herriot's stand was that Great Britain, Italy, and Belgium must consult France before reaching debt settlements with the United States. The displeasure in the United States was voiced by President Hoover, who in a letter to Senator Borah, Chairman of the Senate Committee on Foreign Relations, said that the United States was "not a party to, nor in any way committed to" the Lausanne Agreements. He added:

While I do not assume it to be the purpose of any of these agreements to effect combined action of our debtors, if it shall be so interpreted, then I do not propose that the American people shall be pressed into any line of action or that our policies shall be in any way influenced by such a combination, either open or implied.

The Anglo-French Accord was the third, and in some respects the most important, agreement reached at Lausanne. It was made public in the form of a declaration July 13. The agreement stated that, in accordance with the spirit of the Covenant of the League of Nations, the signatories "intend to exchange views with one another with complete candour concerning, and to keep each other mutually informed of, any questions coming to their notice similar in origin to that now so happily settled at Lausanne which may affect the European régime." The signatories pledged their mutual coöperation to find a solution of the disarmament question "which will be beneficial and equitable for all the powers concerned." The agreement applied also to coöperation in preparation for the World Economic Conference and stated that the signatories would "avoid any action of the nature of (economic) discrimination by one country against the interests of the others." Other European governments were invited to adhere to the agreement.

In France this agreement was regarded as a revival of the *Entente Cordiale*, assuring a united Anglo-French front against the German demand for territorial revision and against the United States on the war debt issue. The British, however, were less enthusiastic about the accord. On July 14, the London government formally declared that "there is no truth in any statement that it (the accord) is applicable to the question of the British debts to the United States. The use of the words 'European régime' expressly excludes from its purview any questions affecting non-European countries."

The Lausanne Agreements provided for the continuation of the Hoover Moratorium on German and non-German reparation and on the war debts which the various European governments owed to one another. The question of non-German reparation was referred for final settlement to a committee consisting of one representative of

each government concerned. The conference also initiated preparations for two further international meetings. A committee was named to formulate proposals for the economic reconstruction of Central and Eastern Europe and to submit them to the Commission of Inquiry for European Union. Under the auspices of this committee a conference was held at Stresa, Italy, September 5-20, attended by 80 delegates from 15 nations (see UNITED STATES OF EUROPE; PEACE).

The second conference provided for was a world economic and financial conference to consider measures for meeting the world crisis. A committee of experts, in which the United States was represented, was appointed to prepare for the Economic Conference. This was scheduled to be held during 1933.

THE WAR DEBT NEGOTIATIONS. After the Lausanne Conference, there was little official discussion, in Great Britain, France, or the United States, of the war debt payments to the United States falling due on December 15. It was considered unwise to inject the issue into the American Presidential campaign. However, the Democratic platform adopted at Chicago came out flatly against cancellation. Premier Herriot on July 10 said in an interview that "the link is now clearly established between the settlement of reparations and the solution of the debt problems with relation to the United States." The British government made no provision in its budget for the December 15 payment to the United States.

A number of the smaller European countries did not await the end of the Presidential campaign to commence postponements on debt payments. The day before the Hoover Moratorium expired (June 30), Greece postponed for two and one-half years the payment of \$130,000 in principal due July 1. Shortly afterwards, Latvia, Estonia, and Poland postponed for two years payments of principal due December 15, amounting to \$37,000, \$90,000, and \$1,125,000, respectively. The German government followed suit late in September, announcing postponement of \$7,800,000 due September 30 in payment of war claims and the costs of the American army of occupation. All these postponements were in accordance with debt-treaty provisions and bore interest at varying rates.

Immediately after the election, legal postponements gave way to outright default by the Greek government on a \$444,920 non-postponable payment (November 10). A series of notes from other debtors informed the United States government that payments could not conveniently be made on debts coming due and asked suspension of such payments. The British and French governments urged the suspension of the December 15 payments pending a reconsideration of the entire debt agreements. Other countries stated that the difficulties of transferring payments into dollars were insuperable. To all these appeals, Washington replied that the Administration had no authority to grant extensions and that payment of the sum due December 15 would increase "prospects of a satisfactory approach to the whole question." To Great Britain, the United States suggested means of surmounting the transfer difficulty. It was recalled that the hands of the Executive were tied by the anti-cancellation resolution adopted by Congress in December, 1931.

In the face of these developments, the united

front among the European debtors failed to materialize. Six nations paid their December 15 installments in full, as follows: Great Britain, \$95,550,000; Czechoslovakia, \$1,500,000; Italy, \$1,245,437; Finland, \$186,235; Latvia, \$111,852; Lithuania, \$92,386; total, \$98,685,910. Five nations defaulted, as follows: France, \$19,261,432; Poland, \$3,302,980; Belgium, \$2,125,000; Estonia, \$266,370; and Hungary, \$40,729. The French government was overthrown (December 13) when the Chamber of Deputies rejected Premier Herriot's request for authority to make the payment, the vote being 402 to 187 (see FRANCE under *History*). The countries which met their obligations made it plain that they desired a revision of their war-debt agreements with the United States before the next semi-annual installment was due.

The status of the foreign debts, excluding those of Germany, owed to the United States government, as of Jan. 1, 1933, is shown in the accompanying table compiled by the New York Times from Treasury records.

# GOVERNMENT DEBTS OWED TO THE UNITED STATES, JAN. 1, 1933

Country	Amount owed	Paid Dec. 15, 1932	Due June 15, 1933
Armenia . . .	\$19,617,103	(Govt. ceased to exist)	
Austria . . .	23,752,217	(Postponed by international agreement.)	
Belgium . . .	406,555,000	Defaulted	\$6,325,000
Czechoslovakia	165,571,023	\$1,500,000	1,500,000
Estonia . . .	17,203,743	Defaulted	284,322
Finland . . .	8,803,295	186,235	148,592
France . . .	3,921,547,932	Defaulted	40,738,568
Great Britain	4,499,520,000	95,550,000	75,950,000
Greece * . .	32,183,000		28,260
Hungary . . .	1,977,917	Defaulted	18,545,438
Italy . . .	2,007,406,125	1,245,437	118,961
Latvia . . .	7,085,454	111,853	132,091
Lithuania . .	6,383,612	92,386	3,559,062
Poland . . .	215,289,815	Defaulted	1,000,000
Rumania . . .	63,860,560		
Soviet Union .	327,583,071		
Yugoslavia . .	61,625,000		275,000
Total . . .	\$11,794,964,867	\$98,685,910	\$144,179,674

\* The Greek 4 per cent loan of 1929, amounting to \$12,167,000, was funded separately over a 20-year period. Payments from Greece are June 1, July 1, May 10, and Nov. 10, 1933.

**REPTILIA.** See ZOOLOGY.

**RESEARCH COUNCIL, NATIONAL.** See NATIONAL RESEARCH COUNCIL.

**REUNION, rē'un'yōn'.** An island colony of France in the Indian Ocean, situated 420 miles east of Madagascar. Area, 970 square miles; population (1926 census), 186,637; St. Denis,

the capital, had 23,390. Pointe des Galets is the chief port. The island sends one representative to the French Senate and two to the Chamber of Deputies. Governor in 1932, M. J. Repiquet.

**RHENIUM.** See PHYSICS.

**RHODE ISLAND. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 687,497, as against 604,397 in 1920. Providence, the capital had (1930) 252,981 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay . . . . .	1932	85,000	42,000*	\$736,000
	1931	35,000	45,000*	864,000
Corn . . . . .	1932	9,000	351,000	176,000
	1931	8,000	344,000	210,000
Potatoes . . . . .	1932	2,000	320,000	237,000
	1931	2,000	300,000	273,000

\* Tons.

**MINERAL PRODUCTION.** The total value of the State's mineral product was \$1,209,227 for 1930; for 1929, \$939,602. These totals did not include the production of coke in relatively large totals for either year, as the coke was made from coal not native to the State. The output of the chief native mineral, stone of divers grades, rose to 201,110 short tons for 1930, from 141,290 for 1929; by value, to \$757,306 (1930), from \$590,627 (1929). Except for sand and gravel the only other products contributing to the yearly total of production were lime, amorphous graphite, and clay products.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$8,124,576 (of which \$474,320 was for local education); for interest on debt, \$859,170; for permanent improvements, \$5,947,820; total, \$14,947,925 (of which \$6,616,928 was for highways, \$1,477,193 being for maintenance and \$5,139,735 for construction). Revenues were \$12,865,270. Of these, property and special taxes furnished 38.4 per cent; departmental earnings and compensation to the State for officers' services, 5.0; sale of licenses, 42.3 (in which was included a gasoline sale tax that produced \$1,732,497). Funded debt outstanding on June 30, 1931, totaled \$21,654,000, of which \$6,241,000 was for highways. Net of sinking-fund assets, the debt was \$16,721,679. On an assessed valuation of \$1,447,034,201 the State levied in the year ad-valorem taxes of \$1,223,545.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 193.95. In the year previous, about 3 miles of new line had been put in operation.

**EDUCATION.** A feature of the era of widespread unemployment was an increase of the enrollment in the secondary grades of the public schools of the State; evening schools for adult education and summer schools were likewise active. Retrenchment of expenditure was reported as having occurred only in minor degree. The number of children of school age (reckoned as from 4 years to 21) in January was reported as 212,396. For the academic year ending June 30, 1932, there were enrolled in the public schools of the State and in private and parochial schools 157,260 pupils. Of those enrolled in the public day schools, 6389 were pre-elementary pupils, 51,887

elementary, 18,153 in junior high school grades, 11,964 in upper high schools; other groups were 14,090 primary school pupils, 12,374 grammar school pupils, 1802 in mixed schools, 4301 in 4-year high schools, 1631 in special schools, and 648 in vocational schools. Despite isolated curtailments of expenditure, the total expenditure for public-school education in the State was reported to have increased by \$352,949 for the academic year.

**CHARITIES AND CORRECTIONS.** The chief of the central functions of the State, with regard to the care and custody of persons, under the system in operation in 1932, rested in the Public Welfare Commission. As reorganized in 1929, the commission was composed of three members, serving terms of six years, by appointment of the Governor, confirmed by the State Senate. The commission directed what was described as probably a more centralized institutional system than that of any other State. This included the administration of institutions and centralized purchasing and engineering operations, and also the work of a State Probation Department, a Children's Bureau, a Bureau for the Blind, a Mothers' Aid Bureau, a Bureau of Child Guidance, and a Psychological Bureau. The position of director of State institutions was abolished by a State act of 1932, and the duties of this former chief executive officer of the commission were distributed among its members and its other executive aids. The institutions under the commission, with their populations of December 1, 1932, were: State Hospital for Mental Diseases (2164); State Prison and Jail (758); Reformatory for Women (22); State Infirmary (925); Sockanosset School for Boys (delinquents, 186); Oaklawn School for Girls (delinquents, 53); Exeter School (mental defectives, 588); State Home and School (neglected and dependent, 281); Reformatory for Men (136).

**LEGISLATION.** The General Assembly, in regular annual session, enacted a measure dividing the State into two districts, instead of three, for the election of the reduced number of Federal Representatives allowed it under the Federal reapportionment of 1930. The State's law for the enforcement of prohibition (Sherwood act of 1922) was superseded by legislation exempting from State prosecution the manufacture, transportation, and possession of beer containing not more than 3 per cent, by weight, of alcohol, and likewise of other alcoholic beverages for the possessor's own use. A budget-director was authorized for Pawtucket, and authority was granted that city to refund \$1,200,000 of its outstanding notes. Adjournment was on April 19.

**POLITICAL AND OTHER EVENTS.** A commission appointed by Governor Case to study the commerce of the State made a recommendation in November that railroads throughout New England be allowed to convert unprofitable lines into highways and either to operate these as private routes for motor traffic or to dispose of them to the States, for operation as toll highways.

**ELECTION.** The popular vote of November 8 was cast for the Democratic National ticket by about 5 to 4. For President, the officially reported totals were: Roosevelt (Dem.), 146,004; Hoover (Rep.), 115,366. Two Democrats were elected Representatives to the Seventy-third Congress. Theodore F. Green (Dem.) was elected

Governor, defeating Norman S. Case (Rep.), who ran for reelection. A slight Republican majority was reported to have been elected to the lower house of the State Legislature.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Norman S. Case; Lieutenant-Governor, James G. Connolly; Secretary of State, Ernest L. Sprague; General Treasurer, George C. Clark; Comptroller, Albert E. Godfrey; Attorney-General, Benjamin M. Mc Lyman.

**Supreme Court:** Chief Justice, Charles F. Stearns; Associate Judges, Elmer J. Rathbun, John W. Sweeney, John S. Murdock, J. Jerome Hahn.

**RHODESIA**, rō-dē'zhī-ā or zī-ā. A British territory in south central Africa, extending northward from the Transvaal to the borders of the Belgian Congo and Tanganyika Territory. It is divided into Northern Rhodesia and Southern Rhodesia by the Zambezi River; Southern Rhodesia comprises Matabeleland and Mashonaland.

**NORTHERN RHODESIA.** This territory was taken over by the British Crown from the British South Africa Company on Feb. 20, 1924. With an area of 287,950 square miles, mostly high plateau country, it had a permanent European population (1931 census) of 13,630 and a native population estimated Jan. 1, 1931, as 1,331,229. Livingstone, the capital, had 1596 Europeans in 1931.

Mining is the primary occupation, the total value of mineral production in 1930 was £806,446. Tobacco, wheat, fruits, and maize are the chief agricultural crops. Imports in 1930, including specie, were valued at £4,953,716 and exports, including specie, at £909,541. Revenue for 1930-31 was £830,254; expenditure £704,986. The gold standard was abandoned on Oct. 12, 1931.

The territory is administered by a governor, assisted by a nominated executive council of 5 official members, and by a legislative council of 16 members with a majority of official members. Governor, Sir Ronald Storrs, appointed in 1932.

**SOUTHERN RHODESIA.** Formally annexed by the British Crown from the British South Africa Company in October, 1923, Southern Rhodesia has an area of 150,344 square miles and a population (1931 census) of 1,108,949 (preliminary), including 49,904 Europeans. Salisbury, the capital, had about 28,000 inhabitants; Bulawayo, about 31,000.

The country is well suited to agriculture and European settlement. In 1930, the acreage devoted to the chief crops was: Maize, 317,700; tobacco, 10,500; ground-nuts, 7500; legumes and fodders, 58,000. Exports of oranges and lemons increased from 53,000 boxes in 1923-24 to 165,000 boxes in 1930. Livestock (1930) included 2,468,400 cattle, 360,400 sheep, and 66,500 swine. The mineral output for 1931 was valued at £2,273,875; gold, chrome ore, asbestos, and copper are the chief minerals exploited. Imports, including bullion and coin, were valued at £7,529,439 in 1930; exports, including gold and reexports, amounted to £7,490,955. In 1930-31, revenue amounted to £2,449,300; expenditure was £2,995,000; public debt stood at £6,334,492. The gold standard was abandoned on Oct. 12, 1931.

Railways provide through communications with Beira on the east coast, Capetown on the south, and Lobito Bay on the West coast. There is a highway motor service system covering 1521 miles. Executive power is vested in a governor, aided by an executive council; legislative power

in an elected legislative assembly. Governor and Commander-in-Chief in 1932, Sir Cecil H. Rodwell, appointed 1928. Premier and Secretary for Native Affairs, H. U. Moffat.

**RHODES SCHOLARSHIPS.** See UNIVERSITIES AND COLLEGES.

**RICE.** The rice producing countries reporting to the International Institute of Agriculture not including the United States estimated their yields for the crop year 1932-1933 as follows: Japan 533,145,000 bushels, Formosa (first annual crop) 35,528,000 bushels, Italy 30,517,000 bushels and Bulgaria 675,000 bushels. In area devoted to rice India ranked first with 75,531,000 acres followed by Japan with 7,976,000 acres, and Korea with 3,824,000 acres. India in the preceding crop year produced 2,512,033,000 bushels and Korea 140,625,000 bushels. No data on the large production of China were available.

As reported by the Department of Agriculture the rice production of the United States was estimated at 39,356,000 bushels or 10,932,000 barrels which was nearly 15 per cent less than in 1931. The rice area of 869,000 acres was about 10 per cent smaller than that of either 1930 or 1931. The California crop was reported as 17 per cent below, and the crop of the three Southern States as 14 per cent below that of the preceding year. The average yield per acre for all these States was 45.3 bushels only slightly below that of the two preceding years. The production of the different States was placed as follows: Louisiana 16,536,000 bushels, Texas 8,880,000 bushels, California 7,040,000 bushels, and Arkansas 6,900,000 bushels. The acreage of these States was 424,000; 185,000; 110,000; and 150,000 acres and the average yield per acre 39; 48; 64; and 46 bushels respectively.

The exports of the United States in the fiscal year ended June 30, 1932, were recorded as 214,473,000 pounds of rice grain and 60,243,000 pounds of rice flour, meal and broken rice. The imports for the same period included 17,157,000 pounds of cleaned and 1,884,000 pounds of uncleaned rice, 1,087,000 pounds of patna rice for used in canned goods and 556,000 pounds of rice flour, rice meal, and other rice products. The United States and the insular possessions consume about 1,000,000,000 pounds of the rice crop of the country. The artificial drying of rice has been found to be a practical means of raising the grade and market value of the product.

**RICE INSTITUTE.** A coeducational institution for higher education in Houston, Texas, opened in 1912. The enrollment in the autumn of 1932 was 1386, and the faculty numbered 93. The plant equipment and productive funds of the institution were estimated at \$15,000,000, and the income from endowment for the fiscal year 1931-32 was in excess of \$600,000. The library contained approximately 93,000 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

**RIFLE SHOOTING.** See SHOOTING.

**RIJOUW-LINGGA.** See NETHERLAND INDIA.

**RIVERA, DIEGO.** See PAINTING.

**ROAD CONSTRUCTION.** See ROADS AND STREETS.

**ROADS AND STREETS.** United States Federal-Aid road construction in the year ending June 30, 1932, totaled 15,997 miles or nearly one-sixth of the total mileage improved since the Federal-Aid Act was passed in 1916. A similar increase occurred in the case of national-forest highways. Both increases were due mainly

to increased appropriations authorized in 1930 to stimulate new construction and decrease unemployment. A total of \$80,000,000 for Federal Aid alone was authorized late in 1930, all of which except \$8,000,000 had been spent by June 30, 1932. The money was allotted to the 48 States and Hawaii on the same basis of population and road mileage as holds for other Federal Aid, but was to be deducted from the normal total allowance of \$125,000,000 a year. To June 30, initial or final improvements with Federal Aid had been made on 103,659 miles of road but 2627 miles were undergoing "stage construction or reconstruction," leaving 101,032 miles open to traffic.

Under Virginia legislation of 1932, State administration and financing had been accepted by 96 of the 100 counties in Virginia, 85 without referendum votes and 11 by such votes cast. On August 9 the plan was voted down by 4 of the 96 counties, all but one of which were adjacent to cities of considerable population and receive a large part of the State gasoline taxes. At a special session of the Indiana Legislature an act was passed transferring all township roads to the counties.

State funds otherwise available for road construction, with or without Federal Aid, are being lessened by a diversion to other objects of gasoline taxes and motor license fees originally devoted to road work. These diversions were begun to lighten direct taxation. They have been increased by the need of money for unemployment relief. In addition, bonds originally authorized for highway building have been diverted to unemployment relief, notably \$20,000,000 in *New Jersey* by referendum vote in November. In *Massachusetts*, at the close of the year, a special committee on public expenditures advised the Legislature to stop all State highway construction in 1933 and devote the funds to relief work. Notable among recent highway improvements at State expense is the high-level viaduct from Jersey City to Newark and Elizabeth, the last link of which was opened in November. This is really a super-example of grade crossing elimination to afford high speed for vehicles. Viaduct and subway combined, New Jersey has built 13 miles of 50-foot roadway—virtually a vertical bypass of city streets, railways, and waterways, the latter including the Hackensack and Passaic rivers. The viaduct connects with the Holland Tunnel from New York on the east and further north it gives an outlet for traffic across the George Washington Bridge. See BRIDGES.

Limitations of width, height, length, axle loads, gross weight and speed of highway vehicles were adopted late in the year by the American Association of State Highway Officials (see *Engineering News-Record*, Dec. 1, 1932, p. 660). The speed restrictions include minimum as well as maximum rates, the former expressed in general terms related to traffic blocking, except that "vehicles equipped with solid-rubber or cushion tires shall be operated at a speed not in excess of 10 miles an hour." The speed of busses and trucks is limited to 45 miles an hour. The only limitation on the speed of passenger automobiles is consideration for "safety and the proper use of the roads."

*Russia* has about 1,864,000 miles of roads, says *Foreign Highway News*, U. S. Department of Commerce, June 20, 1932. Of these 621,329 miles are "under technical supervision." Only

31,000 are maintained by the Soviet. The Five-Year Plan, ending with 1932, called for the improvement of 1,031,364 miles of road, ranging from the making of dirt roads passable to gravel, macadam, and asphalt and cement-concrete roads, the last two to stop short of 2000 miles. To the end of 1931 little of this programme had been executed.

Gregory, *The Story of the Road* (London and New York) covers the period "from the beginning down to 1931."

**ROCHESTER, UNIVERSITY OF.** A nonsectarian institution of higher education for men and women in Rochester, N. Y., founded in 1850. It consists of three schools—the college of arts and sciences, composed of a college for men and a college for women; the Eastman School of Music; and the school of medicine and dentistry. A school of nursing is also maintained in conjunction with the Strong Memorial Hospital, the property of the university. The enrollment for the autumn session of 1932, exclusive of extension division and special music students, totaled 1911, distributed as follows: Arts and science, 1112, of whom 688 were men and 424 women; music, 421; medicine and dentistry, 174; graduate students, 204. For the summer session, 590 were enrolled in the arts college and 321 in the music school. There were 1016 in the extension division. The faculty had 338 full-time members. The productive funds as of June 30, 1932, amounted to \$29,082,941, and the total resources, including land, buildings, equipment, and endowment, were approximately \$50,000,000. President, Rush Rhees, D.D., LL.D.

**ROCKEFELLER, JOHN D., JR., STATEMENT ON PROHIBITION.** See PROHIBITION.

**ROCKEFELLER CITY.** See ARCHITECTURE; PAINTING.

**ROCKEFELLER FOUNDATION, THE.** An institution chartered in 1913 "to promote the well-being of mankind throughout the world." Its plan of work provides for cooperation toward the advancement of knowledge in the fields of public health, the medical sciences, the natural sciences, the social sciences, and the humanities. During the year 1932 approximately \$14,400,000 was expended by the foundation for work in the fields in which its interests lie.

In addition to the new grants made during 1932, enumerated below, the foundation continued to make payments toward many projects initiated in 1931, or earlier years, where support of assistance over a period of years was specified in the original appropriations.

**PUBLIC HEALTH.** In the field of public health, assistance was given for research on yellow fever, malaria, hookworm disease, tuberculosis, undulant fever, yaws, and anemia; for yellow fever surveys and control campaigns; for demonstrations of malaria and hookworm disease control and of local health work; for the organization or maintenance of essential services of State and national health departments; for the development of schools and institutions of hygiene and public health; and toward the advancement of the work of the Health Organization of the League of Nations. Fellowships in public health were provided, and opportunities were given for the training of health workers in connection with health demonstrations and through travel.

**THE MEDICAL SCIENCES.** Appropriations for the advancement of medical education included grants to the following institutions, for the development

of specific departments, for maintenance, for endowment, or for special research projects: to McGill University, toward the development of teaching and research in neurology, neurosurgery, and the physiology and pathology of the nervous system; to the faculty of medicine of the University of Montreal, for the development of laboratories; to Columbia University, toward research on virus diseases and studies of bacteriophage, over a four-year period; to Albany Medical College, toward the support of extension courses in medicine; to the medical school of Johns Hopkins University, toward a study of deafness, over a seven-year period; to the University of Oregon medical school, for a general research fund during a two-year period; to the University of Rochester school of medicine and dentistry for research in dental pathology and toward studies of the effect on general paresis, chronic rheumatism, gonorrheal arthritis, and other diseases, of heat produced by radiation; to Washington University school of medicine, toward research on cytological phases of poliomyelitis and other virus diseases; to Western Reserve medical school, toward studies on whooping cough; to Yale University, for research in dental pathology; to the Carlsberg Foundation, Copenhagen, toward endowment of the research institute of experimental biology; to the Kaiser Wilhelm Institute of Brain Research, for the purchase of apparatus for its chemistry section and for the maintenance of this section during the years 1932-1934; to the Radium Institute of Paris, toward salaries of full-time scientific personnel, over a ten-year period. In addition, a number of small research aid grants were made to schools and institutions in Europe to enable especially qualified workers on their staffs to pursue studies of importance to the advancement of the medical sciences.

Funds were provided for the support of fellowships in the medical sciences administered directly by the foundation and for fellowships administered by the National Research Council, the Medical Research Council (Great Britain), the Notgemeinschaft der Deutschen Wissenschaft, and the Hungarian Scholarship Council.

Two new volumes of *Methods and Problems of Medical Education* (series xx and xxi), and three volumes of reprints from previous series, appeared in 1932.

**NURSING EDUCATION.** For the development and advancement of nursing education, appropriations were made during the year to the following institutions; to the University of Lyon, toward the cost of building and equipping a school of nursing; to the University of Toronto school of nursing, for support over a five-year period; to St. Luke's International Hospital College of Nursing, Tokyo, Japan, for endowment and educational work; to the East Harlem Nursing and Health Service, for general expenses over a four-year period; and to the Committee on the Grading of Nursing Schools, for the cost of printing the final committee report and handbook on the grading of nursing schools. A number of fellowships in nursing were also maintained.

**THE NATURAL SCIENCES.** In the natural sciences, new appropriations were made toward endowments, building programmes, apparatus and equipment, maintenance, or general development, to the following universities and scientific institutions: the International Commission for the Polar Year 1932-1933; Cold Spring Harbor Bio-

logical Laboratory; Ohio Wesleyan University (Perkins Observatory); Princeton University (Palmer Physical Laboratory); University of Göttingen; the Kaiser Wilhelm Institute of Physical Chemistry and Electrical Chemistry; the Zoological Station of Naples; Fukien University, China; and Yenching University, China.

Contributions were also made toward the advancement of knowledge in the natural sciences through appropriations for research, to the following institutions: to Harvard University, for its programme of chemical research; to the California Institute of Technology, for its research programme in physics and chemistry; to the Massachusetts Institute of Technology, for a co-operative programme of aerial research for the year 1932-1933; to the University of North Carolina, for a research fund in the natural sciences over a three-year period; toward the publication, over a five-year period, of the *Annual Tables of Constants and Numerical Data, Physical, Chemical, and Technological*; to the American Institute of Physics, for underwriting a plan for financing scientific publications; to the National Research Council, toward the cost of indexing *Biological Abstracts*; to the American Mathematical Society, toward the publication of the results of scientific research, over a two-year period; toward the support of the *American Annals of Mathematics*; to the National Research Council, for its research aid programme; for continuation of human paleontological research in Asia under the auspices of the Peiping Union Medical College and the Geological Survey of China. In addition, many small grants were made to institutions toward support of important research projects of individual investigators.

Support was continued for fellowships in the natural sciences granted and administered by the foundation itself, and for the natural science fellowship programme of the National Research Council.

**THE SOCIAL SCIENCES.** For the advancement of the social sciences, contributions were made toward the maintenance of the following institutions and departments of universities: the New York School of Social Work; the Behavior Research Fund, Chicago; the Community Council of Philadelphia; the University of North Carolina (Institute of Research in the Social Sciences); the University of Pennsylvania (industrial research department of the Wharton School of Finance and Commerce); Syracuse University (school of citizenship and public affairs); Tulane University of Louisiana (school of social work); Western Reserve University (school of applied social sciences); the German Institute of Politics; and the Jean Jacques Rousseau Institute.

Funds in aid of research were furnished the following organizations: the Council on Foreign Relations, in support of its research programme for three years; the Industrial Relations Counselors, Inc., for a study of the administrative procedures of employment exchanges; Brown University, for a study of the international gold standard; the University of Cincinnati, toward its programme of training for government service; Columbia University, for research and field training in anthropology; Harvard University, Stanford University, and the University of Texas, for research in the social sciences over a five-year period; the University of Minnesota, for studies of unemployment; the Bernice P. Bishop

Museum, toward its programme of research in Polynesian anthropology; the Institute for International Economics and Maritime Trade, Kiel, for its general research programme; the Institute of Industrial Psychology, London, toward its research programme for the years 1933-1936; and the Royal Institute of International Affairs, London, toward its research programme, for five years. Small grants were made to numerous European institutions toward the support of the studies of investigators especially equipped for work in certain social science fields.

Contributions were also made to the Social Science Research Council, for its fellowship and research programmes and for conferences and planning; and additional funds were provided for the support of fellowships in the social sciences administered directly by the foundation.

**THE HUMANITIES.** In the field of the humanities, the foundation made appropriations during the year to the following organizations: to the University of Chicago, toward support of the foreign work of its Oriental Institute; to the University of Michigan, toward the completion of the excavation of the ancient Hellenistic city of Karanis in Fayum Province, Egypt; to Yale University, as a fund for research in the humanities during a five-year period; to the school of oriental studies, London Institution, University of London, toward a programme of research in African linguistics during a three-year period; toward the support of work on the *Thesaurus Linguae Latinae*, which is being compiled under the auspices of four German Academies and one Austrian Academy; to the Prussian State Library, Berlin, toward the preparation of a union catalogue of the 7,000,000 titles in its own library and in the 10 Prussian universities, the State Library of Bavaria, and the National Library of Vienna; and to the American School of Classical Studies at Athens, for fellowships in archaeology in connection with the excavation of the Athenian Agora. Many small grants were made to forward the work of mature scholars in Europe engaged in definite projects in the field of the humanities.

Aid was continued in support of fellowships and research aid in the social sciences, administered by the American Council of Learned Societies.

The executive officers of the foundation in 1932 were: John D. Rockefeller, Jr., chairman of the board of trustees; Max Mason, president; Thomas B. Appleget and Foster M. Dunn, vice-presidents; Alan Gregg, director for the medical sciences; Warren Weaver, director for the natural sciences; Edmund E. Day, director for the social sciences; David H. Stevens, director for the humanities; Frederick F. Russell, director for the international health division; Norma S. Thompson, secretary; L. M. Dashiell, treasurer; and George J. Beal, comptroller. Offices are maintained at 61 Broadway, New York City.

**ROCKS.** See GEOLOGY.

**ROLLINS COLLEGE.** A nonsectarian, co-educational institution of higher learning in Winter Park, Fla., founded in 1885. The enrollment for the fall term of 1932-33 was 450. The full-time faculty members numbered 45 and part-time members 20. The productive endowment in 1931-32 amounted to \$1,287,000, yielding an annual income of about \$56,000. The income from other sources was approximately \$198,000. The

library contained 41,600 volumes. President, Hamilton Holt, Litt.D., LL.D., LL.D.

**ROMAN CATHOLIC CHURCH.** The Pope concluded the official year on Christmas eve by the proclamation of a Holy Year. The announcement was made in an address in reply to Christmas and New Year's greetings delivered by Cardinal Granito Pignatelli di Belmonte, Dean of the Sacred College, in the name of all the cardinals: all Catholics are invited to journey to Rome to benefit by the special indulgences provided for pilgrims who pay the specified number of visits to Rome's four major basilicas. The holy year was to be opened by the Pope on Apr. 2, 1933, and solemnly closed by him on the same date in 1934. Twenty-two cardinals of the Curia and Cardinal Binet, Archbishop of Besançon, France, were present. A small golden microphone at the Pope's side conveyed his voice to the Vatican wireless station, from which it was broadcast to the whole world. Later the papal address was broadcast in all principal languages. The Pope referred to the year's happenings which caused him pain or joy. Among the former he listed the "iniquitous situation" of the Church in Mexico, Spain, and Russia; the differences among nations that often lead to wars, civil strife and aggravation of the worldwide financial and economic depression which causes so much suffering among poor workers. Among the happenings that brought joy were the Eucharistic Congress in Dublin, the "magnificent development" of missionary work, and the heroic faithfulness, often unflinching even in the face of martyrdom, shown by the Episcopacy and clergy, especially in countries where the Church was persecuted. He expressed joy to be able to use the radio to address his good wishes directly to the whole world and sent his good wishes to all peoples of the world. The year was marked by a number of his encyclicals and decrees. On January 24, in public audience, he paid tribute to the Spanish Jesuits, calling them "martyrs of the Vicar of Christ"; February 12 he celebrated the tenth anniversary of his election to the Pontificate and by radio asked the prayers of the world for peace. On the third anniversary of the signing of the Lateran treaty, February 11, Premier Mussolini made his long-expected visit to the Holy See, a call that was regarded as a public gesture denoting the reestablishment of friendly relations between the Vatican and the Italian Government after the recent conflict over Catholic Action. On April 4 he told 200 students of the American College in an audience that the United States offered "great hope for the future in the development of spiritual life." "America is so dear to us," he said, "and has offered us so many consolations, we have great confidence in the future." On May 3, the Encyclical "Caritate Christi Compulsi" called on all peoples to offer prayer and expiation to the Sacred Heart in the present distress. The document enumerated the causes of the present evils crushing humanity. They were, said the Pope, greed, the accumulation of the wealth of nations in the hands of a small group of individuals, exaggerated nationalism, Communism, and the revolt of man against God. An Encyclical titled "Acerba Animi" dealing with the Mexican-Catholic conflict, dated September 29, denounced the persecution of Catholics in Mexico, which it charged was carried on by the Mexican government after an agreement had been reached in 1929 permit-

ting resumption in Mexico of free Catholic worship. He particularly affirmed the point that "forced acceptance of vexations does not mean approval of these laws." Non-coöperation with the persecuting government, the Pope declared, cannot be condemned. The document concluded with an exhortation to the persecuted Catholics to obey their religious leaders and to remain united with them. In this way, the Pope said, they would confound their enemies.

The Congregation of the Holy Office issued on February 5 a decree which ordered that stricter guarantees must be given by persons applying for dispensations for marriages between Catholics and non-Christians, or between Catholics and Christians who do not belong to the Catholic Church. Other decrees relate to the age at which the Sacrament of Confirmation may be received, and procedure in the matrimonial courts. The Pope, in inaugurating the new entrance to the Vatican Museum on December 7, stepped outside Vatican territory, remaining a few moments in the busy streets beyond the walls. This was the fourth time the Pope has left Vatican City since the accord was signed with the Italian government ending the "voluntary imprisonment" of Popes, which began in 1870. Concordats were signed between the Holy See and Baden and Rumania during the year. On August 11 the Pope expressed interest in the American Indian and American Negro by letter to the American bishops recommending the Sisters of the Blessed Sacrament, founded by Mother M. Katharine Drexel.

**STATISTICS.** Statistics relating to the numerical strength of the Church throughout the world show that Catholics number 341,430,900. In Europe there are 208,882,000, in America 109,097,000, in Asia, 16,356,000, in Africa, 5,330,000, and in Oceania 1,585,000. The Catholic population of the United States proper for 1932 is put at 20,236,391, according to the Official Catholic Directory, an increase of 21,293 over 1931. In 1922, the summary shows, the Catholic population was 18,104,804, and in 1912 it was 15,015,569. The increase over ten years is put at 2,131,587 and over twenty years ago at 5,220,822. The Hierarchy number 122 prelates: 17 Archbishops, of whom four are Cardinals, and 105 Bishops. The priests total 28,297, an increase of 433. The number of churches with priests resident increased from 12,475 to 12,484. The total number of churches and missions is 18,152. There are 172 seminaries, an increase of 27. The number of parish schools increased by 127, the present number being 7514. There are three more Catholic hospitals, the total number being 645.

The Catholic population of England and Wales is given in the Catholic Directory for 1932 as 2,253,420, as compared with 2,235,237 in 1931. The number of secular priests increased by 82 to 3057 and the regular clergy by 45 to 1651, making a total of 4708 priests in England and Wales. Fourteen new churches and chapels were opened, the total number now being 2288. Secondary schools show a decrease of three from 519 to 516, but the number of their pupils has risen from 58,278 to 59,859. The elementary schools increased from 1331 to 1376, and attendance in these schools grew from 384,129 to 386,631. There are sixteen dioceses in England with twenty-four Archbishops and Bishops. Six Catholics were elected mayor of their towns in England and Wales for the first time since the

Reformation. Five of them inaugurated their year of office by attending Mass in state, accompanied by the aldermen and councilors, on what is known as "Mayor's Sunday."

According to the Dominion Bureau of Statistics the last census showed there were 4,098,548 Catholics in Canada. There are 186,587 Greek Catholics mainly in the prairie provinces, 66,671 in Manitoba, 44,265 in Saskatchewan, and 37,500 in Alberta. Greek Catholics are in communion with the See of Rome. Catholics in India, Burma, Ceylon, and the Malay States number 3,630,945. The number of converts for the year for only 29 out of the 56 dioceses or missions was 28,544. In the Belgian Congo Catholic missionaries number 891 priests and Brothers and 687 Sisters. The number of Catholics is placed at 662,278 with 417,241 under instruction. Statistics compiled during 1931 show that the Catholics in Japan number 96,323, an increase of about 3000 during the year. Besides the foreign missionaries in Japan there are 63 Native Japanese priests, 224 seminarians, and 230 Japanese Sisters. The labors of Catholic missionaries in China in 1930-31 netted the conversion of 48,974 adults according to statistics prepared by the Apostolic Delegation in Peiping. In the period covered the ecclesiastical divisions in China rose from 97 to 107, an increase of 14 new territories erected under the jurisdiction of Chinese Bishops. Foreign missionaries are now 2176. The number of Chinese priests has risen from 1446 to 1504. In the preparatory seminaries the students have risen from 1463 to 1547; in the minor seminaries from 2745 to 3148, and in the major seminaries from 291 to 1024, of whom 26 are studying at the Urban College of Propaganda in Rome. Catholics in China now number 2,530,843.

Statistics show that there are 8,177,522 communicants in the Eastern Rite of the Church. Of this number 5,162,385 are Ruthenians. There are 28 Congregations of men and 41 of women. These figures do not include the Jesuits, Franciscans, Assumptionists, and Redemptorists.

The Catholic Press Directory for 1932 lists 310 Catholic publications in the United States of which 267 report a circulation of 7,108,456. Twenty-five years ago there were 66 Catholic weekly newspapers published in English. Today there are 62.

The number of Jesuits in the whole world is now 22,936, an increase of 599 during the year. Of these 10,166 are priests, 7889 scholastics, and 4888 Brothers. In the United States there are 4503: 1931 priests, 2067 scholastics, and 505 Brothers.

The bi-centenary of the founding of the Redemptorist Congregation, Nov. 9, 1732, was celebrated. It now numbers 348 houses with 5735 members all over the world.

THE CARDINALS. No new Cardinals were created during the year. Two died: Willem Van Rossum of Holland, Prefect of the Congregation for the Propagation of the Faith, August 30, and Frederick Gustavus Piffi, Archbishop of Vienna, April 20, which reduced the number of Cardinals to 54, and leaving 16 vacancies. There are 26 Italians and 28 of other nationalities—six Frenchmen, four Germans, four Americans, three Spaniards, two Poles, and an Englishman, Belgian, Brazilian, Dutchman, Hungarian, Irishman, Portuguese, and Czech. Ten Cardinals belong to the regular clergy: two Benedictines, the Archbishop of Milan and the Primate of

Hungary; two Dominicans, Cardinals Bogiani and Fruehwirth; a barefoot Carmelite, Cardinal Rossi; a Jesuit, Cardinal Ehrle; a Missionary of the Precious Blood, Archbishop of Naples; a Salesian, the primate of Poland; a Servite, Cardinal Lepicier and a Sulpician, the Archbishop of Paris. Of the Cardinals, one was created by Pope Leo XIII, nine by Pope Pius X, 13 by Pope Benedict XV, and 31 by Pope Pius XI. Cardinal Cerretti was made Cardinal Ponens in the Process of the Cause for the Beatification and Canonization of Catherine Tekakwitha, the Indian maiden who is expected to be the first native of the United States to be canonized.

THE HIERARCHY. The annual meeting of the hierarchy of the United States attended by two Cardinals, seven Archbishops and fifty-eight bishops was held in Washington, November 16-17, at which the reports of the chairmen of the various departments of the National Catholic Welfare Conference were submitted, all of which showed satisfactory progress. Resolutions were passed, pledging support and coöperation to the National Citizens Committee of the Welfare and Relief Mobilization 1932 and condemning "the increasing flood of immoral and unmoral books, periodicals, pamphlets" as "one of the most potent factors in the debasing of the individual and the public conscience." They called on Catholics to maintain standards of clean literature as "part of that crusade of Catholic Action" for which the Pope has pleaded. Archbishop Albert T. Daeger of Santa Fe, died December 2, the result of an accident, and these Bishops: George J. Finnigan, of Helena, Montana, August 14; Daniel J. Curley, Syracuse, N. Y., August 3; Edward J. O'Dea, Seattle, Washington, December 25; Cornelius Van de Ven, Alexandria, La., May 8; John J. McMahon, Trenton, N. J., December 31; and Thomas J. Shahan, former rector of the Catholic University, March 9. Bishop John B. McGinley of Monterey resigned September 30; and the following new Bishops were appointed: Stanislaus V. Bona to Grand Island December 19; James E. Kearney to Salt Lake October 28; Joseph E. McCarthy to Portland, Me., August 24; John B. Peterson to Manchester, N. H., July 14; Daniel F. Desmond to Alexandria, La., December, and as auxiliaries James A. McFadden to Cleveland September 8; and Francis J. Spellman to Boston September 8. Archbishop John G. Murray was installed at St. Paul, Minn., January 27, and Bishop John J. Mitty of Salt Lake was appointed Coadjutor Archbishop of San Francisco, February 3.

There are 1609 resident ecclesiastical jurisdictions divided as follows: Europe, 673; America, 445; Asia, 277; Africa, 140; and Australia, 74. The ecclesiastical jurisdictions in North America are United States, 114; Canada and Newfoundland, 74; and Mexico, 34.

The Holy See has diplomatic representatives in 36 States, and Apostolic Delegations without diplomatic character in 22 States. Thirty-five nations and the Order of Malta have diplomatic representation at the Holy See.

There are 321,000 Catholic priests in the world, of whom 257,000 are secular priests and 64,000 regulars. The distribution follows: Europe, 252,000; the Americas, 51,500; Africa, 4800; Asia, 10,500; Australia, 2200. There are 28,297 priests in the United States and approximately 800 Catholics to each priest. The Religious Congregations of the Church in the

United States are 63 of priests, 15 of Brothers, and nearly 200 of women. The total number of individuals in all of these Congregations was approximately 100,000, of whom 8648 were priests. Four European countries, Norway, Sweden, Denmark, and Finland, have only 24 native priests. Norway has four. There are three in Sweden and about 4000 Catholics. There are 15 in Denmark for 25,000 Catholics, and Finland has two for 1500 Catholics.

EDUCATION. The biennial survey made by the N. C. W. C. Department of Education shows a total of 2,598,669 students enrolled in 10,439 Catholic schools of all classifications, a gain of 203, or approximately 2 per cent, in the total number of Catholic schools; of 476, or 6 per cent, in the total number of instructors; and of 60,097, or 2.4 per cent, in the total number of students in attendance. The report reveals 187 seminaries divided into 99 major seminaries, staffed with 886 instructors for 7632 students and 88 minor seminaries with 1021 instructors and 10,863 students. The enrollment for both classes of seminaries was 18,495 in 1930, or, compared with 1928, a gain of 1158, or 6.7 per cent. The 162 colleges and universities had 7768 instructors, and 105,926 students, an increase of 18,895 students, or 21.7 per cent, between 1928 and 1930. These institutions were attended by 53,929 male and 50,898 female students; 1099 students were not classified. The colleges were divided into 73 men's colleges and 89 women's colleges.

The normal schools totaled 44, staffed with 1075 instructors. The enrollment was 9781 students, 707 male and 9074 female, a loss of 3009 students, or 23.5 per cent compared with 1928. This loss is explained by the attendance of students at universities and colleges. Of the normal schools, 6 were for Religious men, 33 were for Religious women, and 5 offered courses for men and women.

Catholic high schools and academies numbered 2123, staffed with 14,307 instructors, and attended by 241,869 students, of whom 102,094 were boys, 135,120 were girls, and 4655 were not classified, compared with 1928, an increase of 16,024, or 7.1 per cent, in the two-year period. Catholic elementary schools were 7923, staffed by 58,245 instructors, and attended by 2,222,598 pupils, or 884,235 boys, 911,267 girls, and 427,096 unclassified. The enrollment in 1930, compared with 1928, represents an increase of 27,029 pupils, or 1.2 per cent, in the two-year period.

For the ten-year period from 1920 to 1930 schools of all classifications increased 1733 in number, or 19.9 per cent; teachers increased 29,037 in number, or 53.5 per cent; and students 617,618, a gain of 31.2 per cent.

The Xavier University, the first Catholic university for Negroes in the United States, was dedicated on October 12 at New Orleans with leading members of the Catholic hierarchy in the South and Cardinal Dougherty, of Philadelphia, in attendance. It cost \$600,000 and is managed by the Sisters of the Blessed Sacrament of whom Mother M. Katharine Drexel, Philadelphia, is Superior-General and founder.

CONGRESSES AND CONVENTIONS. The Thirty-first International Eucharistic Congress was held in Dublin June 22-26 and was one of the most successful of the series, a million persons crowding into the city for the services. All the

churches put forth their richest adornments and, in the Fifteen Acre tract of Phoenix Park, the high altar turned the huge space into an open-air church. The Papal Legate, Lorenzo Cardinal Lauri, who had been accorded the highest diplomatic honors by the Italian government on his departure from Rome and had been given ovations in London and Chester on his way, was received at Dun Laoghaire, on June 20, by President De Valera and Lord Mayor Byrne. Ten Cardinals, over 200 Archbishops, Bishops, and Lord Abbots, a very large number of Monsignori, about 4000 priests attended the Solemn Pontifical High Mass in the Phoenix Park, on June 26. His Eminence Cardinal Lauri presided. The celebrant was Archbishop Curley of Baltimore. The Pope gave his blessing to the Eucharistic Congress over his own radio station, after a brief address congratulating the Congress for its display of religious faith. Bishop Schrembs of Cleveland had charge of the American section of the Congress. In the preparations for its details it was developed that more than 1000 churches, including 68 non-Catholic, have been dedicated to St. Patrick; and that since 1780, about 250, or more than half of the Bishops of the United States have been of Irish birth or descent.

The Eucharistic Congress in Copenhagen from August 19-21 was the greatest Catholic demonstration in Scandinavia since the Reformation. The programme included Pontifical Mass in the open air, addresses by various Danish Catholics—including Johannes Jørgensen, the author—and foreign visitors, and a procession through the streets of Copenhagen for the first time since the Reformation. Nearly 200,000 Catholics attended the seventy-first session of the German Catholic Congress held at Essen, the great industrial centre of Germany, on August 31. Herr Wilhelm Marx, a former Chancellor, presided. "Christ in the Big Cities" was the general theme of discussion for the Congress. The twelfth annual convention of the National Council of Catholic Women was held at Charleston, S. C., October 8 to 12, inclusive, the first ever held in the South. The Catholic Rural Life Conference had its tenth annual convention of the Conference, at Dubuque, Iowa, October 19 to 21. Four main topics were selected for discussion, "Rural Education," "Economic Welfare of Catholic Farm People," "The Rural Family and the Woman on the Farm" and "Religious Enlightenment in Rural Parishes." There were five Archbishops and Bishops at the seventy-seventh annual convention of the Catholic Central Verein in America and the sixteenth meeting of the National Catholic Women's Union, held at St. Louis, Mo., August 20 to 24. The National Conference of Catholic Charities held their national convention at Omaha, September 25-28. Meeting at the same time was the national conference of the St. Vincent de Paul Society. In Rome, on April 9, a check for \$1,100,000, representing contributions of American Catholics, was presented to Pope Pius XI by Mgr. William Quinn of New York, Director of the Society for the Propagation of the Faith. The money, which will be used in the development of missions, is 20 per cent less than last year's contribution, but the Pontiff said he was grateful for the sum and congratulated Mgr. Quinn on the spiritual progress of the organization. The general council of the society reported total world contributions of \$2,600,000, including the American check, which

represented 42 per cent of the world's donations to Catholic missions. The total was about 15 per cent lower than last year, the Pontiff was informed. "Considering the conditions," the Pontiff replied, "what you have done is marvelous. Wherever we turn we see a vast horizon filled with difficulties which you are obliged to confront at every step of your work. Your accomplishment deserves the admiration of the angels." The total membership of the Knights of Columbus on June 30, 1932, was 547,288 according to the annual report of the Supreme Secretary to the National Convention. There were 61 State and 2 territorial jurisdictions, and 2544 subordinate councils, showing a net membership decrease of 44,136. The total assets of the Order amounted to \$37,447,099.

**ROSCOE, JOHN.** A British clergyman and anthropologist, died in Ovington, Norfolk, England, Dec. 4, 1932. Born in 1861, he was educated as a civil engineer, but instead of practicing this profession he joined the Church Missionary Society and in 1884 was sent to the Uganda mission where, following his ordination as a minister in the Church of England, he labored for 25 years. While in Africa he distinguished himself also as an investigator of the manners and customs of the Baganda and kindred tribes. On his return to England in 1910 the honorary M.A. degree was conferred on him by the University of Cambridge in recognition of the services which he had rendered to the science of ethnology and anthropology, and for several years he was a lecturer at that institution on the anthropology of Africa for the board of anthropological studies. In 1919-

20 he led the Mackie ethnological expedition to Central Africa. He was made rector of Ovington and honorary canon of Norwich in 1923. His publications include: *The Baganda, an Account of Their Native Customs and Beliefs* (1911); *Twenty-five Years in Central Africa* (1921); *The Soul of Central Africa* (1922); and *Report of the Mackie Expedition* (vol. i, *The Bakitara*; vol. ii, *The Banyankole*; and vol. iii, *The Bagesu*, 1923). He contributed extensively to the *Journal of the Royal Anthropological Institute*.

**ROSENWALD, JULIUS.** An American merchant and philanthropist, died in Chicago, Jan. 6, 1932. He was born in Springfield, Ill., Aug. 12, 1862. After being engaged in the wholesale clothing business with two of his uncles in New York from 1879 to 1885, he went to Chicago where he entered into partnership with Julius E. Weil in a clothing manufacturing venture. The success of this enterprise led to the firm's acquiring a large share of stock in the mail order house of Sears, Roebuck & Co. In 1895 Mr. Rosenwald became vice-president and treasurer of the latter, in 1910 president, and in 1925 chairman of the board. A special innovation which he established in 1916 was the employees' savings and profit-sharing fund, whereby employees might subscribe 5 per cent of their earnings and receive 5 per cent of the company's net earnings. During the World War he was a member of the advisory commission of the Council of National Defense and was chairman of the committee on supplies. He also was a member of the second National Industrial Conference held in Washington in 1919.

In 1917 Mr. Rosenwald established the Julius Rosenwald Fund, whose chartered purpose was "the well-being of mankind" and whose capital at the time of his death amounted to \$35,000,000. Through this fund he contributed \$5,000,000 to the University of Chicago and pledged \$5,000,000 for a Museum of Science and Industry to be housed in the remodeled fine arts building of the Columbian Exposition in Jackson Park, Chicago. Also, he contributed to the uplift of the Negro race through donating \$2,700,000 toward a model housing project for Negroes in Chicago, \$3,660,000 toward the erection at a total cost of \$23,200,000 of 4500 Negro schools in the rural sections of the South, \$250,000 to Tuskegee Normal and Industrial Institute, and \$625,000 for the construction of Y.M.C.A. and Y.W.C.A. buildings in the Negro quarters of 25 cities. For these benefactions he received in 1927 the William E. Harmon award for distinguished achievement in race relations. His contributions to Jewish education and charity included \$6,000,000 for Jewish colonization work in Russia, \$6,000,000 to the American-Jewish Joint Agricultural Corp., \$500,000 each to the Jewish Theological Seminary and the Hebrew Union College, and \$250,000 for the construction of a building to house Jewish philanthropic agencies in Chicago. Following the World War he contributed \$500,000 to aid German war widows, orphans, and prisoners.

**ROSICKYTE.** See MINERALOGY.

**ROSICRUCIAN ORDER.** An international fraternity, known as the Ancient, Mystic Order Rosæ Crucis, whose name is derived from the emblem, a cross with a single rose in its centre, adopted by Johann Valentin Andreae, erroneously regarded as the restorer of the order in Germany in the seventeenth century. It had its traditional

origin as the Great White Brotherhood in Egypt about 1500 B. C., and was introduced into Palestine by Solomon, into Greece by Solon, and into Italy by Pythagoras. During the Christian era the order found its greatest welcome in France under Charlemagne; from there it spread to Germany, the Netherlands, and England. It was first established in the United States in 1693, its supreme temple being located in Philadelphia. From 1801 to 1909, in accordance with the order's principle that 108 years of public activity should be followed by a corresponding period of retirement and secret activity, the members carried on their work in silence. On the reestablishment of the American order in 1909 its jurisdiction was extended to include not only the United States and its dependencies but the Dominion of Canada, the West Indies, and the Central American states.

In 1932 the Rosicrucian Order had throughout North America 9 grand lodges, 136 local lodges, and 3 colleges. The national congress was held in San Jose, Calif., July 9 to 16, and the secret international congress in Geneva, Switzerland, August 4 to 9. The organization conducts much public welfare work and contributes to the advancement of all the fine arts and sciences, including excavations in Egypt to bring to various national museums some of the art of that land. During 1932 it was especially interested in the development of the "Luxatone" master color organ, which was devised and constructed by the order's emperor, H. Spencer Lewis, to demonstrate the relationship between color harmony and sound harmony as taught by the Rosicrucians in the middle ages. The instrument demonstrates also, in connection with the Rosicrucian doctrine of transmutation, that the rates of vibration of all atomically constructed matter are related by harmonic cycles and periods and that by changing the rates of vibrations of one element or one manifestation the element or manifestation may be changed in nature. National headquarters are in San Jose, Calif., where there are also located the grand college of rites, the Rosicrucian research department and laboratories, and the Rosicrucian museum. H. Spencer Lewis has been emperor or chief executive of the order since its reestablishment.

**ROSS, SIR RONALD.** A British physician and bacteriologist, died in Putney, Sept. 16, 1932. Born May 13, 1857, he studied medicine at St. Bartholomew's Hospital, London, and in 1881 entered the Indian medical service. In 1895, after having spent three years in a special study of malaria, he undertook at Burma the experimental verification of the malaria-bearing mosquito theory, and two years later discovered the ætvo-autumnal parasite, the various stages of whose life history he observed within the body of the mosquito. He received in recognition the Nobel Prize for medicine in 1902. In 1899 he led an expedition to west Africa which found there the malaria-bearing mosquito and laid down methods for large-scale reduction of the disease. On retiring from the Indian service with the rank of major the same year he was appointed professor at the Liverpool School of Tropical Medicine. In 1913 he was made physician for tropical diseases at King's College Hospital, London. During the World War he was consultant in malaria for the War Office and after the war for the Ministry of Pensions, holding the rank of colonel in the Royal Army Medical Corps. At the time of his death he was director-in-chief of the Ross

Institute and Hospital for Tropical Diseases at Putney Heath. He was a past president of the Society of Tropical Medicine, a past vice-president and medallist of the Royal Society (of which he had been elected fellow in 1901), and editor of *Science Progress* and the *Annals of Tropical Medicine*. Among his publications are: *Mosquito Brigades and How to Organize Them* (1901); *The Prevention of Malaria* (1910); *The Revels of Orsera* (novel, 1920); *Memoirs* (1923); *Studies on Malaria* (1928); and *Fables and Satires* (1930). He was created Knight Commander of the Bath in 1911 and Knight Commander of St. Michael and St. George in 1918.

**BOTA.** See **LAW** in 1932.

**ROTARY CLUBS.** Organizations established for the purpose of developing the highest ideal of unselfish service; of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and countries in which they live; and of advancing international peace and goodwill through a fellowship of business and professional men of all nations united in the ideal of service. Membership in the clubs is limited to one representative of each business, profession, or institution in a community.

The twenty-third annual convention of Rotary International was held June 20-24, 1932, in Seattle, Wash. There were 5159 Rotarians and members of their families present, representing Rotary clubs in 55 countries. The 1933 convention is to be held in Boston, Mass., June 26-30. On Nov. 1, 1932, Rotary International consisted of 3537 clubs, with an approximate membership of 149,000. There were 2,443 clubs in the United States, 111 in Canada, 368 in Great Britain and Ireland, and 615 in other parts of the world.

Officers for 1932-33 were: president, Clinton P. Anderson, Albuquerque, N. M.; first vice-president, Biagio Borriello, Naples, Italy; second vice-president, G. Fred Birks, Sydney, Australia; third vice-president, Allen H. Bagg, Pittsfield, Mass.; secretary, Chesley R. Perry, Chicago, Ill.; treasurer, Rufus F. Chapin, Chicago, Ill. Headquarters of Rotary International are at 211 West Wacker Drive, Chicago, Ill., with a branch office at 74 Bahnhofstrasse, Zurich, Switzerland.

**ROUMANIA.** See **RUMANIA**.

**ROUND-TABLE CONFERENCE.** See **INDIA** under *History*.

**ROWING.** The trail of eight-oared rowing in 1932 led from early April through the Olympic games. It was the saga of a great University of California boatload that started its campaign in April, on the Oakland Estuary, by leading the University of Washington crew to the finish line, three miles away, by three hundred yards. The next step was training for the four-mile grind at Poughkeepsie, the intercollegiate championship regatta, and, with the slogan "A California Crew for the California Olympics" always before their eyes, the oarsmen kept in trim and in June, with that stroke that baffled the experts, swept under the bridge a good length ahead of Cornell with Washington in third place. The next step was the Olympic trials on placid Lake Quinsigamond at Worcester, Mass., where the Californians had to battle the Columbia alumni crew, and then the grand Penn A.C. eight, to the last inches to win the right to follow the ripples of that other California crew that had gone on to Olympic victory in the 1928 games at Am-

sterdam. The feat of the Golden Bears on the 2000 meters course at Long Beach for a thrilling Olympic triumph is well known and is described under OLYMPIC GAMES.

California dominated the rowing scene so thoroughly that the activities of other crews were almost forgotten. At New London, in the famous annual four-mile race on the Thames, a Harvard crew that had been only moderately successful in early season regattas, scored a decisive victory over Yale for the second season in succession. In the other early spring races Cornell, Syracuse, Pennsylvania had been powerful, the Quakers leading Wisconsin and Marietta over the new Marietta College course on the Ohio River, the scene of the first mid-America regatta. Yale, a good sprint crew, won the Blackwell and Carnegie Cups, and the Childs Cup fell to the Pennsylvania eight. Syracuse won both the junior varsity and the freshman races at Poughkeepsie; the Harvard junior varsity beat Yale, but the Yale freshman gave signs of embryo greatness in leading Harvard.

Cambridge maintained its long-lived superiority over Oxford in the annual race from Putney to Mortlake on the Thames. The Leander Club took the Grand Challenge Cup, the eight-oared prize at the Henley regatta. The world's professional singles sculls championship was won by Ted Phelps of Great Britain and the Diamond Sculls fell to Herbert Buhtz of Germany, a country progressing with amazing rapidity in rowing, as is Italy, second in the Olympics to California. The national eight-oared championship went to the veteran Penn A.C. crew which was trimmed by an inch by California in the Worcester trials. William Miller of the Penn A.C. won the national singles sculls and Kenneth Myers and W. E. Garrett Gilmore of the Bachelors Barge Club, Philadelphia teamed to win the double sculls title.

**RUANDA-URUNDI.** See CONGO, BELGIAN.

**RUBBER.** World rubber shipments for 1932 amounted to 704,127 long tons, as against 792,222 long tons in 1931; absorption amounted to 661,913 long tons as against 675,326 in the previous year. Foreign absorption showed a considerable increase, rising from 323,279 long tons in 1931 to 347,658 in 1932; while in the same period consumption in the United States declined from 352,047 long tons to 314,255. These figures are shown in the accompanying table furnished by the Rubber Division of the U. S. Department of Commerce.

	(Long tons)		
	1930	1931	1932
World shipments .....	816,133	792,222	704,127
World absorption .....	707,270	675,326	661,913
Foreign absorption .....	331,163	323,279	347,658
U. S. consumption .....	376,107	352,047	314,255
World stocks, December 31	486,928	619,906	698,595
U. S. stocks, December 31	201,000	322,000	399,303
U. K. stocks, December 31	118,562	127,149	92,674

The decline in the consumption of rubber in the United States and the increased absorption in foreign countries were traceable in part to lower prices, to an almost complete loss of footwear export trade to Japanese and Czechoslovak producers, and to the shift of tire export business from American to British and other foreign branch factories, which combined with foreign quota systems, exchange restrictions, and depreciated currencies to make exportation from

the United States more difficult. Although employment, numerically, was comparatively well maintained in American tire and footwear manufactures, imports of finished rubber goods were increased during 1932.

The world production based on the net exports from the leading rubber producing countries of the world in 1932 is indicated below.

WORLD PRODUCTION, 1931 AND 1932  
(Long tons)

	1931	1932
British Malaya .....	394,234	385,713
Ceylon .....	61,769	48,973

Amazon Valley .....	12,121	6,126
All other .....	3,292	1,816
Total .....	792,203	702,327

Rubber absorption in the United Kingdom in 1932 registered an increase of 10.5 per cent over that for 1931 and reached the highest point in the history of the British rubber industry, and quadrupling in nine years from 21,914 long tons in 1924 to 84,639 tons in 1932. Each year in the period showed an increase over the previous year, the largest jump occurring in 1929 with a total absorption of 72,023 tons as compared with 48,509 in 1928. To a large extent the increase resulted from the activities of branch manufactures of American rubber companies which brought the United Kingdom into the position of the second largest consumer of rubber, the United States still holding the lead.

The absorption of rubber for the years 1930, 1931, and 1932 by the leading import countries is indicated in the table below, and shows the trend of increase or decrease, although the amount in 1932 for Australia is not available.

CRUDE RUBBER ABSORPTION OF PRINCIPAL  
MANUFACTURING COUNTRIES  
(Long tons)

	1930	1931	1932
United States .....	376,107	352,047	314,255
United Kingdom .....	74,760	76,583	84,639
Canada .....	28,793	25,261	19,000
France .....	68,503	46,466	60,000
Germany .....	45,488	39,688	41,000
Russia .....	16,229	30,671	25,000
Japan .....	32,731	43,483	53,000
Australia .....	5,354	7,649	...
Czechoslovakia .....	4,582	7,717	9,463

The rubber requirements of individual foreign countries were influenced in various directions by the events of the year. American exports of every class of finished rubber products declined more than average for countries engaged in international trade in similar lines, as a result of the protectionist policy increasingly in vogue among the nations of the world. Foreign factories made up the deficiency. French absorption declined, while that of Germany increased—Germany reduced imports of rubber goods and maintained exports fairly well, while France was affected more by loss of exports in competition with countries having depreciated currencies. The sharp drop in Russian takings toward the end of the year made it unlikely that they will equal the 1931 total in 1932. Rubber requirements of Japan

increased as a result of the predominant position gained by that country in international trade in rubber footwear, and the Czechoslovak rubber industry was increasing its requirements steadily. The transfer of export business from Canadian to British factories by some American companies, and the further decline in Canadian domestic business, account for the decline in Canadian rubber imports.

The consumption of rubber in the manufacture of tires and tire sundries in the United States in 1932, compiled by the statistical department of the Rubber Manufacturers' Association and comprising 80 per cent of the industry indicated a further decrease in output over preceding years. The following tabulation covers consumption by long tons for the past three years:

**CRUDE RUBBER CONSUMED IN THE MANUFACTURE OF TIRES AND TIRE SUNDRIES**

[The Rubber Manufacturers Association]

(Long tons)

	1932	1931	1930
Automobile and Motor Truck Pneumatic Casings . . .	194,570	212,861	224,211
Automobile and Motor Truck Pneumatic Tubes . . . . .	32,371	40,008	46,224

<b>Total Tires and Tire Sundries . . . . .</b>	<b>233,476</b>	<b>260,516</b>	<b>280,989</b>

\* Included in Automobile and Motor Truck Pneumatic Casings.

The total value of tires and tire sundries, as shown in the foregoing table indicate greater shrinkages than do the consumption figures. The total production of 1930, involving a rubber consumption of 280,989 long tons, was valued at \$518,786,000; the production of 1931 had a valuation of \$402,927,000; while that for 1932 shrank to \$292,201,000.

The consumption of rubber by other rubber products in long tons, from the same statistical source, is shown below:

**CRUDE RUBBER CONSUMED IN OTHER RUBBER PRODUCTS**

[The Rubber Manufacturers Association]

(Long tons)

	1932	1931	1930
Mechanical Rubber Goods . . .	14,912	17,985	18,719
Boots and Shoes . . . . .	12,482	11,269	14,766

Miscellaneous, not included in any of above items . . . . .	4,717	4,572	3,934
<b>Total . . . . .</b>	<b>55,974</b>	<b>58,433</b>	<b>60,441</b>

The values of these products showed similar shrinkages: 1930, \$284,342,000; 1931, \$209,650,-

000; 1932, \$146,270,000. See CHEMISTRY, INDUSTRIAL.

**RUINS.** See ARCHAEOLOGY.

**RUMANIA.** A constitutional monarchy of southeastern Europe; bounded on the south by the Danube River and Bulgaria; on the east by the Soviet Union and the Black Sea; on the north by Poland, Czechoslovakia, and Hungary, and on the west by Yugoslavia. Capital, Bucharest; reigning sovereign in 1932, Carol II.

**AREA AND POPULATION.** Rumania has an area of 113,887 square miles, of which 60,643 square miles were added by the treaties of peace of 1919. The population at the census of 1930 totaled 18,025,237, as compared with 7,234,919 at the census of 1912. Births averaged 612,180 annually over the five-year period 1926-30 and deaths 368,357. The birth rate per 1000 inhabitants averaged 34.2 and the death rate 20.6. The population of the chief cities at the 1930 census was: Bucharest (Bucuresti), 631,288; Chişinău (Kishinev), 117,016; Cernăuţi (Czernewitz), 111,122; Galaţi, 101,148; Iaşi (Jassy), 102,595; Cluj (Klausenburg, Kolozsvár), 98,550.

**EDUCATION.** While elementary education is nominally compulsory, there are no schools in many districts. The enrollment in primary schools in 1929-30 was 1,885,783; in secondary schools, 161,502; in universities, 37,604. The four universities are at Bucharest, Iaşi, Cluj, and Cernăuţi.

**PRODUCTION.** Three-fourths of the population derive a livelihood from the soil. In 1931, there were 33,324,000 acres of arable land, or about 46 per cent of the total area; 10,019,000 acres of permanent meadow and pasture; 1,516,000 acres of trees, shrubs, and bushes; and 17,851,000 acres of woods and forests. About 38 per cent of the arable area was devoted to cereals. Agriculture was in a critical condition in 1932, due to low prices and reduced demand. Production of the chief crops in 1931 was: Wheat, 135,295,000 bushels; rye, 13,962,000 bushels; barley, 64,964,000 bushels; oats, 46,175,000 bushels; corn, 250,384,000 bushels; potatoes, 87,302,000 bushels; sugar beets, 310,000 metric tons; beet sugar, 43,000 tons; tobacco, 24,926,000 pounds. Livestock on farms in 1930 included 3,834,000 cattle, 117,000 buffaloes, 2,323,000 swine, 11,921,000 sheep, and 1,820,000 horses, mules, and asses.

Rumania in 1931 ranked fourth among the petroleum-producing countries of the world, the output being 47,600,000 barrels (3.5 per cent of the world total), as against 41,624,000 barrels in 1930. The quantity of oil exports was 30 per cent higher than in 1930, reaching 4,850,000 metric tons, but low prices rendered the industry unprofitable. The total value of mineral and metal production in 1930 was \$62,621,000 (\$72,203,000 in 1929), of which petroleum contributed \$39,313,000, coal and lignite \$10,703,000, salt \$3,960,000, natural gas \$3,382,000, pig iron \$1,560,000, and gold \$1,776,000. Production of coal in 1930 was 299,000 metric tons; salt, 676,662,000 pounds; iron ore, 92,517 metric tons; pig iron, 68,843 metric tons; steel ingots, 161,800 metric tons; copper, 373,109,000 pounds. Manufacturing industries in 1929 employed a total of 201,000 wage earners, and 498,000 horse power, the value of production being \$336,773,000 (converted at par). Lumbering was an important industry. The number of registered unemployed at the end of June, 1932, was 34,000.

**COMMERCE.** Imports in 1931 declined to 15,858,948,000 lei (\$94,361,000), from 22,540,929,000 lei (\$134,119,000) in 1930, while exports fell to 22,085,224,000 lei (\$131,407,000), from 28,525,585,000 lei (\$169,727,000) in 1930. Exports increased 9 per cent in quantity, despite a 23 per cent decline in value; the decline in import values was 31 per cent. There was an export surplus equal to \$37,358,000. The leading imports in 1930, in order of value, were cotton cloth and other textiles, iron and steel, cotton yarn and thread, and machinery. Leading exports, in the same order, were gasoline and benzine, corn, barley, construction wood, gas and fuel oil, kerosene, wheat, and cattle. United States statistics show exports to Rumania in 1931 of \$2,200,000 (\$4,900,000 in 1930), and imports from Rumania of \$600,000 (\$300,000 in 1930).

**FINANCE.** State revenues declined steadily during the 1931 fiscal calendar year and although expenditures were drastically curtailed, a deficit of 1,662,000,000 lei (about \$10,000,000) resulted. Receipts totaled 26,635,000,000 lei (\$159,000,000) and expenditures 28,297,000,000 lei (\$169,000,000), as contrasted with the 1930 revenues of 31,155,000,000 lei (\$186,000,000) and expenditures of 31,591,000,000 lei (\$189,000,000). In line with declining revenues, the 1932 ordinary budget estimates were reduced to 25,429,000,000 lei (\$152,000,000), of which the service of the public debt absorbed 24 per cent. In addition, an extraordinary budget was introduced, with estimated revenues of about 3,089,000,000 lei (\$18,534,000) and proposed expenditures of 11,170,000,000 lei (\$67,020,000). The extraordinary budget was to be administered by a newly created amortization office, whose main function was to liquidate all past due obligations of the Treasury from preceding budgets, aggregating about 10,000,000,000 lei (\$60,000,000). The Cabinet announced Nov. 20, 1932, that the beginning of the 1933 fiscal year would be postponed from January 1 to April 1 and that the 1932 budget would be extended by royal decree for the intervening three months.

According to the official 1930 budget statement, the public debt on Jan. 1, 1930, was \$1,021,690,000, of which \$917,176,000 represented the external debt. The debt due the United States government on Dec. 31, 1931, was \$3,861,000. The unit of currency is the leu (plural, lei), which was stabilized at \$0.00598 U. S. currency on Feb. 7, 1929. The exchange value averaged \$0.00595 in 1930 and 1931.

**COMMUNICATIONS.** In 1931, there were 6971 miles of line in the state railway network; these lines carried 30,944,000 passengers and 20,491,000 metric tons of freight during the year, earning gross revenues equivalent to \$57,924,000. As compared with 1930, freight traffic declined about 15 per cent and revenues from all traffic about 17 per cent. The telegraph system is government owned and operated, but the telephone system was leased to the International Telephone and Telegraph Company in 1930. The merchant marine on June 5, 1931, consisted of 31 steam and motor vessels of 100 gross tons or more, with a total gross tonnage of 65,921. Highways in 1931 extended 66,212 miles, of which 36,458 miles were macadam.

**GOVERNMENT.** The Constitution of Mar. 28, 1923, nationalized the forests and subsoil. It vested executive power in the King and a council

of ministers, the King having a suspensive veto over laws passed by parliament. Legislative power was vested in a parliament, consisting of a senate of 187 elected and various *ex officio* and appointed members and a chamber of deputies of 388 elected members. The term of elected senators and deputies is four years. The composition of the Chamber of Deputies following the elections of June 1 and 4, 1931, was: National Union (government bloc), 211; National Liberals, 80; National Peasant party, 30; Liberals (George Bratianu), 12; Hungarians, 11; People's party (Marshal Averescu), 10; National Christian Defense League, 9; Peasants (Dr. Lupu), 7; Socialists, 7; Stere and Anti-Usury League, 6; Jews, 5. The composition of the Senate (elected members) was: National Union, 129; National Liberal, 39; National Peasant, 8; Hungarians, 4; Liberals (George Bratianu), 1; Independents, 6. The Cabinet formed Apr. 19, 1931, was headed by Professor Nicholas Jorga as Prime Minister and Minister of Education and of the Interior. Other members included: Finance, Dr. C. Argetoianu; Foreign Affairs, Prince Demetre Ghica; Transport and Justice, M. V. Valcovici. For changes in 1932, see *History*.

## HISTORY

**ECONOMIC CONDITIONS.** Although the year 1931 was considered the most difficult experienced by the Rumanian economic system since the World War, conditions steadily deteriorated throughout 1932. Sagging prices of the country's leading export commodities, the rigid curtailment of imports, the deadening effect of tariff and exchange restrictions in neighboring countries, and the grinding poverty of the peasant masses placed an acute strain upon the economic and financial system. The seriousness of the situation was revealed by the partial moratorium on foreign debt payments announced on Dec. 22, 1931.

By June of 1932 army pay as well as civil service salaries were months in arrears. Many leading industries were unable to collect some \$65,000,000 due on government contracts. In an effort to meet the agricultural crisis, the Jorga Ministry espoused and secured the passage by Parliament on April 14 of a proposal of Finance Minister Argetoianu to convert the agricultural short-term debt into 30-year bonds at 4 per cent. This plan was vigorously opposed by France, Great Britain, the Netherlands and Switzerland on the ground that such legislation would cause the depreciation of the leu, which had been stabilized with their financial assistance. The Liberal party and the Rumanian bankers also objected. On May 18, the government was forced to follow the example of the other Central European states and restrict dealings in foreign exchange in order to check speculation and loss of gold reserves. A final blow came in the form of a report on Rumanian finances by M. Charles Rist, of the Bank of France, which ended hopes of securing a new loan from Paris. The report disclosed that the government lacked funds to pay half the civil service salaries. It criticized Rumanian financial policy, recommended a reduction in civil servants as well as a 50-per-cent salary cut, and suggested that an appeal for aid be carried to the League of Nations.

**POLITICAL DEVELOPMENTS.** Confessing its failure to cope with the situation, the Jorga Ministry resigned on May 31. Nicholas Titulescu,

Rumanian Minister to London, attempted in vain to form another non-party cabinet. The King was forced to turn once more to the National Peasant party, which he had been instrumental in ousting from power in 1930 and 1931. On June 8 Alexander Vaida-Voevod formed a ministry composed exclusively of members of the National Peasant party. He immediately dissolved Parliament, which had a hostile majority, and called new elections for July 17. In contrast to the preceding election of June 1, 1931, the election of July 17 was reported to have been remarkably free of fraud and intimidation. The National Peasants won a sweeping victory, the vote demonstrating the popular opposition to King Carol's attempts at personal rule. The Peasant party won 277 out of 388 seats in the Lower Chamber and secured 45 per cent of the total popular vote, as against 15 per cent in the 1931 election. The Duca wing of the National Liberals won 28 seats, the Bratianu wing 13, the Hungarian party 14, the Anti-Semites 11, the Socialists 6, and other parties 38. Senatorial elections, held later in July, showed a similar trend.

On August 10, the National Peasant ministry, which had been provisional in nature, resigned and the King offered the Premiership to Julius Maniu, the party's outstanding leader, who had gone into retirement following his break with King Carol in 1930. Maniu refused, although he announced that he would resume active leadership of the National Peasant party. Dr. Vaida-Voevod accordingly formed a new government which included a number of the party's leaders left out of his former cabinet. With the political situation temporarily stabilized, the Premier appealed to the League of Nations, asking an investigation and expert report on Rumania's finances. In September the League responded by sending a group of experts to study the situation.

**SOVIET-RUMANIAN NEGOTIATIONS.** Hardly had they arrived when a new political crisis developed in connection with Soviet-Rumanian negotiations for a non-aggression pact. Moscow's demand that the proposed pact include a provision for arbitration of the dispute over Bessarabia (q.v.) was favorably considered by Premier Vaida-Voevod. The negotiations were said to have the approval of both France and Poland, military allies of Rumania, who appeared eager to establish closer relations with the Soviet Union as a counterweight to the nationalist and anti-treaty movement in Germany.

On September 26, M. Titulescu resigned as Minister to Great Britain and as head of the Rumanian delegation to the League of Nations. He objected to the arbitration clause in the proposed pact with the Soviet Union and declared that he had not been informed of the negotiations. The outstanding Rumanian diplomat, M. Titulescu's prestige was so great that Premier Vaida-Voevod offered him the portfolio of Foreign Affairs in order that he might personally conduct the Soviet negotiations. Titulescu accepted the post, but he and the Premier failed to reconcile their views and on October 16 most of the Cabinet, including the Premier, resigned.

M. Maniu was again requested to form a new Cabinet, and this time he accepted. His cabinet, announced on October 20, included M. Titulescu as Foreign Minister. Except for the Ministers of Trade and of Transylvania, the new government was identical with that of Premier Vaida-Voevod.

Apparently Premier Maniu supported the general position of M. Titulescu. While the latter resumed negotiations with the Soviet government on October 29, he announced in Parliament November 23 that the negotiations had been broken off, owing to the impossibility of reaching an agreement over Bessarabia. This divergence of policy from that of France and Poland, both of which signed and ratified non-aggression pacts with the Soviet Union, aroused much alarm in Rumania. However, at the Little Entente conference in Belgrade December 1, M. Titulescu announced that no departure from Rumania's traditional policy of collaboration with France was involved (see FRANCE and POLAND under *History*).

**OTHER FOREIGN RELATIONS.** The third annual Balkan conference, established to promote co-operation and eventually some form of union among the Balkan states, was held in Bucharest October 22-25. Representatives of Bulgaria, Greece, Albania, Rumania, Turkey, and Yugoslavia attended, as did observers of the League of Nations. The conference failed to achieve unanimity on a proposed Balkan pact. The Bulgarian delegation withdrew when the other delegates, with the exception of the Albanians, rejected the Bulgarian request that an agreement on the protection of minorities be reached before beginning the debate on the Balkan pact.

Rumors that Rumania was drifting away from her alliances with France and the two other Little Entente countries were scotched when a special conference of the Foreign Ministers of the Little Entente—Czechoslovakia, Yugoslavia, and Rumania—was held at Belgrade commencing December 18. A communiqué at the end of the conference reported complete unity and announced the appointment of a permanent council consisting of the three Foreign Ministers; also of a permanent secretariat, located at Geneva. The closer ties established were forged by the increasing threat of forcible revision of the territorial clauses of the Versailles Treaty (see GERMANY and ITALY under *History*).

**DEVELOPMENTS AT COURT.** Friction between King Carol and his divorced wife, Princess Helen, over the care and custody of their son, Crown Prince Michael, was extensively aired in the European press during the year. In September, Michael was permitted to visit his mother in London. When after two weeks he suddenly left for Rumania, Princess Helen issued a statement declaring that his holiday with her had been cut from six weeks to two and that "to intimidate me still further the threat has been made that he will never be allowed to see me again." On October 23, Princess Helen returned to Bucharest to be with her son on his eleventh birthday. Before leaving for Florence, Italy, on November 3, she was reported to have reached an agreement with King Carol regarding financial matters and the right to visit Michael.

Consult Joseph Slabey Roucek, *Contemporary Roumania and Her Problems* (Stanford University Press, 1932).

**RUSSELL SAGE FOUNDATION.** An institution created by Mrs. Russell Sage as a memorial to her husband. The initial endowment was \$10,000,000, to which \$5,000,000 was added by her will. Its purpose, as specified by its charter, is "for the improvement of social and living conditions in the United States of America."

The members of the staff of the foundation

study social conditions and methods of social work, interpret the findings, make the information available through publications, conferences, and other means of public education, and in various ways stimulate action for social betterment. A little more than 50 per cent of the income of the foundation was expended in 1932 for the support of its administration and of work carried on by its departments of charity organization, industrial studies, library, recreation, remedial loans, statistics, surveys, and exhibits, its consultation service on delinquency and penology, and the production of its *Social Work Year Book*. The remainder was expended through grants to other agencies with kindred purposes.

While the foundation has for some time been carrying on as a part of its programme a certain amount of work bearing upon problems of unemployment, such as the improvement of public statistics relating to employment, and the systematic collection of statistics of relief work in some 80 cities of the United States, it has also given special attention to other problems relating to the present unemployment emergency, particularly to aspects in which its experience has seemed to be of value and to have qualified its staff to offer constructive advice. This includes experimental sampling studies in cities of the amount and distribution of unemployment, in an effort to develop detailed methods for use in similar local unemployment surveys; a series of studies of trends of employment in the past two decades in a number of leading countries; fact-gathering as to the experience of representative cities in supervising and administering unemployment relief; assistance, personally and by publication, in planning campaigns to inform and interest the public regarding the needs of the unemployed, and methods of coöperating in their relief; and investigating and making available various recreational projects throughout the country designed to keep up the public morale of the unemployed and prevent possible delinquency, in which the unprecedented compulsory free time of the unemployed may be a factor.

During recent years the foundation has published the following pamphlets and books on various aspects of the unemployment problem: *Community Planning in Unemployment Emergencies*; *Setting Up a Programme of Work Relief*; *Emergency Work Relief*; *The Incidence of Work Shortage*; *Public Employment Offices*; *Employment Statistics for the United States*; *Unemployment Relief*; *Unemployment Relief in the United States and Canada*; *Labor and Industry*; and *Costs and Standards of Living*. The last four of these are bibliographies. Other of its publications during 1932 are: *Immigrant Gifts to American Life*; *Plans for City Police Jails and Village Lockups*; and *Small Loan Legislation*.

The foundation's trustees are: Lawson Purdy, vice-president and treasurer; John M. Glenn, secretary; Johnston de Forest, Frederic A. Delano, John H. Finley, Mrs. Frederic S. Lee, Mrs. Finley J. Shepard, and Harold T. White. Shelby M. Harrison is general director. Headquarters are at 130 East Twenty-second Street, New York City.

**RUTGERS UNIVERSITY.** A nonsectarian institution of higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The university consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, and New Jersey College for Women. The registration for the autumn of 1932 was 2689, of whom 1070 were registered at the college for women. Enrollment in the 1932 summer session was 1861. Of the 297 members of the faculty, 176 were professors and 121 instructors. The endowment funds amounted to \$4,350,000, and the income for the year, exclusive of the State agricultural experiment station, amounted to \$3,148,230. Lands, buildings, and endowments had a total valuation of more than \$19,579,506. The library contained 175,000 volumes. In June, 1931, a division of physical education, which included the departments of physical education, inter-collegiate athletics, and student health, was established. A gymnasium, erected at a cost of \$700,000, was opened in December of that year. President, Robert C. Clothier, LL.D.

**RUTHENIA.** A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

**RYE.** The 1932 production of 27 countries reporting to the International Institute of Agriculture, not including the Soviet Republics and the countries of the southern hemisphere, was estimated at 96,008,000 bushels, or 22.1 per cent above the crop of 1931 and 8.4 per cent above the average annual yield of the five years 1926-1930. The acreage of these countries, 46,150,000 acres, was only slightly above that of the preceding year. The production of the leading countries other than the United States was estimated as follows: Germany 329,262,000 bushels, Poland 252,399,000 bushels, Czechoslovakia 85,661,000 bushels, and France 35,188,000 bushels. The total crop of Europe outside of the Soviet Republics was placed at 934,370,000 bushels, or 21.6 per cent above the preceding year's crop and 9.1 per cent above the five year average. For the Soviet Republics an average annual yield of 878,629,000 bushels was recorded for the five year period and the acreage of 1932 was placed at 65,731,000 acres. The Canadian crop was estimated at 9,937,000 bushels which was 86.7 per cent above the yield of 1931 but 35.9 per cent below the five year average. Argentina, where the crop is harvested in December, produced 9,744,000 bushels in the crop year 1931-1932.

The production of rye of the United States in 1932 was estimated by the Department of Agriculture at 39,855,000 bushels as compared with 32,026,000 bushels in 1931. The acreage harvested for grain was placed at 3,271,000 acres, an increase of 7 per cent over the harvested acreage in the preceding year but 238,000 acres under the five year average of 1924-1928. The yield per acre, 12.2 bushels, was slightly below the ten year average for 1919-1928. The yields of the leading States among 33 reporting rye production were reported as follows: North Dakota 11,440,000 bushels, South Dakota 7,125,000 bushels, Minnesota 4,960,000 bushels, Wisconsin 2,832,000 bushels, and Nebraska 2,830,000 bushels. These States produced 73 per cent of the

total production. In North Dakota and South Dakota where in 1931 drought greatly reduced acreage and yield a favorable growing season doubled the crop as compared with the preceding year.

The rye exports of the United States for the fiscal year ended June 30, 1932, were recorded as 852,000 bushels of grain and 10,000 barrels of flour in comparison with 179,000 bushels of grain and 8000 barrels of flour during the preceding fiscal period. Steps were taken during the year to prevent the sale of seed of inferior varieties misbranded as seed of Abruzzi, a variety of superior value.

**SAAR BASIN.** A section of the German Rhineland, which, under Article 45 of the Versailles Treaty, was awarded to France for exploitation of its coal fields, as compensation for the destruction of the coal fields in northern France by the German armies. Area, 737 square miles; population (1927 census), 770,030. Mineral production in metric tons for 1931 was: Coal, 11,367,000; pig iron, 1,515,429; steel, 1,539,346. The Saar is administered by a commission appointed by the League of Nations.

**SAASTAMOINEN, ARMAS HERMAN.** A Finnish industrialist and diplomat, died in London, Oct. 20, 1932. Born in 1886, he became one of the leaders of the Finnish lumber industry. During 1915-18 he took a prominent part in the national independence movement. He was Finnish minister to Denmark in 1918; to Washington, 1919-21; to Great Britain, 1926; and to The Netherlands, 1926-32. He was elected to the Finnish Parliament in 1924.

**SAFETY AT SEA.** An early ratification by the U. S. Congress of the International Convention on Safety of Life at Sea was urged by A. J. Tyrer, Commissioner of the U. S. Bureau of Navigation in his report for the fiscal year ending June 30, 1932, to the Secretary of Commerce.

The Supervising Inspector General, Dickerson N. Hoover, of the Steamboat Inspection Service, in his annual report, indicated that travel by American vessels was relatively safer in the fiscal year ending June 30, 1932, than in the previous year. In the past fiscal year, there were 262,640,219 passengers carried on vessels of this type. Of that number, 55 were lost. This is in the ratio of one lost for every 4,775,276 passengers carried safely on all types of voyages and under all weather conditions.

On Aug. 3, 1932, in accordance with economy legislation enacted by Congress, the Bureau of Navigation and the Steamboat Inspection Service were merged into one bureau, the Bureau of Navigation and Steamboat Inspection.

The number of persons saved or rescued from peril during the fiscal year 1932, according to the Annual Report of Rear Admiral H. G. Hamlet, Commandant of the U. S. Coast Guard, was 5214, being 413 less than in 1931. There were 30,847 persons on board vessels assisted as against 25,898 in 1931, being an increase of 4949. The number of persons in distress cared for increased from 561 in 1931 to 659 in 1932. The number of vessels boarded and examined by service agencies during the year in the interests of the enforcement of the laws of the United States was 102,268. In the previous year the number was 88,357. The vessels seized or reported for violations of law numbered 2358, a decrease of 571 under the preceding year. The fines and penalties incurred

by vessels reported showed a decrease from \$369,341 in 1931 to \$300,756 in 1932. The total number of instances of assistance rendered during the year was 13,739.

Among the accidents recorded during the year 1932, the more notable include the following:

January 26. The British submersible *M-2*, with six officers and 54 men, while exercising off Portland Bill, Eng., sank from unknown causes, with no survivors.

February 24. The Norwegian freighter *Aggersund*, damaged by heavy gales, was abandoned by her crew four days later, 600 miles off Cape Race.

May 16. The French motorship *Georges Philpar*, on its maiden trip returning from Indo-China with 663 passengers, was destroyed by fire at the entrance to the Gulf of Aden; 41 lives were lost.

June 8. The Spanish steamship *Teide* with 700 passengers ran aground and wrecked on the coast of West Africa, passengers and crew were saved by the British *S.S. Appam*.

June 17. In drydock for repair, the British tanker *Cymbeline* was destroyed by explosion and fire, 23 were killed and 63 injured.

June 30. The bark *Melbourne*, in collision with the tanker *Seminole* off Fastnet, sank; 11 drowned.

July 26. The German naval training ship *Niobe*, capsized in a squall in the Baltic; 69 were drowned, including 50 cadets.

September 9. The steamboat *Observation*, crowded with workmen for construction on Rikers Island, N. Y. harbor, was blown to pieces by a boiler explosion; 70 were killed and 70 injured.

December 5. The Japanese destroyer *Swarabi* capsized in a storm off Formosa; 105 lost, 16 rescued.

**SAFETY MOVEMENTS.** See NATIONAL SAFETY COUNCIL.

**SAGHALIEN.** See SAKHALIN.

**ST. CHRISTOPHER.** See LEEWARD ISLANDS.

**ST. GOTHARD RAILWAY.** See ELECTRIC TRANSPORTATION.

**ST. HELENA.** An island of volcanic origin in the South Atlantic, about 1200 miles from the west coast of Africa, belonging to Great Britain. Area, 47 square miles; estimated civil population, Jan. 1, 1931, 3905. Capital and seaport, Jamestown.

**ST. JOHN'S COLLEGE.** A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the first half-year of 1932-33 was 297. There were 29 faculty members. The endowment fund as of July 1, 1932, amounted to \$233,711, and the income for the year ending June 30 was \$316,664. The library contained 25,996 volumes. President, Douglas H. Gordon.

**ST. LAWRENCE UNIVERSITY.** An institution for the higher education of men and women in Canton, N. Y., founded in 1856. The registration for the autumn term of 1932 was 2059. The faculty numbered 129 members. The endowment funds amounted to \$4,921,001, and the income for the year to \$247,793. President, Richard Eddy Sykes, D.D.

**ST. LAWRENCE WATERWAY.** See UNITED STATES under *Administration*; NEW YORK under *Political and Other Events*; CANALS; WATER POWER; CANADA under *History*.

**ST. LOUIS CITY ART MUSEUM.** See SCULPTURE.

**ST. LUCIA,** 165'shi-à. A British insular colony in the Windward group of the West Indies. Area, 233 square miles; population in 1929, 58,494. Castries is the capital (population 5899).

**ST. PATRICK, ANNIVERSARY OF LANDING IN IRELAND.** See CELEBRATIONS.

**ST. PIERRE AND MIQUELON,** mē-ke-lōn'. Two small groups of islands belonging to France,

situated close to the southern coast of Newfoundland, and named from their two largest islands. Area of St. Pierre group, 10 square miles; of Miquelon group, 83 square miles; total population (1931 census), 4321. St. Pierre, the capital and chief port, had 3464 inhabitants.

**ST. THOMAS.** See SÃO THOMÉ AND PRINCEPE; VIRGIN ISLANDS.

**ST. VINCENT.** A British insular colony in the Windward Islands group of the West Indies. Area, 150.3 square miles; population in 1930, 53,228. Kingstown, with a population of 3836 in 1921, is the capital.

**SAKHALIN (SAGHALIEN)** sâ'ká-lyên'. See KARAFUTO.

**SALES TAX.** See TAXATION.

**SALVADOR,** sál'vá-dör' (EL SALVADOR). A Central American republic fronting the Pacific Ocean, whose land frontiers are contiguous with those of Guatemala and Honduras. Capital, San Salvador.

**AREA AND POPULATION.** The area is estimated at 13,176 square miles; the population in 1930 was 1,437,611. The mestizos, or persons of mixed race, numbered 1,000,000 or more. San Salvador had a population of 95,700 in 1930. Other large towns were: Santa Ana, 74,800; San Miguel, 39,800; San Vicente, 24,500; and Ahuachapán, 28,117. For the period 1926 to 1930, births averaged 62,832 annually and deaths 33,289, the birth rate being 39 per 1000 and the death rate 20.5.

**EDUCATION.** The annual report of the Secretary of Public Instruction showed 924 official, 85 municipal, and 119 private elementary schools in 1931, with an average attendance of 40,078 and a total enrollment of 56,826. There were 1119 students in secondary schools and about 411 in the National University.

**PRODUCTION.** Coffee, which furnished 95 per cent of the value of all exports in 1931, is the chief source of national income. The 1930-31 coffee crop was the largest in the country's history, totaling 165,345,000 pounds (143,343,000 pounds in 1929-30); a 40 per cent decline was estimated for 1931-32. The average price for all grades of coffee in 1930-31 was about 26 per cent less than in the previous year. The 1931 coffee exports amounted to 119,950,000 pounds (129,238,000 pounds in 1930). Sugar production was 70,700,000 pounds in 1931 (75,237,000 pounds in 1930); henequen, about 2,000,000 pounds in 1931. Gold and silver are mined, but operations were at a virtual standstill in 1932. Sugar grinding, coffee cleaning, and the production of shoes and textiles are the chief industries.

**COMMERCE.** Salvador's imports in 1931 were valued at \$7,293,000, as against \$11,953,000 in 1930, and exports at \$11,378,000 compared with \$13,657,000 in 1930. The value of the chief 1931 export items was: coffee, \$10,848,000 (\$11,957,000 in 1930 and \$22,741,000 in 1928); henequen fibre, \$158,000 (\$196,000 in 1930); sugar, \$42,000 (\$773,000 in 1930). Cotton fabrics, iron and steel, machinery, and wheat flour are the chief imports. The United States in 1930 supplied 49.3 per cent of the total imports; the United Kingdom, 13.2 per cent; and Germany, 9 per cent. Of the total exports, 29.5 per cent went to Germany; 23.4 per cent to the United States. Exports to the United States in 1932 were \$1,143,495 (\$2,231,125 in 1931); imports from the United States, \$2,289,155 (\$3,483,153).

**FINANCE.** The 29 per cent decline in foreign trade in 1931, as compared with 1930, was re-

flected in an 8 per cent decline in customs revenue. Ordinary revenues for 1931 were reported at 17,599,078 colones, as against 21,964,881 colones in 1930, while ordinary expenditures were 17,446,681 colones, against 23,048,451 colones in 1930. Revenues declined nearly 20 per cent and expenditures 24 per cent. Although the above figures, issued by the subsecretary of finance and public credit, showed a budget surplus, a deficit of about 5,000,000 colones was estimated for the fiscal year ended June 30, 1932. The colon, par value \$0.50, exchanged at an average of 2.07 colones to the dollar during 1931.

The public debt on Apr. 30, 1932, amounted to \$23,577,807 at par of exchange, of which \$17,393,299 represented external bonds, according to the Institute of International Finance, New York. On Feb. 27, 1932, the government issued a decree postponing service on the foreign debt. However, interest was paid July 1, 1932, and Jan. 1, 1933, on the Series A external bonds, of which \$3,879,500 was outstanding. There was default on interest and sinking-fund payments on Series B bonds (\$4,414,999) and Series C (\$9,098,800). The service of the external debt during 1931 amounted to \$1,771,887. An agreement between a bondholders' protective committee and agents of the republic for payment of interest on the Series B and C bonds in 6 per cent short-term scrip was announced in New York City Dec. 2, 1932.

**COMMUNICATIONS.** Railway lines in operation during 1931 aggregated 375 miles, of which 285 miles constituted the Salvador division of the International Railways of Central America. The railways in 1931 carried 734,000 passengers and 259,000 short tons of merchandise. Arrivals and departures by air transport were 524 and 473, respectively. The Salvadorean section of the Pan American highway (205 miles) was virtually completed in 1931. There were 1476 miles of highways in all. Cutuco, the chief port, handled about 67 per cent of the imports and 31 per cent of the exports.

**GOVERNMENT.** Executive power is vested by the constitution in a president elected for four years, who acts through a ministry of four members, and legislative power in the Congress of 42 members elected for one year by universal suffrage. Provisional President in 1932, Gen. Maximiliano Hernández Martínez, who was appointed Dec. 2, 1931, by a military directorate following the overthrow of the constitutional régime of President Arturo Araujo by revolution.

**HISTORY.** Gen. Maximiliano Hernández Martínez, who assumed the Presidency following the successful military revolt against President Araujo of Dec. 3, 1931, held his post throughout 1932 despite a serious revolt in January and the opposition of the United States State Department, which refused to extend recognition to the Martínez régime. The January revolt broke out in the form of serious agrarian disturbances on January 22. While loyal troops were occupied in coping with this situation a revolt occurred simultaneously in a number of towns (January 24). The uprising, which appeared to be of a planned rather than a spontaneous nature, was reported to be of communist origin. Sanguinary fighting, in which about 600 were killed, took place before the revolt was finally quelled. In the meantime, vessels of the U. S. Navy Special Service Squadron were dispatched to Salvadorean ports as a precautionary measure for the protection of Americans and other nationals. Brit-

ish and Canadian naval vessels were also on hand. However, it was found unnecessary to land naval forces.

Although General Martínez, as Vice President in the Araujo government, was eligible to succeed President Araujo under the Salvadorean Constitution and his régime was popular in the country, recognition was refused by Washington on the ground that he was ineligible under the Central American non-recognition treaties of 1923 to which the United States government adhered. On Feb. 29, 1932, the Martínez government suspended service on the external debt which had been floated in New York and for which the Metropolitan Trust Company of New York, later merged with the Manufacturers Trust Company, was fiscal agent. The loan contract provided for the establishment of a customs receivership in the event of default, but efforts to enforce the default provisions could not succeed while the Salvador government remained unrecognized. Early in October the British and French governments extended recognition to the Martínez régime, despite opposition from the United States government, and recognition from Spain, Poland, Belgium, and Ecuador followed immediately. According to a statement by the Under-Secretary for Foreign Affairs in the House of Commons October 26, the British action was taken "because the present government of El Salvador has given evidence of stability and in order that there might be more effective representation of British commercial and financial interests in that country."

The National Congress of Salvador, on February 5, had declared President Martínez the constitutional head of the state and confirmed him in office for a four-year period.

**SALVATION ARMY, THE.** A world-wide organization with international headquarters in London, England, whose sole purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The movement was first organized as a mission in the East End of London in 1865 by William Booth, a minister of the New Connexion Methodists. It spread rapidly throughout England and in 1880, as the Salvation Army, was extended to the United States. Incorporation took place in New York City in 1899. The government is military in character and in 1932 was under the command of Gen. Edward J. Higgins. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner and subdivided into divisions consisting of corps, posts, and institutions under the direction of officers of varying ranks. The United States has four territories, with headquarters in New York City, Chicago, San Francisco, and Atlanta. The Salvation Army is active in 83 countries and colonies and preaches the Gospel in 74 languages.

The economic depression which persisted during 1932 resulted in a continuous demand by communities and governing circles throughout the country on the resources of the Salvation Army. Never before in its history had the army been called upon for service in so many directions. The result was the establishment of large emergency relief schemes, principally in the urban districts. This expression of national confidence in the Salvation Army imposed a severe strain on all ranks of the personnel, but the extra labors were cheerfully accepted.

Hostels for unemployed homeless men, some accommodating over 2000, were organized. The family welfare service was expanded to meet the abnormal need. Free food stations capable of serving thousands of meals daily were established, also emergency lodges for women and children. A unique feature was the creation of a "white collar" bureau, known as the confidential counselor, where men and women, hitherto strangers to poverty and distress, were given a sympathetic hearing prior to being helped according to their need. All these activities were carried on in addition to the regular institutional service.

The evangelical side was not neglected. Special religious campaigns were carried on throughout the year, especially among the young people.

The magnitude of the year's work is seen from the fact that over 15,000,000 applications for aid of all kinds were made to the Salvation Army during 1932.

In 1932 there were in the service of the Salvation Army throughout the world 25,903 officers and cadets, 6563 persons without rank, wholly employed, 156,980 local officers and bandmen, 63,412 songsters, 32,532 corps cadets, and 15,304 corps and outposts in operation. Social institutions and agencies numbered 1581, and day schools 1001. Among the social institutions were: 34 naval and military homes; 14 prisoners' homes, with a capacity of 609; 146 hotels for men and 39 hotels for women, accommodating 40,867 persons; 6 inebriates' homes with 244 patients; 98 homes housing 4982 children; 24 crèches; 17 industrial schools with 1190 pupils; 102 women's industrial homes, accommodating 3416 women; and 94 maternity homes with 3793 patients. The army maintained also 303 miscellaneous social services, as well as 12 farms, 173 slum posts, 227 homes, elevators, workshops, and woodyards accommodating 7258 persons. In addition to 34 food depots, there were 145 combined shelters for men and 18 shelters and food depots for women. Through the 139 labor bureaus, 212,244 men and women were supplied with work. The organization published 130 periodicals, with an average circulation of 1,768,595 copies per issue.

In the United States there were, in 1932, 1777 corps and outposts, 5076 officers and cadets, 14,930 local senior officers and bandmen, and 13,201 local junior officers and bandmen. Converts during the year numbered 129,649. Among the social institutions were 89 men's hotels, 1 women's hotel, and 13 residential hotels for young women, accommodating a total of 8998. Men's industrial homes numbered 117 with accommodation for 4652 persons; children's homes 10, with accommodation for 828 persons; women's homes and hospitals 45, with accommodation for 2992 persons; and dispensaries 10, with a total of 25,700 patients. During the year 11,128 families were visited, while Thanksgiving and Christmas dinners were distributed to 686,946 persons. In addition 40,970 prisoners were assisted by the Salvation Army on discharge and situations were found; 15,375,452 persons were afforded temporary relief outside social service centres and hotels; 41,270 children and 8505 mothers were given summer outings; and 238,737 men and women found employment through the army's 105 free employment bureaus.

The national headquarters of the Salvation Army in the United States are at 120 West Fourteenth Street, New York City. Evangeline

Booth, daughter of William Booth, the founder, is the commander-in-chief. The territorial commissioners in 1932 were: John McMillan (eastern); William McIntyre (central); Benjamin Oramas (western); and Alexander M. Damon (southern).

**SALEBURG FESTIVAL.** See **MUSIC**.

**SAMOA.** A group of 14 islands in the Pacific Ocean, about 2200 miles south of Hawaii and 4000 miles southwest of San Francisco. Since Feb. 13, 1900, the islands east of 171° W. longitude have belonged to the United States; the islands west of that line belonged to Germany until the outbreak of the World War in 1914, when they were occupied by New Zealanders and on Dec. 17, 1920, were turned over to New Zealand for administration, under a mandate of the League of Nations.

**AMERICAN SAMOA.** The American Samoan islands comprise the islands of Tutuila, Tau, Olosega, Ofu, Aunuu, and Rose Island. The Naval Station at Pago Pago, Tutuila, is the seat of government. Pago Pago harbor is considered the best in the South Seas. With a total area of about 60 square miles, the islands had an estimated population of 10,272 on June 30, 1932. Production of copra, the sole export, was 376 tons in the calendar year 1931. Imports during 1931-32 were valued at \$120,688; gross revenue, \$114,611; expenditure, \$116,064. The U. S. Navy has a high powered radio station on Tutuila. The island is under the jurisdiction of the U. S. Navy Department and is administered by the Governor of the U. S. Naval Station at Pago Pago. Capt. G. S. Lincoln U. S. Navy (retired), was succeeded as Governor on July 8, 1932, by Capt. G. B. Landeberger, U. S. Navy.

**WESTERN SAMOA.** The official name applied to the former German Samoan Islands is the Territory of Western Samoa. This territory includes Savaii and Upolu, two of the largest islands. Area of Savaii, about 700 square miles; Upolu, about 430 square miles. The population of Western Samoa on Dec. 31, 1930, was 44,535, including 1815 Europeans and half-castes; 41,668 native Samoans; 915 indentured Chinese laborers, and 137 other islanders. Apia, on the island of Upolu, is the chief port. Products include copra, bananas, rubber, sugar, and cardamoms. Imports during 1930 totaled \$275,355; exports, \$284,515. Revenue for the fiscal year ended Mar. 31, 1931, was \$151,385; expenditure, \$140,288. Administrator in 1932, Brig.-Gen. H. E. Hart (appointed February, 1931).

**SAN MARINO, mǎ-rě'nō'.** A tiny independent republic situated near the northwest coast of the Adriatic and encircled by Italian territory. The area is 38 square miles and the population (Oct. 31, 1929) was 13,387. Capital, San Marino (2000 inhabitants).

**SANTO DOMINGO.** See **DOMINICAN REPUBLIC**.

**SANTOS-DUMONT, sǎn'tōs-du'mōn', ALBERTO.** A Brazilian aeronaut, died July 24, 1932,

in São Paulo where he was born July 20, 1873. Interested from boyhood in mechanics and engineering, he began experimenting early in the '90s in the construction of airships, and on taking up his residence in Paris decided to compete for the prize of 125,000 francs offered by M. Deutsch de la Meurthe for the first flight from St. Cloud round the Eiffel Tower and back within 30 minutes. He built six airships before he managed to win the prize for his flight over the prescribed course on Oct. 19, 1901, but from each attempt he gained new data that enabled him to improve construction features. The second balloon, for instance, which he flew in 1898, was cylindrical instead of spherical in shape, and from it was suspended a basket containing a 3½ h.p. gasoline engine which operated a screw propeller. In the third balloon he discarded the basket for a bamboo keel. The fourth balloon, which was driven by a 7 h.p. engine and had a capacity of 15,000 cu. ft., was successfully flown and secured for its designer the encouragement of the Paris Aéro Club prize. The fifth, a still larger airship, made the journey over the prize course of 11 km. in 40 min. The sixth, the prize-winning ship, which was driven by a 12 h.p. engine and had a capacity of 22,000 cu. ft., established the record of 30 min. 40¼ sec. For this exploit the Brazilian government struck a special medal in his honor. In 1903 he erected at Neuilly an airship station where he kept his fleet of dirigibles that was offered to France in the event of war with any country but the United States.

In 1905 Santos-Dumont turned from his dirigible balloons to experimentation with the new type of heavier-than-air machine that the Wright brothers had invented—the aeroplane—employing a light and powerful gasoline engine. On Nov. 12, 1906, he flew 215 meters (715 ft.) in 21 sec. in the cellular form plane which he had invented, winning the prize of 1500 francs offered by the Aéro Club of France for the first public flight in that country. In 1909 he evolved a monoplane, the *Demoiselle*, weighing but 280 lbs. without the pilot and having a surface of planes amounting to 97 sq. ft. with a spread of 16.4 ft. With this machine, which was a marked step forward on account of its reduction in size, the inventor accomplished some fast and interesting flights, covering, for example, the distance from St. Cyr to Buc, 8 km. (4.97 miles), in 12 min. on Sept. 13, 1909. He was made a Chevalier of the French Legion of Honor in 1904 and received the Officer's Cross in 1909. On his return to Brazil in 1928 a public holiday was declared in his honor. He wrote *My Airships: A Story of My Life* (1904).

**SÃO PAULO.** See **BRAZIL** under *History*.

**SAORSTAT EIREANN.** See **IRISH FREE STATE**.

**SÃO THOMÉ, soun tō-mǎ', AND PRINCIPE, prěn'sé-pě.** Two islands in the Gulf of Guinea, about 125 miles from the coast of Africa, constituting a province of Portugal.

**SARAWAK, sǎ-rǎ'wǎk.** An independent state, comprising the northwestern part of the island of Borneo; under the protection of Great Britain. Area, about 50,000 square miles. Population estimated at 475,000. In 1930, imports totaled 16,421,592 Straits dollars; exports, 24,894,762 Straits dollars (Straits dollar averaged \$0.5245 in 1931); revenue, 5,562,034 dollars; expenditure,

7,089,923 dollars. Rajah in 1932, Sir Charles Vyner Brooke.

**SARTORIO, GIULIO ARISTIDE.** An Italian painter, died Oct. 4, 1932, in Rome, where he was born in 1861. In his early work he was inspired by Dante Gabriel Rossetti. For many years he was an instructor in painting at the University of Jena under the patronage of the Grand Duke of Saxe-Weimar. He exhibited in Paris, Munich, Berlin, New York, and other cities, and was awarded a gold medal at the Paris Exposition of 1889. He was best known for his mural works, among which are the decorations of the Parliament building in Rome, depicting the spiritual history of the Italian race.

**SASKATCHEWAN, sās-kāch'è-wōn.** One of the Prairie Provinces of Canada, bounded on the east by Manitoba, north by the District of Mackenzie, west by Alberta, and south by the United States. Area, 251,700 square miles; population (1931 census), 921,785 (757,510 in 1921). Regina, the capital, had 53,209 inhabitants in 1931 (34,432 in 1921); Saskatoon, 43,291 (25,739); Moose Jaw, 21,299 (19,285). Living births during 1930 numbered 22,061; deaths, 6309; marriages, 5717. The total enrollment in the 1917 public elementary schools in 1930 was 228,434. The University of Saskatchewan at Saskatoon had 2813 students in 1929-30.

Agriculture is the leading occupation, the gross value of the annual agricultural production being estimated at \$106,686,000 for 1931. Field crops harvested from 21,769,639 acres were valued at \$66,101,400 in 1931, as compared with \$135,695,000 from 22,868,300 acres in 1930. The value of the mineral output in 1931 was \$2,114,372 (subject to revision) compared with \$2,368,612 for 1930. The coal output for 1930 was 579,424 tons valued at 968,963. In 1930 the 750 manufacturing establishments had 7248 employees, a capital investment of \$65,486,140, and a value of output of \$62,276,766 gross and \$26,668,609 net. The bonded indebtedness in 1930 was \$73,667,316. Revenues amounted to \$16,561,528 and expenditures to \$17,079,704 for 1930.

Executive power is vested in a lieutenant-governor and a legislative assembly of 63 members elected for 5 years. In 1932, the government coalition included 24 Conservatives, 5 Progressives, and 6 Independents, with 28 Liberals forming the Opposition. The Province is represented in the Dominion Parliament at Ottawa by 6 members in the Senate and 21 members in the House of Commons. Lieutenant-Governor in 1932, H. E. Munroe. Premier, President of the Council, and Minister of Education, J. T. M. Anderson.

**SAUDI ARABIA, KINGDOM OF.** See under ARABIA.

**SAULT STE. MARIE, CANALS AT.** The commerce passing through the canals at Sault Ste. Marie in Michigan and Ontario fell off at a still greater rate during 1932 than during the previous year. In 1931 the percentage of decline in the number of vessels with registered tonnage was 22 per cent, with a total of 13,056 vessels. In 1932, with 8679 vessels, the decline was 34 per cent; a total decline in the two years of 61 per cent. The registered tonnage of 17,250,905 in 1932 as against 35,917,044 in the previous year showed a decline of 52 per cent; a total decrease in two years of 69 per cent. The 1932 traffic involved 7102 steamers, 335 sailing vessels, and 1242 unregistered craft. There were 6577 lock-

ages against 9537 in 1931, and 12,661 in 1930.

The freight passing through the canals in 1932 totaled 20,480,873 short tons as against 44,613,671 in 1931, a decline of 54 per cent—a decline of 72 per cent in two years. Passengers were 20,241 as against 33,606 in the previous year, a decline of 40 per cent. The traffic in wheat amounted to 207,224,044 bushels as against 189,090,091 bushels in 1931, or an increase of 10 per cent. Grain was 39,615,921 bushels, or a decrease of 30 per cent from the 56,303,180 bushels carried in 1931. Iron ore in 1932 dropped to the incredibly low figure of 3,607,119 short tons, a decline of 85 per cent from 24,259,899 tons in 1931, and of 92.5 per cent from 47,050,854 tons in 1930. Soft coal was 7,187,409 short tons as against 9,891,474 tons in 1931, a decline of 27 per cent; and flour was 7,116,400 barrels as against 8,575,915 barrels in 1931, a decline of 17 per cent.

The U. S. Canal was opened April 17 and closed December 13, a season of 241 days; the Canadian Canal also opened April 17 and closed December 16.

The greater amount of the freight was east-bound and amounted to 11,821,705 short tons, of which 9,940,538 passed through the U. S. Canal and 1,881,167 through the Canadian Canal. The total westbound freight was 8,659,168 short tons, of which 8,206,430 passed through the U. S. Canal and 452,738 through the Canadian Canal.

**SCABIES, ERADICATION OF.** See VETERINARY MEDICINE.

**SCANDINAVIAN LITERATURE.** This review includes the late books of 1931 in addition to the books of 1932, and is divided into Danish, Norwegian, and Swedish literature.

**DANISH.** *Poetry.* Helge Rode's new collection, *Den vilde Rose* (The Wild Rose), contains poems of various types, many written for special occasions; as, for instance, the "Prologue to the Ibsen Jubilee." They are characterized by seriousness and solemnity. Johannes V. Jensen's *Den fydske Blæst* (The Jutland Wind), is pervaded with that classical spirit which we have of late learned to expect in Jensen's poetry. In it we note also the local atmosphere of Jutland so characteristic of his prose.

*Fiction.* Harald Herdal's *Tirsdal* is the story of an orphan girl from the poorer section of Copenhagen who through grit and perseverance overcomes the obstacles of her environment. Throughout the work one glimpses the social doctrine of the author—that the welfare of the group is of far greater importance than that of the individual. Morten Korch is still interested in Fyen, as is proved by *Kærlille*, a sequel of *Ved Stillebækken*. This book shows the author's usual ability to depict the common people and their humor. Cai M. Woel wrote two books, *Mit Livs Elvira* (My Life's Elvira), a simple love story told in a charming and intimate manner which reminds one of Hemingway's *Farewell to Arms*, and its sequel, *Mænd på femogtredive* (Men at Thirty-five), which in general falls below the standard of the earlier work.

*Literature and Criticism.* *Svensk Historietänkning* (Swedish Historical Thought), by Kay

Schmidt-Phiseldeck is a scholarly and interesting exposition of the development of historical theories in Sweden and Finland during the nineteenth century. In *Juan de la Cruz*, H. Brønsted pictures the two representatives of mysticism, Santa Teresa and Juan de la Cruz, against the literary background of the Spanish Golden Age. The work shows an exceptional mastery of the Spanish text as well as a rare power of sympathetic understanding.

**SWEDISH. Drama.** In *Jag har varit en tjuv* (I Have Been a Thief), a play whose heroine is transformed by the realization that her hitherto selfish life has been worthless, Sigfrid Siwertz again stresses the importance of the human will. The scene of Rudolf Värnlund's *Den heliga familjen* (The Holy Family) is a workingman's home, and the action extends from 1900 to 1930. The play deals with social and economic conflicts and ends on a note of religious mysticism. In *Den förste Bernadotte* (The First Bernadotte), Herbert Grevenius gave a series of effective scenes from the reign of Karl Johan, the founder of the present dynasty.

**Poetry.** Einar Malm's *Under bar himmel* (Under the Open Sky) shows a love of nature, a receptive mood, and a fertile imagination.

**Fiction.** In *Saltjäppirater* (Salt Water Pirates), which is a sequel of the twenty-year-old *Mälarpirater*, Sigfrid Siwertz shows himself, as always, a lover of nature and adventure, and a firm believer in action. Gustaf Hellström's *Carl Heribert Malmros* is the story of a chief of police whose unhappiness and tragic end are caused by the fact that his idealistic and philosophical spirit is not robust enough to cope with the conditions that he encounters. Olle Hedberg's *Får jag be om räkningen* (May I Have the Bill) is a good model of contemporary realism. Hedberg never preaches, but one sees in this book a certain resignation coupled with the conviction that we are all makers of our own fates. Knut Stenring's new book, *Ludvig Lyra*, is a masterly, although at times somewhat satirical, portrayal of the Swedish-born population of a big American city.

**Literature and Criticism.** *Nordisk Folklivskildring* (Portrayal of the Common People in Scandinavian Literature) by Erik Lindström is a scholarly and at the same time fascinating study extending from earliest times to the present. Gerda Rydell's *Henrik Ibsen* is especially good in treating the literary men and tendencies that directly or indirectly influenced the great dramatist, and gives many new and fruitful points of view (See also PHILOLOGY, MODERN.)

**NORWEGIAN. Poetry.** Although the poems in Theodor Caspari's *Myrmalm* (Swamp Ore) vary in subject matter and tone, all express the thought that there is in Norwegian nature and people a treasure, an "ore," which rewards those who seek it. Olaf Bull's collection *Ignis Ardens* is excellent throughout. Especially the opening poem, a cantata describing the creation and development of the universe, because of its magnificence of conception, its depth of thought, and its poetic beauty, deserves a place among the masterpieces of Norwegian literature.

**Fiction.** Kristmann Gudmundsson, who, although a native Icelander, has an enviable record as a Norwegian novelist, wrote his best work so far, *Det hellige fjell* (The Sacred Rock), a story of the birth of the Icelandic nation. Birger Dahl made his début with *Kommandanten og hans by*

(The Commandant and His Town), a work of easy and natural humor, considered by critics as unique in its kind.

**Literature.** The Bjørnson centenary aroused a renewed interest in the great writer. The first complete biography of Bjørnson was written by Christian Gierloff. His letters were edited by Halvdan Koht under the title of *Kampliv* (A Life of Combat). In *Bjørnstjerne Bjørnson*, Bjørn Bjørnson gives an intimate view of his father during the Aulestad period.

**SCHAUMBURG-LIPPE**, shoum'boörk-lip'pē. A State of the German Republic. See GERMANY under *Area and Population*.

**SCHNEIDER TROPHY COMPETITION.** See AERONAUTICS.

**SCHOBER**, JOHANN. An Austrian statesman, died in Vienna Aug. 19, 1932. He was born in Berg, Upper Austria, Nov. 14, 1874, and studied law at the University of Vienna. In 1898 he entered the imperial Austrian police service, and in 1914 became head of the State Police Department and president of police of Vienna. During the revolution of November, 1918, that changed Austria into a republic, it was largely due to his efforts that Austria was spared Bolshevism. In June, 1921, he was requested by the central committee of Parliament, which was then the governing power in Austria, to accept the chancellorship, heading a non-party ministry. One of his first steps was the establishment of friendly relations between Austria and her neighbors, but the pact of Lana, which he concluded with Czechoslovakia on Dec. 16, 1921, did not meet with the approval of the Pan-Germans who feared that such an agreement might prove an obstacle to an ultimate *anschluss* with Germany. On the withdrawal of the Pan-Germans from the government coalition the Christian Socialists were not strong enough to govern alone against the opposition of the Social Democrats. Accordingly in May, 1922, Schober resigned the chancellorship and returned to the post of president of police. In the following years he reformed the State Police Department and was made head of the international police commission which took its permanent seat in Vienna.

In September, 1929, Schober was again appointed chancellor, having been called upon during the earlier months of the year to avert a threatened clash between the Heimwehr, a reactionary military organization, and the Socialist Schützbund, which staged rival demonstrations in Vienna. By the amendment of the constitution in December he achieved a compromise between the Socialists and Conservatives, thus nullifying the Heimwehr plans for the establishment of a Fascist state. He returned from the second Hague Reparations Conference held in January, 1930, and from the subsequent conference on Eastern reparations at Paris, with two noteworthy achievements to his credit that removed the obstacles in the way of a new international loan to Austria. These were the definite promise that Austria would not be required to make further reparation payments until 1943 and the termination of the control of her foreign borrowing operations by the Reparation Commission. Schober signed also a reconciliation treaty with Italy during his visit to Rome in February, 1930, and in April brought to a successful conclusion the long-pending negotiations with Germany for a commercial treaty. His sub-

sequent visits to London and Paris paved the way for the flotation of a \$100,000,000 foreign loan.

After the downfall of his cabinet in September, 1930, he headed the National Economic party and at the general elections in November became a member of Parliament. In December, 1930, he became Vice Chancellor and Minister of Foreign Affairs in the Ender cabinet, and in this capacity made the abortive attempt to bring about the Austro-German Customs Union. On Sept. 3, 1931, with Dr. Julius Curtius, the German Foreign Minister, he had to renounce the plan before the European Union Commission at Geneva. He resigned his cabinet post in February, 1932.

**SCOLLARD, CLINTON.** An American poet and educator, died in New Milford, Conn., Nov. 19, 1932. He was born in Clinton, N. Y., Sept. 18, 1860, and was graduated from Hamilton College in 1881, later studying at Harvard and Cambridge Universities. He was professor of English literature at Hamilton College from 1888 to 1896, and on resuming this chair in 1911 held it thereafter until 1932. He was honored by election to the National Institute of Arts and Letters. His verse, which was characterized by true poetic feeling, color, and imagination, was published in the volumes: *Pictures in Song* (1884); *With Reed and Lyre* (1886); *Old and New World Lyrics* (1888); *Giovio and Gulua*, a metrical romance (1891); *War Voices and Memories* (1919); *Songs of Summer* (1927); *Lyrics of Life* (1928); *Lyrics of Florida* (1929); and *Songs Out of Egypt* (1930).

**SCOTLAND.** See GREAT BRITAIN.

**SCOTLAND, CHURCH OF.** See PRESBYTERIAN CHURCH.

**SCOTT, CHARLES PRESTWICH.** A British journalist, died in London, Jan. 1, 1932. Born in Bath, Somersetshire, Oct. 26, 1846, he attended Corpus Christi College, Oxford, from which he was graduated in 1869. Two years later he began his long connection with the *Manchester Guardian*, serving as its editor from 1872 until his retirement in 1929. As a Liberal he represented the Leigh division of Lancashire in Parliament from 1895 to 1906. He was also a governor of Manchester University. His son, Edward Taylor Scott, succeeded him as editor in 1929, but was drowned in Lake Windermere on Apr. 22, 1932.

**SCOTT, SIR WALTER, CENTENARY OF DEATH.** See CELEBRATIONS.

**SCOTTSBORO CASE.** See LAW IN 1932; KENTUCKY under *Political and Other Events*; COMMUNISM.

**SCULPTURE.** As a part of the Folger Shakespeare Memorial in Washington, D. C., which was designed by Paul Cret of Philadelphia, and dedicated April, 1932, John Gregory executed a series of nine large panels in high relief repre-

senting scenes from Shakespeare's plays, which suitably ornament the very simple façade.

A seated figure of Lincoln by Charles Keck was dedicated on Memorial Day, 1932, in the Court House grounds at Wabash, Indiana, the gift of Alexander New.

A statue of Lincoln as a youth, modeled by Paul Manship, was placed in the forecourt of the Lincoln National Life Insurance Building, Fort Wayne, Indiana, and ceremoniously unveiled on September 16th. This statue represents Lincoln as an Indiana frontiersman at the age of twenty-one.

A statue of Cardinal Gibbons by Leo Lentelli, a seated figure with flowing robes and right hand upraised in benediction, was placed in a small triangular park in front of the Shrine of the Sacred Heart in Washington, the gift of the Knights of Columbus. This was accepted by President Hoover in a public address at the unveiling on Aug. 14, 1932.

A bust of Daniel Webster, begun by the late Daniel Chester French and finished by his daughter, Margaret French Cresson, was dedicated on October 12th in Franklin, N. H., Webster's birthplace. This bust, which is heroic in size, is cast in bronze and stands on a pedestal of native New Hampshire granite in front of the Congregational Church.

A pediment group by C. Paul Jennewein and Leon V. Solon, designed for the façade of the new Pennsylvania Museum in Philadelphia, was completed in the early autumn of 1932. It is in terra cotta, measuring 70 feet at the base, executed in brilliant polychrome and gold glazes. The composition includes thirteen mythological figures, ranging to 12 feet in height; these represent the physical side of man's nature.

A Stirling Calder's figure of Leif Ericson, a statue presented by the United States to Iceland, received the Gold Medal in Sculpture at the Architectural League's Annual Exhibition for 1932. The Avery Prize in this exhibition, awarded to sculptors under thirty years of age, was won by David K. Rubins, for a group entitled "Victory."

In the Olympic International Exhibition, Los Angeles, the first prize in sculpture was awarded to Mahonri Young for his group "The Knock-down," and in the division of sculpture in relief and medals the second prize went to Frederick W. MacMonnies for his Lindbergh Medal, made for the Society of Medalists, and third prize to Dr. R. Tait McKenzie of Philadelphia for his "Shield of the Athletes."

A memorial in bronze and stone by Hermon A. MacNeil to commemorate the Confederate Defenders of Fort Sumter was dedicated at Charleston, S. C., on October 20.

A monument in bronze and stone, 25 feet high, including figures of a warrior in attitude of defense and an allegorical female figure, commemorating the Confederate Defenders of Fort Sumter was dedicated at Charleston, S. C., on October 20. It is the work of Hermon A. MacNeil.

An equestrian statue of Gen. Oliver Otis Howard of the Eleventh Union Corps, was unveiled with ceremony on the Hill Top at Gettysburg by the State of Maine, which contributed \$30,000 toward the cost. It is the work of Robert Aitken, sculptor.

A replica of the late Paul Wayland Bartlett's equestrian statue of Lafayette in Paris was unveiled in Hartford, Conn., in the autumn of 1932.

in honor of French-American friendship. It is the gift of Mrs. William M. Storrs, a Hartford artist.

Two monumental groups by Lorado Taft were placed on either side of the entrance to the Louisiana State Capitol at Baton Rouge, La. Works by other well-known sculptors also decorate this building, such as Albert Rieker, Juanita Gonzalez, Angela Gregory, John Lachin, and Rudolph Parducci. The window grilles were the work of the Piccirilli Brothers.

A bronze replica of Houdon's bust of Lafayette was presented to New York University and unveiled with appropriate ceremonies in the Auditorium of the University on February 22.

**BIBLIOGRAPHY.** Among the publications of the year may be noted the following: *The Sculptor Speaks*, by Arnold Haskell; *Medieval Sculpture in France*, by Arthur Gardner; *The Meaning of Modern Sculpture*, by R. H. Wilemski; *Daniel Chester French* by Adeline Adams.

**SEAMAN, LOUIS LIVINGSTON.** An American surgeon, died in Bronxville, N. Y., Jan. 31, 1932. He was born in Newburgh, N. Y., Oct. 17, 1851, and was graduated from Cornell University in 1872. On completing the course at the Jefferson Medical College of Philadelphia in 1876 he was appointed resident surgeon for the New York State Emigrant Hospital. In 1879 he was made superintendent of the New York State Emigrant Insane Asylum, and in 1881 chief of staff of the hospitals and training school for nurses on Blackwell's Island, New York City. During the Spanish-American War he served as major and surgeon with the 1st regiment of the United States volunteer engineers. Also, he served in the Philippines with the 17th and 23d infantry regiments during 1899-1900 and in Peking, China, with the American Army of Occupation during 1900-01. In 1905 he was a surgeon with the 2d Japanese army in Manchuria during the Russo-Japanese War, recording his observations in *From Tokio through Manchuria with the Japanese* and *The Real Triumph of Japan*. At the outbreak of the World War he offered his services to the hospitals of the Belgian army. Also he served with the British and the French Red Cross for two years and was president of the British War Relief Association. He was a contributor to the **NEW INTERNATIONAL ENCYCLOPEDIA.**

**SECONDARY EDUCATION, NATIONAL SURVEY OF.** See **EDUCATION** in the **UNITED STATES.**

**SECOND POLAR YEAR.** See **METEOROLOGY.**

**SEIPEL, MGR. IGNAZ.** An Austrian cleric-statesman, died in Pönnitz, Aug. 2, 1932. He was born in Vienna, July 19, 1876, and attended the theological seminary of the University of Vienna. Following his ordination as a Roman Catholic priest in 1899, his career until the close of the World War was partly pastoral and partly academic. In 1909 he became a professor of theology at the University of Salzburg, and in 1917 was appointed to the same chair at the University of Vienna. In October, 1918, he was made Minister of Social Welfare in the cabinet which the Emperor Charles had asked Heinrich Lammasch to form in an attempt to hold together the rapidly dissolving monarchy. After the col-

lapse he succeeded in preventing the threatened split of the strongest conservative party in the country, the Christian Socialist, into a monarchist and a republican party, and two years later became the acknowledged leader of that party. He sat in 1919 as a member of the National Constituent Assembly, and of the National Council. On the resignation of the ministry of Johann Schober (q.v.) in May, 1922, he took office as chancellor. The government was rapidly approaching bankruptcy and dissolution. To prevent this catastrophe he secured an international loan of 650,000,000 gold crowns (\$135,000,000), with the aid of which Austria weathered the storm. He resigned in November, 1924.

At the head of a Christian Socialist-Pan German coalition Seipel again became chancellor in October, 1926. His resignation in April, 1929, was due to strife within the Christian Socialist party and criticism from the Socialists of his dual rôle of priest and state official. Only once again did he accept a cabinet post and that was as Minister of Foreign Affairs in the minority government of Karl Vaugoin that lasted from September to November, 1930.

**SEISMOLOGY.** On the average, earthquakes are felt in some part of the world at least 4000 times each year, though fortunately the vast majority of these quakes either are feeble and harmless, or else occur under the sea or in thinly populated regions. In the United States alone, 200 or more are usually reported annually. Heavy quakes often occur in remote regions from which direct news is weeks or months in reaching the world, and are known to have taken place only from the records made by seismographs over the globe.

The year 1932 had the usual quota of earthquakes, several of which ranked as severe disasters. A large portion of Santiago, Cuba, was ruined by a series of destructive quakes which began on the morning of February 3; 12 people were killed, and about 500 injured. The vicinity of Santiago is one of the most active earthquake centres of the West Indies; great destructive shocks have occurred in 1624, 1678, 1766, and 1852. The epicentres lie along a well-known dislocation that is 1250 miles long, and skirts the southern coast of the east end of the island, forming the northern boundary of the Bartlett Trough; the latter at one point reaches a depth of 4 miles. On September 26, a violent quake, followed by numerous aftershocks, originated under the Ægean Sea, and caused great damage in a number of towns. See **GREECE** under *History.*

Part of the city of Eureka, Calif., was destroyed on June 6 by the most severe quake that has occurred on the Pacific Coast since the Santa Barbara shock in 1925; the epicentre was at sea, a short distance off the mouth of the Klamath River. A rather severe quake also occurred on December 20, centred near Mono Lake in the high Sierras not far from the California-Nevada State line. Late in December a severe quake occurred in the region of Mount Athos, in northeastern Greece.

**SELANGOR.** See **FEDERATED MALAY STATES.**

**SELLERS, MATTHEW BACON.** An American aeronautical engineer, died in Ardsley Park, N. Y., Apr. 5, 1932. He was born in Baltimore, Md., Mar. 29, 1869, studied in Göttingen, Germany, and Evreux, France, and was graduated from the Harvard law school in 1892. About 1900 he became interested in aeronautics. In 1903 he be-

gan to investigate and determine the lift and drift of arched surfaces, devising for this purpose a "wind tunnel" for measuring the dynamic air pressure on bodies.

Sellers in 1908, invented a novel flying machine, whose four planes were arranged like steps, the operator being on a line with the lowest plane. In 1915 he became a member of the Navy Consulting Board, serving during the World War as technical assistant to the Secretary of the Navy. He was also for several years technical editor of *Aéronautics*.

**SEMPLE, ELLEN CHURCHILL.** An American anthropo-geographer, died in West Palm Beach, Fla., May 8, 1932. She was born in Louisville, Ky., in 1863, and was graduated from Vassar College in 1882, later studying at the University of Leipzig in 1891-92 and 1895. One of the first Americans to make a special study of the influence of geographic conditions upon the development of society, she was professor of anthropo-geography at Clark University (1921-28). Among her publications are *American History and Its Geographic Conditions* (1903) and *The Influences of Geographic Environment* (1911).

**SEVENTH-DAY ADVENTISTS.** See ADVENTISTS.

**SEWAGE TREATMENT.** See SEWERAGE AND SEWAGE TREATMENT.

**SEWERAGE AND SEWAGE TREATMENT.** In the United States sewerage systems in 100 cities in 20 States are being at least partly maintained from charges for the use of the sewers. Where the water supply is metered it is logical to base the charge for the use of the sewers on the water consumed in each house. The Reconstruction Finance Corporation (see UNITED STATES) ruled that sewerage systems can be classed as self liquidating if an adequate charge is made for the use of the sewers.

Forty years ago a few cities, led by *Brockton, Mass.*, began to charge for the use of sewers. The practice increased slowly for years. Of late it has been adopted in many cities as a means of raising money to meet the increasing costs of sewers and sewage treatment, to lessen stream pollution and to reduce the burden of taxation. A few American cities have sewers owned and operated by private companies, the largest being *Atlantic City, N. J.*

In sewage treatment the activated-sludge process continued to gain for new installations. More attention was being given than before to the disposal of screenings by incineration, particularly at *Chicago* and *Milwaukee*. Progress in carrying out the decree of the U. S. Supreme Court setting up a programme for building additional works sufficient to treat all the sewage of the *Chicago Sanitary District* was delayed by lack of funds due in part to the tax muddle in Chicago and all of Cook County (see MUNICIPAL GOVERNMENT). At the close of the year the court commissioned a master to report on the delays. A tri-State compact designed to control the pollution of waters common to Connecticut, New York, and New Jersey was completed early in the year and submitted to the three correspond-

ing legislatures but had not been ratified by them and sent to Congress by the end of the year.

**SEX-DETERMINATION.** See ZOOLOGY.

**SEXTON, THOMAS.** An Irish journalist and parliamentarian, died in Dublin, Nov. 1, 1932. Born in 1848, he received a common school education, and at the age of 12 became a junior clerk in the offices of the Waterford & Limerick Railway. In 1868 he became a member of the editorial staff of the *Nation*, the famous Nationalist weekly newspaper, and following the strengthening of the Irish Nationalist party by Parnell, the leader of the more advanced section, was selected to stand for Parliament in the general election of 1880. For 16 years he was one of the most conspicuous figures in the Nationalist movement, representing in succession County Sligo (1880-85), Southern Sligo (1885-86), Belfast, West (1886-92), and Kerry, North (1892-96).

**SHAHAN, THE RIGHT REV. THOMAS JOSEPH.** An American Roman Catholic bishop and educator, died in Washington, D. C., Mar. 9, 1932. He was born in Manchester, N. H., Sept. 11, 1857, and was educated at the American College and the College of Propaganda in Rome, the Roman Seminary, the University of Berlin (1880-91) and the Sorbonne and Institut Catholique in Paris (1891). In 1891 he was called to the Catholic University of America as professor of Church history and patrology, and from 1909 to 1928 was rector of that institution. He was created domestic prelate to the Pope, with the rank of monsignor, in 1909. On Nov. 15, 1914, he was consecrated titular bishop of Germanicopolis. His publications include: *The Blessed Virgin in the Catacombs* (1892); and *St. Patrick in History* (1905).

**SHAW, LESLIE MORTIER.** An American lawyer, banker, and cabinet officer, died in Washington, D. C., Mar. 28, 1932. He was born in Morristown, Vt., Nov. 2, 1848, and was graduated from Cornell College in 1874 and from the Iowa College of Law in 1876. In the latter year he began the practice of law in Denison, Iowa. He was Governor of Iowa from 1898 to 1902 and thereafter until 1907 served as Secretary of the Treasury in the cabinet of President Roosevelt. On his resignation he became president of the Carnegie Trust Co. in New York City.

**SHIP-AND-SHORE COMMUNICATION.** See RADIO.

**SHIPBUILDING.** In 1932 the production of shipping throughout the world was the smallest in more than fifty years. It reached only a total of 726,591 gross tons, and was less than half of that for 1931 (1,617,115 gross tons) which in turn was the smallest since 1909, except for the war year 1915. These figures and the following summary of shipbuilding are from the annual record of *Lloyd's Register of Shipping*, which does not include warships and takes into account only merchant vessels of 100 gross tons or over

that were launched in 1932, whether they were completed during the year or were still under construction at its close. The decline in 1932 was much less marked in the United States than in other shipbuilding nations. For the American shipyards there was a decrease of only 62,000 gross tons, as compared with a decline of 314,000 tons for Great Britain and Ireland, and one of 513,000 tons for the other countries, taken as a group. A comparison of the launchings in the last two years is shown in the following table of gross tonnage for the chief shipbuilding groups:

Country	1932	1931
United States .....	143,559	205,865
Great Britain and Ireland .....	187,794	502,487
Other countries .....	395,238	908,768
World total .....	726,591	1,617,115

Of the total for the United States, 141,359 gross tons were launched on the Atlantic Coast. There were no launchings for the Great Lakes during 1932.

Variations in the total ship production of the world during recent years is shown by *Lloyd's Register* in the accompanying table, giving the gross tons launched in the last pre-war year, and in all years since the war:

Year	Yearly launchings	Gain or loss
1913 .....	3,332,000	.....
1919 .....	7,144,000	+ 3,812,000
1920 .....	5,861,000	- 1,283,000
1921 .....	4,856,000	- 1,005,000
1922 .....	2,467,000	- 1,874,000
1923 .....	1,643,000	- 824,000
1924 .....	2,247,000	+ 604,000
1925 .....	2,198,000	- 54,000
1926 .....	1,874,000	- 519,000
1927 .....	2,285,000	+ 611,000
1928 .....	2,699,000	+ 414,000
1929 .....	2,793,000	+ 94,000
1930 .....	2,889,000	+ 96,000
1931 .....	1,617,000	- 1,272,000
1932 .....	726,000	- 891,000

The launchings in Great Britain and Ireland in 1932 represent the smallest volume of construction in those countries almost from the beginning of their shipbuilding activity; their total is less than a tenth of the output for the last pre-war year, 1913. Compared with this, however, the 1932 output for the United States was slightly more than 50 per cent of the 1913 total. The tonnage launched in these countries in recent years is compared in the accompanying table:

Year	United States	Great Britain and Ireland
1913 .....	276,000	1,932,000
1919 .....	4,075,000	1,620,000
1920 .....	2,476,000	2,055,000
1921 .....	1,006,000	1,588,000
1922 .....	119,000	1,031,000
1923 .....	172,000	645,000
1924 .....	139,000	1,439,000
1925 .....	128,000	1,084,000
1926 .....	150,000	639,000
1927 .....	179,000	1,225,000
1928 .....	91,000	1,445,000
1929 .....	126,000	1,522,000
1930 .....	246,000	1,478,000
1931 .....	205,000	502,000
1932 .....	143,000	187,000

The production of sailing vessels and barges of 100 gross tons and upwards almost reached the vanishing point last year, only 2304 tons being reported as launched throughout the entire

world. In 1931 a total of 13,564 gross tons was reported, and for 1930, 53,996 tons.

**TANKERS.** With the exception of Germany, the returns for all countries show a sharp decline during 1932 in the construction of steam and motor tankers of 1000 gross tons each and upwards. The world launchings for these types of vessels for the year aggregated only about a fifth of the total for 1931. No tankers at all are reported as having been launched in the United States during 1932, and the output for Great Britain and Ireland dwindled from about 240,000 tons to less than 6000. Germany's production, however, fell off only a few thousand tons, in contrast to Sweden's decrease of about 60,000 tons. For the other countries, taken together, the decline was almost as drastic as for Great Britain and Ireland. The comparison in tanker production between the two years is shown by *Lloyd's Register* in the accompanying table, the figures representing gross tons:

Country	1932	1931
Great Britain and Ireland .....	5,716	242,222
United States .....	382	37,561
Germany .....	62,057	65,881
Sweden .....	27,527	87,238
Other countries .....	39,329	209,580
World total .....	185,011	642,507

Of the world output for 1932, motor tankers again predominated, launchings of these representing 128,913 tons of the total.

**MOTORSHIPS.** Especially pronounced was the decline in the production of motor vessels of all types, the total launchings of these during 1932 being about 650,000 gross tons less than in the preceding year. Germany launched almost as large a volume of this type of construction as in 1931; but all other countries reported a very sharp decline in output, save Italy, whose decrease was only 13,000 tons. Sweden showed a falling-off of 70,000 tons; and there was practically no production of motor vessels in Great Britain and Ireland, or in the United States, the first named countries reporting a decrease of 225,000 tons, and the latter country one of 45,000 tons. For the other maritime countries, combined, there was a falling off of 295,000 tons. The launchings of motor tonnage is compared by *Lloyd's Register* in the accompanying table:

Country	1932	1931
Germany .....	79,244	79,995
Italy .....	46,201	59,584
Sweden .....	37,217	107,766
Great Britain and Ireland .....	2,448	227,910
United States .....	2,082	48,424
Other countries .....	101,503	396,816
World total .....	268,690	920,495

The situation in 1931, when more motorized tonnage was launched than that of all other types of vessels taken together, was reversed in 1932. This condition was largely due to the marked decline in the construction of tankers, as the great bulk of this type of construction has of late years been motor-driven. In 1931, 223,000 gross tons more of motor vessels were launched than of all other kinds of vessels combined. In 1932, however, motorship launchings fell 190,000 tons behind the total for other types, with the result that motorized tonnage represented only about 37 per cent of the 1932 output. Comparative

launchings of the various types of vessels during recent years is shown by *Lloyd's Register* in the accompanying gross tonnage table:

Year	Motor vessels	Other types
1927 .....	863,000	1,422,000
1928 .....	1,183,000	1,516,000
1929 .....	1,269,000	1,524,000
1930 .....	1,582,000	1,807,000
1931 .....	920,000	697,000
1932 .....	268,000	458,000

Eighteen steamers and motorships, each of from 6000 to 9999 gross tons were launched during 1932 as compared with 89 during 1931. Of the vessels of larger size, from 10,000 tons and up, 17 were sent down the shipways in 1932, as against 26 in the previous year. The returns show that the vessels equipped with steam turbines launched during 1932 aggregated 252,891 gross tons, including 104,464 tons fitted with

In 1931 Great Britain and Ireland launched 31 per cent of all the tonnage sent down the shipways of the world; but in 1932 her proportion of the total output fell to 26 per cent. In the same period the share of the United States advanced from 13 per cent to 20 per cent, and that of the other maritime countries combined dropped from 56 per cent to 54 per cent. In 1930 Great Britain and Ireland launched more tonnage than all other countries put together.

**SHIPPING.** According to the annual report of the U. S. Commissioner of Navigation for the fiscal year ending June 30, 1932, the merchant marine of the United States, at that date, including all kinds of documented craft, comprised 25,156 vessels of 15,838,655 gross tons, of which 1967 seagoing vessels of 9,937,717 gross tons were of 1000 tons or over, compared with 1998 vessels of 9,922,771 gross tons on June 30, 1931. The accompanying comparative table is an analysis of the ownership of seagoing tonnage for 1931 and 1932.

Ownership and date		Steel		Wood		Total	
		Number	Gross tons	Number	Gross tons	Number	Gross tons
Private ownership (500 gross tons and over):							
July 1, 1931 .....		1,468	7,395,551	400	497,753	1,868	7,893,304
July 1, 1932 .....		1,490	7,593,370	365	451,388	1,855	8,044,758
U. S. Shipping Board (1,000 gross tons and over):							
July 1, 1931 .....		897	2,239,153	...	.....	897	2,239,153
July 1, 1932 .....		862	2,088,864	...	.....	862	2,088,864
Total, 1931 .....		1,865	9,634,704	400	497,753	2,265	10,132,457
Total, 1932 .....		1,852	9,682,234	365	451,388	2,217	10,133,622

turbo-electric equipment. For 1931 the steam turbine equipped launchings totaled 419,965 tons, inclusive of 125,559 tons with turbo-electric equipment. Of vessels fitted with a combination of reciprocating engines and turbines there were launched during 1932 a total of 22,605 gross tons. The 1931 figure for this type was 26,478. Vessels built on the Isherwood system of longitudinal framing launched during 1932 aggregated 122,908 gross tons, as against 260,000 tons in 1931. The largest vessel launched during the year was the *Normandie*, of 68,000 gross tons, constructed in France.

Other vessels of over 15,000 tons and launched in 1932 were the steamer *Washington*, 25,000 tons, built in the United States; the turbo-electric *Queen of Bermuda*, 22,500 tons, built in England; the motorship *Oceania*, 20,000 tons, built in Italy, and the steamer *Lurline*, 18,021 tons, built in the United States. Four other turbine steamers, each of 11,200 tons—the *Santa Elena*, *Santa Lucia*, *Santa Paula*, and *Santa Rosa*—and two of 8061 tons each were launched in the United States, and two of 13,904 tons in which the electric drive is employed. The comparison of tonnage launchings by the various countries in the last two years is shown by *Lloyd's Register of Shipping* in the accompanying table, the figures representing gross tons:

Country	1932	1931
Great Britain and Ireland .....	187,794	502,487
United States .....	143,559	205,865
France .....	89,310	103,419
Germany .....	80,799	103,934
Japan .....	54,422	83,721
Italy .....	47,441	165,048
Sweden .....	48,000	112,703
Holland .....	26,282	120,296
Denmark .....	22,418	125,974

Of the gross total 928 vessels of 5,276,979 gross tons were engaged in the foreign trade and 1289 vessels of 4,856,643 gross tons in the coasting trade. Since June 1, 1921, when foreign trade reached its greatest volume, 10,699,596 gross tons, there has been a gradual decline, until June 1, 1932, when it amounted to only 5,187,692 gross tons, a falling off of 5,511,904 gross tons, and a decrease during the year of 435,008 gross tons. In 1931–32 722 vessels, of 212,892 gross tons, were built and documented, and on July 1, 1932, there were building, or under contract to build for private shipowners, 96 vessels of 179,911 gross tons. The corresponding figures for 1931 were 1302 vessels of 386,906 gross tons built and 105 vessels of 358,904 gross tons under contract to build. See SHIPBUILDING. On June 30, 1932, the laid-up seagoing tonnage of the United States aggregated 831 vessels of 3,603,426 gross tons, as against 923 vessels of 2,550,363 gross tons on June 30, 1931.

The International Load Line Convention, held in London in the spring of 1930, and ratified by the United States Senate on Feb. 27, 1931, will go into international effect on Jan. 1, 1933.

Prospects of the Government's early retirement from the field of ship operations were indicated in the sixteenth annual report of the U. S. Shipping Board, for the fiscal year ended June 31, 1932. Of the 2546 vessels previously owned by the Board, all but 96 had been sold, scrapped, laid up, or otherwise disposed of. It was the intention of the Board to sell these 96 active ships to private American interests for continued operation. About 80 per cent of the ships constituting the American Merchant Marine, the second largest in the world, are now owned by private American shipping companies. American-flag lines, operating in a network of services to all the principal foreign ports, carry about 34

per cent of the country's exports and imports, as contrasted with 10 per cent when the Shipping Board was first established. Ocean freight and passenger revenues average about \$300,000,000 a year.

Despite the continuance of the depression in international trade, the Shipping Board, in the period covered by the report, disposed of 37 vessels for \$2,644,687. Coincident with this progress toward complete liquidation of its vessel property, the Board during the year was able to reduce the personnel of the Merchant Fleet Corporation by 566 employees, involving salaries and wages aggregating nearly a million dollars. Advances made from the Government's construction loan fund totaled \$50,817,809 for the year, as contrasted with \$28,704,796 for the previous fiscal year. Four additional ocean mail contracts, signed during the year, brought the total up to 44 since the passage of the Merchant Marine Act of 1928. These 44 contracts called for the construction of 69 new vessels, including 5 completely rebuilt vessels, and betterments or substitutions affecting 57 vessels. The estimated cost of the new vessels is about \$300,000,000, and of the betterments about \$22,300,000.

**SHIPWRECKS.** See SAFETY AT SEA.

**SHIRAKAWA, GEN. YOSHINORI.** A Japanese soldier, died in Shanghai, China, May 26, 1932. He was born in Ehime-ken in 1870 and attended the Japanese Military Academy. Entering the army in 1891 he was promoted to major-general in 1915, lieutenant-general in 1918, and general in 1924. He took part in the Russo-Japanese War, served as director of the Military Staff College in 1918, was dispatched to Siberia as commander of the 11th Division in 1921, and commanded the Kwantung garrison during 1925-27. He was Vice-Minister of War under Gen. Hanzo Yamanashi during 1922-24 and Minister of War in the Tanaka cabinet of 1927-29. In 1929 he was made Supreme War Councilor, and at the time of his death was commander-in-chief of the Japanese expeditionary forces at Shanghai. He was one of several high Japanese officials wounded by a bomb thrown by a Korean during the military celebration in Hongkew Park on April 29 of the Emperor Hirohito's birthday. See CHINA under *History*.

**SHOES.** See BOOTS AND SHOES.

**SHOOTING.** Arthur E. Sheffield, railway postal clerk from Dixon, Ill., cracked 98 out of 100 targets from the 21-yard position in a driving rainstorm at Vandalia, O., in August and won the Grand American Handicap and its \$11,000 cash prize, the richest prize in trapshooting in 1932. He succeeded the Rev. Garrison Roebuck, 1931 winner, as champion. This 33d annual Vandalia fixture was attended by the best gunners of the country and many remarkable scores were made. In the tournament Fred Tomlin of Glassboro, N. J., won the international open with a perfect score of 200 from the 16-yard rise, and four men tied for second with 199. Monty Dewire, Hamilton, Ind., farmer, captured the North American target crown; Steve M. Crothers of Philadelphia was crowned "champion of champions"; O. C. Bottger of Fairfield, Ia., annexed the North American double-target championship with 191 out of 200; Ralph Smoots of Kenton, O., took honors in the class AA national event; George Slaughter of Benton Harbor, Mich., won in Class A; K. L. Leach of Calgary, Can., was the winner in class B; W. B. Sale of Denver captured the

North American professional laurels and Mrs. H. S. Grigsby of Oklahoma City, the women's North American, defeating Mrs. Joseph Murphy of Freehold, N. J., by a single target. Mrs. Walter Andrews of Atlanta took the women's North American doubles. The national amateur championships were held over the New York Athletic Club traps at Travers Island in early May, and A. Schwarz of Philadelphia took honors for double target shooting, nosing out Steve Crothers. W. Berwyn Beaver of Berwyn, Pa., won the single target title.

The international small-bore rifle match for the Lord Dewar Trophy was won by the United States in telegraphic competition, with a score of 7872 out of a possible 8000. Another small-bore event of interest, the International Railway Men's match, was won by Great Britain with 7792 out of 8000. The American Legion team of the United States took the Fidac International match, making 1937 out of a possible 2000 in at Camp Perry, O. Other interallied teams participated in this event and the scores were sent to the headquarters at Paris, where it was announced that the United States had won for the third consecutive year.

C. E. Ward, of the Los Angeles police force, won the National Rifle Association individual pistol championship and the national outdoor small-bore individual rifle championship went to Leo Kaufman of Munich, N. D., with a perfect score of 800. The National Rifle Association team pistol honors were taken by the Los Angeles police and the national collegiate small-bore rifle title was won by a Cincinnati University squad.

**SHORT-WAVE CONVERTERS.** See RADIO.

**SIAM, si-am'.** An independent monarchy in southeastern Asia. Capital Bangkok; reigning king in 1932, Prajadhipok.

**AREA AND POPULATION.** With an area of 200,234 square miles, Siam had a census population in 1929 of 11,506,207, as compared with 9,207,355 in 1920. There were (1929) 10,493,304 Siamese, 445,274 Chinese, 379,618 Indians and Malays, 1920 Europeans and Americans, and various other race groups. Migration statistics for the five years 1927 to 1931 covering Bangkok and the southern frontiers showed arrivals of 167,000 annually and departures of 118,888 annually. Bangkok, the chief port and leading city, had 931,170 inhabitants in 1929.

**EDUCATION.** About half the population is said to be literate. Of 2,920,176 children of school age (6 to 15 years) at the 1929 census, 590,585 were enrolled in primary schools in 1929-30; there were 16,534 in secondary schools and 1927 in special schools. Chulalongkorn University is situated at Bangkok.

**PRODUCTION.** Agriculture is the main industry, there being 7,689,000 acres, or 6 per cent of the total area, under cultivation in 1930. For the 1931-32 season the rice crop was 3,160,000,000 pounds; 2,282,000,000 pounds, valued at \$45,597,000, were exported in 1930-31. Rubber production in 1930-31 was 13,670,310 pounds; coconuts, 128,923,642 nuts; tobacco, 10,440,960 pounds; pepper, 4,452,630 pounds. Sticklac is an important product. Teakwood exports in 1930-31 were 66,085 tons, valued at \$4,202,600. Live-stock in 1930 included 4,584,000 cattle, 4,569,000 buffaloes, 9400 domesticated elephants, and 293,000 horses. The metal content of tin produced during the year ended Mar. 31, 1931, was 11,997 metric tons (11,006 in 1929-30). By the interna-

tional restriction agreement reached in September, 1931, Siam's annual tin output was restricted to 10,000 tons. Rice milling is the chief manufacturing industry, there being over 500 mills in the country, mostly Chinese owned.

**COMMERCE.** Siam's exports in the calendar year 1931, valued at \$58,698,000, were 29 per cent less than the 1930 exports, while imports, valued at \$48,684,000, were 37 per cent less. Rice, tin, and teakwood, were the leading export items and cotton piece goods, machinery, sugar, cigarettes, and kerosene the leading imports. Of the total 1930-31 imports, 20.3 per cent were credited to Hong Kong, 15.5 per cent to the United Kingdom, 9.2 to Singapore, and 7.6 to Japan. Singapore took 37 per cent of the exports (for transshipment), Hong Kong 19.1 per cent, and Japan 5.1 per cent. Imports from the United States (1930-31) were valued at \$2,461,000 (\$3,656,000 in 1929-30) and exports to the United States at \$328,000 (\$421,000).

**FINANCE.** The national finances remained in a solvent position throughout 1932 and it was announced that the 7 per cent sterling loan of £2,000,000, issued in 1922, would be paid off Mar. 31, 1933, instead of at maturity in 1963. The resources of the debt redemption fund were more than twice those required to retire the loan. The budget for the fiscal year ended Mar. 31, 1932, estimated revenues at 94,809,000 bahts and expenditures at 94,347,000 bahts; closed accounts for the year approximated the estimates. For 1932-33 revenues were estimated at 74,864,000 bahts and expenditures at 74,455,000 bahts.

The public debt on Mar. 31, 1932, amounted to £10,785,000 (\$52,485,000, converted at par) and was held entirely in London; on Mar. 31, 1931 the debt was £11,092,000. The unit of currency is the baht, formerly called the tical, stabilized in 1928 at 11 bahts to the pound sterling, or about \$0.4423 in United States currency. On May 12, 1932, Siam abandoned the gold standard, and the baht fluctuated in value with the pound sterling, averaging about \$0.31 to the end of 1932.

**COMMUNICATIONS.** The opening of the Bangkok Memorial Road Bridge, 754 feet long, spanning the River Chow Phya and linking the poorer and richer sections of Bangkok, was the chief development in the communications field during 1932. The railways and the telegraph and telephone systems are government owned. The railways in 1930 had 1778 miles of line; in the year ended Mar. 31, 1930, they carried 6,303,000 passengers and 1,447,000 metric tons of freight, the gross receipts being equivalent to \$8,552,000.

**GOVERNMENT.** Executive power at the beginning of 1932 was vested in the King, who exercised virtually absolute authority and was assisted by a consultative council of four elder statesmen of the royal household. An advisory cabinet council consisting of the ministers of state and other high officials functioned as a sort of legislative arm of the government. For changes during 1932, see *History*.

**HISTORY.** The Siamese government, one of the few remaining absolute monarchies in the world, was forcibly transformed into a limited monarchy by a *coup d'état* on the night of June 23-24, 1932. This quiet but effective revolution was the work of a small group of civilians, practically all young men educated in Europe, who had planned for a number of years to bring about a change of government. They objected particularly to the power of the princes of the royal house, who formed a powerful aristocracy, holding all but one of the Ministerial posts and many of the chief offices in the civil and military administration. While many of the princes were honest and capable, some of those holding high office were accused of enriching themselves at the expense of the nation.

In 1932, the conspirators won over a number of the younger officials in the army and navy. Preserving complete secrecy and taking advantage of the King's absence on a vacation at Hua Hin, they suddenly seized the royal palace at Bangkok and arrested a number of the leading princes. Taking control of the War Department, the arsenal, the railways and all means of communication, they then sent a battleship to Hua Hin to notify the King of the developments and to invite him to return as constitutional monarch. The King accepted, rather than precipitate civil war and the possible execution of the royal hostages held at Bangkok.

King Prajadhipok returned to the capital on June 20 and on June 28 a temporary dictatorship was established by the revolutionists, who labeled themselves the People's party. Shortly afterwards the King formally decreed the establishment of constitutional government. The drafting of the Constitution was not completed until November 19, when it was published, to become effective December 24. It provided for the appointment of an executive committee by the King, who was empowered to dissolve the Legislature. Members of the royal family were permitted to hold any appointive office, but were

barred from entering active politics or running for elective office. At the outset, the new government appeared to be a one-party affair, with a mildly Fascist complexion. The new rulers acted with ability and moderation. The princes were allowed to return to their palaces. The American adviser was retained and persuaded to accept an extension of his term of office. The financial condition of the government continued sound and later in the year Siamese bonds were selling above par in London. On May 12, 1932, Siam abandoned the gold standard, which had been adopted in 1929.

**SIBERIA.** A general term applied to the vast area of northern Asia extending from the Ural Mountains to the Pacific and from the Arctic Ocean to Manchuria, Mongolia, and Soviet Central Asia. Siberia is divided, as shown in the accompanying table, into administrative units of the Russian Socialist Federated Soviet Republic, the largest of the seven republics forming the Union of Soviet Socialist Republics.

	Area in square miles	Population January, 1931
Ural Area *	660,000	7,688,400
Western Siberian Area	503,653	8,767,200
Eastern Siberian Area	1,227,248	2,568,400
Yakutsk Republic	1,552,994	308,400
Buriat-Mongol Republic	150,192	575,000
Far Eastern Area	900,731	1,593,400
Total	4,994,818	21,500,800

\* Includes a small section of European U.S.S.R.

See UNION OF SOVIET SOCIALIST REPUBLICS; EXPLORATION.

**SIERRA LEONE**, sē-ēr' lē-ō'nē. A British colony and protectorate on the west coast of Africa. The area of the colony is 4000 square miles and the population 85,163 including 1161 Europeans. Freetown (population, 44,142), the capital is headquarters of the British Imperial naval forces in West Africa. Vessels entered and cleared in the foreign trade in 1930 aggregated 4,621,121 tons. In the year 1930 exports totaled £1,206,040; imports £1,424,175; revenue, £742,972; expenditure, £805,725. The adjoining protectorate has an area of 27,000 square miles; population (1921 census) 1,456,148, of whom 1,450,903 were natives.

**SIGNAL SYSTEM.** See ELECTRIC TRANSPORTATION.

**SILESIA**, sl-lē'sha. (1) A part of the Province of Moravia and Silesia in Czechoslovakia. (2) A county of Poland. (3) The two Prussian provinces of Lower Silesia and Upper Silesia.

**SILK.** The internal consumption of raw silk in Asia is an unknown quantity, hence the production of that region at any period can be based only on the amount exported. On that basis it appears that production of raw silk in 1932 throughout the world declined about 15 per cent. Falling prices did not stimulate a market that would tend to stabilize prices. Hence the price of Japanese raw silk declined still further in 1932 and averaged for the year about three dollars less per pound than the price of \$4.66 for January, 1930, according to the Silk Association of America. Beginning the year at \$2.04 the price dropped rapidly to an all time low of \$1.25 in June, and from that soared to \$1.91 in September, closing the year at \$1.59 as an average for December.

During 1932, Yokohama and Kobe, the main ports in Japan, exported 540,820 bales of raw

silk, of which 511,955 went to the United States and 28,865 to Europe. In 1931 total exports from these ports were 553,600 bales of which 537,815 went to the United States and 15,785 to Europe. Total exports from Canton, China, in 1932 amounted to 33,165 bales as against 48,570 in 1931, but the exports to America dropped from 30,845 bales in 1931 to 12,275 in 1932, with exports to Europe rising from 15,727 bales in 1931 to 20,890 in 1932. The total imports from all Chinese ports into the United States in 1932 dropped to 34,921 bales as compared with 86,502 bales in 1931 and 92,850 in 1930.

The raw silk imports into the United States in 1932 aggregated 547,195 bales as against 605,919 bales in 1931.

WORLD RAW SILK PRODUCTION, SEASONS  
1930-31 AND 1931-32  
[Tussah silk included]

	Pounds 1931-32 *	Pounds 1930-31
Europe	7,518,000	11,199,000
Italy	7,246,000	10,768,000
France	176,000	308,000
Spain	97,000	128,000
Levant	1,786,000	2,690,000
Asia: Total exported *	80,646,000	90,531,000
China, Shanghai *	4,412,000	9,126,000
China, Canton	8,417,000	7,297,000
Japan	72,795,000	74,064,000
India	22,000	44,000
Total	89,950,000	104,420,000
Tussah	850,000	1,500,000
Grand total	90,800,000	105,920,000

\* Estimated. The 1931 Japan crop is estimated to have been 96,584,000 pounds. \* The total production of raw silk in Asia is an unknown quantity, therefore, export figures have been used. \* Excludes tussah silk.

**SILK, ARTIFICIAL.** See RAYON; CHEMISTRY, INDUSTRIAL.

**SILVER.** The demand for silver declined almost steadily each month of the year, falling quite sharply in December. In consequence, the production for the year also declined. According to the Annual Review of Handy and Harmon of New York City, the world production of newly

PRODUCTION OF SILVER IN THE UNITED STATES IN 1932

[Arrivals at United States Mint and Assay Offices and at private refineries]

States	Ounces	Silver Value *
Alaska	256,791	\$ 72,415

Total	24,425,089	6,887,875

\* Value at 28.2¢ per ounce, the average New York price of bar silver.

mined silver fell to 160,600,000 ounces in 1932 as against 193,800,000 ounces in 1931, a shrinkage of 17 per cent. The company estimated the world production as follows: United States, 23,400,000 oz.; Mexico, 71,700,000 oz.; Canada, 18,300,000 oz.; South America, chiefly Peru and Bolivia, 12,406,000 oz.; and all other sources, 34,800,000 oz. The total amount of silver arising from demonetization and sales by the Indian Government during the year was estimated at 46,600,000 oz., as against 68,500,000 oz., in 1931. The previous low record of 25½ cents established on Feb. 16, 1931, was not duplicated, according to this authority, until Nov. 26, 1932, and for the remainder of the year the price continued beneath that point, reaching a record low of 24¼ cents on December 29.

The Director of the U. S. Bureau of the Mint, with the coöperation of the Bureau of Mines, has issued the preliminary estimate, shown in the table on page 752, of refinery production of gold and silver in the United States during the calendar year 1932.

Comparison with 1931 final production indicates a decrease in 1932 of 6,506,961 ounces of silver. Comparison with the year of largest production, 1915, when silver amounted to 74,961,075 ounces, gives a reduction of 50,535,986 ounces silver.

**SIMMONS COLLEGE.** A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1932, was 1485. The faculty numbered 150. The productive funds of the institution amounted to \$3,384,451 and the income for the year was \$571,900. President, Henry Lefavour, Ph.D., LL.D.

**"SIMON BOCCANEGRA."** See MUSIC.

**SINGAPORE.** See STRAITS SETTLEMENTS; BRITISH MALAYA.

**SKATING, SPEED.** The world's championship speed skating races were held at Lake Placid, N. Y., immediately after the Olympic games there had closed late in February, and, with the skaters using the European style of racing, i.e. alone against time, instead of in fields of four or five, where there is the possibility of jockeying and interference, Europeans took the titles. Jack Shea and Irving Jaffee, of the United States, Olympic winners, did not compete. Ivar Ballangrud of Norway, won the 1500, 5000, and 10,000-meters races, and Haakon Pedersen of Norway took the 500-meters race. In the final point scoring, Ballangrud was first, Michael Staksrud of Norway, second; Bernt Evensen of Norway, third; and Bert Taylor, of the United States, fourth.

The North American skating championships, held at Lake Oconomowoc, Wis., at the same time as the Olympics, was taken by James Webster of St. Paul. The women's national championship fell to Miss Helen Bina of Chicago. William Marks won the national boys' title, and the Middle Atlantic men's crown went to Jaffee, and the women's laurels to Miss Elsie Muller.

**FIGURE SKATING.** The world's figure skating championships were held in Montreal after the Olympic games and the titles awarded in Canada matched those awarded at Lake Placid. Miss Sonja Henie won the women's title again; Karl Schaefer of Austria again took the men's crown, and the pair's title went to M. and Mme. Pierre Brunet of France.

Miss Maribel Vinson and Roger F. Turner retained their national championships for the fifth

successive year. The pair honors went to Miss Beatrix Loughran and Sherwin C. Badger for the third consecutive time. Robin Lee, 12-year old Minneapolis skater, captured the national junior crown and the women's junior title was taken by Miss Louise Weigel, of Buffalo. Joseph K. Savage of New York City and Mrs. Frederick Secord of Brooklyn won the national waltz championship; the national dancing crown went to Mrs. Channing Frothingham and George E. B. Hill, of Boston. The national junior pairs championship was taken by Mr. and Mrs. Ferrier T. Martin, of New York.

**SKIING.** The 1932 national ski jumping championship was held at Lake Tahoe, Calif., in early March and the title went to Anton Lekang, of the Norway Ski Club of New York. His victory was a hollow one because Casper Oimoen, 1931 winner and fifth in the Olympic competition, broke his ankle in practice before the national championship, and was unable to jump.

**SKINNEE, FRANK W.** An American civil engineer, died in New York City, Dec. 24, 1932. He was born in Brownville, N. Y., June 6, 1858, and was graduated from Cornell University in 1879. Becoming associated with the Pittsburgh Bridge Co., he was appointed in 1881 an assistant engineer on the reconstruction of the railroad suspension bridge across the Niagara River at Niagara Falls. On the completion of this work he was for a time with the Delaware Bridge Co. and then became bridge engineer for the New Jersey Steel & Iron Co. In 1884 he went to Montreal to become principal assistant and later resident engineer for the Dominion Bridge Co., his most important contract being the construction of the cantilever bridge across the St. John's River at St. John, N. B. During 1886-87 he was engineer of bridges for the St. Paul & Northern Pacific Railroad Co., constructing bridges across the Mississippi River at St. Paul and Minneapolis. On his return to New York in 1887 he was assistant engineer on the construction of the Washington arch bridge across the Harlem River. He was associate editor of the *Sanitary Engineer and Construction Record* (later the *Engineering Record*) from 1887 to 1914. In 1915 he founded *Contracting*, which he edited until 1920. During 1920-22 he was associate editor of *Public Works*.

**SLATIN PASHA, RUDOLF CARL VON.** An Austrian soldier, died in Vienna, Oct. 4, 1932. Born at Ober St. Veit, near Vienna, June 17, 1857, he served for a time in the Austrian army. In 1878 he entered the Egyptian service under General Gordon, then governor-general of the Sudan under the Khedive Ismail, and in 1881 became governor-general of Darfur. Not long after his appointment to this post the Mahdi began his famous religious war (primarily a revolt against foreign influence), and in November, 1883, after the defeat of Hicks Pasha's army at El Obeid, he was captured by the Mahdists. He became the servant of the Khalifa Abdullah, who succeeded to power on the death of the Mahdi in 1885. After a captivity of 11 years Slatin succeeded in 1895 in escaping to Lower Egypt. Upon reaching Cairo he was received with every mark of honor and was made a pasha by the Khedive. He served on Kitchener's staff in the Sudan campaign of 1897-98, which ended in the overthrow of the Khalifa Abdullah at the Battle of Omdurman on Sept. 2, 1898. In 1900 he was appointed British inspector-general of the Sudan, which post he held until the outbreak of the World War. He then returned to

his native Austria where throughout the war he was head of the Austrian Red Cross's aid for prisoners of war.

**SLATTERY, JOHN RODOLPH.** An American civil engineer, died in New York City Sept. 23, 1932. He was born in Athens, Ohio, Jan. 31, 1877. On his graduation from the U. S. Military Academy in 1900 he was appointed 2d lieutenant in the Corps of Engineers of the U. S. Army, being sent first to the Philippines on road and bridge construction and then to the Hawaiian Islands as district engineer in charge of seacoast defenses and of harbor improvements at Honolulu and Hilo. On his return to the United States in 1904 he was successively district engineer at Jacksonville, in charge of the improvements of rivers and harbors in Florida and the maintenance of coast defenses at Key West and the mouth of Tampa Bay; at Vicksburg, in charge of flood control works in the 3d Mississippi district and improvements of the tributary streams in that district; at Portland, in charge of the improvement of the Columbia River and other rivers and harbors in Oregon; at Nashville, in charge of the improvements of the Cumberland and Tennessee rivers; and at New York City, in charge of the improvement of New York harbor and of other works in the 1st New York district. During the World War he served in France as commander of the 312th Engineers and was later made chief engineer of the 7th Army Corps. He resigned his commission as colonel in 1925 to become deputy chief engineer of the board of transportation of New York City, and previous to his death served as general manager of the operating organization of the new municipal (Eighth Avenue) subway system.

**SLAVERY.** See ETHIOPIA, LIBERIA under *History*.

**SLAVIC STUDIES.** See PHILOLOGY, MODERN.

**SLAVONIA.** See CROATIA AND SLAVONIA; YUGOSLAVIA.

**SLEVOGT, MAX.** A German painter and illustrator, died in Berlin, Sept. 20, 1932. He was born in Landshut, Bavaria, Oct. 8, 1868, attended the University of Würzburg, and studied painting at the Munich Academy where he was later appointed professor of fine arts. On his removal to Berlin in 1901 he became one of the leaders of the German impressionists. His greatest work was the triptych "The Prodigal Son." He was represented in the New Pinakothek, Munich, by "The Hour of Rest," in the Stuttgart Gallery by "The White Andrade," and in the Dresden Gallery by a portrait of Marietta de Rigardo, the singer, and by 20 paintings executed during his travels in Egypt in 1913-14. In his later years he devoted most of his time to graphic art.

**SLOVAKIA.** A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

**SLOVENES.** See YUGOSLAVIA under *History*.

**SMEETING.** See METALLURGY.

**SMITH, J(ORN) M(ERLIN) POWIS.** An American theologian, died in New York City, Sept. 26, 1932. He was born in London, England, Dec. 28, 1866, and was brought to the United States in childhood. He was graduated from the Des Moines (Iowa) College with the A.B. degree in 1893 and from the University of Chicago with the Ph.D. degree in 1899. In addition to acting as literary secretary to President William R. Harper (1899-1906), he was docent in Semitic languages and literatures at the University of Chicago (1899-1901), assistant (1901-02), as-

sociate (1902-05), instructor (1905-08), assistant professor (1908-12), and associate professor (1912-15). After 1915 he held the chair of Semitic languages and literatures at that institution and was editor of the *American Journal of Semitic Languages and Literatures*. He was also associate editor of the *Biblical World* (1906-20), the *American Journal of Theology* (1907-20), and the *Journal of Religion* (1920-32). He collaborated with A. R. Gordon, T. J. Meek, and L. Waterman in an American translation (in modern language) of the *Old Testament* (1927) and with E. J. Goodspeed in an American translation of the *Bible* (1931).

**SMITH, WILLIAM ALDEN.** An American lawyer and legislator, died in Grand Rapids, Mich., Oct. 11, 1932. Born in Dowagiac, Mich., May 12, 1859, he received a public school education and was a newsboy, telegraph messenger, and page in the Michigan House of Representatives. In 1879 he became connected with the law firm of Burch & Montgomery in Grand Rapids where he studied law and in 1883 was admitted to the bar. After 1889 he was a partner in the firm of Smiley, Smith & Steven. He was active in Republican politics, serving from 1888 to 1892 as a member of the Michigan Republican State Central Committee. In 1894 he was elected to Congress as representative from the fifth Michigan district and was reelected to the succeeding 55th to 60th Congresses. He resigned from the latter in 1907 to run for the Senate, filling out the unexpired term of Russell A. Alger, and was reelected in 1912 for the term expiring in 1919.

**SMITH COLLEGE.** A nonsectarian college for women in Northampton, Mass., founded in 1871. The enrollment for the autumn of 1932 was 1978. There were 239 faculty members. The productive funds amounted to \$6,317,075, and the income from funds was \$305,805. President, William Allan Neilson, Ph.D., LL.D., L.H.D., Litt.D.

**SMITHSONIAN INSTITUTION.** An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his property to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men."

The enterprises supported wholly by Congressional appropriations, but administered by the Smithsonian Institution, include the National Museum, the National Gallery of Art, the Bureau of American Ethnology, the International Exchange Service, the National Zoological Park, the Astrophysical Observatory, and the U. S. Regional Bureau of the International Catalogue of Scientific Literature. It administers also the Freer Gallery of Art.

During 1932 preliminary plans were completed for the wings authorized by Congress in 1930 to be added to the Natural History Building of the National Museum. An unrestricted bequest of \$100,000 was received for the endowment funds of the institution from the late Dwight W. Morrow. The director of the National Zoological Park headed an expedition to British Guiana, returning with 317 live animals for the park. Investigations of periodicities in solar and terrestrial phenomena were made by the Astrophysical Observatory. The division of radiation and organisms, pursuing its pioneering experiments in biophysics, measured the carbon dioxide assimila-

tion of wheat for different light intensities, made experiments on the lethal effects of the ultra-violet rays upon algae, and a study of the effects of different wave length distributions of light on the growth of plants.

The institution and the government bureaus under its direction published, during 1932, 121 volumes and pamphlets, of which 204,240 copies were distributed to libraries, educational institutions, and individuals. Volume V of the *Annals of the Astrophysical Observatory* appeared, presenting the results of its researches on the sun for the past 10 years. The fifth revised edition of the *Smithsonian Meteorological Tables* and the fourth reprint of the *Smithsonian Mathematical Tables—Hyperbolic Functions* were issued. The expendable income of the institution for the year was \$136,038; its endowment funds totaled \$1,775,804. Secretary, Dr. C. G. Abbot; assistant secretary, Dr. Alexander Wetmore.

**SNUFF.** See TOBACCO.

**SOCCEER.** The New Bedford Whalers, surprisingly beaten by the New York Giants for the American Soccer League championship, won the 1932 national honors in the annual cup competition of the U. S. Football Association. In the play-off for the League title, the Whalers took the first game from the Giants, 8 to 3, and as the series was on a two-game total points scored basis the cause of the Giants looked hopeless. The New York team swamped New Bedford, three days later, 6-0, however, and won the series, 9 to 8. A few months later the Giants again met the Whalers in the Eastern final for the National Cup. This time the Whalers reversed the decision and turned back the Giants, 5-2. The Stix eleven of St. Louis gained the Western final by downing the Chicago Bricklayers. In the first game between the finalists, New Bedford and Stix tied, 3-all, but in the second the Easterners asserted their superiority and won handily, 5-2, tallying all five goals in the second half.

The Shamrock Football Club of Cleveland won the U.S.F.A. amateur cup, defeating the Santo Christo eleven of New Bedford in the final, 2 to 1.

The University of Pennsylvania team won college laurels by topping the Middle Atlantic Association, and the James Monroe High School eleven took the honors in the Public Schools Athletic League in New York.

**SOCIALISM.** UNITED STATES. In May, the Socialist party, assembled in its convention in Milwaukee, nominated as its standard bearer in the presidential campaign Norman Thomas of New York and for the vice-presidency James H. Maurer of Pennsylvania. The party's programme was the traditional one of American socialism in its advocacy of public ownership of the large industries. The leaders of the party, however, did not expect the immediate realization of their programme, devoting their time largely to the building up of sentiment in favor of public acquisition of a limited number of industries. Specifically such industries were to be

the banks, railroads, mines, and electric and gas companies. The party platform was opposed to confiscation of property but it did endorse "the efforts being made in Russia to create the economic foundations of a socialist society." Other important planks demanded the repeal of the Eighteenth Amendment; a federal appropriation of \$5,000,000,000 for immediate relief of the unemployed; the six-hour day and five-day week without wage reductions; compulsory unemployment compensation based upon contributions by the government and employers; old-age health and maternity insurance; the abolition of child labor; steeply increased taxes on inheritances and large incomes; and a group of political demands looking to more democratic processes, adherence to the World Court, reduction of armaments, and recognition of Soviet Russia. Mr. Thomas made a spirited campaign seeking, particularly, to evoke the interest of dispossessed white collar workers and the middle class generally. Later in the campaign, in order to gain the support of working populations, Mr. Thomas swung farther to the Left and insisted that a limited capital levy was necessary immediately for the salvation of our industrial society. The party was aided by an influential non-partisan committee headed by such men as Profs. Paul H. Douglas of Chicago University, John Dewey of Columbia University, Morris R. Cohen of the College of the City of New York, and the publicists Oswald Garrison Villard and Elmer Davis. However, despite the sympathetic attention with which Mr. Thomas's campaign was being received in the public press, there was no opposition lacking within party councils themselves. There was a definite Left wing group which frowned on the ameliorative tactics of the standard bearer. This group, the so-called "militants," was in many particulars comparable to the Independent Labor party of Great Britain and, like the English Left wing group, believed that the doctrine of the class struggle was basic to any programme of socialist tactics. The "militants" were opposed to reform and opportunism and, more specifically, desired a thoroughgoing endorsement of the activities of Soviet Russia and in America the fostering of industrial unionism and a more concerted drive to convert the labor movement to the socialist philosophy. It is to be noted that unlike the I. L. P. of Great Britain the "militants" did not break away from the Socialist party. However, in view of the disappointingly small vote cast for Thomas in the November elections, there was every reason to believe that the "militants," in the future conduct of party affairs, would succeed in playing an increasingly more significant rôle. See COMMUNISM.

The Socialist Labor party nominated as its standard bearer Verne L. Reynolds of New York, and John W. Aiken of Massachusetts for the vice-presidency. The heart of the Socialist Labor doctrine called for collective ownership and control to be obtained by uniting national and industrial unions into one big union. Its principles really placed no reliance on political action or in immediate demands. In 1928 its national candidates polled 21,181 votes.

**GREAT BRITAIN.** The annual conference of the British Labor party, which was held at Leicester, England, from October 3 to October 6, definitely showed a decided turning toward the Left on the part of the party membership as well as

the repudiation of the old line executive. See GREAT BRITAIN under *History*.

**SOCIALIST LABOR PARTY.** See SOCIALISM.

**SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.** An international association, of which the Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. The general assembly last met at Paris, Oct. 19-22, 1931. The two technical commissions appointed to study the two problems at present under consideration by the Association met at London, July 6-8, 1932. The two questions considered were new aspects of the problem of hours of work and the respective parts played by social insurance and public assistance against social risks, especially unemployment. See LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

**SOCIAL PSYCHOLOGY.** See PSYCHOLOGY.

**SOCIAL STATISTICS.** See WELFARE WORK.

**SOCIETY ISLANDS.** See OCEANIA, FRENCH ESTABLISHMENTS IN.

**SOCIOLOGY.** See LITERATURE, ENGLISH AND AMERICAN.

**SOILS.** Land use planning, classification, valuation, and adaptation, soil erosion and moisture conservation, soil chemistry, soil fertility, soil physics, soil micro-biology, and the dynamic properties of soil affecting tillage were among the more important topics receiving special consideration by soil investigators.

The trend toward more discriminating use of soil in the United States continued to spread. According to the *Report of the Chief of the Bureau of Chemistry and Soils for 1932*, the agricultural plant of the United States is too large to meet present domestic demands. "Of the 350,000,000 acres of land now in harvested crops, probably about 100,000,000 acres may be classed as marginal or sub-marginal and would be better adapted for other purposes such as grazing, forestry, and recreation."

Two national committees, growing out of the National Land Utilization Conference, were formulated to be known as the national land use planning committee and the national advisory and legislative committee on land use. Notable progress was made in formulating policies and stimulating local interest in adequate land use adjustments, and in aiding in the development of coordinated land use planning programmes in individual States.

The Bureau of Chemistry and Soils continued the nation-wide inventory of the soil fertility resources of the United States. The soil survey was world-wide and the United States retained the lead in such work. During the year the Department of Agriculture in coöperation with appropriate State agencies conducted soil survey work in 79 separate areas distributed over 28 States and one insular territorial possession. Detailed surveys aggregating 30,569 square miles, and reconnaissance surveys to the extent of 7455 square miles were covered during the year, bringing the total acreage for the detailed survey to over 550,000,000 and the reconnaissance survey to over 402,146,000 according to the *Report of the Chief of the Bureau of Chemistry and Soils for 1932*. Continued progress also was made by the several State organizations coöperating with the Depart-

ment of Agriculture in the proper correlation and classification of soils. Continued progress was made in the inventory of the character and quality of the peat and muck resources of the United States. Studies were continued of the sequence of peat layers and characteristic profile features of peat deposits of regional importance and a survey and classification was made of organic soils in Virginia, North Carolina, and Minnesota. A study was completed of the chemical composition of the muck soils of New York.

Soil impairment by erosion and run-off continued to be recognized as one of the most important problems confronting American agriculture. The investigations of the Department of Agriculture were expanded by the establishment of two new soil erosion experiment farms in defined major soil erosion areas. The work already in operation was enlarged and strengthened along scientific lines and there continued to be accumulated information on soil and water losses under various controlled conditions of soil type, slope, and character of rainfall. According to the *Report of the Chief of the Bureau of Chemistry and Soils for 1932* research methods were applied for the first time to the exceedingly diversified problem of land impairment and destruction by erosion, in conformity with a comprehensive scientifically coordinated plan. Farmers were beginning to adopt the comparatively inexpensive strip cropping method of reducing soil losses in which strips of thick-growing, water-retarding, soil-saving crops serve as a powerful agency in slowing down the rate and amount of run-off and in reducing the severity of soil washing. Results obtained with the hole digging soil-saving cultivator continued to be satisfactory, the rainfall losses from fallow land scarified by this machine being only 1½ per cent of the total precipitation as against 34 per cent for unscarified areas adjacent. In the Corn Belt the fact developed that terracing alone cannot control soil erosion as well as terracing combined with crop rotations which build up the humus content of the soil, and the possibility of controlling soil erosion by the use of good farming methods was indicated. However, experiments in the Red Plains region indicated conclusively the value of terracing in reducing the harmful effects of erosion and in assisting the soil rebuilding process by retaining fertilizer and organic matter according to the *Report of the Chief of the Bureau of Agricultural Engineering for 1932*. The Alabama Agricultural Experiment Station was expressing the erosive tendencies of soils in terms of their dynamic properties, and was developing control measures by the manipulation of these properties.

The demand for more accurate and specific information regarding the fertilizer requirements of crops on soils of known character was more widespread and persistent than ever before, and soil fertility studies by both the Department of Agriculture and the State agricultural experiment stations continued to concentrate in that direction with particular reference to the needs of cotton, potatoes, sugar beets, sugar cane, pecans, sweet potatoes, strawberries, and citrus and truck crops. Evidence accumulated to indicate that phosphoric acid is the limiting plant food factor in the growing of sugar beets, the national crop of which had a value during 1931 of nearly \$47,000,000. Additional evidence accumulated relating to the crop producing and economic value of some of the newer concentrated fertilizers, and

progress was made in perfecting their rational use, it again being found that the addition of calcium, magnesium, and some of the heavier metals such as copper and manganese to concentrated fertilizers increased crop yields on a number of soil types.

The relation of soil reaction to crop production continued to receive much attention not only with reference to its influence on availability of plant nutrients and the development of rational fertilizer practices but to its influence on the prevalence and severity of certain crop diseases. The rational use of fertilizers and the practice of modified tillage in conjunction with crop rotation, soil conservation, and other fertility maintenance measures offered promise as means of controlling cotton root rot in the black-land area of Texas, according to the Bureau of Chemistry and Soils.

New light was thrown on the practical aspects of green manuring, the evidence pointing to the fact that failures of grain crops grown in rotation with two summer green manure crops, especially on light soils, is due to the production of nitrates and ammonia from the green manures at times when the grain crop is unable to use them efficiently and to the consequent loss of nitrates in the drainage. It also developed that it is more efficient to allow the vegetative matter produced by green manure crops to lie on the surface of the ground than to turn it under. Considerable interest developed in the possibility of determining mineral soil deficiencies by bacteriological reactions and the soil plaque, utilizing the spontaneous development of azotobacter colonies as a plant food indicator, was proved by the Colorado Agricultural Experiment Station to be a satisfactory means of determining deficiencies in phosphorus, lime, and apparently available potash in soils containing an adequate inoculum of azotobacter. Soil molds were receiving an increasing consideration among the agents affecting the nature and amount of soil organic matter, the evidence pointing to the brown walled molds as forming the characteristic species active on the decaying portion of plant residues and imparting a gray to black or brown color thereto. These forms were rapid destroyers of sugars, starches, and other quickly decaying substances rather than of fibrous materials, and thus tended to contribute to the lignins which seem to be an important part of the soil organic matter. A survey of soil fungi on forest floors was under way in nine States which was establishing a basis for interpreting the relations of fungi, other organisms, and tree roots in the decomposing mass that covers the soil itself. In contrast to the fungi of arable soils, those of the forest floors contributed to the accumulation of little if any lignin.

**BIBLIOGRAPHY.** Advances in the knowledge of the sciences of soil technology, microbiology, and fertility appear currently in *Soil Science*, published in Baltimore, Md., and in *Journal of the American Society of Agronomy*, published at Geneva, N. Y. Recent books on these subjects are *Soil Conditions and Plant Growth*, by E. J. Russell, London, 1932; *The Soil.—An Introduction to the Scientific Study of the Growth of Crops*, by A. D. Hall, London, 1931; *Principles of Soil Microbiology*, by S. A. Waksman, Baltimore, 1932; *Controlling Small Gullies*, by *Bluegrass Sod*, U. S. Department of Agriculture Leaflet No. 82, Washington, D. C.; and *Strip Cropping to*

*Prevent Erosion*, U. S. Department of Agriculture Leaflet No. 85, Washington, D. C.

**SOLOMON ISLANDS.** A group of islands in the western Pacific, lying to the eastward of Papua. The southern islands of the group (Guadalcanar, Malaita, Ysabel, San Cristoval, New Georgia, Choiseul, Shortland, and numerous smaller ones) are known as the British Solomon Islands. The land and sea area of the British Solomon Islands is about 375,000 square nautical miles; population (1931 census), 91,407 including 497 Europeans. Capital, Tulagi. The northern islands of the Solomon group (Bougainville, Buka, and adjacent small islands) form part of the Territory of New Guinea under Australian mandate. The area of this group is about 4100 square miles, and the native population of patrolled areas was 41,111 in 1930. See **NEW GUINEA**.

**SOMALILAND, ITALIAN.** See **ITALIAN SOMALILAND**.

**SOMALILAND, sô-mă'lê-lând, PROTECTORATE.** A British territory on the African coast of the Gulf of Aden. Area about 68,000 square miles; population estimated at 344,700. The capital and chief port is Berbera, with about 30,000 inhabitants.

**SOPHIE (DOROTHEA ULBICA ALICE).** Former Queen of Greece, died in Frankfurt, Germany, Jan. 13, 1932. She was born in Potsdam June 14, 1870, third daughter of the German Emperor, Frederick III, and Queen Victoria. In 1889 she was married at Athens to Prince Constantine, Duke of Sparta, who succeeded to the throne on the assassination of his father, George I, in 1913. In 1917 Constantine was compelled by the Allies to leave Greece with his eldest son George, after having appointed his second son Alexander to succeed him. He returned to the throne in 1920, following the death of Alexander, but was obliged to abdicate again in September, 1922, in favor of the Crown Prince. On the abdication of her son and the establishment of the Greek republic in March, 1924, Sophie retired to Florence, where until a few months previous to her death she made her home with her three unmarried children, Paul, Irene, and Catherine. Her eldest daughter Helen was the divorced wife of King Carol of Rumania.

**SOUSA, JOHN PHILIP.** An American bandmaster and composer, died in Reading, Pa., Mar. 6, 1932. He was born in Washington, D. C., Nov. 6, 1854, and was educated there, studying violin under John Esputa. He held the position of bandmaster of the U. S. Marine Corps at Washington from 1880 to 1892, and during that period made the organization one of the finest military bands in the country. In 1892, in conjunction with David Blakely, he formed the organization later known as Sousa's band, with which he toured the United States and Europe and in 1910-11 made a tour around the world, meeting with phenomenal success everywhere. His ability as a composer of marches soon secured for him the title of "The March King." Of the nearly 100 marches which he wrote the most popular are the *Washington Post*, *High School Cadets*, *Liberty Bell*, *Semper Fidelis*, and *Stars and Stripes Forever*, the latter having been suggested as the national march of the United States. The more successful of his

light operas are: *El Capitan* (1898); *The Chariot Race* (1897); and *The Bride-Elect* (1898). Among the others are: *The Smugglers*; *Désirée*; *The Queen of Hearts*; *Chris and the Wonderful Lamp*; *The Free Lance*; *The Glass Blowers*; and *The American Maid*. He also wrote *The Chariot Race*, a symphonic poem; *The Last Crusade*, a cantata; and five suites.

**SOUTH.** UNIVERSITY OF THE. A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1932 was 235, of whom 211 were registered in the college and 29 in the theological school. The faculty had 27 members, exclusive of student assistants. The income from productive funds was \$80,674, while the receipts from all sources totaled \$289,260. The library contained 45,287 volumes. President, Benjamin Ficklin Finney, LL.D.

**SOUTH AFRICA.** UNION OF. A self-governing dominion of the British Commonwealth of Nations. Capital, Pretoria; seat of the legislature, Cape Town.

**AREA AND POPULATION.** The area and census population of the Union by Provinces is shown in the accompanying table.

AREA AND POPULATION BY PROVINCES

Province	Area, square miles	Non- European, 1921	European	
			1921	1931
Cape of Good Hope ...	278,536	2,132,110	650,609	749,231
Natal .....	35,284	1,292,560	136,838	177,449
Transvaal ..	110,450	1,544,151	543,485	696,120
Orange Free State ....	49,647	440,271	188,556	205,875
Total ..	471,917	5,409,092	1,519,488	1,828,175

The 1926 census of Europeans showed a total of 1,076,000. Of the 1931 white population, 55 per cent were of Dutch origin and about 36 per cent were British. No census of the colored and native population was taken after 1921. The total population as of June 30, 1932, was estimated by the Office of Census and Statistics at 8,250,900, including 1,859,400 Europeans, 5,600,300 Bantus (natives), 193,900 Asiatics, and 597,300 of mixed or other races. The division of the estimated Bantu population by Provinces on June 30, 1932, was: Cape, 1,861,500; Natal, 1,363,300; Transvaal, 1,836,000; and Orange Free State, 538,900. For the period 1927 to 1931, European births averaged 46,001 annually; deaths, 17,166; the birth rate per 1000 Europeans, 26.1; death rate, 9.6. Immigrants in 1931 numbered 5024 and emigrants 4746; of these 4140 and 2696, respectively, were Europeans.

The estimated population of the chief cities in 1931, with census returns for Europeans in parentheses, was: Johannesburg, 347,900 (203,298); Cape Town, 268,200 (150,914); Durban, 138,000 (86,228); Pretoria, 88,800 (62,138); Port Elizabeth, 76,200 (43,924); Benoni, 50,800 (28,503); Bloemfontein, 51,200 (28,503).

**EDUCATION.** At the beginning of 1931, there were 736,049 pupils enrolled in state and state-aided schools, of which 353,942 were European and 382,707 non-European. The number of European children of school age (roughly 7 to 16 years) in 1931 was 344,633. The number of teachers was 25,805 and the normal state expenditure for education in 1930 was £7,824,219. In 1931, ten universities and colleges had 7006 students;

the state expenditure for higher education in 1930 was £386,584.

**PRODUCTION.** Of about 10,000,000 acres of arable land, about 60 per cent was devoted to cereals in 1931, with corn dominant. Forests cover 2,600,000 acres. The production of the chief crops in the 1931-32 season was: wheat, 14,230,000 bushels; barley, 1,046,000 bushels (1930-31); oats, 5,920,000 bushels (European cultivation, in 1930-31); corn, 60,946,000 bushels; potatoes, 5,598,000 bushels (European cultivation); sugar cane, 3,500,000 short tons (European); tobacco, 17,500,000 pounds (European); Kafir corn, 44,000 short tons (European); peanuts, 8,330,000 pounds (European). The 1930-31 cotton crop was 3,495,000 pounds. Wool production (including pulled wool) for 1931-32 was 315,000,000 pounds (305,000,000 pounds for 1930-31); it is the chief source of farm income. Mohair output (1930-31), was 6,205,000 pounds.

The Union is the chief gold and diamond producing region of the world. The value of all minerals produced in 1931 was 54,730,000 South African pounds (\$4.8065 at par), as against 58,985,000 pounds in 1930. Gold production was valued at 46,206,000 pounds; diamonds, 4,183,000 pounds; and coal, 3,040,000 pounds. The gold output of 11,553,564 fine ounces in 1932 set a third consecutive high record. The 1931 output of mined diamonds was 1,470,386 carats (2,242,000 carats in 1930) and that of alluvial diamonds 647,045 carats (415,047 in 1930). The average price received by the Diamond Corporation, which acted with the government, was 43s. 2d. in 1931, as compared with 63s. 2d. in 1930 and 80s. 8d. per carat in 1929.

Mining conditions in South Africa became increasingly unsatisfactory following the abandonment of the gold standard by the United Kingdom and many other countries in September, 1931. In 1932 the Namaqualand copper properties in Cape Province were closed and experimental work in flotation of gold and copper ores in eastern Transvaal was suspended. The platinum mines were closed for the most part, but the Messina copper property was able to remain open, partly through a government subsidy on exports. Early in December, 1932, suspension of diamond production by the Diamond Corporation, a syndicate controlling the bulk of the world supply, was reported. In October, it was announced that a two-year survey of a 40-mile extension of the famous Witwatersrand had revealed approximately 278,000,000 tons of potential gold ore.

**COMMERCE.** Foreign trade declined less in 1931 than in the previous year and the decline was about equal with respect to both imports and exports. The 1931 imports were valued at \$257,758,000, against \$314,174,000 in 1930, and exports at \$293,596,000, against \$330,584,000 in 1930. The value of the chief overseas export items in 1931 was: gold bar, \$189,609,000; gold coin, \$34,788,000; wool, \$27,742,000; diamonds, \$17,390,000. For 1930 comparative figures were \$180,469,000, \$50,747,000, \$42,068,000, and \$26,674,000, respectively. The leading import items were machinery and apparatus, iron and steel products, cotton piece goods, and chemicals. Of the total exports, the United Kingdom in 1931 purchased 43.4 per cent (47.9 in 1930); France, 10.7 per cent (10.3); and Belgium, 6.9 (8.2). The United Kingdom also furnished 44.1 per cent of the total imports (45.7 in 1930); United States, 14.2 (15.7); and Germany, 6.8 (6.3). Ex-

ports to the United States in 1931 (excluding gold) were \$3,737,000 (\$5,831,000 in 1930) and imports from the United States were \$34,143,000 (\$44,959,000 in 1930).

**FINANCE.** For the fiscal year ended Mar. 31, 1932, ordinary accounts showed a deficit of 1,102,166 South African pounds, with expenditures totaling 28,185,602 pounds and receipts 27,083,436 pounds. The 1930-31 budget deficit was 897,000 pounds. For the year 1932-33, the Finance Minister estimated ordinary revenues at 25,845,000 pounds and ordinary expenditures at 27,479,000 pounds, leaving an anticipated deficit of 1,634,000 pounds. Accordingly, new taxes estimated to bring in 3,535,000 pounds in additional revenue in 1932-33 were imposed.

The total gross debt on Mar. 1931, was 256,845,000 South African pounds (about \$1,249,936,000) and the net debt was £237,958,000 (\$1,158,023,000). For financial developments in 1932, see *History*.

**COMMUNICATIONS.** On Mar. 31, 1931, there were 13,459 miles of railway lines in the Union, all state owned and operated, except 400 miles of private lines. In the fiscal year 1930-31, all lines carried 76,287,000 passengers and 21,608,000 short tons of freight, the gross receipts totaling \$118,368,000. The government railways reported a deficit of £2,500,000 in 1931-32. Highways in 1930 extended 85,598 miles. Air-mail service between Cape Town and London was inaugurated in February, 1932. In August and September, 1932, the British telephone service to South Africa was extended to include Pretoria, Johannesburg, Kimberley, and Bloemfontein. A total of 1412 vessels, of 4,971,000 net registered tons, entered the ports in the foreign trade during 1931.

**GOVERNMENT.** The executive power is vested in a governor-general, appointed by the Crown, who acts through an executive council of ministers, each in charge of a department. Legislative power rested in a parliament, consisting of a senate of 40 members, of whom 8 were nominated by the governor-general-in-council and 32 by the Provinces (eight each), and a house of assembly of 148 members, distributed among the Provinces as follows: Cape of Good Hope, 58; Transvaal, 55; Natal, 17; and Orange Free State, 18; the basis of suffrage being the same as that existing in each Province at the time of the formation of the Union. The executive council in 1932 was composed as follows; Prime Minister and Minister of External Affairs, General J. B. M. Hertzog; Interior, Health, and Education, Dr. D. F. Malan; Mines and Industries, A. P. J. Fourie; Railways and Harbors, C. W. Malan; Finance, N. C. Havenga; Justice, O. Pirow; Defense and Labor, Col. F. H. P. Creswell; Agriculture, Gen. J. C. G. Kemp; Lands, P. G. W. Grobler; Posts and Telegraphs and Public Works, H. W. Sampson; Native Affairs, E. G. Jansen. Governor-General and Commander-in-Chief in 1932, Earl of Clarendon, appointed January, 1931.

#### HISTORY

**GOLD STANDARD ABANDONED.** Throughout 1932, the Union was torn by a bitter controversy over the Nationalist government's retention of the gold standard. Besides its purely economic implications, the issue was intimately involved in the increasing rift between the Afrikaner Nationalists, of whom a strong section desired the abolition of the imperial connection and the establishment of a republic, and the British and

loyal Afrikaners. While the Nationalists favored divorcing the South African currency from sterling in order to decrease the Union's dependence upon Great Britain, the adherents of the Empire demanded that the gold standard be abandoned and the Union currency linked with sterling.

The economic issue, however, cut across racial and political lines. Despite the 10 per cent export subsidy authorized in November, 1931, farmers and wool producers, including many Afrikaners, found themselves at a disadvantage in competing with primary producers of countries which had abandoned the gold standard. By the time Parliament convened on Jan. 27, 1932, the opposition to the government's policy was sufficiently strong to induce the government to appoint a select committee to investigate the whole problem. This failed to mollify the South African party and its leader, Gen. J. C. Smuts. The latter resented the anti-dumping duties imposed against imports from Great Britain and other countries off the gold standard, which threatened to obstruct arrangements for imperial preferences at the Ottawa Conference. The government's new trade agreements with Germany and Japan were other obstacles to economic cooperation with the Empire.

Despite this opposition, the Nationalists introduced into Parliament on March 22 a bill providing for new currency in units called rands, florins, and cents. The rand, which was to be based on gold, was equivalent to \$3.90 and contained 10 florins of 100 cents each. It was decided to wait until after the Ottawa Conference to fix the value of the British pound in terms of the new currency. However, the budget adopted for 1932-33 imposed an additional 7½ per cent surtax on the gold value of imports. It also increased the tax on gold-mining profits by 33 per cent and imposed a graduated 5 per cent surtax on income from fixed investments.

At the Ottawa Conference (see CANADA and GREAT BRITAIN under *History*) the South African government concluded new preferential tariff agreements with Great Britain, Canada and several other Dominions. The agreements secured preferential entry into British and Dominion markets of South African cereals, meats, and other agricultural products in return for preferences extended to British manufactures and products of other Dominions. The agreements were ratified by Parliament and that with Great Britain went into effect on November 17.

In December, a series of events convinced the public that the overthrow of the Hertzog Ministry and the abandonment of the gold standard was imminent. The Nationalist candidate in the Germiston by-election was unexpectedly defeated by the South African party's candidate on December 1. On December 12, a number of the Labor party leaders in the Rand withdrew their support from Premier Hertzog and accepted the invitation of General Smuts to join the South African party. These events started a drainage of gold from the country and the conversion of South African pounds into gold and foreign exchange to prevent losses due to the prospective devaluation of the local currency. The strain on the Union's financial system was greatly increased when on December 20 Judge Tielman Roos, an influential Afrikaner, resigned from the appellate division of the Supreme Court and announced his intention of entering politics in

opposition to Premier Hertzog. He demanded immediate devaluation of the currency and the extinction of racialism.

On December 27, the country went off the gold standard internally when the government released the Reserve Bank from its responsibility for redeeming notes in gold. Exchange facilities were also severely restricted. The efforts to keep the currency on gold parity externally failed, however, and on December 29 the government definitely abandoned the gold standard. The South African pound, worth \$4.785 when backed by gold, was left to find its own level. The government made no effort to link it with the pound sterling. The political situation at the end of the year was confused, with the Nationalist leaders denouncing Judge Roos for treachery and negotiations proceeding between Roos and Smuts for the establishment of a coalition government to succeed the Nationalist government.

**OTHER EVENTS.** The political rights of the inhabitants of South-West Africa (q.v.) were fixed by an agreement signed April 9 by Premier Hertzog and an official delegation from the protectorate, which was administered by the Union under a mandate from the League of Nations. German was recognized as an official language with English and Afrikaans. Europeans in South-West Africa were granted equal rights with those in the Union and those domiciled in South-West Africa on Dec. 31, 1931, were automatically made citizens. The Assembly of South-West Africa was granted extended powers and a joint commission to settle differences between the two governments was agreed upon. The Union government also agreed to extend financial assistance to the Territory.

**SOUTH AMERICA.** See under the various South American countries; **EXPLORATION**; **ARCHAEOLOGY**.

**SOUTH AMERICAN LITERATURE.** See **SPANISH-AMERICAN LITERATURES**.

**SOUTHAMPTON, ENGLAND, HARBOR IMPROVEMENTS.** See **PORTS AND HARBORS**.

**SOUTH AUSTRALIA.** A State of the Australian Commonwealth, occupying the south central part of the continent. Area, 380,070 square miles; population, 585,466 on Mar. 31, 1932. Adelaide, the capital and largest city, had 324,337 inhabitants on Dec. 31, 1931.

**PRODUCTION, ETC.** The value of production in the fiscal year 1929-30 aggregated £31,085,919, divided as follows: crops, £11,957,903; manufactures, £10,637,552; pastoral, £2,989,297; minerals, £1,320,805; dairying, £1,950,572; fisheries and game, poultry, forestry, etc., £2,229,790. The estimated production of wheat, the chief crop, was 48,093,102 bushels in 1931-32 (34,871,526 in 1930-31). The wool production in 1931-32 totaled 66,162,687 pounds, as in the grease. Mineral production in 1931 was but £542,693.

Direct overseas imports for the 1931-32 fiscal year was valued at £2,821,487 (British currency values), against £3,916,258 in 1930-31; overseas exports, £12,143,632 (recorded values), against £10,263,441 in 1930-31. State revenue for 1931-32 totaled £10,481,977 (£10,725,811 for 1930-31), and expenditure £11,545,336 (£12,539,668 in 1930-31). The net state loan expenditure for 1930-31 was £464,541 and the net state public debt on June 30, 1931, was £100,065,643.

The Assembly elected Apr. 5, 1930, was composed of 30 Laborites, 13 Liberals, 2 Country party members, and 1 Independent. Governor in

1932, Sir Alexander G. A. Hore-Ruthven, Premier, Treasurer, and Minister of Education. L. L. Hill (Labor). See **AUSTRALIA**.

**SOUTH CAROLINA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,738,765, as against 1,683,724 in 1920. Columbia, the capital, had (1930) 51,581 inhabitants; Charleston, 62,285.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1932	1,842,000	695,000	\$22,588,000
	1931	1,960,000	1,005,000	80,401,000
Corn	1932	1,656,000	17,885,000	8,227,000
	1931	1,608,000	22,994,000	10,577,000
Tobacco	1932	68,000	39,236,000	4,904,000
	1931	102,000	69,972,000	6,437,000
Oats	1932	389,000	7,974,000	2,631,000
	1931	878,000	9,450,000	3,496,000
Hay	1932	298,000	217,000	2,155,000
	1931	255,000	187,000	2,222,000
Sweet potatoes	1932	66,000	6,072,000	2,793,000
	1931	58,000	3,180,000	2,162,000
Potatoes	1932	17,000	1,462,000	1,213,000
	1931	25,000	8,500,000	2,380,000

\* Bales.    † Pounds.    ‡ Tons.

**MINERAL PRODUCTION.** The greater part of the State's entire mineral product, by yearly value, consisted of stone. The total value of the State's mineral product was \$3,341,051 for 1930; for 1929, \$3,592,112.

**FINANCE.** State expenditures in the year ended Dec. 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$12,617,467 (of which \$3,808,080 was for local education); for interest on debt, \$4,725,270; for permanent improvements, \$20,951,251; total, \$38,297,182 (of which \$21,419,174 was for highways, \$828,557 being for maintenance and \$20,590,617 for construction). Revenues were \$25,088,731. Funded debt outstanding on Dec. 31, 1931, totaled \$69,973,508, of which \$64,341,630 was for highways.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 3774.89. During the year previous, about 1 mile of new line had been put in operation; about 6 miles abandoned.

**EDUCATION.** The public-school system was maintained through the academic year 1931-1932, according to the *Journal* of the National Education Association, "with very little shortening of terms or tardiness in the payment of salaries." The school-age population was stated to be 676,381, composed of 343,188 whites and 331,193 Negroes. There were enrolled in the public schools 251,364 white and 223,710 Negro pupils. Of these, 202,894 whites and 214,299 Negroes were in elementary schools or grades; in high schools, 48,470 whites and 9411 Negroes. Expenditures for public-school education totaled \$12,314,226. Of this total, \$10,884,062 was for the education of whites and \$1,429,564 for that of Negroes. Salaries of teachers averaged \$841 a year for whites and \$275 for Negroes.

**LEGISLATION.** A second session of the seventy-ninth Legislature was convened on January 12. Its main occasion was to meet a deficit of some \$5,000,000 in the State's accounts. It passed an act authorizing the issuance of \$5,000,000 in State notes to provide the required sum due the State's creditors; a levy of 2½ mills on the \$100

was affixed to the State's ad-valorem tax on property and was to be devoted to extinguishing this note debt in about eight years. A joint resolution of the two houses provided for an extension of time for the payment of property taxes; but Governor Blackwood vetoed the resolution. A Public Utilities bill was enacted, vesting in the State Railroad Commission the authority to regulate the rates at which companies sold hydro-electric energy in the State.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket, save for a mere sprinkling of Republican votes. The officially reported totals for President were: Roosevelt (Dem.), 102,347; Hoover (Rep.), 1978. U. S. Sen. Ellison D. Smith (Dem.), was reelected, and an all-Democratic delegation of six, chiefly actual incumbents, were elected Representatives to the Seventy-third Congress. No State offices were filled in the election.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Ibra C. Blackwood; Lieutenant-Governor, James O. Sheppard; Secretary of State, W. P. Blackwell; Treasurer, J. H. Scarborough; Budget Secretary, Walter E. Duncan; Attorney-General, John M. Daniel; Comptroller-General, A. J. Beattie.

**Supreme Court:** Chief Justice, Eugene S. Blease; Associate Justices, Thomas P. Cothran, John G. Stabler, Jesse F. Carter, Milledge L. Bonham.

**SOUTH CAROLINA, UNIVERSITY OF.** A non-sectarian State institution of higher education in Columbia. The enrollment for the autumn session of 1932 totaled 1655. The faculty numbered 98. The appropriation was \$312,000 for the fiscal year. In the spring of 1932 the School of Education occupied its new building, erected at a cost of \$300,000. This building also is being used as the University High School, which opened in 1932. President, Leonard T. Baker, A.M., LL.D.

**SOUTH DAKOTA, POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 692,849, as against 638,547 in 1920. Sioux Falls, the chief city, had (1930) 33,362 inhabitants; Pierre, the capital, 3659.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn . . .	1932	4,982,000	73,235,000	\$9,521,000
	1931	4,837,000	25,152,000	7,797,000
	1932	3,527,000	2,678,000 <sup>a</sup>	9,585,000
Hay . . .	1931	8,194,000	1,643,000 <sup>a</sup>	12,172,000
	1932	3,991,000	54,095,000	16,228,000
	1931	2,796,000	16,718,000	7,189,000
Oats . . .	1932	2,321,000	75,432,000	6,336,000
	1931	1,745,000	20,068,000	4,014,000
	1932	2,053,000	47,630,000	6,192,000
Barley . . .	1931	1,833,000	16,680,000	4,504,000
	1932	165,000	776,000	636,000
	1931	211,000	654,000	739,000
Flaxseed . .	1932	73,000	5,110,000	1,278,000
	1931	54,000	2,160,000	1,231,000
	1932	475,000	7,125,000	1,069,000
Rye . . . .	1931	352,000	2,464,000	591,000

<sup>a</sup> Tons.

**MINERAL PRODUCTION.** The mining of gold, supplying normally about three-fourths of the total yearly value of the State's mineral production, was increasingly active in 1931. The quantity of gold mined increased to 431,000 fine ounces (1931), from 406,297 (1930); the value, to \$8,913,700 (1931), from \$8,398,900 (1930).

South Dakota ranked third among the States and territories as a gold producer in both years, following California and Alaska. For 1932 the production of gold was estimated to have risen further, attaining the value of \$9,959,711. The total value of the State's mineral product was \$11,075,808 for 1930; for 1929, \$8,914,344.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: \$19,555,756 (of which \$7,276,420 was for highways). Revenues were \$19,695,929. Funded debt outstanding on June 30, 1931, totaled \$49,961,032, of which \$186,032 was for highways. Net of sinking-fund assets, the debt was \$13,049,592.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 4218.70. During the year previous, about 19 miles of line had been abandoned.

**EDUCATION.** A complete new curriculum was put in use in the public elementary schools in the course of the year. The number of persons of school age in the State was reckoned, for the academic year 1931-1932, as 216,658. There were enrolled in the public schools 164,684 pupils. Of these, 130,697 were in common schools or elementary grades; in high schools, 33,987. The year's expenditures for public-school education totaled \$14,546,959.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion of nearly 2 to 1. For President, the officially reported totals were: Roosevelt (Dem.), 183,515; Hoover (Rep.), 99,212. Peter Norbeck (Rep.), was reelected United States Senator. Democrats were elected to both the State's seats in the House of Representatives, for the Seventy-third Congress. Tom Berry (Dem.), defeated Gov. Warren E. Green (Rep.), who ran for reelection.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Warren E. Green; Lieutenant-Governor, O. K. Whitney; Secretary of State, Mrs. Elizabeth Coyne; State Auditor, William M. Dunn; State Treasurer, A. C. Goodhope; Superintendent of Public Instruction, C. E. Gold; Attorney-General, M. Q. Sharpe.

**Supreme Court:** Judges, S. C. Polley, Frederick A. Warren, Everett D. Roberts, Herbert B. Rudolph, Dwight Campbell.

**SOUTH DAKOTA, UNIVERSITY OF.** A State institution of higher education in Vermillion, founded in 1882. The enrollment for the autumn term of 1932 was 852 and for the summer session, 413. The faculty and staff numbered 145. The operating income for the year was \$455,280. President, Herman G. James, J.D., Ph.D.

**SOUTH DAKOTA STATE COLLEGE.** A State college of agriculture and mechanic arts in Brookings, founded in 1882. The enrollment for the autumn of 1932 was 832, summer school, 232. The teaching staff was equivalent to 73 full-time teachers. The income for 1930-31 was \$1,065,009. President, Charles W. Pugsley, D.Agr.

**SOUTHERN CALIFORNIA, UNIVERSITY OF.** An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. The enrollment for 1931-32, including summer session and extension classes, was 15,590. In the autumn of 1932 there were 550 members on the faculty. The endowment was \$1,648,000, the income from tuition and fees, \$1,776,000, and other income \$326,700. President, Rufus B. von Kleinsmid, Sc.D., J.D.

**SOUTHERN RHODESIA.** See under RHODESIA.

**SOUTH GEORGIA.** See FALKLAND ISLANDS.

**SOUTH ORKNEYS.** See FALKLAND ISLANDS.

**SOUTH-WEST AFRICA.** A former German protectorate, administered since Dec. 17, 1920, by the Union of South Africa under a mandate from the League of Nations. Area, 322,394 square miles; population (1926 census) 258,905 including 24,115 Europeans. Capital, Windhoek, with 18,241 inhabitants including 13,639 natives. Imports in 1930 were valued at £2,120,282; exports, £2,017,127. In 1930-31 revenue was £619,229; and expenditure, £1,271,281. Administrator in 1932. A. J. Werth. See SOUTH AFRICA, UNION OF, under History.

**SOVIET CENTRAL ASIA.** A region in central Asia, including the territory formerly known as Russian Turkestan. Administratively it is divided into the soviet socialist republics and autonomous areas, affiliated with the U.S.S.R., shown in the accompanying table.

#### SOVIET REPUBLICS OF CENTRAL ASIA

<i>States</i>	<i>Area, sq. miles</i>	<i>Population</i>
Turcoman S. S. R. ....	189,658	1,030,500
Uzbek S. S. R. ....	75,598	4,525,000
Tadzik S. S. R. ....	54,826	745,200
Kara-Kalpak Aut. Area .....	46,320	370,000
Kirghia A. S. S. R. ....	60,000	1,000,000

**SOVIET-POLISH NON-AGGRESSION PACT.** See POLAND; PEACE.

**SOVIET RUSSIA.** See UNION OF SOVIET SOCIALIST REPUBLICS.

**SOVIET UNION.** See UNION OF SOVIET SOCIALIST REPUBLICS.

**SPAIN.** A former constitutional monarchy of southwestern Europe, proclaimed a republic on Apr. 14, 1931. Capital, Madrid.

**AREA AND POPULATION.** Continental Spain has an area of 190,050 square miles; including the Balearic and Canary Islands, the total area is 196,607 square miles, or about one-third less than that of Texas. The population at the census of 1930 was 23,903,343, compared with 21,959,086 in 1920. For the period 1926 to 1930, births averaged 655,588 annually and deaths 411,085; the birth rate per 1000 inhabitants was about 29.3 and the death rate 18.3. Emigration, which is mostly to Argentina, Cuba, Brazil, and Uruguay, totaled 94,571 in 1930 (100,988 in 1929). The chief cities, with their census populations (preliminary) in 1930, are: Madrid, 863,958 (750,896 in 1920); Barcelona, 958,723 (710,335 in 1920); Valencia, 315,816; Seville, 217,788; Valladolid, 188,619 Málaga, 180,105; Zaragoza, 162,129; Bilbao, 161,987; Murcia, 159,825; Granada, 117,493.

**EDUCATION.** The census of 1920 showed that 46.45 per cent of the population six years of age and over could neither read nor write. The Constitution of the republic (Dec. 9, 1931) made primary education free and compulsory and the republican government has greatly expanded educational facilities. In 1929, there were 27,883 public elementary schools and about 6000 private schools, with some 3,800,000 pupils; 69 secondary schools, with 63,396 pupils; and 11 universities, with 45,463 students. The universities are at Barcelona, Granada, Madrid, Murcia, Oviedo, Salamanca, Santiago, Seville, Valencia, Valladolid, and Zaragoza.

**PRODUCTION.** Predominantly an agricultural

country, Spain in 1930 had 39,789,000 acres, or about 32 per cent of the total area, under cultivation, besides 40,539,000 acres of pastures, and 11,146,000 acres of trees, shrubs, and bushes. About 7 per cent of the cultivated land was under irrigation. The wheat crop in 1932 was unofficially estimated at 4,850,000 metric tons, compared with the previous record yield of 4,420,000 metric tons in 1925 and the estimated domestic consumption of 3,930,000 metric tons. Spain is normally the chief olive-producing country of the world; the yield of olive oil in 1931-32 was 109,187,000 gallons. Other crops (in bushels) in 1931 were: Rye, 18,512,000; barley, 90,727,000; oats, 41,670,000; corn, 26,403,000; rice, 13,042,000; potatoes, 124,162,000. Sugar beet production was 2,962,000 metric tons; wine, 476,166,000 gallons.

Crude mineral production in 1930 was valued at 477,741,000 pesetas (\$87,262,000) and refined-mineral products at 1,095,572,000 pesetas (\$127,853,000). The output of coal and lignite in 1931 was 7,338,000 metric tons; coke (metallurgical), 572,000 tons; pig iron, 475,000 tons; copper (blister), 25,802 tons; lead, 122,197 tons; zinc, 10,830. Pyrites, mercury, superphosphates, and cement were other mineral products. The chief manufactures are cotton goods, paper, glass, sugar, cork products, silk, and metallurgical products. There were about 250 cotton-spinning and 800 weaving mills, which employed about 110,000 persons. Silk production in 1931 was 58,000 metric tons. Unemployment at the end of November, 1932, totaled about 400,000.

**COMMERCE.** The value of Spain's foreign trade declined more than 50 per cent in 1931. Imports, valued at 1,177,100,000 gold pesetas (\$227,180,000), were 51 per cent less than the 1930 imports, valued at 2,447,351,000 pesetas (\$472,339,000). Exports were valued at 960,880,000 gold pesetas (\$185,450,000) and were 58 per cent less than the 1930 exports of 2,299,667,000 pesetas (\$443,836,000). Leading import items, in order of value in 1931, were chemicals and fertilizers, raw and waste cotton, mineral oils, lumber and timber, electric machinery, and other machinery. Exports, in order of value, were fresh fruit (chiefly oranges), olive oil, salt, almonds, and chemicals. In 1930, the United Kingdom purchased 21.9 per cent of the total exports; France, 19.3; the United States, 9.2; Germany, 7.4; and Argentina, 7.1. Of the total imports, the United States supplied 16.8 per cent; the United Kingdom, 12.3; Germany, 11.6; France, 11; and Argentina, 2.2 per cent. According to United States statistics, exports to Spain in 1931 were \$33,970,000 (\$26,688,366 in 1932) and imports from Spain were \$16,621,000 (\$11,406,375 in 1932). Spain's purchases of American raw cotton fell to \$12,624,000 in 1931 from \$20,154,000 in 1930.

**FINANCE.** The ordinary budget for 1931 closed with a deficit of 199,000,000 pesetas, as contrasted with a surplus of 53,000,000 pesetas in 1930 (the peseta, par value \$0.19295, exchanged at \$0.1167 in 1930 and \$0.0954 in 1931). Ordinary revenues in 1931 were 3,656,000,000 pesetas (3,735,000,000 pesetas in 1930) and ordinary expenditures were 3,855,000,000 pesetas (3,682,000,000 in 1930). The preliminary 1932 returns placed revenues at 4,403,000,000 pesetas and expenditures at 4,297,100,000 pesetas. The receipts included 500,000,000 pesetas in loans. For 1933, budget proposals called for revenues of 4,715,-

278,000 pesetas (including loans of 586,370,000 pesetas) and expenditures of 4,711,169,000 pesetas. The funded public debt on Jan. 1, 1932, was reported at 19,551,267,000 pesetas (\$1,642,306,000, converted at the averaged exchange rate for December, 1931), not including the 350,000,000 gold pesetas (\$67,550,000) raised on Jan. 1, 1930.

**COMMUNICATIONS.** The railways, which are privately owned but subsidized by the government, extended 10,370 miles in 1929. By a decree of Sept. 28, 1932, the government established a system of commissions to regulate the operation of private lines which had received financial assistance from the state.

**GOVERNMENT.** Under the Constitution of the Second Republic, voted by the Constituent Cortes Dec. 9, 1931, Spain was declared a democratic republic of workers of all classes, organized as an integral state but with autonomy for municipalities and certain regions. There was to be no official religion; freedom of conscience was guaranteed; all citizens were made equal before the law; Castilian (Spanish) was made the official language; and war was formally renounced as an instrument of national policy. The colors of the republic are red, yellow and purple. Legislative power was vested in the people, who exercise it through a unicameral Cortes, or Congress of Deputies, elected for four years by universal male and female suffrage under a system of proportional representation.

The President is elected for six years conjointly by the Cortes and by an equal number of electors chosen by universal, secret suffrage. He is ineligible for reelection for six years after the termination of his last mandate. The Premier is appointed and dismissed by the President, who also appoints the Ministers upon the Premier's nomination. President in 1932, Niceto Alcalá Zamora y Torres, elected Dec. 10, 1931. The Cabinet formed Dec. 16, 1931, included: Prime Minister and Minister of War, Manuel Azaña y Díaz; Foreign Affairs, Luis Zulueta Escolano; Justice, Alvaro de Albornoz y Liminiana; Marine, José Giral Pereira; Finance, Jaime Carner Romeu; Interior, Santiago Casares Quiroga; Education, Fernando De Los Rios Urruti; Public Works, Indalecio Prieto y Tuero; Labor, Francisco Largo Caballero; Agriculture, Marcelino Domingo Sanjuan; Communications, Santiago Casares Quiroga (*pro tem.*).

### HISTORY

**THE REPUBLICAN REFORMS.** Under the firm guidance of Premier Manuel Azaña, the Spanish Cortes (Parliament) during 1932 laid the foundations for the social and economic transformation of the nation. Legislation was enacted calculated to break the power of the church and of the aristocracy. The army and navy, formerly the bulwark of the monarchy, were reorganized as republican instruments. Education was secularized and the knotty problems of Catalan autonomy and of agrarian reform were attacked with apparent success. The programme was carried through in the face of strong opposition from monarchists and extreme radicals by a régime which moved steadily in the direction of a moderate Socialist dictatorship. The republican revolution of 1931 thus began to achieve its long-pending results.

The attack upon the church commenced on January 23 when President Zamora signed a de-

ree dissolving the Jesuit order, confiscating its property, and forbidding Jesuits to form congregations or "to live in brotherhoods, either in public or private manner." The property seized, estimated at \$30,000,000, was placed in charge of a special committee. A bill passed by the Cortes on September 7 ordered the utilization of this wealth for social welfare purposes. It was reported that other wealth of the order, estimated at \$70,000,000, was vested in private individuals and thus escaped confiscation. By the end of 1932, the total church property confiscated by the state was estimated at over \$500,000,000. In addition, late in the year, another bill was enacted which corresponded to the French anti-clerical law of 1902. It reserved to the state the right to veto appointments of heads of religious associations and declared that all such persons must be Spaniards and submit to the national laws. Religious orders were forbidden to engage in industry or to teach anything but religion. Secular education, which had been largely in the hands of the church, was taken over by the Minister of Instruction. Another law pending before the Cortes at the end of the year called for the withdrawal of the small state subsidy from more than 40,000 parish priests. Despite the drastic character of these measures, the Papal Nuncio advised the Spanish Church to accept the republic peacefully, while resisting lawfully all anti-clerical legislation.

To replace the religious schools, the government by the end of 1932 had added 7000 new state schools to the 37,716 existing at the time of the monarchy's collapse. With some 60 per cent of the population still illiterate, the government prepared to erect 27,000 additional schools over a four-year period. Salaries of 50 per cent of the public school teachers were raised. To carry through its education programme, the government raised an internal loan of 400,000,000 pesetas (\$77,200,000 at par). The municipalities promised to raise another 200,000,000 pesetas (\$38,600,000) for educational purposes.

Equally far-reaching was the reorganization of the army. In 1931 the leading royalist officers had been weeded out. On May 3, 1932, Señor Azaña, who was both Premier and Minister of War, introduced a bill calling for further modernization of the army, in which the number of officers had already been reduced from 22,000 to 12,000. The army then totaled about 150,000 men and officers. The bill provided for rigid examinations, based upon study at the military academy, for promotion to all commissioned officers' ranks. Its aim was a small, relatively inexpensive, but efficient fighting force. Subsequent evidences of monarchist sympathies among some of the army and naval officers was followed by a further "weeding out" process.

**Agrarian Reform.** Redistribution of the large landed estates of the Spanish aristocracy had been a prominent measure in the republican programme. It was not until September 9, however, that the Cortes passed the Land Reform Bill. This measure, which was retroactive to April, 1931, applied not to the entire republic but to sections near Madrid where large estates were particularly prevalent. It provided that such feudal estates, land poorly cultivated, and land in the neighborhood of towns and villages might be expropriated by the government. Indemnification was to be based on values declared for taxation, and was to be paid partly in cash and partly in 5 per cent

bonds. The nobility, however, were to be repaid only for recent improvements.

The bill also provided for the establishment of an Institute of Agrarian Reform to carry out its provisions. The Institute was to distribute the land to landless agricultural workers or those owning only small plots. Ownership, however, was to be retained by the state. Facilities were provided for financing equipment and crops, the construction of buildings, and the purchase of seeds and fertilizers. The Institute was allotted 50,000,000 pesetas (\$9,650,000 at par) annually for this purpose. The measure was later extended to include all Spain. A national survey made at the end of the year indicated that about 3,000,000 acres of the best lands of Spain had been taken over by the state for redistribution. Eventually some 52,000,000 acres was to be redistributed in this manner.

*The Catalan Statute.* More controversial than any of these problems was the question of the relation of Catalonia (q.v.) to the republic. Following the establishment of the republic, in which the Catalan autonomists played a prominent part, a charter or statute reserving to Catalonia large powers of autonomy was drafted by the Catalan leaders and almost unanimously indorsed in the Catalanian plebiscite of Aug. 2, 1931 (see 1931 YEAR BOOK). When the newly reassembled Cortes late in April began consideration of the Statute the issue quickly assumed proportions which threatened the stability of the republic. In Spain proper there was a widespread outcry against "national dismemberment," while the Catalan extremists defiantly insisted upon the recognition of Catalonia as an "autonomous state."

In this crisis, Premier Azana displayed practical statesmanship. Reminding the nation that at the height of Spain's power Catalonia had greater autonomy than even the Statute called for, he announced that Spain was to be a Federal republic, with effective state governments limited by Federal control. The Statute as finally approved by the Cortes on September 9 represented a compromise between the demands of Spanish nationalism and Catalan separatism. It defined Catalonia as an "autonomous region within the Spanish state," with a government (Generalidad), consisting of a Parliament, an executive council and a president. The Statute authorized the Catalans to use their own language, national anthem and flag, Catalan and Castilian being made the official languages. Education, taxation, law enforcement, social welfare and most of the other governmental functions were in the main left in the hands of the Catalan government. In each case, however, the Federal government reserved important powers, such as the right to maintain its own schools, the control of customs administration and of certain taxes, the right to intervene in behalf of public order, and complete control of foreign affairs.

The Statute was enthusiastically approved by the Catalan delegates to Madrid and was officially confirmed by the Barcelona government on September 25, when Premier Azana in person presented the Statute to Colonel Macia, president of the Generalidad. The Statute was expected to serve as a precedent for the settlement of the autonomy demands of the Basque Provinces (q.v.) and other regions. The elections for the Catalan Generalidad held on November 20—the first since 1705—gave 68 out of the 87

seats in the Parliament to Colonel Macia's Esquerra party, which indorsed the Statute. This insured the completion of the autonomy programme along the lines authorized by the Azana government.

**OPPOSITION TO THE REPUBLIC.** The government's programme was carried through in the face of sporadic strikes, riots, conspiracies, and even revolutions precipitated by the ultra-radical syndicalists, anarchists, and communists on the one hand and the monarchists and conservatives on the other. There was a radical outbreak in Catalonia on January 21 accompanied by an uprising in the agricultural areas of Andalusia, and outbreaks in Madrid. Acting under a drastic law for the defense of the Republic, decreed the previous October, the government suppressed the outbreaks and sent 109 of the radical leaders to exile in Spanish Guinea. Throughout the year, it checked with severity similar radical conspiracies against the republic.

The same fate was meted out to monarchist revolutionaries. On February 27, Alfonso XIII issued a manifesto from his place of exile in France denouncing the republic and urging all Spaniards to "reunite Spain under my holy banner." The manifesto aroused little excitement. The government retaliated by confiscating Alfonso's private fortune of cash, securities, jewels, and works of art valued at about \$3,000,000. His estates and palaces were seized by the republic in 1931. The most serious monarchist threat to the republic was the revolt of August 10, led by Gen. José Sanjurjo. Supported by many members of the civil guard, General Sanjurjo captured Seville and several small towns in Southern Spain, while monarchist groups in Madrid attempted to seize important government buildings. The government immediately declared martial law and dispatched troops from Madrid to the disaffected regions. Military measures, combined with a Socialist general strike in Seville and adverse public opinion, resulted in the quick collapse of the revolt. Captured at Huelva, near the Portuguese frontier, on August 11, General Sanjurjo was taken to Madrid and sentenced to death. On recommendation of the Cabinet, President Zamora commuted the sentence to life imprisonment.

The abortive revolt strengthened the government and gave it a welcome opportunity to rid itself of the menace presented by the aristocracy. The Duke of Alba and more than 100 others from the ranks of the highest nobility were arrested in connection with the revolt, their estates were confiscated by action of the Cortes on August 20, and on September 21, 105 of those arrested were exiled to Villa Cisneros in the Spanish West African colony of Rio de Oro. During the year approximately 100 newspapers were suspended for too vigorous criticism of the government's policies.

**THE ECONOMIC SITUATION.** Despite political disturbances, the economic recession in Spain during 1932 was less pronounced than in many countries. Reserves of the Bank of Spain were maintained, peseta exchange was fairly steady, the position of private banks was strengthened, increased taxation brought higher government revenues, and unemployment was relatively lower than in the industrial countries. On the other hand, the issue of 550,000,000 pesetas in treasury obligations was required to balance the 1933 budget, according to the estimates.

**FOREIGN RELATIONS.** In the field of foreign relations the chief development of the year was the understanding with France which was reached during a visit of Premier Herriot to Madrid on October 31. Despite the hostile demonstration of Madrid students, who saw in Herriot's visit the threat of Spain's embroilment in the predicted European war, Franco-Spanish collaboration in certain military affairs was believed to have been agreed upon. Shortly afterwards, a project for a Franco-Spanish express railway through the Sombart tunnel in the Pyrenees was discussed. The line would furnish France with secure land communications with French North Africa in the event of war with Italy. Another result of Premier Herriot's visit was the draft agreement providing for reciprocal concessions and equal treatment of the workers of both nations resident in the other. For the Spanish government's policy in Morocco, see MOROCCO under *History*. Also see FRANCE under *History*.

A dispute with the Compañía Nacional Telefonica, an affiliate of the International Telephone and Telegraph Company, involved the Spanish government in a controversy with the United States. A bill introduced into the Cortes declared the contract secured by the company illegal and provided for its cancellation. On December 5, the U. S. State Department warned the Spanish government that if the bill was passed by the Cortes, it might recall the American Ambassador. The threat was apparently sufficient to induce the Cortes to suspend action. About \$100,000,000 of American capital was invested in the company. See UNEMPLOYMENT.

**SPANISH ACADEMY.** See SPANISH LITERATURE.

**SPANISH-AMERICAN LITERATURES.** The facts here presented are not to be considered exhaustive, nor must the omission of some of the countries be taken as evidence that they produced nothing in 1932. A book of considerable usefulness in connection with nearly all the Spanish-American countries is H. S. Holmes, *Spanish America in Song and Story*. It gives selections from 238 authors chosen from 15 of the 18 Spanish-speaking countries in the Western Hemisphere. There are also 30 pages of introductory material, in addition to important biographical and bibliographical notes at the head of each set of selections, and explanatory notes at the end of the volume. Another anthology of all Spanish-speaking countries including the Philippine Islands is by José Brissa and Enrique de Leguina, *El libro de la raza* (containing 886 pages of prose and poetry).

**ARGENTINA.** Once more Argentina offers materials of interest in several fields; see *Lista de las últimas obras argentinas ingresadas en la Biblioteca Nacional*.

**Fiction.** Carlos María Riestra, *Junto al fuego* (24 cuentos, with a prologue defending the "story" as a genre, whereas the performance in the book is the best defense the genre could have); Ricardo Güiraldes, *Raucha* (posthumous work, worthy companion of his *Don Segundo Sombra*, and a masterly treatment of Argentine rural life); Elias Castelnuovo, *Larvas* (careful, well-written study of seven clinical cases of degenerate children); Chita de Leonard, twenty-year-old journalist, *Velocidad* (her first book, and highly praised); Alcides Greca, *Cuentos de Comité* (short stories showing the workings of politics in Argentina); Amadeo Rodolfo Siroli,

*Pacha mama* (carefully written study of the Valles Calchaquies in northern Argentina—has also a vocabulary of indigenous terms); Jerónimo del Rey (a new pseudonym), *Camperas, "fábulas santafecinas"* (excellently executed and a new note in Argentine letters: the fable); González Carbalho, *Historia de niños* (exquisite); Marcelo Menasché, *Y van dos . . .* (first book of a born humorist, excellent in conception, wit, and purity of style); Antonio Rubín Ferrari, *Pincladas, cuentos de mi ciudad*; Enrique Popolizio, *Cuentos de todo Tiempo* (confirms reputation for craftsmanship won by his first book, *Romance de Zina*).

**Poetry.** One notable thing about the poetic output for the year is the number of authors who are women. The following works should be mentioned: Arturo Marasso, *Melampo* (beautiful, dialogued, lyric poem, possibly too intellectual and not sufficiently emotional); María Alicia Domínguez, author of *Las Alas de Metal* and *El Hermano ausente*, published late in 1931 another volume of poems, *El Nombre inefable*, which is a full confirmation of her talent; Maruja Vidal Fernández, *Látigos Invisibles* (written while traveling and strong in emotion and spontaneity) and *Amor, Amor!*; Fernández Moreno (prolific lyric poet of lofty inspiration), *Décimas* (awarded 20,000 pesos Second National Prize for Literature).

Also Rafael de Diego, *El Grito, poemas para la Libertad* (a volume of "civic" poems, his previous volumes being *Las Angustias*, *La Estelas*, and *Las Sombras*); Justa Gallarda de Balazar Pringles, *Etapas* (three types of verse: urban, a few; folkloric, the majority; intimate, very few—the author is highly recommended for her preference for Argentine themes and the purity of her sentiments); and Carlos Obligado, *Los Poemas de Edgar Poe* (translation, prologue, and notes—an examination of the translation of *Ulalume* shows a delicate sensitiveness to the rhythm and the thought of the original).

**Erudition.** P. B. de Estella, *Historia vasca* (very interesting); Roberto Levillier, *Nueva Crónica de la Conquista del Tucumán* (2d and 3d vols. of a work whose 1st vol. appeared in 1926—chronological and ideological history); Arturo Capdevila (poet, essayist, humanist), *Babel y el castellano* (won 30,000 pesos Grand National Prize for Literature, not awarded for several years past and now awarded as for 1929; won also prize as "best book of the month" when published in Spain), and *Rivadavia y el españolismo liberal de la Revolución Argentina* (history, philosophy, and literature, by a master of style); Sigfrido A. Radaelli, *Capítulos de Historia Argentina* (admirable style and balanced judgment); José Rossi, *La Senda Alucinante* (five chapters of dainty, beautiful mysticism); Ricardo Rojas, *El radicalismo de mañana*; *La Obra de Rojas: XXV Años de Labor Literaria* (collection of articles by distinguished scholars to celebrate the twenty-fifth anniversary of the appearance of Rojas's first book: *La Victoria del Hombre*—the articles prove Rojas to have been and to be a great force for civic righteousness and solidarity); Antonio Aita, *La Literatura Argentina Contemporánea* (very fine study for the years 1900–1930); K. Vossler, L. Spitzer, y H. Hatzfeld, *Introducción a la Estilística Romana* (translation and notes by Amado Alonso and Raimundo Lida—Colección de Estudios Estilística, T. I. Facultad de Filosofía y Letras de la Universidad de Buenos Aires); and Alejandro

M. Unsain, *Legislación del trabajo* (awarded the 10,000 pesos Third National Prize for Literature).

*Prizes.* Aside from the three National Prizes for Literature (for 1929), as just set forth, there were the following six Municipal (Buenos Aires) Prizes for Literature awarded as for 1931—three for prose and three for poetry: *Prose*: 1st prize (5000 pesos), Alfonso Corti, *François Villon: su vida y su obra*; 2d prize (3000 pesos), Raúl Scalabrini Ortiz, *El hombre que está solo y espera*; 3d prize (2000 pesos), María A. Centrone, *Momentos*; *Poetry*: 1st prize, Eugenio Julio Iglesias, *Ruta de soledad*; 2d prize, Augusto González Castro, *En el Amor del viento*; and 3d prize, Manuel Alcobre, *Poemas de media estación*.

CHILE. The learned lexicographer and grammarian, Miguel Luis Amunátegui Reyes, Director of the Academia Chilena (Correspondiente of the Academia Española), completed a monumental work in three volumes, *Don Antonio García Reyes i algunos de sus antepasados a la luz de documentos inéditos*, which deals exhaustively with one of the great characters of the early years of Chilean independence. It is based very largely on inedited original documents in the archives of the author himself. Domingo Amunátegui Solar wrote a tribute to José Toribio Medina, great bibliographer, who died more than a year ago. Carlos de Silva Vildósola, the keen student of international affairs, took his seat in the Chilean Academy. Aníbal Echevarría y Reyes published *Vocabulario de . . . Don Quijote*; and Arturo Torres Riosco produced a volume of attractive verses, *Ausencia*.

COLOMBIA. To Colombia, one of her illustrious sons brought a great honor. Carlos Balen y Groot, author of a recent volume of attractive verse, *Horas de ensueño*, won the 1931 Hispano-American Prize of the Spanish Academy for Lyric Poetry with his *Alas viajeras*. Alfredo Gómez Jaime (Colombian Consul in Vigo) published *El explorador del infinito*, which calls itself a "novela teatral" and is a lyric poem in prose. The Academia Colombiana (Correspondiente of the Academia Española) lost its brilliant man-of-letters and statesman, Guillermo Camacho y Carrizosa.

COSTA RICA. Roberto Brenes Mesén, member of the Academia Costarricense (Correspondiente of the Academia Española), ex-Minister of Public Instruction in Costa Rica, and now professor in Northwestern University, has published a beautiful Biblical story, *Lázaro de Betania*.

CUBA. José Antonio Saco published a very important new edition of his *Historia de la esclavitud de los indios en el Nuevo Mundo*. The Cuban ambassador to Spain, Manuel Villaverde, produced an attractive verse comedy, *Carmen y Don Juan*; and the Secretary of the Cuban embassy to Spain, José María Chacón y Calvo, published *El Consejo de Indias y la Historia de América* (careful study and edition of an important document in the Archivo General de Indias, Sevilla). Emilio Ballacas issued a volume of verse, *Júbilo y fuga*. In the Academia Cubana (Correspondiente of the Academia Española), the humanist Enrique José Varona (beloved, octogenarian Director) resigned his office because of poor health. As his successor was chosen the jurisconsult, orator, and litterateur, Mariano Aramburo Machado, who was practically the discoverer of the

great Cuban poetess, Gertrudis Gómez de Avellaneda.

DOMINICAN REPUBLIC. After long and serious coöperative efforts between the Spanish Academy and the leading litterati of the Dominican Republic, the Academia Dominicana (Correspondiente of the Academia Española) was established with the following members: President, Dr. Adolfo Nouel (Archbishop of Santo Domingo, ex-President of the Republic); Vice-President, Alejandro Wos Gil (ex-President of the Republic and ex-Judge of the Supreme Court); Secretary, Federico Laverías (ex-head of the Chancellery and director of the Protocol); and Rafael Justino del Castillo, Armando Rodríguez, Andrés Julio Montolio, M. A. Patin Maceo, Félix M. Nolasco, Alcides García, Bienvenido García Gautier, Arturo Logroño, Manuel de J. Camarena Perdomo, Rafael C. Castellanos, Juan T. Mejía, Max Henríquez Ureña, Enrique Henríquez, and Ramón Emilio Jiménez. All of these gentlemen have brilliant careers in sciences, belles-lettres, jurisprudence, or statecraft.

ECUADOR. The Academia Ecuatoriana (Correspondiente of the Academia Española) late in 1931 lost Alejandro Cardenas, and this year Leónidas Pallares Arteta (ex-Minister of State and Minister to various European countries, lyric and dramatic poet). The Academy paid marked tribute to its senior member, Honorato Vázquez (for many years Minister to Spain), and conferred upon him the title "Illustrious and Favorite Son" of Ecuador. The country celebrated also in due fashion the Centenary of the birth of its great writer and patriot, Juan Montalvo. In this connection the Ecuadorean Minister to the United States, Gonzalo Zaldumbide (author of a learned study concerning the great Uruguayan philosopher José Enrique Rodó), published a study: *Juan Montalvo, en el centenario de su nacimiento (1832-1932)*. Other things to be noted are: Ismael Enrique Arciniegas, *Antología poética*; Vicente Moreno Mora, *Gajo de crepusculos* (poems); José de la Cuadra, *Reprisas* (*Narraciones breves*); and C. A. Rolando, *Don Juan Montalvo (1832-1932)*.

GUATEMALA. The Academia Guatemalteca (Correspondiente of the Academia Española) celebrated the second centenary of the birth of Father Rafael Landívar, and the centenary of the death of Fray Matías de Córdoba, and published in their honor a volume: *Homenaje a los poetas nacionales Rafael Landívar, S.J., y Fr. Matías de Córdoba, de la O. P.*

MEXICO. Among important historical studies are: Armand Praviel, *La vida trágica de la Emperatriz Carlota* (Spanish translation by J. García Mercadal); Alfonso Taracena (author of the recent and successful *En el vértigo de la revolución mexicana*), *La tragedia zapatista* (dealing with a man whose importance is gaining increased recognition in the minds of students); and Martín Luis Guzmán, *Mina el Mozo, Heroe de Navarra* (In the series *Vidas españolas e hispanoamericanas del siglo XIX*). Interest in the Classics is shown by Padre Federico Escobedo, the celebrated Latinist, with his *Flores del Huerto clásico* (prologue by the Secretary of the Academia Colombiana, Antonio Gómez Restrepo). There were also Rodolfo Usigli, *México en el Teatro* (interesting contribution to literary history); Manuel Romero de Terreros (Marqués de San Francisco), *Encuadraciones artísticas mejicanas—Siglos XVI al XIX* (Monografías Bib-

liográficas Mexicanas, núm. 24); Alvaro Leonor Ochoa, *El sendero social*; and Mariano Azuela, *La luciérnaga* (intensely emotional Mexican novel of the humble folk of the Capital, by the author of *Los de abajo* (a novel of the Mexican revolution)).

NICARAGUA. Arturo Torres-Rioseco (the Chilean scholar located at the University of California), *Ruben Darío* (excellent study of Nicaragua's greatest writer).

PARAGUAY. Arthur E. Elliott, *Paraguay, Its Cultural Heritage, Social Conditions and Educational Problems* (a fine piece of work).

PERU. Felipe Sassone (celebrated Peruvian dramatist and novelist, who lives in Spain) published a successful drama, *Una mujer sola*. From 1870 to 1890 General Manuel de Mendiburu published in ten volumes a monumental *Diccionario Histórico-Biográfico del Perú*. A new revised and enlarged edition, by Dr. Evaristo San Cristóval, has been prepared and volume three has already appeared.

URUGUAY. Raquel Sáenz, *Bajo el hechizo* (exquisite poems of love, clean yet passionate, especially the one entitled *Cuando yo muera*); María Elena Muñoz, *Puñado de agua* (dainty verse); Juan León Bengoa, *Labios pintados—Comedia frívola* (well received in Spain). The Academia Uruguaya (Correspondiente of the Academia Española) lost its illustrious Director, Juan Zorilla de San Martín (q.v.), the Dean of Spanish-American literati.

VENEZUELA. The Academia Venezolana (Correspondiente of the Academia Española) lost José Austria; elected to fill vacant chairs F. A. Ríquez (professor at the University of Caracas, orator, and scientist), and Luis Urbaneja y Achelpohl (author of much repute nationally and internationally). It also elected as Secretary José Ramón de Ayala vice Juan E. Arcia, whose death we announced last year.

**SPANISH LITERATURE.** For the seventh year in succession the dramatic output for 1932 outstripped that of all other branches. Erudition, however, won a good second rank, leaving fiction and poetry about on a par for third place.

DRAMA. There were several successful revivals: Enrique Borrás staged, with his usual consummate artistry, Calderón's *El Alcalde de Zalamea*; Ricardo Calvo revived Calderón's play *La vida es sueño*; and the student-artistic group created by Fernando de los Ríos, used the same play to celebrate the four hundredth anniversary of the University of Granada; the Valencian student-group, "La Barraca," performed the auto sacramental of Calderón, *La vida es sueño*.

Eduardo Marquina produced *Los Julianes*, and triumphantly staged *Era una vez en Bagdad* . . . (poetic tale, like those of the Arabian Nights). The Álvarez Quintero brothers produced *Lo que hablan las mujeres* and *Solera*. The Machado brothers gave *La Duquesa de Benamejí*. Jacinto Benavente wrote *La moral del divorcio*, and *La duquesa gitana* (pleasing drama of magic). Others of the older generation were still active: Enrique Suárez de Deza, *Juanita la loca*; Carlos Arniches, *La diosa ríe*; Luis de Vargas, *Concha Morcno*; Francisco Serrano Anguita, *Hombre de presa*; Luis Fernández Ardavin, *Las llamas del convento*; Manuel Azaña (the Prime Minister), *La corona* (profound, beautiful drama).

FICTION. Pío Baroja starts a new series of studies concerning the Basque smugglers in *La familia de Errrotacho*; Francisco de Cossío, *Auro-*

*ra y los hombres*; Eladio Esparza, *Nere* (well-constructed novel, presumably autobiographic, won prize offered by the review *Lecturas*); Luis Martínez Kleiser, *Los Hijos de la Hoz*; Bartolomé Soler, *Marcos Villari* (vigorous Catalan country life); Simón García Martín del Val, *El Polizón* (keen study of the psychology of the criminal); Alberto Insúa, *Ha llegado el día*; Luis Félix de Vega y Rodríguez, *La labradora prócer de Peñafiel*; Adolfo de Sandoval, *Le gran fascinatora* (meaning Avila); Matilde Alanic, *Esperanzas*; "Antonio Robles," *Cuentos de las cosas de Navidad* and *Cuentos de los juguetes vivos* (two inimitable volumes of tales for children); Darío Fernández Flórez, *Maelstrom*.

POETRY. As some of the best verse that Spain produces appears in drama, it will not be listed here. Other kinds of verse are fairly represented; Alfonso Camín, *La danza prima*; Juan José Domenchina, *Dédalo* (philosophic poem, highly praised); Margarita Ferreras, *Paz en la tierra* (exquisite verse); Salvador Rueda (82 years old), *El poema del beso* (50 sonnets, mostly inedited, and now edited by his friend, the poet Mariano de las Cuevas García); Ernestina de Champourcin, *La voz en el viento* (1928-1931).

ERUDITION. Despite present-day problems scholarship flourishes, as witness the following: J. M. Salaverría, *Iparraguirre, el último bardo*, and P. de Répide, *Isabel II, Reina de España* (both excellent studies); Narciso Alonso Cortés *Datos genealógicos del P. Feijóo*, and with Eugenio Mele, *Sobre Gutierre de Cetina* (important); R. del Arco, Aragón: *Geografía, Historia, Arte*; Felix Llanos y Torriglia, *María Manuel Kirkpatrick, condesa de Montijo* (important study of the mother of a Duchess of Alba and of the Empress Eugénie of France); J. Gutiérrez-Ravé, *España en 1931*; A. Alarcón Capilla, *Raza cara a los dioses*; J. del Campo, *Cien años de Madrid*; Enrique Díez-Canedo, *Los dioses en el Prado*; A. Jiménez Soler, *Don Juan Manuel, su vida y sus obras*; J. Zarco Cuevas, *Pintores españoles en San Lorenzo el Real de El Escorial (1566-1613)*, and *Pintores italianos en San Lorenzo el Real de El Escorial (1575-1613)*; Cristóbal de Castro, *Vidas fértiles*; José Subirá, *Tonadillas* (collected and illustrated, words and music of the XVIII century); Pelayo Quintero Atauri, *Excavaciones de Cádiz-Memoria de las excavaciones practicadas en 1929-31*; Juan Serra Vilaró, *Excavaciones en Tarragona-Memoria*; *Monumentos Españoles, Catálogo de los declarados nacionales arquitectónico e histórico—artístico* (2 tomos, very important work published by the Centro de Estudios Históricos).

ACADEMY. Under the ægis of the Academy the "Luca de Tena Prize" for 1931 was awarded to Ramiro de Maeztu; and the "Mariano de Cavia Prize" for 1931 went to César González—Ruano. Niceto Alcalá-Zamora, President of the Spanish Republic, took the chair left vacant by the death of José Francos Rodríguez, which had formerly been held by the orator and statesman, Emilio Castelar. The President's entrance discourse was *El Derecho en el Teatro*. It was answered by the Director of the Academy, Ramón Menéndez Pidal. It is interesting to note that Alcalá-Zamora was on the point of being elected to the Academy in 1926, when the Dictator issued a decree (Nov. 26, 1926) reorganizing the Academy, creating four new chairs, and ordering that they and two that were then vacant be used in a specific manner. After the fall of the Monarchy, and before

he became President, the Academy elected him in accord with its intention in 1926. The Academy suffered heavily through death; Manuel de Sandoval y Cutoli (illustrious poet and scholar), from within its immediate ranks; Spanish Correspondiente, Manuel Serrano y Sanz, learned archivist, who was also a member of the Academia de San Luis de Zaragoza, and was writing his entrance discourse to complete his entry into the Academy of History; and foreign Correspondientes, Pierre Paris, French Archæologist and Director of the Institut Français at Madrid; and the American scholars E. C. Hills and C. C. Marden.

**SQUASH RACQUETS.** See COURT GAMES.

**SQUASH TENNIS.** See COURT GAMES.

**STANFORD UNIVERSITY.** A privately endowed institution of higher education, nonsectarian and coeducational, founded in Palo Alto, Calif., in 1891 in memory of Leland Stanford, Jr. The school of medicine is located in San Francisco; the Hopkins marine station at Pacific Grove; and the schools of business, education, engineering, and law on the campus. The total enrollment in 1931-32 was 4340. The faculty numbered 550. The endowment funds amounted to \$31,170,827; the income for the year was \$1,332,893. There were 606,133 volumes in the libraries. President, Ray Lyman Wilbur, M.D., LL.D., Sc.D. (on leave as Secretary of the Interior). Acting president, Robert Eckles Swain, Ph.D., LL.D.

**STARR, M (OSER) ALLEN.** An American neurologist, died in Marienbad, Germany, Sept. 4, 1932. He was born in Brooklyn, N. Y., May 16, 1854, and was graduated from Princeton University in 1876 and from the College of Physicians and Surgeons (later part of Columbia University) in 1880. After serving for seven years as professor of nervous diseases at the New York Polyclinic he was appointed in 1889 professor of diseases of the mind and nervous system at the College of Physicians and Surgeons, which chair he held until his retirement in 1916.

**STARRETT, WILLIAM AIKEN.** An American civil engineer, architect, and builder, died in Madison, N. J., Mar. 25, 1932. He was born in Lawrence, Kan., June 14, 1877, and attended the University of Michigan during 1893-95. His construction career started in 1898 when he became associated with the George A. Fuller Co., general contractors of New York City, with whom he served in various capacities as timekeeper, field engineer, and building superintendent. In 1901 he joined with his brothers Theodore and Ralph, and others, in the formation of the construction firm of Thompson-Starrett Co., of which he was general superintendent and vice-

president from 1905 to 1913. He then became associated with Ernest A. Van Vleck in the architectural firm of Starrett & VanVleck, but in 1918 severed all business connections to act as chairman of the emergency construction committee of the Council of National Defense and of the emergency construction section of the War Industries Board. Commissioned a colonel in the Quartermaster Corps, he was in charge of the construction for the National Army of cantonments, supply bases, and hospitals in the United States. Upon his discharge in 1919 he returned to the George A. Fuller Co., of which his brother Paul was president, serving as vice-president during the next two years and participating in the introduction into Japan of the use of steel-framed buildings especially designed to resist earthquakes. In 1922 he joined with his brother in forming Starrett Bros., Inc., known after Andrew J. Eken joined the firm as Starrett Bros. & Eken, Inc. Among the outstanding structures erected by this company are the Empire State, Bank of Manhattan, new Metropolitan Life, Starrett Lehigh, and McGraw-Hill buildings in New York City, the Carew Tower in Cincinnati, and the Ramsey Tower in Oklahoma City.

**STATISTICAL ASSOCIATION, AMERICAN.** An organization founded in Boston in 1830 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. The official publications are the *Journal of the American Statistical Association* and the *Annals of Mathematical Statistics*, each issued quarterly.

The association's ninety-fourth annual meeting was held in Cincinnati, O., Dec. 28-31, 1932. The principal topics of discussion included: "Statistics of Public Finance"; "Indices of the Cost of Living"; "Statistical Aspects of Unemployment"; "Federal Bank Policy since 1926"; "National Income"; "Measuring the Cost of Unemployment"; "Statistics of the Depression"; "Costs of Medical and Surgical Care"; "Remedies for Unemployment." There were held joint meetings with the American Economic Association on "The Record of Insurance in the Depression" and with the American Farm Economic Association on "An Evaluation of the Present Economic Position of Agriculture, by Regions and in General."

The officers of the association for 1933 were. President, Stuart A. Rice; vice-presidents, Melvin T. Copeland, Frederick C. Mills, Horatio M. Pollock, Lowell J. Reed, Arthur H. Richardson, George B. Roberts, Henry Schultz, and William M. Stewart; secretary-treasurer, Willford I. King. Headquarters are in the Commerce Building of New York University, 236 Wooster Street, New York City.

**STATISTICS. INTERNATIONAL COST OF LIVING INQUIRY.** These columns before have spoken of the study of the cost of living in certain European cities inaugurated by the International Labor Office, as a result of the request made by the Ford Motor Company. In order to establish a real wage comparable to that received by its employees in the City of Detroit, the Ford Motor Company was interested in a cost of living in-

quiry, particularly in those cities in Europe in which it had already established or contemplated establishing plants. The results of the study made in Detroit to serve as a basis for this international investigation were printed in these columns in the 1931 YEAR BOOK. It was found that for a group of 100 families covered the average family expenditure was \$1720 during the year 1929. The International Labor Office then took up the task in an effort to ascertain what the Detroit standard of living was, that is to say, the quantities of goods and services consumed by the Ford Detroit workers, related to costs in the European cities. One problem that presented difficulties of a controversial nature was that involving the substitution of items, especially concerned with food, for those in the Detroit budget in order to meet possible differences of national or racial habits of consumption. The International Labor Office examined this question of consumption habits and took into account local standards, in such a way, however, to obviate the objection that this procedure would bias the results. Table I indicates the relative cost of living in Detroit and certain European cities on Jan. 1, 1931, with the cost of living in Detroit taken as a base of 100. It will be seen that in only one city, that is to say, Stockholm, Sweden, did the cost of living approximate the Detroit standard. Table II shows to what extent wages would have to be adjusted in these foreign cities in order to rise to the level of the American standard. In some cases wages

would have to be doubled and in other cases would have to be increased from 60½ per cent to 50 per cent.

**COST OF LIVING.** That the cost of living in most civilized countries has declined markedly during the period of depression from the peak of high prices in 1926 has been generally known. Figures collected by the Bureau of Labor Statistics help furnish an exact statistical presentation of the situation. In the United States, for instance, by the end of 1931, the cost of living declined 17 per cent since the peak in 1926, while the cost of food alone declined 30.4 per cent since the period; in the United Kingdom the cost of living declined 17.3 per cent since the peak in 1926, while the cost of food declined 22.8 per cent; in Denmark the cost of living declined 20.6 per cent since the peak of 1926, while the cost of food declined 32.8 per cent; in France the cost of living declined 5.4 per cent since the peak in December, 1930, while the cost of food declined 5.5 per cent since the peak in June, 1931; in Germany the cost of living declined 16.7 per cent since the peak in March, 1929, while the cost of food declined 23.5 per cent; in Italy the cost of living declined 29.5 per cent since the peak in October, 1926, while the cost of food declined 35.8 per cent since the peak in January, 1926; in Sweden the cost of living declined 9.2 per cent since the peak in January, 1926, while the cost of food declined 21.5 per cent.

**PURCHASING POWER OF THE DOLLAR.** The purchasing power of the 1926 dollar is indicated in the accompanying table, in terms of index numbers, for major groups of commodities:

TABLE I—RELATIVE COST OF LIVING IN DETROIT AND CERTAIN EUROPEAN CITIES, JANUARY, 1931

City	Index of cost of living
Detroit, Michigan	100
Stockholm, Sweden	99-104
Frankfort, Germany	85-93
Cork, Irish Free State	85
Copenhagen, Denmark	83-91
Berlin, Germany	83-90
Helsinki, Finland	83
Paris, France	80-87
Marseilles, France	75-81
Manchester, England	70-74
Rotterdam, Netherlands	65-68
Antwerp, Belgium	61-65
Warsaw, Poland	67
Istanbul, Turkey	65
Barcelona, Spain	58

TABLE II—COMPARATIVE COST OF LIVING AND WAGES PER DAY AND PER HOUR OF UN-SKILLED WORKERS IN FORD PLANTS IN SPECIFIED CITIES

City	Index of relative cost of living	Wage per hour		Wage per 8-hour day	
		Aug. 1, 1931	Adjusted to cost of living	Aug. 1, 1931	Adjusted to cost of living
Detroit	100	\$0.86	\$0.86	\$6.88	\$6.88
Antwerp	61-65	.26	.52-.56	2.08	4.16-4.48

Manchester	70-74	.53	.60-.64	4.24	4.80-5.12
Marseilles	75-81	..	.65-.70	..	5.20-5.60
Paris	80-87	.29	.69-.75	2.32	5.52-6.00
Rotterdam	65-68	.41	.56-.58	3.28	4.48-4.64
Stockholm	99-104	.43	.85-.89	3.44	6.80-7.12
Warsaw	67	..	.58	..	4.64

Groups	March, 1931	March, 1932
All commodities	\$1.316	\$1.515
Farm products	1.416	1.992
Foods	1.289	1.605
Hides and leather products	1.142	1.294
Textile products	1.429	1.704
Fuel and lighting materials	1.464	1.473
Metals and metal products	1.157	1.238
Building materials	1.212	1.366
Chemicals and drugs	1.206	1.328
House-furnishing goods	1.136	1.297
Miscellaneous	1.389	1.546
Raw materials	1.439	1.783
Semi-manufactured articles	1.372	1.645
Finished products	1.256	1.399
Non-agricultural commodities	1.295	1.443
All commodities other than farm products and foods	1.295	1.410

**EXPENDITURES OF AMERICAN CONSUMERS ACCORDING TO INCOME.** According to a study of the American consumer market made by the periodical *Business Week*, and published in its Sept. 7, 1932 issue, the percentage distributions of expenditures by persons with different incomes in 1929 were as given in the table on page 770.

**BUDGET FOR DEPENDENT FAMILIES.** A budget for dependent families with children, prepared at the request of the Juvenile Court of San Francisco by the Heller Committee for Research in Social Economics, as of November, 1931, shows that a minimum budget for a family of 5—a man, wife, boy of 11, girl of 6, and boy of 3—is \$1188 per year, or \$99 per month. The Committee declares that this budget "is admittedly an income below that commonly considered a living wage"; yet it is decidedly in excess of the incomes of a large group of so-called self-supporting families who were not dependent upon philanthropy or public social services for the amplification of their budgets.

Item	Under \$1,000	Annual income					
		\$1,000 and under \$2,000	\$2,000 and under \$3,000	\$3,000 and under \$5,000	\$5,000 and under \$10,000	\$10,000 and under \$25,000	\$25,000 and under \$50,000

Total .....	100.0	100.0	100.0	100.0	100.0	100.0	100.0

The fourth revised (March, 1932), edition of the Chicago standard budget for dependent families, prepared under the supervision of the Council of Social Agencies of Chicago, based an estimated minimum monthly budget for a self-supporting family, consisting of a father, mother, child of 13, child of 10, and child of 7 at \$105.72 a month, without rent. The food allowance of the total family was \$38.30; the clothing and toilet articles allowance was \$15.75; the fuel allowance was \$10.50; the allowance for household supplies and furnishings was \$5.50; the carfare allowance was \$4.67; the allowance for medical and dental care was \$7; the allowance for savings and insurance was \$10; the allowance for education and for newspapers and magazines, and books was \$3; the allowance for recreation, including moving picture shows was \$4; the allowance for organization and church dues was \$3; and the allowance for the incidental and emergency expenses was \$4.

**STEAMBOAT INSPECTION.** See SAFETY AT SEA.

**STEAM BOILERS.** See BOILERS.

**STEAM ENGINES.** See POWER PLANTS; BOILERS.

**STEAM TURBINES.** No radical changes in steam turbine design nor in operating conditions, except higher temperatures, were evident during the year just passed, although many refinements in design and savings in both space and in weight were brought about. Decreased load demands upon the central stations resulted generally in more conservative loading of the turbines with the result that outages were much reduced. A large proportion of the outages that did occur were due to blade erosion. This was more pronounced where high blade tip speeds were employed, that is, over 950 feet per second. Research in blading materials has been going on for several years and new materials are being employed to meet the situation, such as stainless steels of various composition, incoloy, and chrome iron. Special steels are also being used for valve stems and seats, low-pressure disks, spindles in the high-temperature region, and for cylinder castings of the high-temperature element. Most of these materials, however, have been in service too short a period to determine their useful life. Welded construction is being employed to a limited extent in turbine work, but has not been applied to cylinders save in a few small units where minimum weight was essential, such as in naval work.

Single-cylinder construction for large turbines has advanced as it involves lower investment, less weight, and less floor space per unit of capac-

ity; but this design tends toward higher leaving losses in the steam. The largest single-cylinder machines to date are of 80,000 kilowatts capacity, none being for steam pressures over 650 pounds and 825 degrees temperature. Also, the tendency toward increased ratings for given sizes of turbine casing, in both single- and multi-cylinder types, makes for increased leaving losses, as it becomes necessary to pass greater volumes of steam through the last rows of blades. This subject is now receiving serious study.

Although the United States still maintains the lead as to turbine sizes, there is a marked trend in Europe toward turbines of larger capacities, 75,000 to 100,000 kilowatts not being uncommon and 50,000 kilowatts being a popular size. In this country the 208,000-kilowatt machine installed several years ago at the State Line Station near Chicago, still holds the record for capacity. During 1932 two 160,000-kilowatt turbines went into service in the extension to the Hudson Avenue Generating Station of the Brooklyn Edison Company. They are the largest tandem-type units in operation and have the largest single generators yet built. Also, each exhausts to a condenser of 101,000 square feet surface—the World's largest condensers. These turbine units provide 40 kilowatts capacity per square foot of floor space and are installed in space that was originally planned for 50,000 kilowatts capacity. This gives an idea as to the progress during the past eight years in the concentration of power as pertains to turbines.

A steam turbine unit of similar capacity was recently ordered for the Richmond Station of the Philadelphia Electric Company. Like the Brooklyn units, it will be installed in space originally laid out for 50,000-kilowatt turbines. Shop tests have lately been completed on a 150,000-kilowatt triple-tandem compound turbine driving a single generator for the Chicago District Electric Generating Corporation. This turbine will operate at 1200 pounds steam pressure and 825 degrees F. total temperature. Between the high- and the intermediate-pressure elements the steam is reheated to 825 degrees. Another turbine of 75,000 kilowatts is being built for the Kearny Station at Newark, N. J. to take the steam produced by the mercury condenser-boiler of the mercury boiler and turbine installation that is going into that station. (See BOILERS.)

The largest capacity turbine in this country operating at 3600 r.p.m. is an 18,000-kilowatt unit at the Burlington Station of the Public Service Electric & Gas Company of New Jersey. Abroad, machines up to 80,000 kilowatts have been built to operate at 3000 r.p.m. The largest

Ljungstrom (radial-flow type) turbine has recently been built for the State Power Station at Vesteras, Sweden.

While turbines in several of the newer stations in this country are employing steam temperatures of 825 to 850 degrees and one is operating at 1000 degrees, high steam temperatures have been more generally used abroad. There are many engineers that favor the use of high temperatures with moderate steam pressures in order to avoid the complication of reheating the steam between the high and the low-pressure elements of the turbine, and some of the newer plants are following this course. See DYNAMO ELECTRIC MACHINERY.

**STETSON, CALEB ROCKFORD.** An American clergyman, died in New York City June 15, 1932. He was born in Boston, Mass., Apr. 16, 1871, and was graduated from Harvard University in 1894. He studied medicine at the Johns Hopkins University for a year and then entered the Virginia Theological Seminary. On his graduation from the General Theological Seminary, New York City, in 1898 he was ordained deacon in the Protestant Episcopal Church and priest the following year. He was priest-in-charge of the Cathedral Mission Chapel of the Good Shepherd in Washington, D. C., from 1899 to 1907; vicar of Trinity Church, New York City, from 1907 to 1911; and rector of St. Mark's Church, Washington, from 1911 to 1921, when he was chosen rector of Trinity Parish, New York.

**STEVENS INSTITUTE OF TECHNOLOGY.** A college of engineering in Hoboken, N. J. The enrollment for the autumn of 1932 was 497. There were 58 members on the teaching staff. The income for 1931-32 was \$450,000. President, Harvey Nathaniel Davis, Ph.D.

**STEWART, GEORGE BLACK.** An American theologian, died in Auburn, N. Y., June 23, 1932. He was born in Columbus, O., Feb. 28, 1854. On graduating from Princeton in 1876, he attended the McCormick Theological Seminary and was graduated from Auburn Seminary in 1879. Ordained to the Presbyterian ministry, he was pastor in Auburn, N. Y., during 1878-84 and in Harrisburg, Pa., during 1884-99. He was then called to Auburn Seminary as professor of practical theology and also acted as president until 1926.

**STORY, MRS. WILLIAM CUMMING.** An American women's club leader, died in New Rochelle, N. Y., July 15, 1932. She was born in New York City about 1860, her maiden name being Daisy Allen. She was active in women's clubs and in patriotic societies for more than 40 years, being principally known in connection with the Daughters of the American Revolution, of which she was elected president-general in 1913, and was reelected in 1915. Her career in the D.A.R. was marked by a determined opposition to pacifism.

**STOTESBURY COLLECTION.** See ART MUSEUMS.

**STRACHEY, strā'chē, (GILES) LYTTON.** A British biographer, died in Inkpen, Berkshire, Jan. 21, 1932. Born Mar. 1, 1880, he was educated at Trinity College, Cambridge, and became a critic whose special field was French literature. He attracted attention with the publication in 1918 of *Eminent Victorians*, a collection of biographical studies; *Queen Victoria*, published three years later, established his fame as an exemplar of the "new" biography, which attempted to break away from a eulogistic, sentimental treatment of the subject. His career was crowned with *Elizabeth and Essex* (1928), one of the finest romantic, yet realistic, biographies written in the English language. His other works are: *Books and Characters* (1922); *Pope*, the Leslie Stephen lecture at Cambridge (1925); and *Portraits in Miniature* (1931).

**STRAITS SETTLEMENTS.** A British crown colony in the Malay Archipelago. The various Settlements with their areas and populations are shown in the accompanying table.

Settlement	Area (sq. miles)	Population (1931 census)	Chief town
Singapore * . . .	288	560,028	Singapore
Penang * . . . .	575	359,757	Georgetown
Malacca . . . . .	637	186,694	Malacca
Labuan . . . . .	85	7,538	Victoria
Total . . . .	1,585	1,114,012	

\* Includes Christmas and Cocos or Keeling Islands.

† Includes Province Wellesley and the Dindings.

The populations of the chief towns were: Singapore (1931), 445,778; Georgetown (1921), 101,180. Singapore, the capital, is one of the great shipping ports of the world. The estimated revenue for 1932 was £3,000,000; expenditure, £5,600,000. The public debt on Jan. 1, 1931 was £18,027,020 of which £9,355,000 represented loans to the Federated Malay States.

The Cocos or Keeling Islands, a group of about twenty small coral islands (12° 5' S. and 96° 53' E.), about 1161 miles from Singapore and Christmas Island in the Indian Ocean (10° 30' S. and 105° 40' E.) are incorporated with the Settlement of Singapore. Governor in 1932, Sir Cecil Clementi.

**STREETS.** See ROADS AND STREETS.

**STRESA CONFERENCE.** See UNITED STATES OF EUROPE.

**STRIKES AND LOCKOUTS.** The Bureau of Labor Statistics' summary figures for the period 1916 through 1931 show that, with the exception of the year 1929, 1931 had the greatest number of strikes since 1926. The total number in 1931 was 894 as compared with 903 in 1929, and 1035 in 1926. Table I on page 772 shows the relative number of disputes and of employees involved from 1916 through 1931 with the year 1916 as the base of 100. Disputes in 1931, as far as industries were concerned, showed little change from the year 1930 except in the case of coal mining where more than twice the number of workers were engaged in industrial disputes, and in textiles where the number was five times as great as in 1930. Disputes for the most part were concerned with question of wages, hours of employment, and union recognition.

In 1931 the results of the termination of strikes showed 47 per cent of the settlements in favor of employers as compared with 44 per cent

in 1930 and 40 per cent in 1929. The number of strikes in which a compromise settlement was effected in 1931 was 21 per cent as against 24 per cent in 1930, and 25 per cent in 1929. Forty-five per cent of all strikes terminating in 1931 were settled within the first week and 67 per cent were settled within the first two weeks. Apropos of this matter it is interesting to observe that the duration of strikes has changed markedly from year to year over the period 1916-31. Thus, in 1916 the average duration in days was 23 as compared with 39 in 1920, 51 in 1921, 27 in 1928,

TABLE I—RELATIVE NUMBER OF DISPUTES AND OF EMPLOYEES INVOLVED, 1916 TO 1931

Year	Relative number of—		Year	Relative number of—	
	Disputes	Employees		Disputes	Employees
1916	100	100	1924	83	41
1917	117	77	1925	84	27
1918	88	78	1926	27	21
1919	96	260	1927	19	22
1920	90	91	1928	17	22
1921	68	69	1929	24	15
1922	29	101	1930	17	10
1923	41	47	1931	24	17

18 in 1930, and 16 in 1931. The following tabulation presents the history of industrial disputes in the United States for the fiscal year July 1, 1931 through June 30, 1932.

TABLE II—INDUSTRIAL DISPUTES BEGINNING IN AND IN EFFECT AT END OF EACH MONTH, JULY, 1931, TO JULY, 1932, AND TOTAL NUMBER OF DISPUTES, WORKERS, AND MAN-DAYS LOST IN THE YEARS 1927 TO 1931

Month and year	Number of disputes		Number of workers involved in disputes		Number of man-days lost in disputes existing in month or year
	Beginning in month or year	In effect at end of month	Beginning in month or year	In effect at end of month

**STUART, CHARLES MACAULEY.** An American clergyman, editor, and educator, died in La Jolla, Calif., Jan. 26, 1932. Born in Glasgow, Scotland, Aug. 20, 1853, he was brought to the United States in childhood and received his education at the Kalamazoo (Mich.) College, from which he was graduated in 1880, and at the Garrett Biblical Institute. Ordained to the ministry of the Methodist Episcopal Church in 1880, he was a pastor in River Forest, Ill., until 1883, and in Detroit until 1885. From 1896 to 1909 he was professor of sacred rhetoric at the Garrett Biblical Institute. After editing the *Northwestern Christian Advocate* for two years he was elected, in 1911, president of the Garrett Biblical Institute, and until his retirement, in 1924, also held the chair of homiletics in that institution.

**SUDAN.** See ANGLO-EGYPTIAN SUDAN; FRENCH SUDAN.

**SUEZ CANAL.** Traffic in the canal declined during 1932 in about the same proportion as in the previous two years, a total reduction in cargo traffic since the boom conditions of 1929 of about 40 per cent and in number of ships of about 25 per cent, as shown in the weekly bulletins of the Compagnie Universelle du Canal Maritime de Suez. During the year 5032 ships with a gross tonnage of 39,425,907 and a net tonnage of 28,340,290 passed through the canal as against 5366 ships with a gross tonnage of 41,743,051 and a net tonnage of 30,027,966 in 1931. The cargoes carried in 1932 totaled 23,632,000 metric tons as compared with 25,332,000 metric tons in 1931. Total transit and navigation receipts amounted to 795,920,000 French francs, as compared with 930,860,000 French francs in 1931. (The French franc equaled \$0.0392.)

British traffic, although still 55 per cent of the total, dropped to 15,722,000 net tons, or a decrease of 902,000 tons from the previous year. German traffic decreased almost as much, from 3,315,000 net tons in 1931 to 2,506,000 in 1932, a decrease of 809,000 tons. The accompanying table gives the preliminary figures for Suez Canal traffic for 1932 and the final comparative figures for several earlier years.

SUEZ CANAL TRAFFIC

Year	Transits Number	Net tonnage Tons	Cargo traffic Metric tons	Tolls Gold francs <sup>a</sup>
1932	5032	28,340,000	23,632,000	795,920,000 <sup>b</sup>
1931	5366	30,027,966	25,332,000	930,860,000 <sup>b</sup>
1930	5761	31,668,759	28,511,000	1,037,720,000 <sup>b</sup>
1929	6274	33,466,014	34,516,000	1,115,920,000 <sup>b</sup>
1928	6084	31,906,000	32,622,000	221,090,000
1927	5544	28,965,000	29,524,000	208,650,000
1922	4345	20,743,245	21,360,000	162,613,850
1919	3986	16,013,802	13,973,000	136,969,915
1912	5373	20,275,120	25,444,000	132,929,341
1909	4239	15,407,627	19,924,000	117,754,888

<sup>a</sup> One gold franc equals \$0.193

<sup>b</sup> In French francs, each equaling \$0.0392.

**SUFFRAGE.** See ARGENTINA and BRAZIL under History.

**SUGAR.** The world's raw sugar production in 1931-1932, based on estimates of the International Institute of Agriculture and other official sources, was placed at 28,961,000 short tons. The total beet sugar production of 27 reporting countries was estimated at 9,378,000 short tons, or 26.4 per cent less than the production of the preceding year and the total cane sugar yield of 38 reporting countries at 18,293,900 short tons, about 1.5 per cent above the 1930-1931 production. The yields of raw beet sugar in short tons of the leading European countries were estimated by the Association Internationale Sucrière as follows: Germany 1,157,050 tons, Czechoslovakia 685,710 tons, Poland 459,000 tons, Italy 347,000 tons and Belgium 259,800 tons. Similarly the cane sugar production as placed by official and other authorities was 4,346,000 tons in India, 3,024,000 tons in Cuba, 2,688,000 tons in Java, 1,102,000 tons in the Philippine Islands, 1,080,000 tons in Brazil, 1,000,000 tons in Hawaii, and 949,000 tons in Puerto Rico. Production in Cuba was restricted in accordance with the Chadbourne agreement to which Czechoslo-

vakia, Germany, Poland, Belgium, Netherlands, Java, and Peru also adhered.

In the United States the beet sugar production in 1932 according to estimates by the Department of Agriculture was 1,308,000 short tons, an increase of 152,000 tons over the preceding yield and about 8 per cent more than from any previous beet crop. The sugar production of the leading States was reported as follows: Colorado 274,000 tons, California 207,000 tons, and Michigan 165,000 tons.

The cane sugar production of Louisiana in 1932 was placed at 231,000 tons, an increase of 74,000 tons over the yield in 1931. The cane production for sugar was 2,900,000 short tons which produced 159.4 pounds of sugar per ton. The total acreage of sugar cane harvested in Louisiana, 3,401,000 acres, was 18 per cent above the acreage in 1931 and the acreage used for sugar, 179,000 acres, was about 21 per cent greater. The State also produced 222,000 tons of cane for sirup and 279,000 tons for seed. See CHEMISTRY, INDUSTRIAL.

**SUICIDE.** See CRIME.

**SULPHUR.** The output of sulphur in the United States in 1932 dropped to less than one-half of the quantity produced in 1931, according to the U. S. Bureau of Mines. Shipments and exports showed smaller decreases than production, and stocks were reduced. Production amounted to 889,095 long tons in 1932, a decrease of 58 per cent, compared with the output in 1931 of 2,128,930 tons. The amount produced in 1932 was less by 1,669,286 tons, or 65 per cent, than that reported in 1930, the record year. Shipments declined from 1,376,526 tons, valued at about \$24,800,000 in 1931, to 1,108,112 tons, valued at about \$19,900,000 in 1932, or over 19 per cent in both quantity and value. Most of the output in 1932 was mined in Texas and from this State has come virtually all of the production of recent years. Texas produced 876,294 tons of sulphur in 1932, or 98 per cent of the country's total. The average quoted price for sulphur was unchanged at \$18 a ton f. o. b. mines throughout the year. Spot prices for car lots were \$21 a ton and prices for sulphur exported were given as \$22 a ton f. a. s. Atlantic ports.

**SUMATRA.** See NETHERLAND INDIA.

**SUN.** See ASTRONOMY; METEOROLOGY.

**SUNDAY SCHOOL UNION, AMERICAN.** A nonsectarian society organized in 1817 to establish and maintain Sunday schools in the rural and mountain sections of the United States and to publish and circulate moral and religious literature. Its board of managers and missionary force are composed of men representing many of the Protestant denominations. For the year ending Feb. 29, 1932, 582 schools were organized and 509 reorganized, with a total of 3517 teachers and 35,278 scholars. There were 222 young people's societies established; 156 preaching stations opened; 17 churches of various denominations organized; and 6 churches built. The organization, with schools in every State but two, maintained approximately 6000 Sunday schools.

In connection with the field work of the society, the monthly publication, entitled the *Sunday School Missionary*, is sent to all contributors to the work. The society publishes a full line of quarterlies and lesson helps on the *International Sunday School Lesson*, which are used by the majority of the schools under its care. The most important of these is the *Sunday School World*,

which is issued monthly. The officers in 1932 were: President, E. Clarence Miller; vice-presidents, Robert L. Latimer and James F. Shrader; secretary of missions, Elliott D. Parkhill; editor of publications, Arthur M. Baker; treasurer, John H. Talley. National headquarters are at 1816 Chestnut Street, Philadelphia, Pa.

**SUPERPHOSPHATE.** See FERTILIZERS.

**SUPREME COURT, UNITED STATES.** See UNITED STATES; LAW IN 1932.

**SURETYSHIP.** See INSURANCE.

**SURGEONS, AMERICAN COLLEGE OF.** A college or guild (not a teaching institution), organized in 1913 by some 500 surgeons of North America. Admission to fellowship is on the basis of merit only, with reference to professional ability and moral and ethical fitness. In 1932 fellows and honorary fellows, including representatives from practically every country of the world and from every branch of surgery, constituted a body of 10,700 surgeons. The twenty-second annual congress was held in St. Louis, Mo., Oct. 17-21, 1932, with an attendance of over 2000 surgeons.

The official journal of the college is *Surgery, Gynecology, and Obstetrics*. The officers for 1932-33 are: President, Dr. J. Bentley Squier, New York City; president-elect, Dr. William D. Haggard, Nashville, Tenn.; vice-presidents, Dr. Evarts A. Graham, St. Louis, Mo., and Dr. Alexander R. Munroe, Edmonton, Albt., Canada; treasurer, Dr. Frederic A. Besley, Waukegan, Ill. Dr. Franklin H. Martin is director-general, and Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell are associate directors. Headquarters are at 40 East Erie Street, Chicago.

**SURGERY.** See MEDICINE AND SURGERY.

**SURINAM, soō'ri-nām', DUTCH GUIANA, gé-a'na.** A possession of The Netherlands on the north coast of South America. Area, 54,291 square miles; population, Jan. 1, 1931, about 153,300. Paramaribo, the capital, had 47,318 inhabitants. **SVALBARD (SPITSBERGEN).** An Arctic archipelago under Norwegian sovereignty, situated from 240 to 480 miles north of Norway between 10° and 35° E. longitude and 74° and 81° N. latitude. Area, about 25,000 square miles; population, 491, in winter of 1930-31; administrative headquarters, Green Harbor.

**SWARTHMORE COLLEGE.** A nonsectarian institution for higher education in Swarthmore, Pa. The 1932-33 enrollment was 551. The teaching staff numbered 78. The total endowment was \$6,250,000. President, Frank Aydelotte, LL.D.

**SWEDEN.** A constitutional monarchy occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm; reigning sovereign in 1932, King Gustaf V.

**AREA AND POPULATION.** With a gross area of 173,174 square miles (land area, 158,510 square miles), Sweden had a population at the census of 1930 of 6,141,516, as compared with 5,904,489 in 1920. The urban population in 1930 was 1,955,666. For the five years 1926 to 1930, births averaged 96,986 annually and deaths 73,624, the annual excess of births being 23,362. The birth rate per 1000 inhabitants in 1930 was 15.4 and the death rate 11.7. The population of the chief cities in 1931 was: Stockholm, 514,333 (419,449 in 1920); Göteborg, 247,900; Malmö, 129,927; Norrköping, 61,799; and Helsingborg, 56,620.

**PRODUCTION.** About one-half of the population

is engaged in agriculture and related industries, although the arable area comprises only 9,201,000 acres, or 9.1 per cent of the total area. There were (1931) about 3,135,000 acres of permanent meadows, and 53,736,000 acres of forests and pasture. The aggregate value of field crops in 1931 was \$220,167,000 (\$254,462,000 in 1930), of which hay contributed \$72,255,000 (\$77,317,000 in 1930); oats, \$25,242,000; potatoes, \$22,717,000; wheat, \$19,734,000; and rye, \$10,825,000. Beet sugar production for 1931-32 was 143,000 metric tons.

Iron-ore exports in 1931 were less than half those of 1930, owing to reduced German demand, and most mines operated only three days a week. The output of pig iron in 1931 was 384,000 metric tons (459,780 tons in 1930); of steel ingots, 542,000 tons (610,824). Coal production (1930) was 397,960 metric tons; iron ore, 11,236,000 tons. The shipyards in 1931 turned out 20 vessels totaling 112,703 gross tons (including 107,766 gross tons of motor vessels).

COMMERCE. As compared with 1930, the 1931 imports declined 13 per cent in value and exports about 28 per cent. The quantity of imports was about the same as in 1930. Imports were valued at 1,439,400,000 kronor (\$363,448,000), as compared with 1,662,175,000 kronor (\$445,463,000) in 1930, and exports at 1,122,400,000 kronor (\$283,406,000), as against 1,550,351,000 kronor (\$415,571,000).

FINANCE. For the fiscal year ended June 30, 1931, closed state accounts showed a net surplus of 2,132,000 kronor when changes in reserved appropriations were accounted for. Ordinary revenues were 782,844,000 kronor (\$209,802,000) and ordinary expenditures 762,040,000 kronor (\$204,227,000). The budget for 1931-32 estimated receipts at 747,057,000 kronor and expenditures at 803,084,000 kronor and that for 1932-33 was estimated to balance at 896,086,000 kronor.

The total debt on June 30, 1931, was 1,845,644,000 kronor (\$494,633,000), of which 170,000 kronor represented the floating debt. The unit of the currency is the krona, plural, kronor), with a par value of \$0.2680; the average exchange value in 1931 was \$0.2525 and in 1930 \$0.2685.

COMMUNICATIONS. At the end of 1931, Swedish railways reported 10,255 miles of line, of which 4196 miles were state owned and 6059 miles were privately owned. During 1930, the railways carried 69,555,000 passengers and 41,978,000 metric tons of freight, earning gross receipts equivalent to \$89,912,000.

GOVERNMENT. Executive power is vested in the King, who acts through a responsible ministry known as the Council of State, at the head of which is the Minister of State, or premier. Legislative power is in the Diet (Riksdag) of two chambers. Premier at the beginning of 1932, Carl Gustav Ekman (People's party). For changes in 1932, see *History*.

HISTORY. The Swedish economic system sustained a severe shock during 1932 as a result of the suicide in Paris on March 12 of Sweden's leading industrialist and financier, Ivar Kreuger (q.v.). As the organizer and manager of the Swedish Match Company and the large holding company Aktb. Kreuger and Toll, Stockholm, with its associated companies, his death and the subsequent revelation of his extensive frauds and manipulations over a period of eight years caused

heavy losses to Swedish stockholders. Of the 899,000,000 kronor loss on securities reported by Swedish investors during 1932, 684,000,000 kronor (\$183,312,000 at par) represented the loss on securities of the Kreuger companies. It was estimated that about 30 per cent of the Kreuger and Toll participating debentures, 41 per cent of the Kreuger and Toll stock, and 40 per cent of the Swedish Match Company stock were in the hands of Swedish investors.

However the industries affected by the Kreuger scandal employed only about 2½ per cent of the nation's industrial workers. Not all of these were thrown out of employment. While the Kreuger and Toll holding company and two associated concerns were declared bankrupt by the City Court of Stockholm on May 24, the Swedish government granted the Swedish Match Company a three months' moratorium in which to reorganize. A still incomplete statement of the financial affairs of Kreuger and his companies, published by the receivers in September, showed that the Kreuger and Toll company had a deficit of more than 270,000,000 kronor (\$48,330,000). The "match king's" personal estate showed assets of \$17,775,897 and liabilities of \$208,538,627, or a deficit of \$191,762,730.

Immediately upon Kreuger's death, the Swedish government intervened to prevent further injury to the financial and economic structure. On March 13, it obtained authority from parliament to grant a month's moratorium on all private payments. The Stock Exchange in Stockholm was closed and three days later Ernst Lyberg, former Minister of Finance, was appointed by the government to supervise the Kreuger and Toll concern during the moratorium. In order to maintain the solvency of the Skandinaviska Kreditaktiebolaget, one of the country's largest banks which had advanced large credits to Kreuger, the government was forced to supply funds totaling 214,000,000 kronor. This was done through an increase in the national debt.

Among the affiliates of the Swedish Match Company was the International Match Corporation of New York, which went into receivership on April 13. In the bankruptcy proceedings it was revealed that Kreuger's American bankers had disposed of some \$250,000,000, of his securities without having positive evidence of satisfactory collateral. In Stockholm the investigating commission found forged Italian Treasury bills aggregating some \$80,000,000 in Kreuger's safe. A contract purporting to grant Kreuger the Italian match monopoly and bearing the name of Finance Minister Mosconi of Italy was declared by Premier Mussolini to have been forged. It was also discovered that Kreuger had distributed bounties to a number of Swedish politicians, editors, and leading public figures, among them K. Kilbom, leader of the Communist party and Premier Ekman, founder and leader of the People's party. The latter received two 50,000-kronor contributions for his party.

The disclosures concerning Premier Ekman forced his resignation on August 6. He was succeeded, pending the quadrennial elections of September 18, by an interim People's party ministry headed by F. T. Hamrin. In the September elections, the Social-Democrats increased their vote to 1,039,249 from 873,931 in 1928 and their representation in the lower chamber to 104 from 90. The standing of the other parties in the new parliament, with the previous standing in par-

entheses, was: Conservatives, 58 (73); Agrarians, 36 (27); People's party, 20 (28); Communists, 8 (8); Liberals, 4 (4); total, 230. The Conservative party suffered its worst defeat, the comparatively new Agrarian party gaining nine seats chiefly at the expense of the Conservatives. The losses of the People's party were attributed to its acceptance of funds from Kreuger shortly before state aid was advanced to the latter's tottering enterprises.

As a result of the election Premier Hamrin resigned (September 19) and on September 26 a minority Social-Democratic ministry was formed under Per Albin Hansson. The other members included: Foreign Affairs, R. Sandler; Justice, K. Schlyter; Interior, G. Möller; Finance, E. Wigforss; Agriculture, P. Sköld; Commerce, F. Ekman.

In his declaration of policy, Premier Hansson promised a foreign policy aiming at the "limitation of military and economic armaments," a better balance between imports and exports, unemployment insurance, more effective old-age pensions, and farm relief. The tariff issue played the leading part in the political campaign. The Swedes, who had a large favorable balance of trade with Great Britain, were perturbed by the Ottawa Conference and by the revised British tariff, effective in November, which extended tariff preferences to Canada and other Dominions whose products competed with those of Sweden in the British market. At the end of the year negotiations were in progress for a readjustment of British-Swedish tariff relations.

**SWEDENBORGIANS.** See NEW JERUSALEM, CHURCH OF THE.

**SWEDISH LITERATURE.** See SCANDINAVIAN LITERATURE.

**SWIMMING.** Although the United States men swimmers were soundly defeated by the Japanese in the Olympic games, there was a general improvement noticeable in swimming in the United States in 1932 as well as in all parts of the world. As in other years world records were shattered with amazing regularity and Miss Eleanor Holm set no less than fourteen new backstroke marks. This wholesale record breaking had its good feature in attracting record crowds to the meets. The Olympic natatorium was jammed for every race and spectators were turned away at several of the indoor meets held at the New Athletic Club and the Illinois Athletic Club in Chicago.

Some of the outstanding performances of the year were the 150-yard backstroke of George Kojac's in 1:37 $\frac{1}{10}$ , a new world's record; Leonard Spence's 220-yard breaststroke standard of 2:44; and the New York Athletic Club 400-yard relay mark of 3:31 $\frac{1}{10}$ . Among the best marks set by Miss Holm in her activities were 100-yards backstroke in 1:11 $\frac{1}{10}$ , and 220-yards in 2:57 $\frac{1}{10}$ .

The Los Angeles Athletic Club won both the men's and women's indoor team championships, although the Californians were beaten by the New York A.C. in a dual meet. The Illinois A.C. won the water polo championship. No men's outdoor championships were held but the Women's Swimming Association took the women's outdoor team title. Clarence Crabbe captured the individual all-round title for men while Miss Helene Madison and Miss Katherine Rawls, 15-year-old Florida marvel, secured the respective indoor and outdoor crowns for women. Crabbe

and Miss Madison deserted the amateur ranks after the Olympic games.

The University of Michigan was supereminent in college ranks, winning the Big Ten championship as well as the National Collegiate A.A. title. Yale won the Eastern Intercollegiate League race and also garnered most of the individual honors. Stanford was best in the Pacific Coast Conference. Pennsylvania in the East, Illinois in the mid-West, and Southern California on the Pacific Coast were best in college water polo.

**SWINE.** See LIVESTOCK.

**SWITZERLAND.** A federated republic in the centre of Europe. Capital, Bern (Berne).

**AREA AND POPULATION.** With an area of 15,940 square miles, Switzerland had a census population on Dec. 1, 1930, of 4,066,400, as compared with 3,880,320 on Dec. 1, 1920. The population of the principal cities at the census of 1930 was: Zürich, 249,820; Basel (Basle), 148,063; Geneva, 142,812; Bern, 111,783; Lausanne, 75,915. Births during 1931 numbered 68,249; deaths, 49,414; the excess of births over deaths, 18,835. The estimated population in 1931 was 4,080,720.

**PRODUCTION.** Of the total working population of about 1,950,000, 26 per cent were engaged in agriculture and 44 per cent in industry. The gross value of agricultural and livestock production (1931) was 1,355,550,000 francs (\$261,621,000 at par), against 1,370,850,000 francs (\$264,574,000) in 1930. Agricultural prices remained relatively high. Production of the chief crops, in bushels, in 1931 and 1930 (in parentheses) was: Wheat, mixed grain, and spelt, 5,489,000 bushels (5,769,000); rye, 1,402,000 (1,484,000); barley, 565,000 (496,000); oats, 2,308,000 (2,659,000); potatoes, 27,410,000 (21,678,000). Wine production was 18,288,000 gallons in 1931.

Factories in operation averaged 8062 annually for the years 1922-25, 8514 in 1929, and 8488 in 1930. The chief manufacturing industries were: Machinery, apparatus, and instruments; cotton textiles; metallurgy; chemicals; food and beverages; paper, leather, and rubber; woodworking; silk and rayon. The percentage of the total production normally exported by leading industries was: Watches and watch movements, 92 per cent; cotton yarn and fabrics, 60; dyes, 90; chocolate, 40; cheese, 67.

**COMMERCE.** Due to its high degree of dependence upon export markets, Swiss industry in 1931 was badly crippled by a 24 per cent decline in the value of exports, as compared with 1930. Imports declined 12 per cent in value but increased 6 per cent in quantity. The figures were: Imports, 2,214,808,000 francs (\$427,458,000) in 1931, and 2,526,048,000 francs (\$487,527,000) in 1930; exports, 1,334,916,000 francs (\$257,839,000) in 1931, and 1,746,323,000 francs (\$337,040,000) in 1930.

Swiss statistics show exports to the United States of \$17,790,000 in 1931 (\$27,826,000 in 1930), and imports for consumption from the United States of \$31,370,000 (\$39,528,000 in 1930).

In 1932, import values declined 31.3 per cent and export values 35.7 per cent, as compared with 1931.

**FINANCE.** The closed Federal accounts for the fiscal calendar year 1931 showed revenues of 428,399,843 francs and expenditures of 426,145,035 francs, leaving a surplus of 2,254,808 francs (the Swiss franc, par \$0.1929, exchanged at \$0.1940 in 1931). This compared with the 1930

revenues of 433,106,233 francs, expenditures of 426,374,014 francs, and surplus of 6,732,219 francs. The budget for 1932 provided for revenues of 409,088,000 francs, expenditures of 417,988,000 francs, and a deficit of 8,900,000 francs. The total state debt on Dec. 31, 1931, was 4,885,585,000 francs, of which 1,963,286,000 francs represented the debt of the Confederation and 2,922,299,000 francs the debt of the Federal railways.

**COMMUNICATIONS.** The Swiss Federal and private railways in 1930 had 3354 miles of line. During 1931 the Federal lines carried 122,516,000 passengers and 17,784,000 metric tons of freight, with gross receipts of 387,231,000 francs (\$74,736,000).

**GOVERNMENT.** The Federal Assembly delegates chief executive authority to a Federal Council of seven members elected for three years. The chief magistrates are the President of the Confederation and the Vice President of the Council, who are elected by the Federal Assembly for one year. President in 1932, Dr. Giuseppe Motta; Vice President, Edmund Schulthess.

**HISTORY.** The usual peace and order of Geneva was broken on Nov. 9, 1932, when militiamen, brought to the city to maintain order at an anti-Socialist meeting, fired upon a crowd of Socialist demonstrators, killing 11 and wounding 45. One soldier was killed. The Geneva trade unions called a 24-hour sympathetic strike on the day of the victims' funerals, after which the city relaxed into its accustomed quiet. By a 6 to 5 decision, the Permanent Court of International Justice on June 7, 1932, upheld the Swiss case in the 13-year-old Franco-Swiss dispute over the free zone of Upper Savoy and the district of Gex near Geneva. The decision required France to alter its customs line (see **WORLD COURT**). The Federal Assembly on December 15 elevated Edmund Schulthess to the Presidency for 1933. Marcel Piletgolaz was elected Vice President.

**SYRACUSE UNIVERSITY.** A nonsectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1932 autumn enrollment was 5102; the extension school enrollment was 1270; and the summer session enrollment was 1907. The faculty numbered 656 for the year 1931-32. The productive funds of the university amounted to \$5,170,382 while the income for the year was \$1,908,669. Chancellor, Charles Wesley Flint, D.D., LL.D.

**SYRIA.** A mandated territory of France in western Asia, bounded by the Mediterranean on the west, by Palestine, Trans-Jordan, and Iraq on the south and east, and by Turkey on the north. Capital, Beirut (Beyrouth).

**AREA AND POPULATION.** The total area is about 77,220 square miles and the population in 1930 was estimated at 3,100,000 (2,191,000 at the 1926 census). The population in 1929 was divided among the four administrative divisions as follows: Syrian Republic (capital, Damascus), 1,696,638; Lebanese Republic, or Greater Lebanon (capital, Beirut), 862,018 (342,388 Christians and 292,247 Moslems); the Government of Latakia (capital, Latakia), 286,920; and the Government of Jebel Druze (capital, El Suweideh), 51,780. The autonomous Sanjak of Alexandretta is part of the Syrian Republic. The bulk of the population is of Arab origin and

Arabic is the language most widely used. There were (1929) 1,514,755 Moslems, 505,419 Christians, 227,930 Alawiyya, and 86,125 Druses. The estimated population of the chief cities in 1930 was: Damascus, 200,000; Aleppo, 225,000; Beirut, 170,000.

**PRODUCTION.** The bulk of the population is engaged in agriculture and stock raising. Syria and Lebanon in 1930 had 3,207,000 acres of arable land, 818,000 acres of permanent meadows and pastures, 419,000 acres of trees, shrubs, and bushes, and 544,000 acres of woods and forests. Livestock in 1930 numbered 385,000 cattle, 2,682,000 sheep (producing 14,133,000 pounds of wool in 1931 and 19,000,000 pounds in 1930), 1,795,000 goats, 52,000 horses, and 139,000 mules and asses. Production of the chief crops in 1931 was: Wheat, 13,929,000 bushels; barley, 14,193,000 bushels; oats, 570,000 bushels; corn, 1,376,000 bushels; potatoes, 1,576,000 bushels; tobacco, 13,889,000 pounds; olive oil, 3,942,000 gallons (in 1931-32); cotton, 8,126,000 pounds (1931-32); silk cocoons, 6,206,000 pounds.

**COMMERCE.** Including transit goods, imports and exports in 1931 totaled \$39,596,000 and \$16,379,000, respectively. Excluding a transit trade valued at \$6,235,000, imports in 1930 were valued at \$49,805,000 and exports at \$17,769,000. France was again the chief source of imports in 1931, followed by the United Kingdom.

**FINANCE.** Preliminary budget results for 1931 showed receipts of 17,940,740 Syrian-Lebanese pounds and expenditures of 16,512,510 Syrian-Lebanese pounds. Comparative figures for 1930 were 18,694,920 and 16,578,740 Syrian-Lebanese pounds, respectively. Budget estimates for 1932 balanced at 17,057,490 Syrian-Lebanese pounds. On June 19, 1931, Syria paid 244,000 Turkish gold pounds (about \$1,073,600) in servicing its share of the Ottoman public debt. The unit of currency is the Syrian Lebanese paper pound, based on the French franc (1 pound equals 20 francs); it exchanged at \$0.784 in 1930.

**GOVERNMENT.** The Constitution of the Syrian Republic adopted May 14, 1930, granted the republic powers equivalent to those of an independent state, except that control of foreign relations and similar functions were retained by France conterminous with her exercise of the mandate. There is a legislature, elected for four years, which in turn elects a president for a term of five years. The president must always be a Moslem. The Constitution of the Republic of Lebanon, as modified May 8, 1929, vests executive power in a president elected for six years by the Chamber of Deputies, and legislative power in the Chamber, composed partly of elected delegates and partly of presidential appointees. Latakia and Jebel Druze are administered by French governors, assisted by partly nominated and partly elected councils. A French army is in occupation of the entire country, however, and final power rests with the French High Commissioner. High Commissioner in 1932, Henri Ponsot, appointed Oct. 12, 1926.

**HISTORY.** *The Syrian Constitution.* The year 1932 witnessed the organization of constitutional government in the Syrian Republic in accordance with the organic statute promulgated by the French High Commissioner in May, 1930. The first general election under the Constitution was held Jan. 5, 1932. The Nationalists, who at first refused to recognize the Constitution, finally decided to participate in the election. Antagonism

between Nationalists and Moderates led to riots and bloodshed toward the end of 1931 and the French authorities were forced to postpone for several months the elections in Damascus, Hamah, and Doma. The final electoral returns showed 54 Moderates and 15 Nationalists in the Chamber of Deputies. Ahmed Ali Bey el-Abed, a Moderate, was elected President of the Syrian Republic on June 11, after the Chamber's first attempt to elect a president had ended in disorder. In the formation of the Cabinet, however, the Moderates received only two portfolios, while the Nationalists obtained the four most important ones.

The Nationalists, nevertheless, continued their violent agitation against the French mandate and the Moderates. Anti-French political speeches were made in the mosques and at Aleppo bomb-throwing, murders, strikes, and demonstrations were reported. The French were finally forced to issue a public safety decree, under which some 70 Nationalist agitators, including a dozen notables, were imprisoned. The world depression affected the finances of the Syrian Republic also, and in midsummer the Council of Ministers effected drastic economies in governmental salaries, pensions, allowances, and general expenditures.

*Lebanese Constitution Suspended.* While the Syrian Republic was experiencing an inauspicious introduction to constitutional government, the Lebanese Constitution was suspended as unworkable in May after having undergone four revisions by the French authorities in six years. The net result of representative government had been a steady increase in government officials, salaries, and general expenditures without tangible results other than the enrichment of professional politicians. In suspending the Constitution, the High Commissioner appointed M. Debbas, President of the Republic, as a sort of dictator, assisted by a council of directors nominated by himself. M. Debbas by the end of the year had completely reorganized and simplified the governmental machinery, eliminated many abuses, and reduced expenditures by approximately one-half.

*Other Developments.* The boundary line between Syria and Iraq was approved by the Council of the League of Nations on November 25. It followed lines recommended by the Council's commission of inquiry. M. Ponsot, the French High Commissioner, visited Istanbul, Turkey, in October in connection with negotiations for the demarcation of the Turko-Syrian boundary, which were under way between the French and Turkish governments. Meanwhile a number of prominent Syrian Arabs were promoting a movement for a Pan-Arab federation to resist foreign domination and imperialism. The movement, known as Istiqlalism, was divided on the proposal for the union of Syria and Iraq under King Feisal of Iraq. On Jan. 8, 1932, Anthony Aridah, Archbishop of Tripoli in Syria since 1908, was elected Patriarch of the Maronites to succeed Patriarch Elias Hoyek, who died in Beirut on December 23. See *ARCHAEOLOGY*.

**TADZHIKISTAN.** See *SOVIET CENTRAL ASIA*.

**TAHITI.** See *OCEANIA*.

**TAIWAN.** See *FORMOSA*.

**TALKING PICTURES.** See *MOTION PICTURES*.

**TANGANYIKA** (tän'gän-yé'ka) **TERRITORY.** An African territory bounded on the north by Kenya and Uganda, west by Belgian

Congo and Northern Rhodesia, south by Portuguese East Africa, and east by the Indian Ocean. It is administered by Great Britain under a mandate approved by the League of Nations. Area, about 374,000 square miles; population (1930 estimate), 4,852,244 natives, 6876 Europeans, and 25,481 Indians. The native population consisted chiefly of tribes of mixed Bantu race. The European population (1931 census) was 5189 males, 2974 females. The capital Dar-es-Salaam (pop. 25,000) and Tanga (pop. 11,000) are the chief seaports. Revenue in 1930-31 amounted to £1,749,478 and expenditure to £2,102,501. Budget estimates for 1931-32 placed revenue at £1,911,500 and expenditure at £1,904,919. Governor in 1932, Lieut.-Col. Sir George Stewart Symes, appointed January, 1931.

**TANGIER**, tăn-jér'. The international zone of Tangier is situated in northwestern Morocco, fronting the Atlantic Ocean at the entrance to the Straits of Gibraltar. The zone has an area of about 225 miles and a population estimated at 65,000, nearly all of whom reside in the port city of Tangier. The manufacture of cigarettes, the chief industry, employed about 700 persons. Under the international protocol of 1928, the Tangier zone was permanently neutralized and demilitarized. The zone has large autonomous powers, legislative authority being vested in an international Assembly of 27 members, but a committee of control, composed of the consuls of Powers signatory to the Act of Algeciras, possesses veto and certain other powers. Administration is delegated to an administrator. Administrator in 1932, M. Le Fur (French).

**TANKERS.** See *SHIPBUILDING*.

**TARIFFS.** See *CANADA*; *GREAT BRITAIN*; *IRISH FREE STATE*; *AUSTRIA*; *FRANCE*; *ITALY*; *UNITED STATES*; *BELGIUM*; *NETHERLANDS*, *THE*, under *History*.

**TASMANIA**, táz-mā'nī-a. A state of the Australian Commonwealth, consisting of the island of that name and several other smaller islands. Area, including the island of Macquarie (170 square miles), 26,215 square miles; population (1921 census), 213,780; estimated, Mar. 31, 1932, at 221,584. Births in 1931 numbered 4702; deaths, 2057; and marriages, 1501. The excess of immigration over emigration was 41 for the same year. Hobart, the capital, with suburbs had 58,100 inhabitants (Mar. 31, 1932); Launceston with suburbs had 4543. Revenue for 1931-32 amounted to £2,385,495; expenditure, to £2,657,109; net debt on June 30, 1932, £23,243,821.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a legislative council (upper house) of 18 members and a house of assembly (lower house) of 30 members. The House of Assembly (1931 election) comprised 18 Nationalists, 11 Labor, and 1 Independent. Governor in 1932, Sir Herbert Nicholls. Premier and Treasurer, J. C. McPhee. See *AUSTRALIA*.

**TAXATION.** The outstanding event of the year 1932 in the matter of taxation was, beyond question, the enactment by Congress of the Revenue Act of 1932 which went into effect in July and which provided (see the article *PUBLIC FINANCE*) one of the largest increases of taxation ever enacted by the government of the United States in time of peace. As summarized by the Secretary of the Treasury this act called for:

(1) Increase in the corporation income tax rate from 12 to 18% per cent, with an additional tax at three-fourths

of 1 per cent on corporate net income for the years 1932 and 1933 reported on consolidated returns, and with no specific credit for corporations with small incomes.

(2) Increase in the normal rates on individual income from 1½, 3, and 5 per cent to 4 and 8 per cent; elimination of tax credit for earned income; reduction in personal exemptions from \$3500 and \$1500 to \$2500 and \$1000 for married persons or heads of families and single individuals, respectively; surtaxes graduated from 1 per cent on net income in excess of \$6000 and not in excess of \$10,000, up to 55 per cent on net income in excess of \$1,000,000; and other income tax changes, the most important of which limits the deduction of losses from sales or exchanges of stocks and bonds held for a period of two years or less to the amount of gains derived from similar transactions with provision for a one-year carry-over, with certain limitations, of the excess of such losses over such gains for a given year.

(3) An additional tax on estates at graduated rates, with an exemption of \$50,000, the additional tax to be paid to the Federal Government without tax credit for payment of State inheritance taxes; and a gift tax at rates graduated up to 38½ per cent on net gifts in excess of \$10,000,000 with an exemption of \$50,000.

(4) Manufacturers' excise taxes on numerous articles, including lubricating oil, brewer's wort, automobiles, trucks, parts and accessories, tires and inner tubes, gasoline, candy, chewing gum, soft drinks, jewelry, toilet preparations, furs, domestic and commercial consumption of electricity, radios, mechanical refrigerators, sporting goods, and cameras.

(5) Other miscellaneous taxes, including new and increased stamp taxes, increased taxes on admissions, and new taxes on telephone, telegraph, cable, and radio messages, checks, leases of safe deposit boxes, transportation of oil by pipe line, and the use of boats.

(6) Increases in postal rates.

The continual dwindling of the supply of revenue both in the Federal treasury and in those of the several States made the year 1932 notable both for the increasing of the burden of taxation in several of the States, as well as under the Federal government, and also for the resumption of discussions and controversies about possible sources of new revenue that had been permitted to lie quiet for a good while in the past. Distressed conditions on the part of large bodies of unemployed led to the consideration of taxes and the enlargement of the weight of taxation in sundry places in a degree not previously thought wise or sound. Similarly the constant demand for some means of temporarily enlarging the immediate resources of the States led to the adoption of measures for the issuance of new public debt obligations at times, and to an extent, not previously thought of. The dangers and possible risks involved in this widespread growth of taxation called further earnest attention from many economists and public men and, in consequence, there was inserted into the Democratic platform a pledge for a reduction of 25 per cent in the total budget of the nation with corresponding promise of relief either from old, or from threatened new, taxes. See LAW IN 1932.

**STATE INCOME TAXES.** The outstanding development of the income tax during 1932, so far as the several States were concerned, was in New York where income tax rates were temporarily

increased 100 per cent. Wisconsin likewise doubled her rates, and Mississippi more than doubled hers, while reducing exemptions. Tennessee adopted an income tax in 1931, and the Supreme Court of that State has held it unconstitutional in 1932. Illinois adopted such a tax in 1932, which is now before the Supreme Court of the State. Constitutionality is also under advisement in other commonwealths. The Supreme Court of the United States has handed down two important constitutional decisions: *Pacific Co. Ltd. vs. Johnson*, in which it is held that gross income may include all interest received from tax-exempt Federal, State, or municipal bonds, while in *Fox Films Corporation vs. Duval* it is held that royalties received from copyrights and patents are subject to State taxation. In inheritance taxes, there was no important development during 1932.

**SALES TAXES.** Considerable development, however, occurred during the year in the field of sales taxes, and taxes on retail transactions. Electric power and its sales constitute the basis of a new tax of 2 per cent in Louisiana, with the first report of results on September 1, 1933. A tax on electric power by kilowatts has been adopted in Idaho. In South Carolina, the subject is under adjudication. In Mississippi, the old sales tax has given place to a substitute effective until June 30, 1934, in which rates rise from 1 per cent to 2 per cent as against ¼ of 1 per cent to 1 per cent. Retail store taxes on chain stores have been adopted by Arizona and Wisconsin, rates ranging from \$10 to \$50 in the latter and from \$3 to \$25 in the former State; while in Louisiana a tax of \$15 to \$200 available for local needs but exempting small gasoline stations has been passed. New gasoline taxes, moreover, have been adopted in Kentucky and Virginia, while enlargement has been ordered in Tennessee, Mississippi, New York, and Massachusetts. Truck registration and other automobile fees have likewise been widely added to. Higher rates for "trailers"—\$8 per ton instead of \$4—have been set in New York, with a temporary increase of 65 per cent on trucks, busses, and trailers. Higher highway taxes have been established in Mississippi and higher rates on common carriers in Kentucky and Louisiana. Taxes on gross earnings of common carriers have been held unconstitutional in Montana.

**EXCISE TAXES.** The chief interest of 1932 in the field of excise taxes has been afforded by taxes on soft drinks in Louisiana and a tobacco tax in the same State. The rate on cigarettes is one-fifth of a cent each, with cigars \$2 per thousand to \$13.50 per thousand, according to price. In Mississippi, tobacco products other than cigars and cigarettes have been included as subject to excise taxation. Both in Kentucky and Louisiana a tax on oleomargarine has been established.

COMPARISON OF NUMBER OF RETURNS AND INCOME TAX FOR THE CALENDAR YEARS 1928, 1930, AND 1931, INDIVIDUAL RETURNS OF NET INCOME OF \$5,000 AND OVER.\*

Net income classes	Number of returns			Income tax (thousand dollars)			Percentage decrease			
	1928	1930	1931	1928	1930	1931	Number of returns	to	to	Income tax
							1928	1930	1928	1930
							to	to	to	to
							1930	1931	1930	1931
\$5,000-\$10,000 .....	561,114	505,715	385,837	21,344	16,590	11,693	9.9	23.7	22.3	29.5
10,000-100,000 .....	359,576	251,490	167,141	409,058	208,184	114,344	30.1	33.5	49.1	45.1
100,000 and over .....	15,780	6,152	3,142	700,341	237,716	107,896	61.0	48.9	66.1	54.6
Total .....	936,470	763,857	556,120	1,180,743	462,440	238,933	18.5	27.1	59.1	49.4

\* Preliminary Statistics of Income; returns filed to Aug. 31, 1929, 1931, and 1932, respectively. For sake of comparability with available figures for 1931, preliminary rather than final figures are used for 1928 and 1930.

Stock transfer taxes were increased in New York from 2 cents to 4 cents. Other minor changes in excise taxation are to be found in various States, with proposed alterations under advisement in several of the larger commonwealths.

**FEDERAL INCOME TAX RECEIPTS.** Description has already been given of the new income tax legislation of the year 1932 and of the preparations for still further enactments that were in the making at the close of the twelvemonth. The actual income situation had shown great deterioration, as indicated by the summaries of the receipts and of their distribution.

According to the Secretary of the Treasury:

As shown by the table, a decline of 18.5 per cent in the number of these returns for 1930 as compared with 1928 was accompanied by a decrease in taxes reported of 59.1 per cent; a further decline for 1931 as compared with 1930 of 27.1 per cent in the number of returns was accompanied by a decrease in taxes of 49.4 per cent. Taxes for 1931, aggregating \$233,900,000, were thus only about one-fifth of the total of \$1,130,700,000 for 1928. Two-thirds of the decline of about \$896,800,000 in individual income taxes which took place from 1928 to 1931 occurred in the net income classes of \$100,000 and over, due to the shift in taxable incomes from the high income group to lower income groups. In 1930 the shift in taxable incomes resulted principally from the decline in profits from the sale of real estate, stocks, bonds, etc., while in 1931 it reflected decreased income from all sources, particularly from dividends.

The returns showing net income of \$100,000 and over declined in number from about 16,000 in 1928 to approximately 6000 in 1930, and to about 3000 in 1931.

**TAXONOMY.** See BOTANY.

**TAX RATES.** See MUNICIPAL GOVERNMENT.

**TEACHING.** See EDUCATION IN THE UNITED STATES.

**TECHNOCRACY.** The term "technocracy" was coined in 1919 by William H. Smyth, an engineer, inventor, and social economist of Berkeley, Calif. It was used by him in an article entitled "Technocracy—National Industrial Management," which appeared as the second of three articles published in the magazine *Industrial Management*. The second appeared in the issue of March, 1919. His definition of the term is, "A theory of social organization and a system of national industrial management. It implies scientific reorganization of national energy and resources, coordinating industrial democracy to effect the will of the people."

Later, Mr. Smyth expanded the three original articles by the addition of nine further articles, all of which were printed during 1920 and 1921 in the *Gazette of Berkeley, Calif.* The entire series was republished in booklet form in 1921 under the title "Technocracy." Ten years later, in July, 1931, the *Gazette* published a further article by Mr. Smyth, using the same title—"Technocracy"—in which he referred to the former series: "This series of twelve essays, entitled Technocracy, were assembled in pamphlet form in 1921, and between one and two thousand copies mailed to outstanding people and members of Congress." The article pointed out the basic similarity existing between his earlier theories and the proposal of Stuart Chase, in *Harper's Magazine*, May, 1931, for the revivification of the War Industries Board to serve as a Peace Industries Board.

The theory developed by Mr. Smyth may be condensed somewhat as follows: He recalled with what willingness the people of any given country had responded to a common national aim during the recent war. Referring especially to the United States he drew particular attention

to the great effectiveness of the War Industries Board, a board composed of technicians and scientists which so directed, or was tending to direct, the industrial output of the entire nation as to preserve an accurate balance between supply and demand, production and distribution. "For this unique experiment in rationalized industrial management," said Mr. Smyth, "I have coined the term Technocracy."

From this "germ of a novel and significant idea—a pioneer idea in the ancient art of self-government," Smyth reached a logical conclusion: "Let us organize our scientists, our technologists, our exceptionally skilled; let us commandeer, conscript, and enlist their loyalty, their devotion, their enthusiasm, their intelligence, their talents, their accomplishments for the purposes of Peace and the realization of a noble national purpose."

The purpose of such a body would be to study production and consumption, to watch the upward and downward curves of demand, to interpret the trend of human wants, to encourage the satisfaction of those wants. "From this coordinated army of science, technology, and skill should be selected a representative and comprehensive national council of scientists as managing directors." Such directors would be chosen through recognized capability and social worth.

The control of the machine, its production, and distribution is the paramount aim of a technocracy—a national industrial democracy. The machine is the servant of man, not man's master; and solely by rigid observance of a predetermined output can man retain his mastery. Price has been the measure of supply and demand; but with demand known and supply correctly gauged, price would no longer fluctuate from peaks to valleys. In fact, Smyth says: "Ownership or 'money' would take the form of certificates issued by the clearing house, exchangeable for any desired form of effort or products. These certificates would be the medium of exchange. By this suggested method business would become scientific barter very similar to that which we were forced to adopt in the money panic of 1907 in the form of 'clearing house certificates.'"

"The savings of any man would be recorded in the tally house and would be available to him at any time whether he desired to provide for his old age or spend it improvidently. And there would not be any shrinkage in the value of the certificates.

"He has placed in the tally house one or fifty pairs of shoes, and whether he draws against them to-day or twenty years hence, he will be entitled to one or fifty pairs of shoes."

The basic principles upon which Smyth's economic structure is built are found in his book *Concerning Irascible Strong* (1926). They are:

**The Individual.** The main function of society is to oppose its combined effectiveness to every natural and artificial condition which tends to hamper the freedom of the individual, in so far as the acts of the individual are consistent with the community objective.

**Sustenance.** The products of labor or effort are the results of life energy expressing itself through an individual, upon his environment, to the end that this individual may and shall express more individual life.

Ownership of products therefore is as essentially inherent in the producing individual as the faculties from which the products flow.

Thus products are, in right and reason, inalienable from the producing individual either by himself or by others—except for the equivalent of the product.

**Mutuality.** Equal liberty is the natural right of every person. It is mutual, but only to the point where it does not interfere with the liberty of another. But it must be

given some directive purpose and yet given free rein so that each person may express himself.

**Family.** As the social and political unit, the family is entitled effectively to voice its united objectives and to be represented in the conduct of all community affairs. One family, one vote.

**Progress.** The community's most valuable and vital assets are its children; therefore, self-preservation makes it imperative that the highest intelligence and most unremitting effort be expended upon their preparation for carrying forward the national objective.

**Increase.** The women are the natural wards of the community, for its life and well-being are inseparable from theirs. By right of womanhood's natural function every woman is therefore entitled to maintenance and protection as a first charge upon the community resources. Realized motherhood places the community under obligation proportional to the benefit accruing to it. In this benefit the mother is, in equity, entitled to participate directly.

**Opportunity.** Every individual is entitled to equal opportunity, to the end that self-expression may have fullest scope and the individual thus be enabled to reach his highest effectiveness for self-realization and for the welfare of the community.

**Prosperity.** Nature's resources are its gifts to all; they are man's inalienable environment; they are his common heritage and birthright.

**Inheritance.** As it is only by and through the organization of the community that an individual can socially function, it is inherently right and reasonable that the surplus product of that functioning should accrue to the community at his death.

**Entitled to Rights.** To sum up these social functions it might be added that the individual is entitled to his rights, the right to think, the right to a private religion, to his own family life, if he wishes it. The duty of society, which is, under my definition, all the people, is to aid him in the free expression of his own private life.

The individual is entitled to the products of his labor. He should not be forced to pay tribute at every turn to some predatory group which takes his money in the form of interest, profit and credit charges.

**Importance of Family.** As the basis of any society, the importance of the family as a unit is axiomatic. Hence they have group rights and should be able to express them as a unit, since the sum of their single rights still does not constitute a group want or right.

As a part of the family or group right, the need for children is vital to both the individual and to society.

The right to inheritance should be abolished and the worldly goods or wealth at the time of death should revert to the society which actually gave it value and which, as a group, contributed to its creation.

It is obvious that the proposed form of government savors no whit of communism, and smacks but lightly of socialism. It recognizes fully that no form of government in the United States would be tolerated that did not recognize the fundamental rightness of (a) private property, (b) equality of opportunity, and (c) personal liberty extending to the boundaries of the equal liberties of others.

The greatest stress is laid by Smyth—in fact, his paramount concern—upon the determination of the national objective, "the living, moving, and effective will of a democracy." He asks, "Is there anything strange, startling, revolutionary, or impractical in the proposal of national purpose? If not, what does a national objective really mean in its social implications?" The question is answered thus:

It proposes a commonplace institutional and constitutional arrangement for amalgamating individual effort, energy, urge, and friction into mass movement—massing futile individual struggles into effective community kinetic force. It proposes an initiative institution for translating individual "needs" into social "wants"—an institution socially responsive to human growth and development. It proposes a rational convention for changing conditions as they are into conditions as we think they ought to be, and without social disturbance—the substitution of self-conscious social evolution for irrational revolution. . . .

Should the idea appeal to a sufficiently large number of citizens to make it a realizable ideal, there would naturally follow a gradually growing discussion, at first confined to comparatively few interested individuals, thence spreading to groups and the public press. Eventually a time would arrive when every intelligent indi-

vidual would have a clarified notion of his own desires, hopes, aspirations, ambitions, and social outlook.

When the time was thus ripe, every adult would be given the opportunity to express himself—his wants and his views as to the provisions of the proposed objective—through the medium of the Census Bureau.

In connection with this census record a nationally representative committee would be elected, whose duty it would be to arrange and classify, and extract from these many-directed expressions of desire the essence, substance, and vital significance of all these various aspects of social wants.

Then, from these concentrations as material, the committee would formulate the provisions of the objective. . . .

This Affirmative Constitution should be a charter by the sovereign people guaranteeing effective freedom for the individual—a great people's book of life and liberty—the Gospel of Democracy.

This then gives a general idea of the character of a national objective.

This document, when formulated, should be published broadcast for a sufficient length of time to permit of its being thoroughly discussed and criticized. It should then be taken up again by the National Committee for such revision as might be found advisable in view of the public criticism.

It would then be submitted to the people. . . .

In essence the proposition seems to be simple and common sense; an army has a definite purpose, a business has a definite purpose; a nation (and above all an industrial democracy) should have a definite purpose. An army is officered by military specialists; a business organization is officered by business specialists; an industrial democracy—a democracy of technical industries—should be officered by technical specialists, should be in the form and in fact a purposive *Technocracy*.

His views further coincide with the later proposal of Stuart Chase in the suggestion, "The Great National Objective should be renewed every ten years, or at least every generation."

It will be noted, however, that Chase proposes that the job of the "Peace Industries Board" "shall be to draft a Ten Year Plan for the United States," and "for many months the total energy of the Board would be devoted to the formulation of the Ten Year Plan. Thereafter, it should continue to serve as the coordinating, driving force to put the plan into operation. . . . What the Board's Ten Year Plan would provide, no man knows pending its completion." Smyth, on the other hand, insists that the people themselves should determine the plan, the function of the Board being merely to direct that plan.

In 1932, Howard Scott brought the term "Technocracy" into the limelight by using it as the name of "a research organization, founded in 1920, composed of scientists, technologists, physicists, and biochemists" which was organized "to collect and collate data on the physical functioning of the social mechanism on the North American continent, and to portray the relationships of this continent and the magnitude of its operation in quantitative comparison with other continental areas of the world." The organization, "Technocracy," according to Mr. Scott, was to establish a new technique in social mensuration, "that is to say, a process for determining the rates of growth of all energy-consuming devices within the limits of the next most probable energy state."

An article by Mr. Scott, appearing in *The Living Age*, December, 1932, had been preceded by other articles not bearing his authorization in other publications which presented some of the findings of the organization. The data thus presented, although promptly challenged as to correctness by other technicians, were so startling in character—tending to demonstrate the amazing growth of modern machine power and the declining importance of man power in production—as to command almost immediately the atten-

tion of the entire country. The theories of Mr. Scott are succinctly given by Allen Raymond in *Current History*, February, 1933:

Together with the certainty of fast approaching chaos, it was first reported that the little group of scientists conducting the "Energy Survey of North America" were working out from the data and laws which they had discovered a new plan for society to which also the name "Technocracy" had been given. Under this new plan, the inordinately productive capacities of the modern machine would be used for the benefit of every one, but with all considerations of prices for commodities abandoned.

By channeling the energy from steam, oil, gas and water power available for such a state, the natural resources at its command, and the declining importance of man-power in production, the scientists claimed to have discovered that a vastly higher standard of living for every one on the North American Continent could be obtained with far less effort than is now expended. Poverty could be abolished. Insecurity could be wiped out. For a few days of work each week by persons between the ages of 21 and 45, under scientific management, every one in America could have a scale of consuming power measured at perhaps \$20,000 a year, according to the value of the 1929 dollar.

Dollars, as such, however, would have to be abandoned. No currency based on such an inexact measure of commodity values as gold or silver is any longer workable. The "Technocrats," as they have come to be called, envisage the distribution of "energy certificates," to take the place of money. These certificates are to be based on the amount of energy in human labor or fuel consumption, required to produce any given commodity to be bought, from cigarettes to automobiles.

The Technocrats propose to balance production of goods with consumption by giving every one the right to consume, on an equal basis, without regard to the share in production which an individual consumer has earned. In this sense, the society which they propose to set up is seen to resemble a Communist or a Socialist order. But the Technocrats are careful to disavow any connection with Communist or Socialist philosophies. They scorn both of these methods of managing society as no more up-to-date than capitalism.

See articles by Wm. H. Smyth in *Industrial Management*, issues of February, March, and May, 1919; Wm. H. Smyth, *Technocracy* (Berkeley, Calif., 1921), and *Concerning Irascible Strong* (New York, 1926); articles by Howard Scott, in *The Living Age*, December, 1932, and in *Harper's*, January, 1933.

**TELEGRAPH AND CABLE.** The supply of accurate time to subscribers of telegraph companies is a service which has been performed for some time but in the last year there has been a much increased interest in the practice, a much greater demand and, as a consequence, a greater activity in the improvement of the technical details. There are now hundreds of thousands of such subscribers in the U.S.A. Three types of service are performed (a) sending out the "noon-beats" each day for use in correcting master-clocks; (b) sending out coded impulses at intervals throughout the day (these are known as jeweler's beats as they are principally used by jewelers to correct their time-pieces); (c) synchronizing clocks every hour. About 120,000 clocks are checked in this manner most of them rented by subscribers.

The telegraph companies have installed additional equipment for carrier current telegraphic circuits, making it possible to add ten carrier current circuits over a 4-wire open-air system which continues to operate with the usual d.c. multiple system. The carrier current circuits are capable of handling printers. Great assistance has been rendered to commercial air transportation by supplying information about the weather in the form of weather maps by telegraph to each major airport. This information is supplied broadcast by teletypewriter. The year 1932 marked the one-hundredth anniversary of the

conception of the telegraph by Morse although it was four years later before he had a practical set to demonstrate. In 1932 the Western Union moved into its new building in Boston and put into operation its new plant.

**TEL EL ARMARNA.** See *ARCHÆOLOGY*.

**TELEPATHY.** See *PSYCHICAL RESEARCH*.

**TELEPHONY.** During 1932 oversea telephone service was extended to several localities hitherto isolated from the world's network of telephone lines. The following places were reached through existing transmitting stations: the principal cities of the Union of South Africa, Bangkok in the Kingdom of Siam, the Balearic Islands in the Mediterranean, the cities of Alexandria, Cairo, and Port Said in Egypt, the greater portion of the Republic of Peru, and the city of Lisbon in Portugal. In addition, a new station was constructed near Miami, Florida, through which radio-telephone service was extended to Colombia, Venezuela, and Nassau in the Bahama Islands. About 92 per cent of the 33,400,000 telephones in the world can be reached from any telephone connected with the Bell system. During 1932 ship-to-shore telephone service was extended to 9 additional liners, making 15 in all at the end of the year.

The continuing effect of the severe depression in general business during 1932 was reflected to a certain extent by the telephone industry in the United States mainly through decreased usage of available facilities. During the year there was a decrease in the number of telephones in service and in the average daily telephone traffic. On Jan. 1, 1933, the total telephones in this country numbered approximately 17,550,000 and there was a daily average of 74,425,000 local conversations and 2,575,000 toll conversations. The total investment in telephone plant and equipment represented about \$4,725,000,000 on Jan. 1, 1933, and on that date there were 87,000,000 miles of telephone wire in service. The investment in telephone plant and equipment decreased only slightly during 1932 whereas the miles of telephone wire in service actually increased. By the end of 1932, more than one-third of all the telephones in this country were served from dial system central offices. In the Bell System, over one-fifth of the subscribers' telephones were of the hand-set type.

During 1932 continued progress was made in extending the telephone cable network, notably in the completion of the cable between Kansas City and Dallas. This cable links Dallas and other Texas points with the storm-proof cable network covering most of the eastern part of the United States. Direct New York-Dallas telephone circuits, 1850 miles in length (the longest direct all-cable telephone circuits in the world), are routed through this cable.

Noteworthy improvements have been made in private branch exchanges. One type recently developed employs a combination of manual and dial equipment. Local calls and outgoing calls are handled by the dial equipment, while incoming calls and certain types of outgoing calls are handled by operators at a manual board. This equipment has been designed chiefly for very large installations where the number of extensions may be several thousand or more, and the number of trunks to the central office several hundred. Teletypewriters have been applied to the distribution of weather maps over extensive networks in connection with aeroplane service.

Outline maps printed in light colors are placed in the machines and information regarding weather conditions at each observing station is typed on these maps by means of signals transmitted from a central weather bureau. When maps are not being received the machines may be used for routine private wire traffic. With this arrangement weather information is available at many airports hours sooner than with previous methods.

In January, 1932, the Trans-Canada Telephone System was formally opened by the Governor-General of Canada. See CANADA.

**TELETYPEWRITER.** See TELEPHONY.

**TELEVISION.** The art has reached that stage in which, after considerable exploitation of the preliminary steps, the scientists have settled down to an endeavor to iron out the practical difficulties and make a useful device instead of a toy. The Radio Corporation of America gave a demonstration in May for the benefit of its numerous licensees. Reports state that the cathode ray tube was used with good effect but it was stated that the method was in the laboratory stage. Many of the scientists are endeavoring to develop the cathode ray oscillograph as a means of reproducing and projecting the image. In this a beam of electrons makes a spot of light on the screen. This beam may be moved back and forth in two coördinate axes by two electric fields produced by varying voltages. As the electron beam has no inertia there is no time lag and no appreciable amount of power required. If the beam is varied in intensity by varying the potential which produces it or varying the focus, the effect of modulation is produced. Another means being tried in England is the cold light of great intensity produced by activating mercury vapor in a tube by means of an induced field. This, it is claimed, modulates a very high intensity of light with a minimum of power and time lag, but a scanning disk is required. One experimenter modulates a beam of light from an electric arc by reflecting it from a mirror attached to a rochelle salt crystal so cut and arranged that when a varying potential is applied to the crystal it turns and twists, thus moving the reflected beam slightly. The reflected beam is sent through a diaphragm to the scanning wheel, and any movement of the beam causes the diaphragm to cut off a part of the beam, thus modulating the intensity of the light received by the scanning disc.

Those interested in receiving television broadcasts, and there are several stations giving a regular schedule of experimental broadcasts, have found it quite a convenience that most of the power stations in any given district are tied together or synchronized. Thus a two-pole motor will run at exactly the same speed no matter where it is connected and at the same speed as all other two-pole motors on the system. That is, they will all be in synchronism. This makes it possible to do the refined pulling into phase, or regulating with very little power. In England a demonstration was given of broadcasting a television subject on a radio wave of six meters.

**TEMPLE UNIVERSITY.** A coeducational institution of higher learning in Philadelphia, Pa. The 1932 autumn enrollment was 10,353. The faculty had 738 members. The income totaled \$1,869,889. President, Charles E. Beury, LL.D.

**TENNESSEE. POPULATION.** According to the Fifteenth Census, the population of the State on

Apr. 1, 1930, was 2,616,556, as against 2,337,885 in 1920. Memphis, the most populous city, had (1930) 253,143 inhabitants; Nashville, the capital, 153,866; Chattanooga, 119,798; Knoxville, 105,802.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1932	2,927,000	59,418,000	\$17,825,000
	1931	2,927,000	73,175,000	26,843,000
Cotton	1932	1,104,000	450,000 <sup>a</sup>	15,725,000
	1931	1,115,000	594,000 <sup>a</sup>	15,830,000
Hay	1932	1,244,000	1,085,000 <sup>b</sup>	9,344,000
	1931	1,275,000	1,206,000 <sup>b</sup>	13,152,000
Tobacco	1932	135,000	110,565,000	11,056,000
	1931	161,000	135,240,000 <sup>c</sup>	10,008,000
Sweet potatoes	1932	75,000	6,600,000	2,508,000
	1931	68,000	5,440,000	3,536,000
Potatoes	1932	53,000	3,657,000	2,633,000
	1931	57,000	3,363,000	2,892,000
Wheat	1932	272,000	2,584,000	1,447,000
	1931	252,000	4,410,000	2,734,000

<sup>a</sup> Bales. <sup>b</sup> Tons. <sup>c</sup> Pounds.

**MINERAL PRODUCTION.** Production continued highly diverse as to the component minerals. Coal, the foremost among them, contributing about one-fourth of the total value of the mineral production of 1930, declined to a quantity of about 4,170,000 short tons for 1931, from 5,130,428 for 1930; by value, the product of 1930 totaled \$8,417,000. The production of cement fell to 3,287,966 barrels (1931), from 3,822,598 (1930); by value, to \$3,810,271 (1931), from \$5,315,693 (1930). The production of phosphate rock, fairly well maintained in 1930 at 611,045 long tons, in value \$2,938,525, fell off in 1931. The total value of the State's mineral product, duplications eliminated, was \$32,499,380 for 1930; for 1929, \$40,719,706.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were \$55,293,026 (of which \$31,339,073 was for highways). Revenues were \$37,192,691. Funded debt outstanding on June 30, 1931, totaled \$87,018,676, of which \$47,200,000 was for highways. Net of sinking-fund assets, the debt was \$36,450,153.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 3940.61. In the year previous, about a mile of new line had been put in operation.

**EDUCATION.** The number of persons of school age (7 to 18 years) in the State in 1931 was reported as 627,609. There were enrolled in the public schools, in the academic year 1931-1932, 641,551 pupils. Of these, 562,387 were in common schools or elementary grades, and 79,164 were in high schools. For 1931, the latest year for which the figures were obtainable, the expenditure for public-school education totaled \$23,299,800. For that year, the salaries of teachers approximated an average of \$700 a year.

**POLITICAL AND OTHER EVENTS.** A State act of December, 1931, to create an income tax, was declared by the State Chancellor, R. B. C. Howell, on May 14 to be unconstitutional. In the State primaries on August 4 Hill McAlister appeared to have received the highest Democratic vote for the gubernatorial candidacy. His opponent Lewis S. Pope, however, contested the result. John E. McCall of Memphis was chosen Republican candidate for Governor. The primary contest dealt largely with the need of reduction in State tax-

ation, the leading candidates of both parties pledging themselves to reduction. The State government was in some difficulty early in the year, because of deficient revenues, but was able to float a loan of \$9,000,000 in 15-year 6 per cent bonds in April.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket by about 2 to 1. For President, the officially reported totals were: Roosevelt (Dem.), 259,817; Hoover (Rep.), 126,806. Seven Democrats and two Republicans were elected as Representatives to the Seventy-third Congress. Hill McAlister (Dem.), was elected Governor, defeating John E. McCall (Rep.), and Lewis S. Pope (Independent). L. D. Hill, Democratic incumbent, was re-elected State railroad commissioner.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Henry H. Horton; Treasurer, Hill McAlister; Comptroller, Roy C. Wallace; Secretary of State, Ernest N. Haston; Auditor, P. H. Williams; Attorney-General, L. D. Smith (deceased) and Roy H. Beeler (successor); Commissioner of Education, P. L. Harned.

**Supreme Court:** Chief Justice, Grafton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, W. H. Swiggert, William L. Cook.

**TENNESSEE, UNIVERSITY OF.** A State institution of higher education, nonsectarian and co-educational, in Knoxville, with colleges of medicine and dentistry and schools of pharmacy and nursing in Memphis and a junior college in Martin, founded in 1794. The total enrollment for 1931-32 was 6136, of whom 1973 were registered in the summer session. The faculty numbered 219. The endowment funds amounted to \$452,958; the income for the year 1931-32 was \$2,067,705. There were 128,500 volumes in the library. There were constructed during 1932 a new alumni memorial gymnasium and auditorium and a tower to the library. President, H. A. Morgan, LL.D.

**TENNIS.** The history of lawn tennis in 1932 is again the tale of the wizardry of H. Ellsworth Vines, Jr., twenty-one-year-old Californian, but in 1932 he was forced to share the limelight with an aging veteran—Jean Borotra, who captured the Davis Cup from the United States in 1927. At historic Wimbledon, at Roland Garros Stade, at Auteuil, and at Forest Hills, Vines proved his superiority and claim to first place in world ranking. At Wimbledon, his first appearance in the all-England championships, he defeated H. W. (Bunny) Austin, English star, in straight sets in the final. Then, in the fifth match for the Davis Cup he outplayed Henri Cochet, who had ruled the tennis world for five years. In September at Forest Hills he met Cochet in the national singles final and again won. This did not help regain the Davis Cup, most prized trophy of tennis. The United States youngsters swept through their early round matches and then in the inter-zone final toppled Germany, surprise victor over England in the zone final. Vines and Wilmer Allison, Texan, were the United States singles players. Cochet was selected for the French, and at the last moment Borotra was drafted for his country when René LaCoste was unable to regain the form that had made him world champion before Cochet's rise. In the first match that day in July at Auteuil Borotra defeated Vines. In the second match of the day Allison bowed to Cochet. The United States team

of Allison and John Van Ryn won the doubles the next afternoon but the Cup stayed in France when Borotra again reached the heights and defeated Allison to open the third day's play. This match went five sets, and Borotra had to overcome a two set disadvantage to win. Allison had set point but could not get past the Basque. In the anti-climax, Vines beat Cochet, giving France the cup, three matches to two.

Borotra and Jacques Brugnon, of France, won the doubles at Wimbledon, beating Fred Perry and G. Patrick Hughes of England in the final. The mixed doubles was captured by Miss Elizabeth Ryan, Californian, and Enrique Maier of Spain. Misses Joan Sigart and Doris Metaxa of Belgium paired to win the women's doubles. Mrs. Helen Wills Moody showed her continued complete dominance of the women of the world by taking the women's singles crown at Wimbledon. She defeated Miss Helen Jacobs, fellow Californian, in the final, but did not return to the United States to participate in the women's national tournament. Miss Jacobs, who had been rated second to Mrs. Moody for years, ran off with the title. Miss Jacobs teamed with Miss Sarah Palfrey to win the doubles. In the final of the singles Miss Jacobs defeated Miss Carolin Babcock, another Californian, the youthful sensation of the season. In the Wightman Cup matches, the United States women downed the English again.

Vines teamed with his old partner Keith Gledhill to capture the national men's doubles at Longwood. Gledhill was also on the winning side in the intercollegiate doubles when he played with J. Coughlin. George Lott won the national clay court championship, and paired with Bryan Grant to win the doubles. Frankie Parker, sixteen-year-old schoolboy from Milwaukee, was the sensation of the newcomers to top ranking among the men. Parker studded his campaign by toppling Lott, veteran campaigner, in four of five matches (losing in the national). Parker captured the national junior title, the Canadian singles and the Western singles. Lott teamed with Van Ryn to win the national indoor singles at New York in March after Gregory Mangin, former Georgetown University star, had gained the singles crown. Mrs. Marjorie Morrill Painter took the national indoor title for women and with Mrs. Marjorie Gladman Van Ryn won the doubles, too. Mrs. Moody won the French women's crown in her other appearance of the year.

William Tilden dominated the growing professional ranks, forming his own company of professional players and touring the United States and Europe. The national outdoor singles were taken by Karel Kozeluh, Czechoslovakian, and the indoor by Richards.

**TERRITORY OF NEW GUINEA.** See NEW GUINEA.

**TEXAS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 5,824,715, as against 4,663,228 in 1920. Houston had (1930) 292,352 inhabitants; Dallas, 260,475; San Antonio, 231,542; Fort Worth, 163,447; El Paso, 102,421; Austin, the capital, 53,120.

**AGRICULTURE.** The table on page 784 shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION:** Petroleum, the source in ordinary years of three-fifths or more, by value, of the total of the State's mineral product,

Crop	Year	Acreage	Prod. Bu.	Value
Cotton ..	1932	13,922,000	4,445,000 <sup>a</sup>	\$187,795,000
	1931	15,469,000	5,320,000 <sup>a</sup>	148,162,000

Barley ..	1932	210,000	3,570,000	607,000
	1931	221,000	5,194,000	1,195,000

<sup>a</sup> Bales. <sup>b</sup> Tons.

continued subject to the effects of high productive capacity, during 1931, in the East Texas area and of public activity bearing on the limitation of the output of wells. The quantity of petroleum produced rose to 332,437,000 barrels (1931), from 290,457,000 (1930); the value of the product fell, owing to the exceeding of normal demand, to \$170,950,000 (1931), from \$288,410,000 (1930).

Natural gas, for which figures covering 1931 were not at hand, increased to a production of 517,880,000 M cubic feet for 1930, from 464,928,000 M for 1929; by value, to \$71,873,000 (1930), from \$67,474,000 (1929). Sulphur producers' shipments of this virtual monopoly of Texas fell to some 1,376,500 long tons (1931), from 1,989,917 (1930); in value, to some \$24,800,000 (1931), from \$35,800,000 (1930). The total value of the State's mineral product was \$450,373,151 for 1930; for 1929, \$495,815,500.

FINANCE. State expenditures for the fiscal year ended Aug. 31, 1931, totaled \$106,023,295. This included \$71,418,296 for the operation and maintenance of the State's general departments (including \$30,540,864 apportioned for education to minor civil divisions); \$35,181,662 representing outlays for permanent improvements; and \$23,337 interest on the State debt. Total revenue receipts were \$110,738,248, of which the sales tax on gasoline produced \$30,216,810. The net State indebtedness on Aug. 31, 1931 was \$4,440,745.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1932, was 17,203.56. In the year previous, 172.69 miles of line had been put in operation; 37.89 miles abandoned.

EDUCATION. The State's apportionment for schools was maintained at \$17.50 per capita, and an increase was made in appropriation for State aid to rural schools. The future of State assistance, however, was unsettled by the adoption of an amendment to the State constitution doing away with the ad valorem tax on homesteads up to the value of \$3000, whereby it seemed likely that State revenue would be much impaired. Notwithstanding the financial difficulties of the year only a limited number of cases were reported in which local authorities reduced the teachers' salaries. For the academic year 1931-1932 the number of persons of school age in the State was reported as 1,567,704. There were enrolled in the public schools 1,309,746 pupils. Of these,

1,052,827 were in elementary grades; in high schools (grades eight to eleven, inclusive), 256,919. Salaries of teachers, by the year, averaged \$1025 for all; for the white alone, \$1078; for the colored, \$629. For the year 1930-1931, the latest for which the figure was obtainable, the total of expenditures for public-school education was \$81,880,950.

LEGISLATION. A special session of the Legislature proposed, for determination by popular vote at the November election, an amendment to the State Constitution, whereby homes, up to the value of \$3000 in each case, should be exempted from payment of the State's ad-valorem tax. The estimated yearly tax receipts subject to the proposed exemption were reckoned at \$9,000,000.

Another special session was called after the Federal decision of October 24 (see *Political and Other Events*, below) invalidating the State's contested restriction on the production of petroleum. A new oil-conservation measure was enacted, specifically permitting the Texas Railroad Commission to make restrictions on the production of petroleum in order to provide that the market demand for the commodity be not exceeded.

An important enactment, made in September, provided that the State have exclusive control over construction and maintenance of all State highways; that counties and road districts cease to furnish money therefor, except for the purchase of rights of way; and that all debt incurred by counties and road districts for roads of the State highway system and due to mature after Jan. 1, 1933, be paid out of a fund of the State, to be realized from the allocation of 1 cent a gallon from the existing tax on gasoline.

POLITICAL AND OTHER EVENTS. A further ruling, adverse to the Democratic party's practice of excluding Negroes from the primary election, was rendered by the United States Supreme Court on May 2 (opinion by Justice Cardozo). This decision held unconstitutional the State law, passed subsequently to the Federal Supreme Court's decision of 1927, and giving the party the power to prescribe its own qualifications for membership. The same law had been affirmed a few weeks before, on another matter, by the Texas Supreme Court, which ruled that the Democratic party could exclude persons who would not take a pledge to support its candidates. There resulted a paradoxical situation, summed up in Texas opinion by the assertion that, as the court decisions stood, the party could exclude white men but could not exclude Negroes. The Federal decision came too late to allow Negroes to vote in the primary of 1932. The State law of 1931 to limit the planting of cotton was held void by a State District Court decision of February 1 and was not enforced. A special Federal Court of three judges rendered on October 24 a decision interpreted as invalidating the system of regulations of the State Railroad Commission prorating the production of petroleum among the producers. The court found that these regulations had not been limited to the prevention of physical waste of the product, but had unwarrantably been extended to the prevention of "economic waste." The result of this decision was to render insecure the administrative measures of control over the oil fields, particularly in east Texas, that had been put in effect the year before.

In the Democratic primary on July 25 ex-Gov. Miriam A. ("Ma") Ferguson outran Governor Sterling for the nomination for Governor. The popular vote favored by about 2½ to 1 a proposal to reconsider the State prohibition laws.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket by nearly 8 to 1. For President, the officially reported totals were: Roosevelt (Dem.), 753,304; Hoover (Rep.), 96,682. Democrats were elected to all the State's 21 seats in the House of Representatives for the Seventy-third Congress, 3 being elected at large and 18 by districts. All those elected, save the 3 Representatives-at-Large and 1 other, were the actual incumbents. Mrs. Miriam A. Ferguson, former Governor, was elected Governor on the Democratic ticket, defeating Orville Bullington (Rep.), despite some support accorded him by Democrats opposed to the Ferguson faction. The Democratic State ticket and Legislative majority were, as usual, elected.

Nine amendments to the State Constitution were adopted by popular vote; seven of them related to taxation or to the voting or issuing of bonds. Their chief provisions were: that property might be sold for tax delinquency without court suit, but could be redeemed within a year after sale by a payment 25 per cent above the price paid at such sale; that the State must collect delinquent taxes within 10 years; that only holders of taxable property might vote at bond elections; that the offices of tax collector and tax assessor (and of sheriff in counties of less than 10,000 inhabitants) be consolidated; that homesteads up to the value of \$3000 be exempted from ad-valorem State tax.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Ross S. Sterling; Lieutenant-Governor, Edgar E. Witt; Secretary of State, Jane Y. McCallum; Treasurer, Charley Lockhart; Comptroller, George H. Sheppard; Attorney-General, James V. Allred.

**Supreme Court:** Chief Justice, C. M. Cureton; Associate Justices, T. B. Greenwood, William Pierson.

**TEXAS, UNIVERSITY OF.** A State institution of higher education in Austin, with a medical

1932 summer session had an enrollment at the main university of 4198, of whom 2008 were men and 2190 women. There were 357 members on the faculty. The income from legislative appropriation, fees, and income from trust and special funds amounted to \$34,870,382. The libraries contained 493,155 volumes. The building programme, inaugurated in 1930, was advanced still further through the construction of the following buildings: Engineering (costing \$387,944); library (\$916,603); home economics (\$311,419); architecture (\$273,329); geology (\$297,809); physics (\$478,276); men's dormitory (\$167,524); union (\$369,622); and auditorium (\$189,959). President, Harry Yandell Benedict, Ph.D., LL.D.

**TEXAS TECHNOLOGICAL COLLEGE.** A State coeducational institution in Lubbock, Tex., opened in 1925. The enrollment for the long session 1931-32 was 2155. Enrollment for the fall term 1932-33 was 1951 (school of agriculture, 169; school of engineering, 333; school of home economics, 176; school of liberal arts, 1273). Of this number 1175 were men and 776 were women. The faculty for 1932-33 numbered 125 members. The State appropriations for the year amounted to \$428,300 and the income from students fees amounted to approximately \$52,000. There were approximately 54,000 volumes and pamphlets in the library. President, Bradford Knapp, D.Agr.

**TEXTILE INDUSTRY.** The textile industry in the United States during 1932 suffered further decline with a total rate of operation 10 per cent lower than in 1931, according to the annual review number of *Textile World* (New York), on which the accompanying information is largely based. After a slight increase in operation following the beginning of the year, the spring months witnessed a sudden and sharp decline in the consumption of all fibres, until July consumption was about one-third less than March. This was followed by an even sharper increase in consumption, with October at the peak of the year's consumption. Prices in all lines dropped incredibly, and resulted in "cut-throat" selling methods that extended its evil effects down through the wholesaler, retailer, and to the consumer who saw no reason why he should buy today when to-morrow's price would be lower.

UNITED STATES FOREIGN TRADE IN TEXTILES AND TEXTILE FIBRES  
[From U. S. Department of Commerce]

	Exports		Imports	
	1931	1932	1931	1932

branch in Galveston; the main university was opened in 1883. For the autumn term of 1932 the enrollment at the main university totaled 6132, of whom 4093 were men and 2039 women; the enrollment in the medical branch was 478. The

The consumption of wool (q.v.) for the year 1932 was 385,521,940 lbs., or a drop of almost 25 per cent from 513,743,129 lbs. in 1931.

The output and consumption of rayon for 1932 as estimated by *Textile World* follows on page 786,

	Production	Consumption
Belgium .....	9,545,000	5,980,000
Britain .....	72,530,000	68,400,000
Canada .....	7,145,000	8,350,000
France .....	39,670,000	22,500,000
Germany .....	54,640,000	67,000,000
Holland .....	16,545,000	3,000,000
Italy .....	71,875,000	25,700,000
Japan .....	66,320,000	56,600,000
Switzerland .....	11,650,000	5,750,000
United States .....	181,000,000	149,500,000
Others .....	17,450,000	95,000,000
Total .....	498,870,000	502,730,000

As compared with 1931 production was increased by about 4 per cent.

The consumption of cotton during the year aggregated but 8 per cent lower than in 1931, and the spread between spot cotton and print cloth closed the year at 10.9 cents, the same as in January. The control maintained over mill production resulted in a total sale of cotton goods at 4.8 per cent over production; consequently, stocks declined 26.1 per cent during the year to the lowest supply as of December 31, on record. The production of cotton textiles dropped to 6,445,342,000 sq. yds., according to a survey of the Association of Cotton Textile Merchants of New York. This was the lowest for any year in the past 10 years and was 9.5 per cent below 1931, though only slightly lower than in 1930. See COTTON.

New textiles developed during the year include the use of latex compounds, especially a yarn-covered latex-core thread, called "lastex," which is woven into elastic fabrics for many purposes—hosiery, garments, bathing suits, etc. The material is said to be far more durable than articles previously woven of rubber.

**THAYER, WILLIAM SYDNEY.** An American physician, died in Washington, D. C., Dec. 10, 1932. He was born in Milton, Mass., June 23, 1864, and was graduated from Harvard University with the A.B. degree in 1885 and with the M.D. degree in 1889. After serving some years at the Johns Hopkins hospital as resident physician he was appointed in 1896 associate professor of medicine at the Johns Hopkins medical school under Sir William Osler, then professor of the principles and practice of medicine. He became attending physician and head of the dispensary department at the hospital in 1898 and assistant physician in 1906. From 1900 to 1918 he was professor of clinical medicine, making important investigations in malarial fevers, typhoid fever, and bacterial endocarditis and being the first to report clinically the third sound of the heart. During the World War he was chief medical consultant to the American Expeditionary Forces in France, attaining the rank of brigadier general in the Medical Corps and receiving the Distinguished Service Medal. On his return to the Johns Hopkins medical school he was made professor of medicine, which chair he held until his retirement as professor emeritus in 1921.

**THEATRE.** During 1932, as was natural, the conditions prevailing throughout the commercial world continued to exert a comparably depressing effect upon the theatre as a business institution and, resultantly, to afflict the drama, as a creative art, with something akin to paralysis. Playwrights, with extraordinarily few exceptions, appeared to be reserving their best efforts for a more favorable day. New productions were less numerous than in normal years and averaged

lower in quality. Relatively short runs were the order of the times, even for many of the more deserving offerings, and quick, decisive failures were distressingly frequent though usually merited.

In New York, after a winter and spring through which the mediocrity of the dramatic offerings in general caused a comparatively small number of items of higher grade to loom perhaps more important by contrast than they might normally have done, the summer respite arrived early, was unprecedentedly thorough, and took weeks longer than usual to subside. Even then the new fall season opened lamely, and not until well after an upturn in business conditions as a whole had been detected and proclaimed, in October, did the quality of the new plays commence to disclose marked improvement.

The very first production of the new year, Benn W. Levy's *The Devil Passes*, chanced to be not only one of the few high spots but also one of the best acted presentations of the season. Partly whimsical, partly mystical in character and pleasantly optimistic in tone, it belonged in about the same category as *The Passing of the Third Floor Back* and *The Servant in the House* of an earlier day. Its cast was easily one of the outstanding aggregations of the year and included Arthur Byron, Robert Loraine, Cecilia Loftus, Basil Rathbone, Mary Nash, and a charming young English actress, Diana Wynyard, who had played her same rôle in a recent London staging of the piece. This was closely followed by a very serious and tragic but significant drama by T. C. Upham entitled *Lost Boy*, depicting the plight of a child who, though innocent, becomes embroiled with the law and suffers the consequences of confinement in a correctional institution where little attention is given to its inmates as individuals despite the dangers of such a system for youths of a character-forming age. In the title rôle young Elisha Cook, Jr., gave a strikingly realistic portrayal of the effect of environment upon the unfortunate juvenile hero, a performance which was followed within the year by two others of similar nature.

Virtually the sole recognition accorded to the classic drama, other than Shakespeare, during the year in New York was a short series of matinees of Sophocles' *Electra* with Blanche Yurka in the name part and Mrs. Patrick Campbell as Clytemnestra, presumably suggested by the interest then attaching to Eugene O'Neill's modern trilogy on the same theme.

Moderate success attended a mystery melodrama, *The Black Tower*, by Ralph Murphy and Lora Baxter, and then came Philip Barry's new comedy, *The Animal Kingdom*, which, with Leslie Howard in its leading rôle, promptly established itself as one of the year's few genuine hits. Written in the author's cultured and sophisticated style, the play visualized an interesting contrast between marriage of the flesh and of the spirit. *Jewel Robbery*, the third piece by the Hungarian Lazo Fodor to be presented in English within a few months, subsisted but six weeks despite its amusing continental flavor and engaging performances by Mary Ellis, Basil Sydney, and Eugene Powers.

A drama by Dan Totheroh called *Distant Drums*, his first since *Wild Birds* of seven years earlier, failed, not so much in the recognition as in the success it deserved. It contained an im-

agitative, atmospheric picture of the hardships encountered by the sturdy pioneers who undertook the long and difficult Western journey by ox train over the Oregon trail in 1848, underlaid with a peculiar and indescribable suggestion of mysticism and foreboding that gave the piece something of the quality of epic poetry. It received an admirable production at the hands of Guthrie McClintic and had the great advantage of a sensitive and glowing portrayal by Pauline Lord and other excellent performances by Edward Ellis, Arthur Hohl, Edward Pawley, Beulah Bondi, and Eda Heinemann, yet was unable to linger beyond five weeks. On the other hand *Whistling in the Dark*, a mystery melodrama with a highly farcical slant by Laurence E. Gross and Edward Childs Carpenter, achieved a run of between four and five months by virtue, in large measure, of the engagingly comic acting of Ernest Truex.

In mid-February the American stage suffered a severe and irreparable loss in the death of Mrs. Minnie Maddern Fiske, whose long and brilliant career in the theatre, dating from her childhood, had contributed so much not merely to the enjoyment of discriminating playgoers, but to the cause of better drama and to an appreciation of the dignity of the art of acting.

In February, also, Arthur Goodman's speculative drama, *If Booth Had Missed*, prize winner of the preceding year in the annual Long Play Tournament of the Little Theatre organizations as presented by Columbia University amateurs, quite failed to measure up to the requirements of a professional production, notwithstanding the interesting feature provided by an exceedingly creditable impersonation of Abraham Lincoln by Daniel Poole, an actor reported never before to have appeared on any stage.

Then followed one of the daintiest and most charming light comedies of the year in John Van Druten's *There's Always Juliet*, exquisitely played by Herbert Marshall and Edna Best, which deservedly caught the public fancy, continuing throughout the spring. All this time and, in fact, ever since its première on the night after Christmas, 1931, the hilarious and broadly satirical musical comedy, *Of Thee I Sing*, had been without a rival in its field. In mid-February, however, a competitor made its appearance in *Face the Music*, a lively concoction with book by Moss Hart and music by Irving Berlin, both executed in much the same absurdly topical and satirical spirit as the earlier piece. With Mary Boland, hitherto of the purely dramatic stage, J. Harold Murray and Hugh O'Connell, among others, to give added zest to the proceedings it scored a very substantial run but succumbed early in the summer to the general desuetude, while *Of Thee I Sing* proved sturdy enough to flourish continuously and was still going strong as the year closed. Incidentally, the committee responsible for the annual award of the Pulitzer Prize for the original American play best representing the "educational value and power of the stage" once more courted criticism by voting it for the first time to a musical production, none other than *Of Thee I Sing*.

For its first new production of 1932 the Theatre Guild selected an Irish play, Denis Johnston's *The Moon in the Yellow River*, first shown at the Abbey Theatre in Dublin the year before. The piece was a distinctive and searching, though discursive, dramatic essay on Irish politics, and

was retained in the bill only long enough to cover the Guild's subscription requirements. *Child of Manhattan*, by Preston Sturges, proved a rather cheap and tawdry comedy yet met with moderate success. With this offering an ex-chorus girl, Peggy Fears (Mrs. A. C. Blumenthal), entered the ranks of the independent producers. Early in March, Laurette Taylor returned to the New York stage after a long absence, appearing in a programme consisting of revivals of two Barrie plays, *Alice-Sit-by-the-Fire*, in which she gave a charming performance of the rôle previously enacted by Ellen Terry and Ethel Barrymore, and the exquisite one-act comedy, *The Old Lady Shows Her Medals*, wherein she fell far short of the original portrayal by Beryl Mercer.

A Ziegfeld extravaganza, *Hot-Cha!* came next, exploiting chiefly the antics of Bert Lahr in a Mexican setting, with airs by Lew Brown and Ray Henderson. This achieved the not very startling total, for its producer, of 119 performances. *Night over Taos*, a play by Maxwell Anderson dealing with the Spanish dominion over New Mexico, was briefly tried out by the serious and ambitious Group Theatre. Then came a lively spring diversion, *The Warrior's Husband*, by Julian Thompson, a piece possibly inspired by the recent resuscitation of Aristophanes' *Lysistrata* but in any event attaining an abundance of comic effect by reversing the familiar order of masculine and feminine prerogatives and by modernizing the ancient Greek legendary style to a degree just short of burlesque. Previously intended as a starring vehicle for Hope Williams, it was finally done with a cast of which Romney Brent, Katharine Hepburn, Irby Marshall, and Colin Keith-Johnston were the principal members. A piece entitled *Intimate Relations* gave scope to Blanche Ring's talents in broad comedy for the duration of one month, and a run of about the same length was the lot of an exceptionally intense drama by Frederick Schlick, *Bloodstream*, depicting the terrors of Southern convict labor in the coal mines. Its all-male cast consisted of both white and Negro players.

An event of the year, even if not a tremendously important one, was the production by the Theatre Guild of Bernard Shaw's latest output, *Too True to Be Good*, which had its world première in Boston on March 1, and arrived in New York a month later. The work was highly undramatic in form, consisting primarily of a collection of dialogues, ending with a particularly striking monologue, embodying the author's characteristic opinions on a varied assortment of topics. It did, however, provide a capital medium for several effective bits of acting by a company recruited especially for the occasion, of which outstanding members were Beatrice Lillie, Hope Williams, Hugh Sinclair, Ernest Cossart, and Claude Rains. The play was not a popular success, its run scarcely exceeding the minimum required for the Guild's subscription. A notably interesting revival in April was A. A. Milne's *The Truth about Blaysds*, first presented by Winthrop Ames some ten years earlier. Guthrie McClintic, formerly associated with Mr. Ames and now a producer on his own account in conjunction with his wife, Katharine Cornell, was responsible for the disinterment of the piece, which had the enormous advantage of the reappearance of O. P. Heggie in his original rôle of the pseudo-poet, and Pauline Lord, Effie

Shannon, Ernest Lawford, and Frederic Worlock for the other principal characters.

A vivid, sensational, and disquieting melodrama, *Merry-Go-Round*, written by two young college men, Albert Maltz and George Sklar, both graduates of Professor Baker's Yale Workshop course, was so obviously designed to exploit the iniquities of municipal politics in New York along the lines of recent disclosures that it ran afoul of the city authorities, who were said to have interposed all possible obstacles to its public representation. Though provocative of much discussion, and made especially interesting through the performance of young Elisha Cook, Jr., as an innocent victim of political expediency, the play was far too harrowing to endure for long. But at about the same time another first offering from a new playwright, *Another Language* by Rose Franken, made its appearance and met with such favor that it was able to continue not only throughout the summer but on into the new year. The piece was an uncommonly appealing character study in comparative perceptions as demonstrated through the various members of a single family and was most engagingly acted by Dorothy Stickney, John Beal, whose recent advent has already been noted above, Margaret Wycherly and, in a lesser degree, Glenn Anders.

The remainder of the spring producing season brought little of interest or importance. An unusually mild type of mystery thriller by Edgar Wallace, *The Man Who Changed His Name*, had a brief career with Frank Conroy, its sponsor, in the title rôle and Fay Bainter playing opposite. Even the popularity of Jane Cowl underwent a rather severe test with *A Thousand Summers*, by Merrill Rogers, the theme of which was the ardent attachment of a youth of 21 for a woman of 36. As the final presentation of a long and spectacular career in the amusement field Florenz Ziegfeld staged a revival of one of his most pronounced musical successes of recent seasons, *Show Boat*.

Summer in the New York theatre was uneventful to an extreme degree. By mid-July only six playhouses were open and of their occupants two were survivals from 1931 and two others were revivals. New offerings proved uniformly short-lived.

The drama of the early fall season most nearly approaching the qualities of a hit was *Clear All Wires!*, a swift-moving farce-comedy by Samuel and Bella Spewack, in which Thomas Mitchell had the hectic part of a resourceful Moscow correspondent of an American daily paper, forced by circumstances not only to manufacture his own sensational news story but to figure in it as hero besides. The middle of September brought also the first musical offering of the new season, a revue, *Flying Colors*, which, with Clifton Webb, Charles Butterworth, Tamara Geva, and Patsy Kelly as the principal entertainers, lasted out the year.

*Success Story*, by John Howard Lawson, the Group Theatre's first offering of the season, was a striking and unhackneyed rendering of the long-conceded postulate that worldly success is by no means a synonym for attainment of the heart's desire. The performances contributed by Luther and Stella Adler, members of a family well known on the Yiddish stage, were particularly interesting. Early in October the practiced hand of Rachel Crothers was again evident in

her *When Ladies Meet*, a skillfully constructed and cleverly written comedy. It proved one of the year's most substantial hits. Highly creditable portrayals by Frieda Inescort, Selena Royle, Spring Byington, and Walter Abel contributed their share to this happy result. The play dealt in novel fashion with the domestic triangle theme.

The Theatre Guild fared rather badly with its opening production, a dramatization by Owen and Donald Davis, father and son, of Mrs. Pearl S. Buck's Pulitzer Prize novel, *The Good Earth*, a work whose scope and style were such as to render it very poorly adapted for the stage. Even vivid portrayals by Nazimova, Claude Rains, and Henry Travers were of no avail to keep the piece running beyond the minimum demands of the subscription arrangement. The Abbey Theatre Company from Dublin, best known as the Irish Players, appeared in New York for a limited engagement with a repertoire about evenly divided between old favorites and new offerings and met with such favor that a return engagement was found necessary to supply the demand.

An interesting family party occurred when Grace George and her step-daughter, Alice Brady, co-starred in *Mademoiselle*, an adaptation by Miss George from a recent French play by Jacques Deval. This was the first time these two talented actresses had ever appeared in the same cast. The piece scored a considerable success. The most pronounced hit of a purely dramatic nature during the entire fall season was *Dinner at Eight*, by George S. Kaufman and Edna Ferber.

*Dangerous Corner*, an original play by the British novelist, J. B. Priestley, was one of the durable attractions of the year—a piece full of surprises and extremely well acted by Colin Keith-Johnston, Jean Dixon, Mary Servoss, Stanley Ridges, Cecil Holm, and others. *Carry Nation*, by Frank McGrath, was an interesting and rather striking dramatic biography of the famous and picturesque temperance crusader of a quarter century ago, of whom Esther Dale, previously known only as a singer, gave an extraordinarily truthful and sympathetic portrait. Eva LeGallienne signaled the reopening of her Civic Repertory Theatre, after a year's lapse, by reviving Molnar's *Liliom* with both Joseph Schildkraut and herself in the rôles they played in the original production by the Theatre Guild. There were subsequently added to the organization's roster a biographical drama by Eleanor Holmes Hinkley entitled *Dear Jane* and based upon the life of Jane Austen, and, to celebrate the Lewis Carroll centenary year, a remarkably skillful dramatization by Florida Friebus and Miss LeGallienne of *Alice in Wonderland* and *Through the Looking Glass* combined.

*The Late Christopher Bean*, a free adaptation by Sidney Howard of a recent Parisian comedy by René Fauchois proved eminently susceptible of Americanization, with Pauline Lord as star.

*Music in the Air*, by Jerome Kern and Oscar Hammerstein, 2d, proved a substantial hit with Natalie Hall, Reinald Werrenrath, Walter Slezak, Tullio Carminati, and Al Shean agreeably concerned in its unhackneyed operatic romance. Ruth Draper and Cornelia Otis Skinner both filled highly successful limited engagements in the metropolis. In November New York had its first opportunity of seeing the London hit, *Autumn Crocus*, by C. L. Anthony, as well as of making the acquaintance of the extraordinarily prepossessing young Czech actor, Francis Lederer, whom

it promptly took to its heart. The play itself had an uncommon degree of wholesome charm blended with gentle pathos and refined humor, and attracted gratifying patronage.

The outstanding hit in the musical field of the season as covered in this chronicle was *Take a Chance*, a Schwab and de Sylva production, presented with a cast of eminent entertainers. *Gay Divorce* achieved substantial popularity. The revue entitled *Walk a Little Faster*, braving the pre-holiday quietude, was sustained by the presence of Beatrice Lillie in something approaching her best form, aided by the always mirth-provoking team of Clark and McCullough.

By presenting S. N. Behrman's scintillating comedy, *Biography*, as its second offering of the season, the Theatre Guild did much to counteract the handicap of its ill-judged opening with *The Good Earth*. Ina Claire played the central rôle.

Katharine Cornell inaugurated her personal tenancy of the Belasco just before Christmas with a distinguished and wholly unconventional presentation of *Lucrece*, a less distinguished translation by Thornton Wilder of Andre Obey's *Le Viol de Lucrece*. Special incidental music composed for the occasion by Deems Taylor, a picturesque setting and costumes by Robert Edmond Jones, and acting of a very high order by Miss Cornell in the title part, Pedro de Cordoba as Collatine, and Brian Aherne as the Tarquin combined to mark an event of unusual significance.

The final week of the year brought an ironical comedy entitled *Honeymoon*, by Samuel Chotzinoff and George Backer; another revival by Walter Hampden of *Cyrano de Bergerac*; and *Girls in Uniform*, a translation by Barbara Burnham of that tragically pathetic German play of Christa Winsloe's that had already become known as the source of a notable talking picture, *Maedchen in Uniform*, for which, however, the ending had been modified. In the American stage version Florence Williams, an unknown actress, gave a particularly intelligent and moving performance in the all-important rôle of the girl, Manuela, with Rose Hobart and Roberta Beatty in the two essential contributory characters.

THE THEATRE IN EUROPE. Conditions among the theatres of Europe were not essentially different from those in America. In London G. K. Chesterton in *The Judgment of Dr. Johnson* presented that famous personality in a benign light and an imaginary setting with Boswell, Burke, and John Wilkes as other features of his drama. Sybil Thorndike figured in the title rôle of *The Dark Saint*, an adaptation of a 40-year-old work by François de Curel, a searching and emotional piece with a nun as its central character.

In February Oscar Asche tempted fate with an all-star production of Shakespeare's *Julius Caesar*. There was a notable tendency to resort to revivals of musical comedy successes of some decades back. Other features of the spring season in London were Maurice Browne's interesting presentation of John Hastings Turner's *Punchinello*; James Bridie's *Tobias and the Angel*, a humorous but somewhat uncertain retelling of the Biblical story; a drama by Clifford Bax called *Rose Without a Thorn* in which the chief figures were Henry VIII and his fifth queen, Catherine Howard; an interesting speculative work by Graham Rawson offering a seemingly logical solution of the mystery that precipitated the World War, *Rudolph of Austria*; *Dr. Pygmalion*, a smart comedy by Harrison Owen, with Gladys Cooper

and Ronald Squire; Ivor Novello's entertaining *I Lived with You*, in which the author also assumed the leading rôle; and an able dramatization of Mary Webb's novel, *Precious Bane*. In addition there appeared an English adaptation by John Drinkwater of the historical drama, *Napoleon: the Hundred Days*, of which one of the authors was Benito Mussolini.

*Wings Over Europe*, though of British authorship, finally reached a London production several years after its American presentation by the Theatre Guild. In May appeared J. B. Priestley's *Dangerous Corner*, already mentioned as a subsequent New York success. Toward summer Marie Tempest introduced an American importation in *The Vinegar Tree*. Then came *Even-song*, a dramatization by Edward Knoblock and Beverley Nichols of the latter's novel.

In September, Noel Coward's *Words and Music*, a satire in revue form, was hailed in some quarters as his best work of that type thus far. The same month brought a welcome revival of Shaw's *Cæsar and Cleopatra*, as well as the first British presentation of Chlumberg's *Miracle at Verdun*.

C. L. Anthony (Miss Dodie Smith) scored another hit with *Service*, a play depicting the effect of the depression on a department store and its staff. Cyril Maude emerged from his retirement to try to help save a slight comedy, *Once a Husband*, by Margot Neville and Brett Hay. Somerset Maugham's tragic and bitter indictment of postwar conditions, *For Services Rendered*, limped through the tag-end of the year despite its brilliant production. The final weeks, oddly enough, brought a surprising number of plays, including several of British authorship, that had first been seen in America.

THEATRE GUILD. See THEATRE.

THEOSOPIHICAL MOVEMENT, THE. The Theosophical Movement is limited to no formal organization. It is furthered by the various bodies calling themselves Theosophical to the extent that they are faithful to its aim of promoting the universal brotherhood of humanity by spreading the high ethics and the consistent and inspiring philosophy which the race has inherited from the great spiritual teachers of the past.

During 1932 several important articles long out of print were made available in pamphlet form, including *Some Words on Daily Life* (written by a Master of Wisdom); Madame H. P. Blavatsky's *Hypnotism: Black Magic in Science, Kosmic Mind, What Are the Theosophists?* and two articles on Christmas; and *Environment and Aphorisms on Karma* by William Q. Judge. Mr. Judge's *Epitome of Theosophy* was translated into Dutch and published during the year. The stand of Theosophy on the dangers of "mental" or "spiritual" healing is set forth in a brochure published in 1932, entitled, *The Laws of Healing—Physical and Metaphysical*.

THEOSOPIHICAL SOCIETY, AMERICAN. The American section of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World Headquarters were later established at Adyar, India, near Madras. In 1932 branches existed in 48 nations, on six continents. The American Theosophical Society had, in 1932, 182 local lodges. The president of the society was Sidney A. Cook. Headquarters are in Wheaton, Ill.

THESSALY. See GREECE.

**THIRD INTERNATIONAL.** See COMMUNISM.

**THOMAS, ALBERT.** A French statesman, died in Paris, May 8, 1932. He was born in Champigny-sur-Marne, June 16, 1878, and attended the École Normale Supérieure in Paris. With the publication of *Le Syndicalisme Allemand* in 1903 his ability was recognized by Socialist leaders, and the following year he was made assistant editor of *L'Humanité* by Jaures, the founder. He became one of the leaders of the reformistic section of the Socialist party, opposing the more revolutionary doctrines that then tended to dominate the French trade unions. Elected in 1910 to the Chamber of Deputies, his political genius was recognized by his successful intervention in the French railroad strike of that year. On the outbreak of the World War he joined his regiment, but after a few weeks of service at the front he was recalled by the government to organize on an efficient basis the production of munitions. In May, 1915, he became under-secretary of State for munitions and a year later took over the newly constituted portfolio of National Industry, including munitions and transportation, which he held in both the Briand and Ribot ministries. On the outbreak of the Russian Revolution he was sent as a special Socialist envoy to Petrograd, where he was successful in persuading Alexander Kerensky, premier of the Russian Provisional Government, to undertake the great offensive of the spring of 1917. At the International Labor Convention held in Washington in November, 1919, he was appointed director of the International Labor Office, which was established under the auspices of the League of Nations in Geneva.

**THOMAS, NORMAN.** See SOCIALISM.

**THOMPSON TROPHY RACE.** See AERONAUTICS.

**THRACE, WESTERN.** See GREECE.

**THURINGIA.** See GERMANY.

**TIBET,** ti-bët' or tib'et. A central Asian territory extending eastward from the Pamirs to the border of China; nominally under the suzerainty of China. Area, estimated at 463,200 square miles; population, approximately 2,000,000. Capital, Lhasa, with a population of 15,000 to 20,000. The temporal ruler of the country is the Dalai Lama, or Living Buddha. During 1932 war was in progress on the Tibet-Szechuan border. See CHINA and MONGOLIA under *History*.

**TICK FEVER.** See VETERINARY MEDICINE.

**TIDES.** See METEOROLOGY.

**TIMBER CONSERVATION BOARD.** See FORESTRY.

**TIMOR ARCHIPELAGO.** See NETHERLAND INDIA.

**TIN.** The latest returns on the output of tin from the countries that officially reported showed a total of about 145,000 tons. By countries the returns were: Malaya, 51,000 tons; Bolivia, 30,800 tons; Netherland India, 30,000 tons; Siam, 12,000 tons; Nigeria, 7300 tons; United Kingdom, 598 tons. Because of a greatly decreased consumption, a quota system was effective in 1932, under which the Federated Malay States were limited to 38,904 tons. Imports of tin ore into the United States in 1932 amounted to 17 tons, valued at \$4364, and of tin bars, blocks, pigs, etc., to 39,998 tons valued at \$16,473,998.

**TIBOL, tè-röl'.** A former crownland of Austria-Hungary, divided between Italy and the Republic of Austria by the Treaty of St. Germain.

**TOBACCO.** Tobacco production in the United States in 1932 was estimated at 1,033,330,000 pounds, or less than two-thirds as much as in 1931. The harvested acreage totaled 1,432,700 acres, compared with 2,015,500 in 1931, while the 1932 average acre yield was 721 pounds, 75 less than in 1931.

In other important producing countries the estimated 1932 crops of tobacco, as reported by different official agencies were, for Japan, 138,230,000 pounds; Italy, 88,382,000; Hungary, 84,877,000; France, 70,100,000; Greece, 59,981,000; Germany, 51,257,000; Turkey, 50,706,000; Algeria, 39,683,000; Bulgaria, 31,306,000; Czechoslovakia, 33,069,000; Belgium, 13,518,000; and Spain, 13,228,000 pounds. The Canadian crop comprised about 49,000,000 pounds, and the crop in Cuba in 1932 was estimated at 34,692,600 pounds versus 80,670,040 in 1931.

The Commissioner of Internal Revenue reported that collections from internal revenue taxes on tobacco in the United States for the fiscal year 1932 amounted to \$398,578,618.56, a decrease of \$45,697,884.06, or 10.29 per cent compared with the previous year, the second and largest decrease since 1921, for which economic conditions appeared responsible. The receipts from taxes on small cigarettes amounted to \$317,533,080.02 which was 79.66 per cent of the total taxes collected on tobacco, and \$41,382,107.82 under 1931. The taxes collected on smoking and chewing tobacco declined to \$58,030,155.75 in 1932 from \$58,376,942.03 in 1931; on large cigars to \$14,207,697.50 a decrease of \$3,817,787.84; and on snuff to \$6,846,301.69, a decrease of \$344,164.47 compared with 1931. Approximately 90 per cent of the total tobacco receipts were collected in North Carolina, Virginia, Kentucky, New Jersey, California, and Ohio in the order named. The Commissioner of Internal Revenue reported that in the calendar year 1931 there were manufactured 117,064,214,454 cigarettes weighing less than 3 pounds per 1000, nearly 6,737,972,000 less than in 1930. A considerable setback in consumption, especially of high-priced tobacco products, was indicated in 1932. Exports of leaf tobacco declined from 524,498,000 pounds in 1931 to 411,159,500 pounds in 1932.

**TOBAGO.** See TRINIDAD.

**TOGOLAND,** or Togo, tō'gō. A former German protectorate in West Africa; divided between Great Britain and France Sept. 30, 1920, as mandated territory of the League of Nations.

**TOLEDO, UNIVERSITY OF THE CITY OF.** A municipal, coeducational institution of higher learning in Toledo, O., founded in 1872. The enrollment for the autumn of 1932 totaled 2187. The faculty had 70 full-time members. The income for the year amounted to approximately \$577,900. President, Henry John Doermann, Ed.D.

**TONGA or FRIENDLY ISLANDS.** A British protectorate consisting of three groups of islands in the Pacific. Area, about 385 square miles; population (1930), 29,611 including 480 Europeans. Capital, Nukalofa. Queen in 1932, Salote. High Commissioner, Sir A. G. M. Fletcher.

**TONGKING (TONKIN).** See FRENCH INDOSCHINA.

**TORONTO, UNIVERSITY OF.** An institution of higher education in Toronto, Ont., Canada, founded in 1827 and supported by the provincial government. The 1932 autumn enrollment was 7527. The faculty numbered 902 members. The total expenditure for the year 1931-32 for sal-

aries and maintenance was \$2,867,947. President, Henry John Cody, M.A., D.D., LL.D.

**TOSCANINI, ARTURO.** See MUSIC.

**TOUMAY, JAMES WILLIAM.** An American forester, died in New Haven, Conn., May 6, 1932. He was born in Lawrence, Mich., Apr. 17, 1865, and was graduated from the Michigan Agricultural College in 1889, later studying at Harvard. He served as professor of biology at the University of Arizona during 1891-98 and as acting director of the Arizona Agricultural Experiment Station during 1897-98. For two years he was superintendent of tree-planting in the division of forestry of the U. S. Department of Agriculture, and was then called to Yale on the establishment of the school of forestry there. He was successively assistant professor of forestry (1900-03), professor of forestry (1903-09), and professor of silviculture (1909-10). In 1910 he became dean of the school, distinguishing himself as an administrator in making the institution a force in the development of forestry in the United States. In 1922 he resumed the chair of silviculture.

**TOWN PLANNING.** See CITY AND REGIONAL PLANNING.

**TOYNBEE, PAGET.** A British scholar, especially known for his studies in Dante, died at Burnham, Buckinghamshire, May 13, 1932. He was born at Wimbledon, near London, Jan. 20, 1855, attended Haileybury College, Hertfordshire, and Balliol College, Oxford, and was a private tutor during 1878-92. With the publication in 1894 of *Index of Proper Names in the Works of Dante* he embarked on a career that enhanced the prestige of English Dante scholarship.

**TRADE UNIONS.** **TRADE UNION LABELS.** On Feb. 18, 1932, President Hoover signed a bill authorizing trade union members in the District of Columbia to adopt a significant emblem for the products of the labor of their members and to punish illegal use or imitation of these. This passage of a "union label law" for the District of Columbia makes the total jurisdictions in the United States authorizing the use of such devices and giving trade unions recourse against imitations, forty-five.

**CANADA.** For the first time since 1924 trade union membership declined in Canada in the year 1931. Out of a total of 310,554 trade unionists reported for the year, there was a decrease in membership of 11,905. The distribution by membership of the leading organizations was as follows: the international craft unions had a membership of 188,219; the "One Big Union" had a membership of 24,260; the Industrial Workers of the World had a membership of 3466; the Canadian Central Labor organizations had a membership of 48,509; directly chartered local unions had a membership of 8840; independent units had a membership of 12,099; the National Catholic Unions had a membership of 25,151. The accompanying table indicates the distribution of members of Canadian labor organizations by trades or crafts.

**GERMANY.** Despite the severity of the depression in Germany, German trade unions have shown a remarkable ability to weather the storm, losses in membership being comparatively slight. The 31 unions which form the German Federation of Labor (*Allgemeiner Deutscher Gewerkschaftsbund*) had a membership of 4,948,209 at the end of 1929, and by the end of 1930 had

Trade group	Number of members	Per cent
Railroad employment .....	90,356	29 10
Building trades .....	56,744	11 83
Public employment personal service and amusement trades .....	33,530	10 80
Mining and quarrying .....	23,111	7 44
Other transportation and navigation .....	22,873	7 37
Metal trades .....	17,802	5 78
Clothing, boot and shoe trades .....	15,680	5 05
Printing and paper-making trades ..	14,965	4 82
All other trades and general labor ..	55,483	17 87
Total .....	310,544	100 00

shown a decrease of but 230,640, or 4.7 per cent. The loss was chiefly due to separations by recent members who, because of this, were entitled either to no benefit or to only limited benefit. See UNEMPLOYMENT.

**TRANSCAUCASIAN SOCIALIST FEDERATED SOVIET REPUBLIC.** One of the seven constituent republics of the Soviet Union, occupying the region between the Caspian and Black seas south of the Caucasian Mountains and north of Persia and Turkey. It is divided into the three republics of Armenia, Azerbaijan (Azerbaidzhan), and Georgia. Azerbaijan includes the autonomous area of Nagorny Karabakh; Armenia, the autonomous republic of Nakhichevan; and Georgia, the Abkhaz and Adjara autonomous republics, and the autonomous area of South Ossetia. See ARMENIA, AZERBAIJAN, GEORGIA, and UNION OF SOVIET SOCIALIST REPUBLICS.

**TRANSFORMERS.** See ELECTRICAL TRANSMISSION AND DISTRIBUTION.

**TRANS-JORDAN.** An Arab territory in Asia Minor, under British protection as a part of the Palestine Mandate, although governed by a local Arab administration under Amir Abdullah Ibn Hussein, elder brother of King Feisal of Iraq. It is bounded on the north by Syria, west by Palestine, south by Arabia, and east by Iraq and Arabia. The area is uncertain; the partly nomadic population is estimated at 260,000, of whom 220,000 are Arab Moslems, 30,000 Arab Christians, and 10,000 Caucasian elements. Arabic is the official language. Capital, Amman, with 12,000 inhabitants. British Resident in 1932, Lt.-Col. C. H. F. Cox.

**TRANSVAAL.** See SOUTH AFRICA, UNION OF.

**TRENGGANU.** See UNFEDERATED MALAY STATES.

**TRIBAL STUDIES.** See ANTHROPOLOGY.

**TRINIDAD.** A West Indian island, north of the mouth of the Orinoco River, which with Tobago, constitutes a British colony. Area of Trinidad, 1862 square miles; of Tobago, 114; total population, according to the census of 1921, 365,913; estimated, Jan. 1, 1931, at 413,119, largely natives of African descent or East Indians. The white population consists of English, French, Spanish, and Portuguese. Capital, Port of Spain, with 69,534 inhabitants. See BRITISH WEST INDIES.

**TRINITY COLLEGE.** An institution for the higher education of men in Hartford, Conn. For the autumn term of 1932 the enrollment was

438. There were 45 members on the faculty. The endowment fund of the college was \$3,328,256, and the income totaled \$324,456. During 1931-32 a new chapel, dormitory, and dining hall were completed. President, Remsen B. Ogilby, Litt.D., LL.D.

**TRIPOLITANIA**, trĕp'ô-lĕ-tā'nyā. The western district of the Italian colony of Libia on the north African coast. Area, estimated at about 342,000 square miles; population (1931 census), 540,580 including 30,866 white. Capital, Tripoli, with about 70,000 inhabitants. See CYRENAICA.

**TUCKER, HENRY ST. GEORGE**. An American lawyer and Congressman, died in Lexington, Va., July 23, 1932. He was born in Winchester, Va., Apr. 5, 1853, and was educated at Washington and Lee University, from which he received the A.M. degree in 1875 and the B.L. degree in 1876. After admission to the Virginia bar he practiced in Staunton. In 1888 he was elected to the House of Representatives and served until 1897. He then succeeded his father, John Randolph Tucker, as professor of constitutional and international law and equity at Washington and Lee University, being also dean of the law school from 1899 to 1902. From 1903 to 1905 he was dean of the schools of jurisprudence and law, and politics and diplomacy at Columbian (now George Washington) University. He was elected to Congress in 1922 and was reelected to the succeeding 68th to 72d Congresses.

**TUFTS COLLEGE**. A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registration for the autumn term of 1932 was 1982. There were 473 faculty members. The productive funds of the college amounted to \$7,964,876, and the income for the year was \$917,800. President, John Albert Cousens, LL.D.

**TULANE UNIVERSITY OF LOUISIANA**. An institution of higher education in New Orleans, founded in 1834. Although the professional schools are coeducational, there is a separate undergraduate department for women. Enrollment for the autumn of 1932 was 2998. The productive funds for the fiscal year ending Aug. 31, 1932 amounted to \$10,073,052; the income for the year to \$1,245,655; and gifts and bequests to \$128,737. The library contained 161,029 volumes. President, Albert Bledsoe Dinwiddie, Ph.D., LL.D.

**TUNGSTEN**. See PHYSICS.

**TUNIS (TUNISIA)**. A French protectorate in North Africa, situated on the Mediterranean coast east of Algeria, west of Tripolitania, and north of the Sahara and Libyan deserts. Area 48,332 square miles; total population (Mar. 22, 1931 census) 2,410,692 including 195,293 Europeans and 2,159,151 Arabs and Bedouins. Tunis, the capital, had 202,405 inhabitants in 1931.

Imports in 1930 were valued at 2,107,455,000 francs and exports at 1,127,233,000 francs (franc equals \$0.0392 at par). French Resident-General,

Minister of Foreign Affairs, and President of the Council of Ministers in 1932, M. Manceron.

**TUNNELS**. In the past tunnel operations have, in the majority of cases, been connected with railroad projects. During the last year or two, years of great interest to the tunnel expert, while there have been a large number of major tunnel projects under way, almost all of them have been for other than railroad purposes. In land tunneling the greatest tunneling operations the world has ever known have been undertaken in connection with great hydraulic works. The task of boring four huge by-pass tunnels, 56 ft. in diameter, for the Hoover Dam, has been noted under DAMS. The Hetch-Hetchy water supply for San Francisco involves 28.6 miles of tunnels through the Coast range. In general, these long lines are not attacked from the portals alone, a feature which makes the famous Simplon still a record undertaking, but from several intermediate shafts or audits as well.

The Hetch-Hetchy project has been in part completed by force account, that is day labor, under the supervision of the city engineers. Bids, however, have been called for for its completion by contract.

The Los Angeles-Colorado River aqueduct is another great water supply project involving some 85 miles of tunnel construction. See AQUE-DUCTS.

In New York City the new deep distributing tunnel for water supply, described in previous YEAR BOOKS, has been practically completed. This Tunnel No. 2 involved excavation equal in difficulty to Tunnel No. 1, which was incidental to the Catskill Water Supply construction of some 20 years ago. While the earlier work, however, was considered a very ambitious and novel undertaking, Tunnel No. 2 has been practically completed within four years and almost without notice. Under the East River section of this work a zone of faulted rock was encountered which gave considerable trouble. Six months work was required to put the 21 ft. tube through this 50 ft. of water bearing, disintegrated rock. We have noted in previous YEAR BOOKS the great difficulties encountered in soft, water bearing rock in some Italian, Japanese, and American works. This 50 ft. seam, 500 ft. beneath the East River developed a hydrostatic head of 250 lbs. per sq. in., and was only conquered after horizontal steel sheet piling had been driven in shield form and thousands of bags of cement had been forced into the loose rock by gravity.

Another large size tunnel operation has been carried on in connection with the Swift River water supply for Boston, Mass. A 25 mile tunnel is to make the connection between the old Wachusett supply and the new Swift and Ware River supplies. The 14 mile section to the Ware is completed and the 11 mile extension to the Swift is under way. In addition, a large section (28 ft. high and 30 ft. wide) tunnel is being driven for diversion purposes, like the Hoover Tunnels, to permit the construction of the Swift River reservoir—an earthfill dam project. It is about 1000 ft. long and interesting drill carriages have been designed, similar to those used on the Hoover Dam tunnels, to expedite the work.

Among the other hydraulic tunnel operations now under way mention should be made of the 4 mile Big Bottom power tunnel near Portland, Ore., for the famous Oak Grove development.

Tunnel No. 5, a  $4\frac{1}{2}$  mile bore, on the Owyhee project of the Bureau of Reclamation was holed through on October 30. Both these bores are of about the same length as the famous Hoosic Tunnel in Massachusetts, but, unlike the earlier work, they have hardly received a notice in the technical press.

The C. P. R. (Canadian Pacific Railroad) Tunnel known as the Wolfe's Cove Tunnel, at Quebec, although only a mile long, has attracted considerable attention because of the use of the unusual full-width bottom-heading method. This distinctly European tunnel practice has found little favor in America where top-heading followed by bench removal has always been preferred to bottom-heading plus stoping. The use of a drag scraper for mucking was also an interesting feature of the Quebec work. Evidently most satisfactory progress was made for the job was completed in 11 months. The C. P. R. has also completed a 4600 ft. tunnel under the city of Vancouver, B. C.

In the field of subaqueous tunneling there are two features which make the Boston-East Boston Vehicular Tunnel of universal interest. The old cast-iron liner plates, so characteristic of earlier subaqueous works, have been abandoned at Boston for steel plates. A section or ring of steel plates weighs about one-third as much as the older cast-iron and is hence far less costly.

The second noteworthy feature of the Boston tunnel is the unusual muck removing equipment. In most of the New York work the river mud is so soft that the bulk of it is not excavated, it is simply forced aside by the shield and only enough is admitted (usually less than one-third) to enable the operators to keep the shield on line and grade. The material encountered in Boston is largely a stiff blue clay and will have to be practically fully excavated. Accordingly, a special system of belt conveyors, with an unique arrangement for passing muck through the air lock bulkhead, was installed. This system was rated at a capacity of 35 to 40 cu. yds. of muck per hour and conveys this material to a dumping platform or storage hoppers above street level. It was completely described in the *Engineering News Record* of June 30, 1932 and represents one of the most recent developments in the mechanization of tunnel operations.

**TURATI**, tōo-ra'tè, FILIPPO. An Italian Socialist leader, died in Paris, France, Mar. 28, 1932. He was born in Canzo, Como, Italy, Nov. 26, 1857. On his graduation from the University of Bologna in 1877 he practiced law for a while but abandoned this profession to enter politics and journalism, serving as manager and editor of *La Critica Sociale*, the monthly organ of the Socialist party, from 1891 to 1903. Later, as the chief spokesman of the Reformists or Constitutionalists, he became the leader of the Italian Socialist party. In 1896 he was elected to Parliament, but three years later was sentenced to 12 years' imprisonment for the part he was thought to have taken in provoking the Milanese bread riots of 1898. After two years' imprisonment, however, he was released, returning to the seat in the Chamber of Deputies which he occupied during seven changes of government. In 1904 Enrico Ferri succeeded in supplanting him in the leadership of the Socialist party, but in 1910 the Milan Congress endorsed his Reformist policy by a vote of two to one, and he continued to lead the more numerous section of the Socialists.

He acted also during this period as editor of the Socialist daily, *Avanti*. When the Socialist party split in 1922 into Unitarians and Maximalists as a result of Communist agitation, Turati joined the more moderate wing, the Unitarians. The party was dissolved in 1926, on account of the attempt made by one of its members on the life of Mussolini, and after 1927 Turati made his home in Paris where he was the leader of the political Italian émigrés.

**TURBINES.** See STEAM TURBINES.

**TURCOMAN REPUBLIC.** See SOVIET CENTRAL ASIA.

**TURKEY.** A republic occupying a large part of Asia Minor and contiguous territory in the Balkan Peninsula; also comprising Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara (Angora).

**AREA AND POPULATION.** With at total area estimated at 294,492 square miles (285,235 square miles in Asia and 9257 square miles in Europe), Turkey had a population estimated at 14,100,000 on Jan. 1, 1930, as against 13,648,270 at the census of October, 1927. The population density was 46.3 per square miles and the urban population (residing in places of 5000 inhabitants or more) was 20.4 per cent of the total. The population of the chief cities (exclusive of suburbs) at the 1927 census was: Istanbul (Constantinople), 690,857, of whom 245,982 resided in the city proper; Izmir (Smyrna), 153,924; Ankara (Angora), 74,553; Adana, 72,577; Bursa (Brusa), 61,690; Konya, 47,596. The population is mainly Turkish, with several millions Kurds (in the eastern Provinces), Lazes, and Jews.

**PRODUCTION.** About 67.7 per cent of the total population was engaged directly in agriculture at the census of 1927; modern farming methods are gradually being introduced. There were 14,129,000 acres under cultivation in 1930. Production of the chief crops in 1931 was: Wheat, 115,741,000 bushels; barley, 91,861,000 bushels; corn, 22,046,000 bushels; oats, 12,745,000 bushels; tobacco, 99,207,000 pounds; olive oil, 3,469,000 gallons (in 1931-32); raisins, 68,343,000 pounds (1931-32); figs, 61,729,000 pounds (1931-32). The wool clip in 1931 was 14,800,000 pounds; mohair, 8,267,000 pounds. In 1932, yields of cereals, tobacco, and opium were below normal, while raisin, fig, olive oil, and filbert crops were above average. Mineral output (1931) was: Coal, 1,116,000 metric tons; emery, 3488 tons; chrome, 25,387 tons; boracite, 6501 tons.

**COMMERCE.** As compared with 1930, imports and exports decreased 13.8 per cent and 15.8 per cent, respectively, in 1931. Imports were valued at 126,660,000 Turkish pounds (\$59,758,000), as against £T147,554,000 (\$89,439,000) in 1930, while exports totaled £T127,275,000 (\$60,048,000), as compared with £T151,454,000 (\$71,274,000) in 1930. Cotton fabrics (\$13,356,000), machinery (\$5,171,000), sugar and confectionery, and wool fabrics were the leading imports in 1931. General imports from the United States were \$1,943,000 (\$1,539,501 in 1932); general exports to the United States were \$5,982,000 (\$5,389,796 in 1932). As a result of the adoption of an import quota system, the favorable balance of trade increased from about £T615,000 in 1931 to £T15,322,000 in 1932. The 1932 imports totaled £T85,984,000 and exports £T101,306,000.

**FINANCE.** Due to continued adverse economic conditions and the imposition of import quotas on Nov. 16, 1931, budget receipts declined sharply.

Revenue estimates were reduced from £T222,732,000 for the fiscal year ended May 31, 1931, to £T186,705,000 for 1931-32, and to £T169,354,800 for 1932-33. Actual revenues for 1931-32 were provisionally estimated at about £T160,000,000, and a considerable deficit was anticipated. For 1932-33, budget expenditures were estimated at £T169,146,000, the estimated surplus being £T208,053.

According to a new agreement reached in principle Dec. 14, 1932, Turkey's share of the Ottoman debt was to be replaced by new bonds in the sum of 895,435,000 French francs (about \$35,101,000), bearing interest at  $7\frac{1}{2}$  per cent and payable annually in gold. The unit of currency is the Turkish pound, par value about \$4.40 United States currency, which exchanged at an average of \$0.4718 in 1931.

**COMMUNICATIONS.** Turkey's extensive railway construction programme, launched soon after the establishment of the republic to meet the economic and strategic needs of the country, was nearing completion in 1932. The Samsun-Sivas line, about 250 miles long, was completed in September, 1932. It linked the port of Samsun on the Black Sea with central Anatolia. At the end of 1930 there were 3432 miles of railway line in operation, of which 2011 miles were operated by the government and 1421 miles by concessionary companies.

**GOVERNMENT.** Ghazi Mustapha Kemal Pasha, first President of the Turkish Republic, was re-elected May 4, 1931, for his third consecutive term, which expires in 1935. The Ministry appointed by him was headed by Ismet Pasha. Two new Ministries, of Agriculture and of Customs and Monopolies, were established by act of the Grand National Assembly of Dec. 29, 1931.

## HISTORY

**INTERNAL DEVELOPMENTS.** Although Turkey suffered severely from the effects of the world depression during 1932, the Kemalist régime made steady progress with its programme of nationalism and economic self-sufficiency. The collapse of farm prices and the restriction of foreign markets increased the poverty of the people while constantly declining revenues forced the government to increase taxation and introduce additional economies. In March, the government was forced to postpone for four years payments of treasury bonds due to armament and public works contractors. Almost all imports except quota goods were prohibited after September 1 by a decree of August 20. Later new quotas were announced, effective Oct. 1, 1932, to Feb. 15, 1933, including many articles imported from the United States.

In an effort to train the Turks in industrial technique, the government extended its control over industry; it operated the railways, the merchant marine, the cloth factories supplying the army and navy, and monopolies of tobacco, salt, gunpowder, and alcoholic drinks. The state also provided much of the capital used in banking. In July, the Minister of War announced that a contract had been awarded to an American company to establish an air service throughout Anatolia. The service was to be a Turkish government monopoly. American engineers were engaged for one year to supervise the manufacture of planes at the Kaiseriyyeh factory. The Turkish Central Bank was opened on Jan. 1, 1932. In May

a treaty was signed with the Soviet Union by which Turkey secured \$8,000,000 worth of machinery. With this the Turkish government hoped to stimulate the domestic production of cotton goods and other articles. By a law of June 5, a long list of occupations were reserved to Turks; it affected thousands of Greeks, Italians, and Persians.

In connection with its political programme, the government engaged Professor Malche of the University of Bern to reorganize the University of Istanbul. It was planned to place the whole educational system upon a modern scientific basis. The campaign carried on for several years to substitute Turkish for Arabic culminated when the Koran was read in Turkish for the first time in the mosque of St. Sophia, at Istanbul, on the Night of Power in the month of Ramazan. Attended by President Mustapha Kemal Pasha and some 2000 persons, a congress on the Turkish language was held in Istanbul from September 26 to October 6. Steps were taken for modernizing the language, eliminating foreign elements in it, and bringing the written language nearer the spoken language.

On December 25, it was announced that the government would adhere to the international conventions limiting the trade in narcotics, restrict the cultivation of the opium poppy to medicinal needs, and set up special courts to try smugglers and illegal manufacturers of drugs. On May 20, Dr. Paul Monroe, director of the International Institute of Teachers College, Columbia University, was appointed president of Robert College, Istanbul, and of Constantinople Woman's College. He succeeded Dr. Caleb G. Gates.

**FOREIGN RELATIONS.** The Turkish government pursued an active foreign policy during 1932 which was designed to promote exports and safeguard its neutrality in the event of a European war. In April Premier Ismet Pasha and Foreign Minister Tewfik Rushdi Bey visited Moscow, where they signed an agreement to barter Turkish raw materials in return for \$8,000,000 worth of Soviet machinery. On May 22, they visited Rome, where they renewed with Premier Mussolini the 1928 treaty of neutrality, arbitration, and conciliation. Italy advanced a credit of \$15,420,000 to Turkey, of which one-third was to be furnished in the form of machinery and industrial material, one-third in cash, and one-third was to be credited toward payment for four torpedo boats and two submarines, which Italy had agreed to build for Turkey.

On July 6, Turkey became a member of the League of Nations. Adjustment of the Turkish-Persian frontier and the restoration of the old trade between Trebizond, Turkey, and Tabriz, Persia, by improvement of the highway was arranged for by the Minister of Foreign Affairs while on a visit to Tehran, Persia, in February. In January a commercial treaty and extradition pact with Iraq was signed. Later in the year negotiations were opened with the French government for a settlement of questions involving the French mandate in Syria. Demarcation of the Turkish-Syrian boundary, purchase by Turkey of the railway from Adana to Nisibin, and the repatriation of Turkish citizens in Syria were among the matters discussed. See IRAQ, ITALY, PERSIA, LEAGUE OF NATIONS, and UNION OF SOVIET SOCIALIST REPUBLICS; UNITED STATES OF EUROPE.

**TURNER, FREDERICK JACKSON.** An American historian, died in Pasadena, Calif., Mar. 14, 1932. He was born in Portage, Wis., Nov. 14, 1861, and was graduated from the University of Wisconsin in 1884, and with the Ph.D. degree from Johns Hopkins University in 1890. After serving as professor of American history at the University of Wisconsin from 1892 to 1910, he was called to Harvard University, where he held the same chair until his retirement as professor emeritus in 1924. Among his works are *Rise of the New West* (1906) and *The Frontier in American History* (1920) and such monographs as *The Character and Influence of the Indian Trade in Wisconsin*; *Policy of France towards the Mississippi Valley in the Period of Washington and Adams*; *Western State Making in the Revolutionary Era*; *The West as a Field of Historical Study*; *Dominant Forces in Western Life*; and *Contributions of the West to American Democracy*.

**TURNER, GEORGE.** An American lawyer and senator, died in Spokane, Wash., Jan. 26, 1932. He was born in Edina, Mo., Feb. 25, 1850. After the Civil War he became associated with a brother in the practice of law in Mobile, Ala., and was U. S. marshal for the southern and middle districts of Alabama during 1876-80. Removing to Washington, he was associate justice of the Supreme Court of that Territory during 1884-88. In 1889 he was a member of the convention which formed the constitution on ratification of which Washington was admitted to the Union. In 1896 he was elected to the U. S. Senate. On the conclusion of his term in 1903 he was appointed a member of the tribunal to settle the Alaska boundary dispute between the United States and Canada. During 1913-14 he served on the International Joint Commission, which had been established four years previously on the occasion of the Boundary Waters Treaty between the United States and Canada.

**TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.** A nonsectarian normal and industrial school for the higher education of Negro men and women in Tuskegee, Ala., founded in 1881 by Booker T. Washington. The enrollment in the 1932 summer session was 320; that for the autumn term was 1391. There were 261 members on the faculty. The endowment amounted to \$7,564,863, and the income for the year to \$491,940. The library contained 20,000 volumes. There were completed during the year a new library and science building. President, Robert Russa Moton, LL.D.

**TWENTIETH AMENDMENT, PROPOSED.** See LAW IN 1932.

**UBANGI-SHARI.** See FRENCH EQUATORIAL AFRICA.

**UGANDA, ō-gān'dā, PROTECTORATE.** A protectorate of Great Britain in East Africa bounded on the north by the Anglo-Egyptian Sudan, west by Belgian Congo, south, by Tanganyika, and east by Kenya. Area, 94,204 square miles (13,616 square miles of water); population, 1931 census, was 3,553,534 including 3,536,267 natives, 14,150 Asiatics, 2001 Europeans. Capital, Entebbe; commercial centre, Kampala.

**UKRAINE.** A region in southwestern Russia known officially as the Ukrainian Soviet Socialist

Republic. See UNION OF SOVIET SOCIALIST REPUBLICS and POLAND, under *History*.

**ULCERS.** See MEDICINE AND SURGERY.

**ULTRA-VIOLET.** See PHYSICS.

**UNDERHILL, FRANK PELL.** An American pharmacologist, died in New Haven, Conn., June 28, 1932. He was born in Brooklyn, N. Y., Dec. 21, 1877, and was graduated from Yale University in 1900, receiving the Ph.D. degree in 1903. He became instructor in physiological chemistry at the Yale medical school in 1903 and was promoted to assistant professor in 1907, professor of pathological chemistry in 1912, professor of experimental medicine in 1918, and professor of pharmacology and toxicology in 1921. During the World War he was lieutenant colonel in the chemical warfare service, being commanding officer in charge of the research work at the New Haven station on methods of treatment for gas poisoning. In October, 1918, while on duty with the A.E.F. in France, he was United States representative to the Interallied Gas Warfare Conference in Paris. He was also chairman during 1917-19 of the committee on biological chemistry of the National Research Council.

**UNDERWRITING.** See INSURANCE.

**UNEMPLOYMENT.** **UNEMPLOYMENT INSURANCE IN THE UNITED STATES.** The pioneer State in the country to write an unemployment insurance code on its statute books was Wisconsin where, on Jan. 28, 1932, the governor signed an act setting up an insurance fund, based entirely upon employer contributions, for the purpose of rendering financial aid to unemployed persons. The Wisconsin legislature provided that before June 1, 1933, it was necessary for employers of at least 175,000 workers to establish voluntarily some unemployment insurance plan; after that date the act was to become automatically compulsory. The statute further provided that voluntary plans for unemployment insurance were to be submitted to the Wisconsin industrial commission for its approval. In order to assist in carrying out the law, the legislature provided that any county or municipality might, subject to the approval of the industrial commission, establish and maintain local free employment offices; also the industrial commission was empowered to establish such offices on its own responsibility. For these activities the industrial commission was given an appropriation of \$25,000 until June 30, 1933. The Wisconsin unemployment insurance law contains the following provisions: First, all employers employing 10 or more persons for four or more months during the preceding calendar year are included in its operations. Excluded classes are the following: Farm laborers, domestic servants, public officers, school teachers, interstate railroad employees, or any one who is unable or unwilling to work normal full time. Second, contributions to the unemployment reserve fund are to be made by the employer at the rate, of the first two years of contribution, of 2 per cent of his annual payroll. Salaries of employees receiving more than \$1500 per year or \$300 or more per month are not included. When a reserve has been built up amounting to \$55 per employee, the rate of contribution by the employers is reduced to 1 per cent; employer contributions to the reserve are to cease when the reserve per employee amounts to \$75. Whenever the reserve falls below \$75, contributions are to recommence. Also, the employer is obliged to contribute to the

administration fund at the rate of two-tenths of 1 per cent of his annual payroll. Any agreement between employer and employee, by which the latter agrees to pay any part of the regular contribution, is void but employees may contribute voluntarily in order to obtain higher benefits. Third, benefits for total unemployment become payable after a waiting period of two weeks and are to be paid at the rate of \$10 a week, or 50 per cent of the average weekly wage, whichever is lower, unless the wage is less than \$5, when the benefit is to be \$5. For partial unemployment, the benefit is the difference between the employee's actual wages and the weekly benefit to which he would be entitled if totally unemployed. An additional \$1 per week is provided if the employee attends a vocational or other school during the period of unemployment. The maximum period of benefit in any one calendar year is limited to 10 weeks. No benefits are to be paid if the employee has lost his job because of misconduct or has quit voluntarily or because of a trade dispute or because the place of business is destroyed, if he earned \$1500 or more during the preceding 12 months. Fourth, the actual fund is to be administered by the State industrial commission. Fifth, penalties of fine and imprisonment are set up in the statute for violations of the act.

This was the only statutory action taken in the country during the year. However, as subsequent developments showed, there was every reason to believe that other commonwealths would shortly follow in Wisconsin's footsteps. Not only had public interest been aroused by the stand taken by the American Federation of Labor and by recommendations made by various legislative and administrative commissions, but the increasing feeling that with the great advances of technological developments the United States was destined to see a sizeable group of unemployed persons even in normal times indicated that the whole subject was already advanced beyond the realm of debate. One such commission report was the Interstate Commission on Unemployment Insurance made up of representatives of the Governors of New York, Ohio, Massachusetts, Pennsylvania, New Jersey, and Connecticut. The chairman of this commission was Mr. Leo Wolman of New York, and the other members were Messrs. Charles R. Blunt of New Jersey, A. Lincoln Filene of Massachusetts, C. A. Kulp of Pennsylvania, W. M. Leiserson of Ohio, and W. J. Couper of Connecticut. The report of the commission, published in February, 1932, made the following recommendations: (1) The establishment of State-wide systems of compulsory unemployment reserves. (2) The payment by each employer into a reserve fund of a contribution amounting to 2 per cent of his payroll. (3) Payments made by each employer were to constitute the unemployment reserve of his firm and be so treated in the accounts. (4) The maximum benefit should be 50 per cent of an employee's wage, or \$10 a week, whichever was lower; and the maximum period of benefit should be 10 weeks within any 12 months. Provision also was to be made for short-time unemployment. (5) The financial responsibility of any employer was to be strictly limited by the amount of his unemployment reserve. (6) When the accumulated reserve per employee exceeded \$50, the employer's contribution was to be reduced to 1 per cent of his payroll and when his

reserve reached \$75, contributions were to cease. (7) The State was to act as the custodian investor and disbursing agent of the reserve funds. (8) The State should take prompt steps to extend its public employment service. (9) The unemployment authority of the State should create stabilization agencies.

UNEMPLOYMENT IN THE UNITED STATES. Because of the absence of governmental figures it is impossible to declare exactly the number of unemployed persons in the United States. Recourse is necessary to estimates, the bases of which are so very meagre in almost all cases that no more than a guess is ever possible. The first and last compilation of unemployment ever made by the Federal Government was that of January, 1931. The only Federal figures in existence are those based on the reports to the Federal Bureau of Labor Statistics made each month by nearly 65,000 industrial establishments. These figures, however, do not show unemployment but the number of persons actually at work in the particular plants and factories reporting. The only agency to endeavor a national estimate is the American Federation of Labor which bases its calculations on the number of unemployed trade unionists in the country. In October, the American Federation of Labor estimated that totally unemployed persons in the United States numbered about 11,000,000.

In New York City alone in the same month, about 1,150,000 persons, or more than one-third of the working population of the city, were estimated to be unemployed by the Welfare Council. The unemployment census taken by the New York Police Department, on the basis of a house to house canvass, found that there were 525,034 able bodied persons unemployed. On these breadwinners there were dependent an additional group of 460,000 persons making a total of 985,034 residents of New York who were victims of unemployment.

THE SHARE-THE-WORK MOVEMENT. As a result of a national conference of banking and industrial committees of the twelve federal reserve districts, called by President Hoover and meeting in Washington on August 26, there was drawn up a coordinated nation-wide programme to cope with the economic depression along voluntary lines. President Hoover, in discussing the question of unemployment, said:

As a matter of national policy, the shortening of hours is necessary not alone to meet the need of the moment but it may be necessary to take up the slack in the future from the vast and sudden advances in labor-saving devices. As the result of conferences similar to this nearly three years ago many industries realigned their operations by shorter hours to retain hundreds of thousands of workers who would otherwise have been dismissed.

Nevertheless, the still further spreading of available work in industrial, commercial, and service activities, especially with every recovery of employment, would be a vital contribution.

While I heartily favor the purpose of these plans, I agree with both the employers and the leaders of labor whom I have consulted that its direction is not properly the function of government, except as applied to the operation of government service. Moreover, with all the various phases of employment and operation to be met in private business, no general rule can be applied. Results must be achieved through cooperation on the part of employers and employees suited to each locality and industry. I suggest you should consider the effective part which you can play in further forwarding organization to this end.

In accordance with the recommendation of President Hoover, there was established a sub-committee with Walter C. Teagle, president of

the Standard Oil Company of New Jersey, as chairman, to promote increased employment through the share-the-work movement. The movement was started by Mr. Teagle's committee on August 27 and was to be carried out under a uniform plan in all sections of the country. It was proposed to urge all employers to take on additional workers and to adjust the hours so that over a given period the total of workers would have been employed the same amount of time. It was Mr. Teagle's hope that as a result of this programme at least 2,000,000 additional men and women would be put back to work.

By the middle of October it was estimated that at least 3500 firms and companies in the United States had tried the scheme.

**SENATE COMMITTEE ON UNEMPLOYMENT INSURANCE.** During the year a Senate committee on unemployment insurance, created by a resolution of the upper chamber to investigate the subject in the United States and foreign countries and made up of the Hon. Felix Hebert of Rhode Island (chairman), Hon. Otis F. Glenn of Illinois, and Hon. Robert F. Wagner of New York, submitted its report (Senate report No. 629), based on numerous hearings and the study of foreign systems. The committee's report (actually the majority report and signed by Senators Hebert and Glenn), pointed out that there were two schools of thought concerned with the problem of unemployment relief. One of these insisted upon public responsibility and, therefore, the establishment of a compulsory system through the agency of the government, and the other that the solution of the problem should be left to private agreement between employers and employees. The committee declared that the views of those who insisted upon social responsibility were somewhat as follows: (1) That unemployment was due to social and not industrial causes and that, therefore, it was incumbent upon society to assure the worker against unemployment. Hence, funds for relief were to be contributed not by employers but by the State and Federal governments. (2) In view of the fact that unemployment was national in character, it was necessary to relieve it by national legislation. Those who insisted that the problem was a matter for private consideration and settlement centred their arguments on the following contentions: (1) American industry should be given an opportunity to work out its own unemployment problems without government intervention. (2) Foreign experiences showed that it was impossible to work out an unemployment insurance scheme on an actuarial basis. (3) Some plan might be successfully operated if kept within certain specified limits as to coverage; however, the experiences of foreign countries showed that this was not possible. (4) Any compulsory plan was bound to be constantly subject to pressure to increase its benefits, extend the limits of coverage, relax the safeguards, and generally expand the system to a wholesale relief scheme supported by public funds and paid for by taxation. On this point the committee report observed that the basic condition of insurance calls for the accumulation of reserves. "Inasmuch as unemployment is not predictable, it follows that there will be not a little difficulty in finding a basis from which to proceed to the accumulation of the necessary reserves. The studies of the actuaries have not brought them to any final

conclusions. Such studies have demonstrated that unemployment insurance as insurance will not relieve those conditions which its advocates claim, and in no event will it prove a major factor in the solution of the general problem. That the knowledge of the subject now available is inadequate upon which to base a sound and practical scheme is conclusive, the experience of the Governments of England and Germany fully demonstrate."

The report's signers agreed that any system of federal unemployment insurance would be impractical if not undesirable. They pointed out that the difficulties of establishing a system included the following: the determination as to the extent of coverage to be provided; the fixing of rates of contribution and unemployment benefits to the varying conditions in different parts of the country; the probability that a constitutional objection existed to Federal legislation for the relief of unemployment. However, some form of relief of unemployment was imperative and there were two possible solutions, first, recourse to the establishment of compulsory reserves maintained by industries, to which employers might contribute; and, second, voluntary reserves maintained by the industries themselves with the cooperation of their employees. Congress was not in the position to legislate on either of these methods and might only recommend courses of action. The majority report indicated that it favored the former as a feasible method in the following words:

Having reached the conclusion that some form of reserves for the relief of the workers of the country should be provided by individual employers, with the possible cooperation of employees, and not by the Federal Government or by the States, yet the Federal Government as well as the States may well consider it to be not without the scope of their powers or of their obligations to their citizens to contribute in some measure to the removal of difficulties which exist and which may recur. We, therefore, recommend that the Federal Government contribute to such systems of private unemployment reserves to the extent of permitting employers who maintain them to deduct some portion, if not all, of the contributions thereto out of their income for tax purposes, just as they are now permitted to deduct as a part of the cost of doing business, all sums paid for insurance against the risks of workmen's compensation and other forms of insurance coverage.

Mr. Wagner, minority member of the committee, presented a separate report in which he made the following points: (1) It was necessary to establish reserves to mitigate the evil consequences of unemployment. (2) Such insurance reserves to be successful should be inaugurated under compulsory State legislation and be supervised by State authority. (3) The Federal government should encourage State action by co-operating through the establishment of a nation-wide employment service and by allowing employers to deduct from their income tax a portion of their payments into unemployment insurance reserves. (4) Every system of unemployment insurance was to be organized to provide incentives to the stabilization of unemployment. (5) Insurance funds should be actuarially sound. (6) Compulsory unemployment insurance placed all employers on an equal footing. (7) Compulsory unemployment insurance preserved the mobility of the worker and kept his hands free in attempting to improve his economic position. (8) "Unemployment insurance will beneficially affect not only the workers but agriculture, industry, and trade; all alike profit from sustained purchasing power." In conclusion

Senator Wagner declared: "Sound business and good conscience both demand that, in dealing with unemployment, we abandon the methods of poor relief, with its ballyhoo, its inadequacy, inequality, and uncertainty, which are a drain on the sympathy of the giver, and a strain on the character of the taker. Let us, like civilized men and women, organize intelligently to prepare to-day for the exigencies of the future."

**REPORT OF THE BRITISH ROYAL COMMISSION.** On November 7, the Royal Commission on Unemployment Insurance, after having studied the question for two years, submitted majority and minority reports. The majority report, which had the backing of the Conservatives, declared for the principle of unemployment insurance, gave the continuance of the system its support, and favored its extension to agricultural workers and domestic servants. The report also declared that the government was to assume responsibility for training and educating unemployed persons, particularly young men and women. The majority report also recommended that insurance benefits be given to unemployed persons during a period between 13 and 39 weeks each year, depending upon the length of time the unemployed person had been insured and had contributed to the unemployment insurance fund. It also recommended the continuation of the so-called "means test," of which more is said below. More significant, perhaps, than even these recommendations was the realization on the majority members of the commission that unemployment in Great Britain was apparently a permanent phenomenon and that, therefore, it devolved upon the state to supplement unemployment insurance funds by the dole system.

The minority report, supported by the Labor members, was a more liberal document. It recommended that fixed sums be granted by the government to all unemployed persons during the entire period of their unemployment, regardless of whether or not they had regular employment or had made contributions to the insurance fund. The report also recommended the abolition of the "means test." See GREAT BRITAIN under *History*.

**OTHER UNEMPLOYED MARCHES.** In the Netherlands and in the United States, as well as in Great Britain, unemployed persons engaged in marches to the countries' capitals in order to demonstrate before national legislative bodies. See NETHERLANDS, THE, under *History*; COMMUNISM under *United States*.

**UNEMPLOYMENT IN FOREIGN COUNTRIES.** The following figures, as reported by the *Monthly Labor Review*, indicate numbers of unemployed persons in various countries of the world for the month last ascertainable in 1932: *Australia* (unemployed trade unionists), 122,340 in September as compared with 90,739 in September, 1930; *Austria* (number of unemployed in receipt of compulsory insurance benefits), 275,840 in September as compared with 163,894 in September, 1930; *Belgium* (wholly unemployed persons receiving benefits from unemployment insurance societies), 165,596 in August as compared with 23,693 in September, 1930; *Canada* (per cent of trade unionists unemployed), 21.4 per cent in August as compared with 9.4 per cent in September, 1930; *Czechoslovakia* (number of unemployed on the live register), 453,294 in July as compared with 104,534 in September, 1930, and (unemployed in receipt of benefits from trade

union insurance funds) 168,046 in July as compared with 57,542 in September, 1930; *Danzig* (number of unemployed registered), 30,469 in September as compared with 16,073 in September, 1930; *Denmark* (unemployed receiving benefits from trade union unemployment funds), 97,130 in September as compared with 27,700 in September, 1930; *Estonia* (number of unemployed remaining on live register), 3256 in August as compared with 1414 in September, 1930; *Finland* (number of unemployed registered), 16,966 in August as compared with 7157 in September, 1930; *France* (number of unemployed in receipt of benefits), 259,237 in September as compared with 988 in September, 1930; *Germany* (number of unemployed registered), 5,100,322 in September as compared with 3,004,000 in September, 1930 and (number of unemployed trade unionists in receipt of benefits) 1,850,197 in September as compared with 1,965,348 in September, 1930; *Great Britain and Northern Ireland* (wholly unemployed persons receiving compulsory insurance), 2,279,779 in September as compared with 1,579,708 in September, 1930 and (temporary stoppages in receipt of compulsory insurance) 645,286 in September as compared with 608,692 in September, 1930; *Hungary* (Social Democrats and trade unionists unemployed), 28,186 in August as compared with 22,252 in September, 1930; *Irish Free State* (unemployed persons receiving compulsory insurance), 57,081 in August as compared with 20,775 in September, 1930; *Italy* (wholly unemployed registered), 945,972 in August as compared with 394,630 in September, 1930 and (partially unemployed registered) 33,666 in August as compared with 22,734 in September, 1930; *Latvia* (number of unemployed remaining on the live register), 7599 in May as compared with 1470 in September, 1930; *Netherlands* (number of unemployed carried by unemployment insurance societies), 116,524 in August as compared with 35,532 in September, 1930; *New Zealand* (number of unemployed trade unionists), 55,203 in July as compared with 38,028 in March, 1931; *Norway* (number of unemployed remaining on the live register), 27,543 in August as compared with 17,053 in September, 1930; *Poland* (number of unemployed registered with employment offices), 187,537 in August as compared with 170,467 in September, 1930; *Rumania* (number of unemployed remaining on the live register), 32,809 in July as compared with 39,110 in September, 1930; *Saar Territory* (number of unemployed registered), 39,063 in July as compared with 7527 in September, 1930; *Sweden* (trade unionists unemployed), 80,975 in August as compared with 34,963 in September, 1930; *Switzerland* (wholly unemployed receiving benefits from unemployment funds), 35,700 in July as compared with 7792 in September, 1930 and (partially unemployed receiving benefits from unemployment funds) 54,000 in July as compared with 26,111 in September, 1930; *Yugoslavia* (number of unemployed registered), 11,940 in August as compared with 5973 in September, 1930. See POLAND under *History*; PSYCHOLOGY.

**UNEMPLOYMENT INSURANCE.** See UNEMPLOYMENT.

**UNFEDERATED MALAY STATES.** A group of five Malay states under British protection but not included in the Federated Malay

States (q.v.). They are divided in area and population as follows:

State	Capital	Area sq. mi.	Population (1931)
Johore	Johore Bharu	7,878	428,645
Kedah	Alor Star	3,648	505,309
Kelantan	Kota Bharu	5,713	862,622
Trengganu	Kuala Trengganu	5,500	179,664
Perlis	Kangar	816	49,297
Total		22,855	1,526,537

See BRITISH MALAYA.

**UNION COLLEGE.** A nonsectarian college for men in Schenectady, N. Y., founded in 1795. The 1932 enrollment of regular students totaled 844. The faculty numbered 85. The amount of endowment and income for the year was more than \$3,000,000. President, Frank Parker Day, LL.D.

**UNION OF SOUTH AFRICA.** See SOUTH AFRICA, UNION OF.

**UNION OF SOVIET SOCIALIST REPUBLICS (U. S. S. R.).** A republic comprising the greater part of the former Russian Empire. Capital, Moscow.

**AREA AND POPULATION.** According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics is 8,199,258 square miles. The population as of July 1, 1931, was estimated by the Central Statistical Board at 162,700,000. The population, according to the census of 1926-27 was 147,013,600, including 71,024,300 males and 75,989,300 females. In 1914 the population of the same territory was 138,200,000.

The Union of Soviet Socialist Republics in 1931 was composed of seven constituent republics, which in turn included 16 autonomous republics and 17 autonomous areas. The Russian Socialist Federated Soviet Republic contained 94 per cent of the area and 76 per cent of the population of the entire Soviet Union. The estimated area and population of the seven constituent republics on July 1, 1931, is shown in the accompanying table from the *Economic Review of the Soviet Union*. Also see SIBERIA; SOVIET CENTRAL ASIA.

#### AREA AND POPULATION OF THE SOVIET UNION, BY CONSTITUENT REPUBLICS, 1931

Republic	Area <sup>a</sup>	Population (thous.)	Cities	Rural Soviets
R.S.F.S.R.	19,662.9	112,181.0	515	50,139
White Russia	126.8	5,275.0	29	1,418
Ukraine	425.0	81,625.6	80	11,040
Uzbekistan	176.1	4,746.2	18	1,698
Transcaucasia	185.5	6,495.9	49	2,534
Turkmenistan	491.2	1,149.1	7	457
Tadzhikistan	141.6	1,186.5	6	376
Total	21,286.1	162,686.3	708	67,662

<sup>a</sup> Thousands of square kilometers (1 square kilometer = 0.386 square miles).

Population of cities of over 200,000, by official estimate of 1931: Moscow, 2,781,300; Leningrad, 2,228,300; Baku, 575,200; Kiev, 539,500; Kharkov, 521,500; Odessa, 475,500; Rostov-on-Don, 457,100; Tashkent, 421,800; Nizhni Novgorod, 350,300; Tiflis, 347,900; Dnepropetrovsk, 322,800; Stalingrad, 294,500; Saratov, 277,500; Sverdlovsk, 223,300; Samara, 220,400; Kazan, 202,000.

**EDUCATION.** Public education in the Soviet Union is a charge against each of the seven constituent republics and of the localities concerned.

For 1932 budgetary outlays planned for education were \$3,012,750,000, converting the ruble at par of \$0.51. For previous years the expenditures were \$2,126,950,000 for 1931, \$1,100,000,000 for 1930, \$738,500,000 for 1929, \$196,200,000 for 1913.

Universal compulsory education for children between the ages of 8-10 years was introduced for the first time at the close of 1930. The accompanying tables show the increase in school attendance.

#### ELEMENTARY AND SECONDARY SCHOOL ATTENDANCE

Year	Elementary schools	Secondary schools
1914	7,236,000	563,500
1930	11,775,500	1,599,200
1931	17,842,300	1,980,200
1932	19,001,000	4,684,800

#### ATTENDANCE IN HIGHER EDUCATIONAL INSTITUTIONS [Thousands]

Institutions	1914	1930	1931	1932
Higher education	109.9	291.4	858.2	525.7
Technicums	46.1	578.7	609.8	1,034.4
Factory training schools		568.9	1,197.8	1,863.0
Workers' faculties		247.5	831.7	500.0

**PRODUCTION, ETC.** In the Soviet Union transport and communications are conducted as federal departments. Banking is centralized in a State Bank under governmental control. Distribution is socialized, conducted partly by the co-operative societies, partly by factory stores. Industrial production is carried on largely by state enterprises under the general direction of three Commissariats, denominated respectively Heavy Industry, Light Industry, and Lumber. A State Planning Commission (Gosplan) plots the objectives for each year, and for five-year periods. A Council of Labor and Defense (STO) acts as a coordinating and standardizing body. In agriculture during the past few years there has been a rapid reorientation, the small three-strip peasant farms (averaging 12 to 14 acres in all) being merged in large-scale collective farms with varying degrees of mechanization. At the end of 1932 it was estimated that 80 per cent of the peasants' acreage had been included in the collectives. There is no private ownership of land or natural resources. The peasant minority that still continues as individual cultivators have their holdings under a sort of perpetual leasehold. A few private concessions in foreign hands survive among the state organizations for the development of natural resources.

In 1932 the energies of the population were mainly absorbed in completing the first Five-Year Plan, which was formally brought to a close December 31, in four and a quarter years.

In general the objectives of the plan were to establish the basis for a modernized industrial economy, to establish industry on a firm socialist basis and to provide the same basis for a fraction (originally estimated at one-fifth) of the agricultural output, and to raise the general standard of living. Specifically the plan envisaged an increase of 133 per cent in the output of industry, an increase of 55 per cent in agriculture, and fixed programmes for the expansion of educational and scientific work. The schedule for educational and scientific expansion were surpassed.

In industry the plan was stepped up each year after the completion of the first twelve months on Sept. 30, 1929. (Beginning Jan. 1, 1931, the Soviet fiscal year was changed from the October 1-September 30 period to coincide with the calendar year.) The new objectives for each year were set forth successively by Gosplan in "control figures," and these year by year showed an increasing advance over the schedules of the original plan. Up to 1932 the schedules of the original plan were generally surpassed; they were topped in several lines in 1932. In both 1931 and 1932 the industrial output was considerably below the goal set in the "control figures" for those years.

The results for 1932 in industry showed wide variations in different lines as compared with the schedules for the final year in the Five-Year Plan. In the oil industry the schedule in the plan was somewhat surpassed. In several branches of the machine-building industry and in the electrical industry it was greatly surpassed. On the other hand production of pig-iron was about 65 per cent of the plan, of steel even less. Coal, textiles, and other industries fell somewhat below the plan, in varying degrees.

Early in January, in an address before the Central Committee of the Communist party, Stalin stated that the average annual increase in industrial production under the plan had been 22 per cent. The original plan provided for about 20 per cent. Stalin also stated that in industry the plan had been fulfilled 93.7 per cent. Official figures for increases of production of heavy industries year by year under the plan are as follows: 1928-29, 24.3 per cent; 1929-30, 24.6; 1931, 21.7; 1932, 18.0. There was an interregnum of three months, October 1 to Dec. 31, 1929, owing to the change by which the fiscal year was made to coincide with the calendar year. During this period the output of industry increased 20 per cent as compared with the same period in 1929.

The industrial output for 1932 was about three times that of 1913. At the beginning of the Five-Year Plan the Soviet Union stood fifth among the nations in industrial output. By 1932 it had assumed second place, according to figures compiled by the German Institute of Economic Statistics.

Major items of construction under the Five-Year Plan include the following: Dnieper River dam and power plant, eventual capacity upwards of 750,000 horse power, formally opened to partial operation in the summer of 1932; the Turkestan-Siberian railway, 950 miles, completed April 1930; giant tractor factories at Stalin-grad, Kharkov, and Cheliabinsk; automobile plant at Nizhni-Novgorod with eventual annual capacity of 150,000 cars and trucks; great steel plants at Magnitogorsk in the southern Urals and Kuznets in Siberia, planned for an output equal to the entire production of Russia at the beginning of the World War, and several hundred other new industrial enterprises, many of them of imposing stature. Over 40 per cent of the machinery produced in the Soviet Union in 1932 was not made in Russia before the revolution. Output in key economic indicators for 1932, with comparison of 1927-28 (the last year before the beginning of the Five-Year Plan) and of the programme of the fifth year of the original Five-Year Plan (1932-33), is shown in the table at the head of the adjoining column.

## SOVIET INDUSTRIAL OUTPUT

	1932	1927-28	Five-Year Plan 1932-33
Coal . . . . . metric tons	64,000,000	35,400,000	75,000,000
Pig iron . . . . . do . . .	6,200,000	3,280,000	10,000,000
Steel . . . . . do . . .	5,900,000	3,370,000	10,400,000
Oil . . . . . do . . .	22,200,000	11,600,000	20,800,000
Machinery mil. rubles	5,400	740	4,840
Electrical industry . . . do . . .	1,075	221	895
Power out- put . . . mil. kwh.	13,500	5,000	22,000
Cement . . . metric tons	4,700,000	1,600,000	6,800,000
Tractors . . . . .	50,250	1,500	55,000

AGRICULTURE. A complete reorientation of the agricultural set-up was effected under the Five-Year Plan. The extent of socialization carried through far surpassed the expectations. In the original plan it was anticipated that 20 per cent of the peasants would be organized in the collectives by the summer of 1933. At the beginning of 1933 Premier Molotov announced the "socialized sector" of collective farms and state farms accounted for 80 per cent of the sown area. This rapid transition was not without its drawbacks. The new form of agriculture, involving coöperative effort on an unprecedented scale mostly among backward and undisciplined peasants, was wholly novel. The change involved grave problems of management and technical personnel, as well as of human relations. During the bumper crop of 1930 it was demonstrated that the large scale collective farms, with tractors and proper direction, were markedly more productive than the individual peasant farms with the primitive methods and outmoded equipment. However, the rather hectic advance of collectivization brought its own difficulties. The new collectives, like some of the new giant industries, suffered from what the Russians called "growing pains." There were serious errors of management and coördination. The supply of tractors and other mechanical aids could not keep up with the demand from the new farms. Because of these and other causes of a natural nature the grain harvests of 1931 and 1932 were not up to the results of 1930. The area sown to grain in 1932 fell below the expansion planned for that year. Grain exports, which were 4,768,299 metric tons in 1930 and 5,059,396 metric tons in 1931, fell off over 50 per cent during the first nine months of 1932, with the prospect of cessation until after the harvest of 1933. The prewar average was 10,700,000 metric tons.

Gross grain crops, in metric tons, were: 1913, 80,100,000; 1929, 73,796,000; 1930, 83,743,000; 1931, 76,200,000. The cultivated area by the fall of 1932 was divided as follows: state farms, 11 per cent; collective farms, 69 per cent; individual peasants, 20 per cent.

LABOR. Unemployment, which reached a peak figure of 1,700,000 at the beginning of the Five-Year Plan, was rapidly absorbed as the programme of heavy construction gained momentum. By 1931 it was replaced by a labor shortage. After a period of experimenting with various "working weeks," the greater part of the industries settled down in 1932 to a six-day week, with a uniform rest-day on the sixth day. By the summer of 1932 about 85 per cent of the workers in industry were on a seven-hour day. Trade union membership increased from 10,900,000 in 1928, at the beginning of the Five-Year Plan, to 16,500,000 in 1932, reflecting the rapid growth of industry.

COMMERCE. Soviet foreign trade held up well during the first two years of the world depression, but showed a drop of about 40 per cent during 1932. Figures for recent years are shown in the accompanying table.

## SOVIET FOREIGN TRADE

Year	Exports	Imports	Total
1927-28 ...	\$398,564,000	\$486,523,000	\$885,087,000
1928-29 ...	458,350,000	431,055,000	889,405,000
1929-30 ...	516,118,000	550,352,000	1,066,470,000
1931 .....	417,773,000	569,092,500	986,865,500
1932 .....	290,400,000	359,827,000	650,227,000

The principal Soviet exports in 1931 were: grain \$78,000,000, oil products \$60,000,000, lumber \$35,000,000, furs \$29,000,000. The principal imports were: industrial machinery and parts \$170,000,000, ferrous metals \$64,000,000, articles manufactured of iron and steel \$47,000,000, tractors and parts \$41,000,000, electrical machinery \$28,000,000.

The principal countries taking Soviet exports in 1931 were Great Britain 32.8 per cent, Germany 15.9 per cent, Italy 4.9, Mongolia 4.6, Persia 4.0. Principal countries furnishing Soviet imports were: Germany 37.2 per cent, United States 20.8 per cent, Great Britain 6.6, Persia 4.2, Czechoslovakia 3.2. In the first nine months of 1932 the United States fell to fourth place on the import list, furnishing only 4.4 per cent. The principal imports from the United States in 1931 were tractors, electrical machinery, factory and mining machinery, oil-refining equipment, construction and conveying machinery, and automotive equipment and parts. The Soviet Union was the leading foreign customer of the United States in 1931 for agricultural equipment, taking 67 per cent of all exports, and for industrial machinery, taking 28 per cent of all exports. Figures of the United States Department of Commerce for Soviet-American trade for the years 1925 through 1932 are given in the accompanying table.

## SOVIET-AMERICAN TRADE, 1925-32

Year	American exports to U.S.S.R.	American imports from U.S.S.R.	Total
1925 ...	\$ 68,900,000	\$13,200,000	\$ 82,100,000
1926 .....	48,900,000	14,100,000	64,000,000
1927 ..	64,900,000	12,800,000	77,700,000
1928 ...	74,100,000	14,000,000	88,100,000
1929 ..	84,700,000	22,500,000	107,200,000
1930 .....	114,356,000	23,839,000	138,195,000
1931 .....	103,669,000	13,206,000	116,875,000
1932 .....	12,600,000	9,600,000	22,200,000

THE BUDGET. Owing to the high degree of socialization in the Soviet Union, the growth of the budget reflects to a large extent the degree of economic progress. The first "firm" budget, that of 1924-25, balanced at 1,400,000,000 rubles. The budget for 1932 envisaged revenues and expenditures of 27,429,000,000 rubles. The budget for 1913 was 3,655,000,000 rubles (ruble equals \$0.51 at par). Over three-fourths of the budgetary revenues are now derived from the "socialized sector." The budget revenue structure for 1931, in millions of rubles, was: revenues from socialized sector, 15,871; funds provided by population, 2868 (including taxes, 1008, and national loans, 1581); miscellaneous revenues, 1715; total, 20,454.

Expenditures in the 1931 budget were propor-

tionately as follows: administration 1.9 per cent, army and navy 5.5 per cent, social and cultural 6.0 per cent, financing national economy 74.8 per cent, and other 11.8 per cent. Actual budgetary receipts and expenditures, in recent years, in millions of rubles were:

Year	Receipts	Expenditures
1927-28 .....	6,951	6,748
1928-29 .....	8,037	8,021
1929-30 .....	12,527	12,246
1931 .....	23,759	23,069

TRANSPORT. Total length of railways in 1931 was 81,000 kilometers (50,301 miles), compared with 79,934 kilometers (49,639 miles) in 1930. Railway operations in 1931 exceeded those set for 1932-33 in the original Five-Year Plan, and during the first six months of 1932 freight operations exceeded those of the same period of 1931 by 16 per cent. Freight carried in 1931 was 149.4 billion ton-kilometers, as compared with 133.9 billion ton-kilometers in 1930. In 1931 airplane lines in operation totaled 44,900 kilometers, or 27,883 miles (29,281 kilometers, or 18,184 miles, in 1930). Passengers carried were 23,000 (17,800 in 1930).

GOVERNMENT. A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. In December, 1932, the Council of People's Commissars (executive cabinet of the Government) was composed as follows: Chairman of the Council, V. M. Molotov; Vice-Chairmen of the Council, J. E. Rudzutak, V. V. Kuibyshev, A. A. Andreyev; Commissar for Foreign Affairs, M. M. Litvinov; Army and Navy, K. E. Voroshilov; Internal Supply, A. I. Mikoyan; Foreign Trade, A. Rengoltz; Transportation, A. A. Andreyev; Water Transportation, N. M. Yanson; Communications, A. I. Rykov; Finance, G. T. Grinko; Workers' and Peasants' Inspection, J. E. Rudzutak; Heavy Industry, G. K. Ordjonikidze; Light Industry, I. E. Liubimov; Lumber Industry, S. S. Lubov; Chairman State Planning Commission (Gosplan), V. V. Kuibyshev; Commissar for Agriculture, Y. A. Yakovlev; Labor, A. M. Tsikhon; Chairmen of the Central Executive Committee, U.S.S.R., M. I. Kalinin, G. I. Petrovsky, A. G. Cherviakov, Gazanfar Mussabekov, Netyrbay Aitakov, Faizulla Khodzhaev, and Maksim Nusratulla.

Joseph Stalin, General Secretary of the Communist party of the Soviet Union, while holding no governmental office beyond membership in the Central Executive Committee or congress, was the most powerful political figure in the country by virtue of his party leadership.

## HISTORY

INTERNAL DEVELOPMENTS. While grave internal problems still confronted the Soviet Union, the Soviet leaders had reason to view the formal conclusion of their Five-Year Plan at the end of 1932 with much satisfaction. A substantial base of heavy industry had been laid. The larger of the new plants, while still functioning imperfectly, were increasing their efficiency. During the three and a quarter years of the world depression the Soviet Union had increased its industrial output about 85 per cent. In agriculture the picture is not so clear. While there was a considerable expansion of acreage (about 19

per cent) under the Five-Year Plan, the grain harvests of both 1931 and 1932, though larger than the harvests before collectivization, were disappointing and left little surplus above bare needs. There was also a meat shortage in certain centres in the winter of 1932-33.

The Five-Year Plan was carried through at the expense of Spartan self-abnegation on the part of the general population. Personal luxuries, and many things on the border line between luxury and comfort, were ruled out. A number of necessities were rationed. This was in large measure due to the fact that the country was putting upwards of 50 per cent of the national income into new capital investment. Another factor was the emphasis on the development of heavy industry at the expense of the development of consumer's goods.

The unstable international situation and the threats of war against the Soviet Union in 1931 and part of 1932 were primary reasons for the preoccupation with heavy industry, and the establishment of economic bases in the interior, far from the border. Stalin made this clear in his report to the party leaders early in January, 1933. Admitting the shortage of consumers' goods, he added: "As it is, we have lifted the country for all time from its position as the object of the military designs of our enemies, such as China now is. That is why the party is shown to have been right in insisting on such speed in heavy industrial production. That is why the party was compelled to drive the country in order not to lose a day's peace for the U.S.S.R. It was not possible for us to wait."

Apparently the generally improved condition of Soviet foreign relations made possible a slackening of this intensive development. Tentative outlines for the Second Five-Year Plan, published early in 1932, indicated if anything an even faster pace than under the first plan. However, in his speech at the beginning of 1933 Stalin announced that during the new five-year period the industrial advance would be slowed to 13 to 14 per cent a year, that new construction would be undertaken at a more moderate pace, and that strenuous efforts would be devoted to perfecting management and technique, improving efficiency all around, and developing a more satisfactory system of distribution. The new plan formally began Jan. 1, 1933.

External handicaps during 1932 included the hostilities in the Far East, which caused an expensive diversion for the protection of the Soviet borders, and the sharp fall in commodity prices, which resulted in a decided drop in the value of Soviet foreign trade and a cutting down of orders for equipment. Internal problems included a transportation system stretched beyond its capacity; the deficiency of skilled workers, technicians and engineers for the new large enterprises; the labor turnover running to upwards of 100 per cent annually in heavy industry; defective management in a portion of the coöperative and even the state farms, complicated by sabotage among the peasants in certain villages. Still another, if less vital difficulty, was the overcrowded housing situation in cities swollen with the rapid industrialization.

Vigorous efforts were being made to meet these various problems. Work was being rushed on the most necessary additions to the transport system. Education and training for skilled workers and engineers were expanded to an extraordinary de-

gree. Various devices were tried to cut down the labor turnover. Industrial managers were forbidden to lure away labor from other plants. Attempts were made to attach penalties to habitual "floaters," the static workers receiving preference in matters of housing and food and other tangibles. The internal passport system for natives—still extant in the Soviet Union as in the Russia of the Tsars—was tightened up, both with the idea of reducing superfluous migrations and of clearing out many non-producers from the larger cities. Attempts were made to reduce the labor shortage by wholesale pruning down of white-collar workers in the offices of government institutions. Another device tried at the close of 1932 was designed to increase the number of women in industries in large cities. This was in the form of a decree restricting family food-allotments in childless homes where the wife had no outside employment.

In the case of agriculture, the Communist party made it plain at the beginning of 1933 that despite present difficulties there would be no recession from the programme of socialization. In the programme designed to carry the country through the period of shortage in farm products and to improve conditions for the future, measures of severe regimentation were mixed with reforms designed to ease conditions among the farming population.

The conduct of some of the collective farms revealed cases of gross maladministration and even active sabotage. The principals discovered were severely dealt with, with sentences of imprisonment, exile, and even death for a few conspicuous offenders. As a preventive measure the machine and tractor stations—there were some 2500 of these in 1932, each serving a group of collective farms—were given certain police powers similar to those of the G.P.U. (secret police). On the other hand the collectives and individual peasants were granted more initiative in disposing of their products in the open market, with restrictive provisions to protect the consumer against profiteering. Finally, a decree was announced changing the agricultural tax from a sliding scale based on the amount of productivity, determined after the crop was in, to a fixed tax for each farm, announced at the beginning of the season. This change removed a constant point of disaffection in the rural districts.

On the whole it might be said that while Soviet foreign policy held steadily to a "rightward" course, internal policy kept its face resolutely to the "left." This resolute clinging to the line of socialization in the face of difficulties, awoke a new "right" opposition in the party itself, or perhaps was made the excuse for a renewal of opposition by certain elements. In the fall of 1932 Zinoviev and Kamenev, the former head of the Communist International in its palmy days and the latter a lieutenant of Lenin's at the time of the revolution and for several years a cabinet officer, were expelled from the party along with a score of lesser lights. In December it was announced that the party had grown to over 3,000,000 members and that one of the periodical "cleansings" would begin forthwith for the weeding out of careerists, slackers, and other undesirable. The "cleansing" process began in the North Caucasus region, where the agricultural results had been particularly poor, and several hundred members were reported ousted. The sporadic heresies of 1932 were not regarded as be-

ing as important as the opposition movement of 1929-30, but they indicated some faltering in the party ranks in a period of stress.

**FOREIGN RELATIONS.** A notable improvement in Soviet relations with European countries was observed during 1932. It was marked by an expansion of the policy of concluding bilateral treaties of peace and non-aggression with neighbor countries. Such pacts were concluded as follows: Finland, signed January 21, ratifications exchanged August 9; Latvia, signed February 5, ratifications exchanged July 18; Estonia, signed May 4, ratifications exchanged August 18; Poland, signed July 25, ratifications exchanged November 27; France, signed November 29.

Previously five such treaties had been concluded: With Turkey in 1925; with Germany, Afghanistan and Lithuania in 1926; with Persia in 1927. Negotiations for a similar pact with Rumania were begun in 1931, but were impeded by the difficulty of finding a mutually satisfactory formula about Bessarabia, which is claimed by both countries. Litvinov, Soviet Foreign Commissar, proposed a non-aggression treaty to Japan in December, 1931, but the Japanese government held aloof during 1932.

The various bilateral pacts are similar in character and somewhat different in detail according to the problems peculiar to each instance. They are thoroughly explicit. They specifically renounce war as between the two countries concerned, they contain a pledge that no aid of any kind shall be given to a third power waging aggressive war on either of the parties, they pledge each party to refrain from participating in any treaty or agreement hostile to the other party. The treaties commit the signatories to arbitration for all disputes between them. They are accompanied by collateral agreements setting up the machinery for a continuous arbitral tribunal. Article V of the treaty with France contains the following clause:

Each of the High Contracting Parties undertakes to respect in all relations the sovereignty or dominion over all its territories as defined by article I of the present treaty, in no way to interfere in its internal affairs, and in particular to refrain from any action inclining toward incitement or encouragement of any kind of agitation, propaganda or attempts at intervention which would have the aim of violating the territorial integrity of the other party or of changing by force the political or social structure of all or part of its territory.

The conclusion of these agreements, particularly the signing of the treaty with France, materially relieved the uneasiness in the Soviet Union about a revival of the period of invasion. (See **POLAND** and **FRANCE** under *History*.)

Litvinov's concrete proposals for complete disarmament, and his alternative plan for progressive disarmament, presented to the Preparatory Disarmament Commission early in 1928, stemmed from this general policy of stabilizing the situation of the Soviet Union. The general disarmament proposals were a natural extension of that policy. The sessions of the Disarmament Conference of 1932 at Geneva found Litvinov still reiterating his proposals. See **DISARMAMENT**.

After Japanese armies invaded Manchuria in the fall of 1931, Soviet-Japanese relations grew increasingly more precarious, especially when Japanese military operations were extended to the northeastern boundary, close to the Soviet line, and a considerable agitation arose in circles in Japan to the effect that manifest destiny

called Japan to the control of Soviet territory from Lake Baikal to Vladivostok. This situation caused an expensive diversion of Soviet war supplies and men to guard the Eastern frontier. The situation continued tense into the summer of 1932, by which time more moderate counsels prevailed in Japan and the strain was gradually eased. A concomitant irritant had been the disagreements over the Soviet-Japanese fisheries pact, under which with certain restrictions Japanese fishermen were permitted to operate in Soviet waters and Japanese canneries were allowed on the Soviet coast. Both sides set forth alleged violations of the existing agreement, which was due to be renewed early in the year. Amidst recriminations the renewal was delayed. The new agreement on terms acceptable to both sides was finally signed August 13 and it materially cleared the atmosphere. There was some renewal of the tension, however, when, at the end of November, the Japanese again advanced to the Soviet border on the west in their pursuit of the insurgent Chinese General Su Pin-wen and his army. General Su was forced to retreat with his army across the Siberian boundary, where they were interned according to established custom in such matters. The Japanese demand that they be delivered up as prisoners was not complied with, and this development was hardly a soothing influence as between the two countries.

Resumption of diplomatic relations between the Soviet Union and the Chinese government at Nanking was announced at Geneva by Litvinov and the Chinese delegate on December 12. Relations had been broken off since 1927. The Soviet press interpreted the resumption as a further step in the Soviet peace programme. See **CHINA** under *History*.

On October 17 the British government gave the required six months' notice of renunciation of the temporary trade agreement with the Soviet Union signed in April, 1930. The renunciation was an outgrowth of commitments made to the Dominions in the Ottawa Conference. However considerable irritation was caused in Moscow by the form in which J. H. Thomas, Secretary of State for the Dominions, announced the decision of the government to Parliament, particularly to his reference to protecting the Dominions from competition of "sweated goods." Since British exports to the Soviet Union had increased 45 per cent in the first nine months of 1932, as compared with the same period of 1931, the denunciation of the treaty caused unfavorable repercussions in powerful sections of British industry. Negotiations for a new treaty were begun in December.

The shift of Soviet orders abroad for machinery, equipment and tools from the United States to western European countries, which began in 1931, was reflected in a marked change in the Soviet import list in 1932. The extent to which Germany, England, and Italy had ousted the United States from the Soviet market was shown in the Soviet import figures for the first nine months of 1932, as compared with those for the same period of 1930. While imports from the United States fell off nearly 90 per cent during the two years, imports from Germany, England, and Italy increased 30 per cent. During 1932 the Soviet Union was Germany's best foreign customer. In 1930 the United States stood first on the Soviet import list. In 1932 it had slipped

back to fourth place, behind Germany, England, and Persia.

A marked increase in recognition sentiment was evident in the U. S. Senate. In December, 1932, the newspapers published a poll of this subject among members of the Senate Committee on Foreign Relations. Nine members were for recognition, five against, seven non-committal. The pro-recognition group included Senator Borah, Chairman of the Committee, Senator Swanson, who was scheduled to become Chairman after March 4, and Senator Robinson, Democratic floor leader in the Senate. The negative group (all Republicans) included three defeated for reelection in November. On January 8 the Washington *Star* published a poll of all the Senators in Washington who had been reelected in November. Of these 22 urged recognition, 9 were opposed, 20 were non-committal.

See SIBERIA; SOVIET CENTRAL ASIA; TRANS-CAUCASIAN SOCIALIST FEDERATED SOVIET REPUBLIC; POLAR RESEARCH; EXPLORATION. Also FINLAND, RUMANIA, TURKEY, PERSIA, MONGOLIA, and JAPAN under *History*; COMMUNISM; MILITARY PROGRESS; NAVAL PROGRESS; ROADS AND STREETS.

**UNIONS.** See TRADE UNIONS.

**UNITARIAN CHURCH.** A denomination believing in one God in one person and, consequently, in the purely human personality of Jesus.

The one hundred and seventh annual meeting of the American Unitarian Association was held in Tremont Temple, Boston, May 24, 1932. According to latest available statistics, the denomination had 419 churches, 372 of which were active; 136,204 members; 3170 Sunday school officers and teachers, and 20,823 pupils. The denominational publications are the *Christian Register* (weekly) and the *Unitarian News Letter*. The officers of the association in 1932 were: President, the Rev. Louis C. Cornish, D.D.; secretary, the Rev. Walter R. Hunt, D.D.; treasurer, Parker E. Marean. Headquarters, 25 Beacon Street, Boston.

**UNITAS FRATRUM.** See MORAVIANS.

**UNITED BRETHREN IN CHRIST, CHURCH OF THE.** A denomination which resulted from the religious awakening of Philip William Otterbein, Martin Boehm, and their coworkers. Formally organized in Frederick, Md., in 1800, its theology is Arminian, while its beliefs are those of the earlier evangelical denominations.

The church is divided into 33 annual conferences, including those in China, Japan, the Philippines, Puerto Rico, and West Africa. In 1932 there were 1648 charges, 2960 organized churches, 1831 active ministers, 413,804 church members, 2845 Sunday schools with an enrollment of 420,994, including teachers and officers. The amount raised by the church for all purposes in 1932 was \$4,531,839. The net increase in church membership for the year was 4397.

The church maintains the following educational institutions: Bonebrake Theological Seminary, Dayton, Ohio; Otterbein College, Westerville, Ohio; Lebanon Valley College, Annville, Pa.; Indiana Central College, Indianapolis, Ind.; York College, York, Nebr., and Shenandoah College, Dayton, Va.

The *Evangel* is the paper published by the Women's Missionary Association; *The Religious Telescope* is the official paper of the church; and *The Watchword* is the young people's paper. The

United Brethren printing establishment and church headquarters are in Dayton, Ohio.

**UNITED CHURCH OF CANADA.** See CANADA, UNITED CHURCH OF.

**UNITED KINGDOM.** See GREAT BRITAIN.

**UNITED STATES. AREA AND POPULATION.** As determined by revised maps, the area of the 48 States and District of Columbia, in 1930, was 3,026,789 square miles, exclusive of oceans, the Gulf of Mexico, and the Great Lakes; non-contiguous lands (Alaska, Hawaii, the Philippine Islands, Guam, the Panama Canal Zone, Puerto Rico, the Virgin Islands, and American Samoa) had an aggregate area of 711,606 square miles; the total area of the Union and the outlying territories and possessions of the United States was 3,738,395 square miles.

The population of the continental United States (understood as exclusive of Alaska and the Canal Zone), as determined by the Fifteenth Federal Census, was 122,775,046 on Apr. 1, 1930. According to the previous census it had been 105,710,620 on Jan. 1, 1920. The respective populations of States and of territories or possessions may be found in the articles on each.

**AGRICULTURE.** See AGRICULTURE; AGRICULTURE, U. S. DEPARTMENT OF; sections on *Agriculture* under the various States; and articles on CORN, WHEAT, ETC.

**INDUSTRY AND COMMERCE.** The distinctive feature of commercial activity during the year was the almost unprecedented extent of its connection with the proceedings of the Federal Government. Activity, as indicated by loadings of freight cars and by the prices for wholesale commodities, reached the lowest stage of the two and a half years of depression early in July. See BUSINESS REVIEW; UNEMPLOYMENT.

**FOREIGN TRADE.** Both imports and exports declined for the year as a whole, in much the same manner in which they had declined for 1931. Again, in 1932, imports fell off, proportionately, from the previous year's totals, somewhat more severely than did exports. In terms of dollar totals, the exports and imports of 1932 did not come by any means as far short of those of 1931 as these, in their turn, had come short of those of 1930; the exports of 1932 were about \$806,000,000 less than those of 1931, while those of 1931 were \$1,420,000,000 below those of 1930; and the imports of 1932 lacked some \$768,000,000 of the total of 1931, whereas those of 1931 lacked fully \$971,000,000 of the total of 1930. But in percentages the losses for the respective years more nearly conformed: as to exports, 1932 ran some 33½ per cent below 1931, which in turn ran about 37 per cent below 1930; as to imports, 1932 lacked approximately 37 per cent of 1931, which in turn lacked some 32 per cent of the total for 1930. On the basis of these percentages exports dwindled somewhat less and imports somewhat more, for 1932 than for 1931. A fairly well sustained export demand for American cotton and specially negotiated exports of grains by the Farm Board were credited with some part in helping keep the total exports of 1932 from greater shrinkage; exceptional exportation to Japan was also reported.

Exports of merchandise exceeded imports, for 1932, by some \$295,212,000; this total was nearly 14 per cent below the corresponding "favorable" balance of the country's foreign trade in merchandise for 1931, which totaled \$333,654,000. For merchandise exports and imports, by months,

during 1928-32, see *FINANCIAL REVIEW* under *International Balance*.

Imports of gold totaled \$364,315,000 for 1932; exports, \$809,528,000. The chief exportation of gold was in May and June.

**MINERAL PRODUCTION.** The article *MINERAL PRODUCTION IN THE UNITED STATES* gives the latest available official figures for mineral production in the United States. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

**RAILWAYS.** See separate article on *RAILWAYS*.

**SHIPPING.** See articles on *SHIPPING* and *SHIP-BUILDING*.

**FINANCE.** See the article on *PUBLIC FINANCE*.

**EDUCATION.** See the articles *EDUCATION IN THE UNITED STATES* and *UNIVERSITIES AND COLLEGES*. Separate articles on the most important universities and colleges also are given under their respective titles. Sections on education are included in the articles on the several States.

#### ADMINISTRATION

**THE PRESIDENT.** From the opening of the year until his active entrance into his campaign for reelection in October President Hoover was chiefly occupied with efforts to carry on his plan for checking economic depression. He held throughout to the guiding idea that liquidation and deflation had been overdone, that the economic emergency was due largely to "unjustified fear" and that conditions could be corrected if "timid capital" were mobilized. He altered in some respects the policy that he had previously followed: the effort to stimulate ordinary credit, as evidenced in his promotion in 1931 of the National Credit Corporation, gave way to the device of a great Government-owned institution, the Reconstruction Finance Corporation, for the direct dispensation of funds from the Treasury as loans to divers sorts of enterprises that could not borrow elsewhere; he abandoned the attitude of equanimity with which he had met the advent of Federal deficits in his message of December, 1930, and on the contrary laid great and repeated stress on the need to reestablish budgetary balance.

The chief points of the financial-economic policy that the President followed throughout 1932 were: the stimulation of finance and industry through grants of credit; the prosecution of public works as the means to provide in part for those who lacked employment; the reduction of the Government's running expenses by elimination of waste, particularly by consolidating bureaus and offices; the reduction of armaments through international agreement, with a view to saving; the increase of taxation to an extent sufficient to bring the budget in balance. He avoided the counsels of many partisans of international economic action, that the United States consider reducing the debts owed the Treasury by foreign governments, as the means toward mending the collapse of international trade, or that he initiate an international economic conference. An invitation to a future international economic conference sponsored by the British government was, however, accepted on August 2, with the understanding that there be no discussion of the course of the United States as to war debts, reparations, and tariffs.

President Hoover communicated many times

with Congress by the regular means of Presidential messages. Also, he gave out numerous public statements during the sittings of Congress setting forth his views. His public statement of May 13, called forth by a demand of the presidents of the seven leading railway brotherhoods that he take action to help foreign trade by dealing with the foreign governments' debts, set forth the doctrine that conditions demanded the use of emergency powers; that these were already being used and were to be extended, in the activities of the Reconstruction Finance Corporation; that within the limits he had proposed they did "not affect the budget"; that he "had no taste for any such emergency powers in the Government," but that they constituted a necessary "temporary mobilization."

Mr. Hoover set an example in administrative economy on July 15 by directing that his own salary be cut by 20 per cent, or \$15,000, at the same time the salaries of Vice President Curtis and of the nine members of the Cabinet, by consent, were reduced 15 per cent. These reductions coincided with the imposition of the furloughs without pay which reduced the yearly remuneration of Federal employees by one-twelfth. In conflicts with Congress Mr. Hoover sought repeatedly to make it conform to his economic policies. When the revenue measure was stalled in the Senate he took the unusual step of going to the Senate chamber in person on May 31 and addressing that body on the need of prompt and united action; the move was successful, the Senate voting the tax bill in the same day's session. On May 5 he made an attempt to dominate the House of Representatives by sending to Congress a message reproving the House for its course, particularly on the economy and emergency relief measures. In that case he was less successful, as the Congress obliged him later to accept measures not wholly in consonance with his demands.

*Treatment of Bonus Army.* The President ordered on July 28 and a mixed force of troops of the U. S. Army summarily carried out, under command of Gen. Perry L. Miles, the eviction from Washington and from Anacostia Island of the so-called Bonus Army. This was a body of war veterans from many parts of the country, chiefly needy, that had gathered at the Capital, ostensibly to urge Congress to enact a law for the immediate payment of the bonus certificates, and presumably also in the hope of finding sustenance not available to them in the places where they resided. They had been passed on from State to State by railroads or towns anxious to get rid of them and so had ultimately reached Washington, where they were organized under their own commanders and were fed largely by private donations. They were unable to influence the Senate to vote the bonus payment, but after the adjournment of Congress they remained in Washington. Money advanced by the Government to take them home induced a great number of them to depart, but a group estimated to number some 4000, including some women and children of veterans' families, remained. Part of the group, having taken possession of vacant buildings on Pennsylvania Avenue to be torn down by the Government, were ordered to leave and some of these resisted eviction by the District police. In the resulting riot at midday on July 28 one veteran was shot to death by police and several other veterans and police were wounded. The troops were ordered out at

3 p.m. and drove all the veterans from the city and from the Anacostia camp, sabres and tear gas being used and a small number of veterans receiving sabre cuts. Sympathizers with the veterans accused the President of having used undue severity. The Administration sought to prove that the situation had got out of the hands of the District Police, and that the veterans were in control of a strong radical and criminal element. Pelham D. Glassford, chief of the District police, denied that he had demanded military help and stated that he could have continued to handle the situation. President Hoover personally defended the act of expulsion in a press statement of July 29, as a necessary use of his authority to prevent "mob rule."

*Conference with President-Elect.* Shortly after his defeat in the National election President Hoover sent President-elect Roosevelt on November 13 an invitation to confer with him at the White House on the policy to be pursued with regard to foreign governments' applications for suspension of the payments of December 15 on the war debts, and likewise with regard to any other matters calling for continuity of policy. Governor Roosevelt accepted but made the reservation that the "immediate question" as to the payment on the war debts must rest on the responsibility of those actually vested with authority.

There resulted a conference of some two hours, held on November 22, of which the details were not divulged.

*Proposal of a War-Debt Commission.* In a special message sent to Congress on December 19 President Hoover recommended prompt re-examination of the debt agreements with governments that had paid or sought to pay sums due on December 15. For this purpose he proposed that Congress create a commission, which was to include leading Democrats in Congress and outside of it, as well as the Government's representatives to forthcoming international conferences on economics and on disarmament. The proposal came to nothing, as the support of the next Administration, which Mr. Hoover requested of President-elect Roosevelt, was refused by the latter, who expressed fear lest the proposed scheme of collaboration would commit his Administration as to policies.

**FOREIGN AFFAIRS.** The chief foreign dealings of the Administration had to do with the Manchurian situation, with the World Conference on Disarmament, at Geneva, with the war debts owed to the Treasury by foreign governments and the germane matters of German reparations and American trade relations, and with a proposed deep waterway down the St. Lawrence.

*Manchuria.* On January 7, moved by the extension of the Japanese occupation of Manchuria to the borders of China proper, Secretary of State Stimson addressed a note to the governments of China and of Japan declaring that the United States neither admitted any de-facto situation nor would recognize any agreement between those governments, in particular as to the integrity of China, that would impair the treaty rights of the United States, as embodied in the "open-door" policy; further that the United States would not recognize "any situation, treaty or agreement which may be brought about by means contrary to the covenants and obligations of the Pact of Paris." This declaration launched among actual international relations the so-

called "Stimson doctrine," which in its general application signified that a government's territorial acquisitions, if subsequent and contrary to the provisions of the Paris pact of 1928, were not to be recognized. See JAPAN under *History*; LEAGUE OF NATIONS; PEACE.

*Armaments.* The United States sent a delegation to the conference on disarmament which assembled at Geneva in January. President Hoover instructed this delegation to present proposals intended to reduce the arms of all nations by one-third of each nation's excess of land armaments over the "police component" or force indispensable for maintaining civil order, for which the relative size of the German army was to furnish the basis. See DISARMAMENT.

*War Debts.* Dealings with the subject of foreign-government debts owed the Treasury were of two sorts: those concerning the postponement of payment of annuities, and those concerning modification of the agreed sums to be paid. As to the former sort, the Government concluded with Great Britain and other debtor governments, toward the end of May and on the eve of the Lausanne Conference, agreements whereby the debtors whose payments had been postponed for a year by the Hoover moratorium of 1931 agreed to make the postponed payments serially over 10 years, with interest at 4 per cent. See REPARATIONS AND WAR DEBTS.

The subject of foreign taxation affecting Americans was allied to that of foreign payments to the Treasury, as foreign governments indebted to the Treasury felt impelled to adjust their financial balances with the United States in part by this means. Ambassador Edge was reported on April 27 to have signed an agreement with the French government whereby the latter was to modify its system of "double taxation" on the profits of American-owned French subsidiaries, to the extent of allowing such enterprises the alternative of diverting profits out of the country by paying a profit tax of 15 per cent and a dividend tax of 10 per cent. Mr. Edge also carried on negotiations to effect a new commercial treaty with France, seeking to improve the position of French imports from the United States as limited by the existing system of French import quotas.

*December War-Debt Payments.* The British and French Ambassadors presented notes on November 10 and 11, immediately after the National election, requesting that the United States allow postponement of the payments due December 15 on account of the war debts and a review of the agreements on these debts. A memorandum from the Belgian government to the same effect followed these on the 15th. The President, after a conference with President-elect Roosevelt, of which the details were not published, issued a statement on November 23, repeating the doctrine that the question of the war debts must be treated separately from that of German reparations, pointing out that Congress alone could alter the debt agreements, recalling that Congress had by resolution declared against any cancellation or reduction, stating the President's own opposition to cancellation, declaring that no facts had been presented by the debtor governments to justify postponement of the payments of December 15, but leaving specifically open to consideration a proposal that any such payments be made in foreign currencies, in the event of "extraordinary circumstances" impeding the

necessary transfers into dollars; the President also expressed the belief that Congress should authorize the creation of an agency to discuss war debts and germane matters with the representatives of the governments affected.

Secretary of State Stimson, in partly identical notes to the British and French Ambassadors, under date of November 25, stated that the President was prepared to recommend to Congress that it constitute an agency to examine the whole subject, but that with regard to suspension of the approaching payments no facts had been submitted by the applicants, such as could be submitted to Congress for action to that end.

A note delivered by the British Ambassador on December 1, in reply, reviewed at length the subject of the war debts as affecting Great Britain's economy and the conditions of international trade; cited the fall of British trade with the United States; pointed out that under the existing American tariff British exports to the United States had fallen far below the amounts necessary to help meet the debt payments; and alluded to the prospect that if the United States should resume collection of payments Great Britain in turn might exact payment from her own debtors and thus bring about the resumption of claims for reparations from Germany. A French note, delivered on the 2d, represented the importance of enabling France to continue assistance to European recovery, by not impairing her gold position through a continued drainage by payments to the United States; cited the Hoover-Laval statement of Oct. 25, 1931, as committing the President to recognition of the possible need of some further agreement, succeeding the Hoover moratorium, with regard to "inter-governmental obligations"; and declared that strict application of the war debt agreements "would result in creating further chaos and poverty throughout the world." A Belgian note of December 7, advancing many of the arguments in the British and French notes, declared that Belgium, if required to pay her intergovernmental debts, did not see how to "avoid turning to her own debtor," Germany.

Secretary Stimson, in turn, delivered to the British Ambassador on December 7 a note reiterating that the Administration found no possibility of postponing the debt payment of December 15, but alluded to possible means to obviate payment in dollars; it was represented that the President might consider permitting a review of the subject of the British debt at a coming Economic Conference. A note to the French government renewed demand for the French payment due on December 15. A British note of December 11 declared intention to make the payment of December 15 but proposed the subjection of this payment to later adjustment by conference, in any final settlement. The State Department replied, refusing the United States' assent to this proposal. The British payment was made nevertheless. The French ministry, endeavoring to adopt the British course, was overthrown by a vote of the French Chamber, which passed a resolution to withhold payment, in view of the American reply to the British note. Six governments, Great Britain, Italy, Czechoslovakia, Finland, Latvia, and Lithuania, met their payments of December 15; five, France, Belgium, Poland, Estonia, and Hungary, did not. See REPARATIONS AND WAR DEBTS.

*Treaty with Canada.* A treaty with Canada,

for "ensuring the completion of the St. Lawrence waterway project," was executed at Washington on July 18. It adopted the general outline of the recommendations of the International Joint Commission and provided for a system of works inclusive of the deepening of the St. Lawrence, locks and power plants at the International Rapids, the already effected Canadian enlargement of the Welland Canal, and deepened channels in the Great Lakes. See CANADA under *History*.

The treaty thus affected the disposal of water-power sites on the border of New York State, to which the government of that State asserted that it and not the United States held the effective rights, and as to which the State had under consideration plans of its own. Governor Roosevelt, prior to the conclusion of the treaty, had repeatedly urged the President that the State authorities have an opportunity of entering the negotiations before the treaty should be drawn. To the last of these requests President Hoover replied by letter of July 10, in effect, that if a treaty were concluded and ratified, then the domestic questions that arose must be settled by Congress, and that the President had no authority to enter upon agreements in respect of such domestic questions. After the execution of the treaty the Power Authority of New York State, in a published letter of July 20 to Governor Roosevelt, charged "direct violation of repeated pledges of the State Department to the effect that every effort should and would be made to reach an understanding with New York before the treaty was signed," and cited a letter of Nov. 3, 1931, from Secretary of State Stimson, containing what was submitted as an implied promise to that effect. The treaty was placed in the hands of the Senate's committee on foreign relations shortly after the adjournment of Congress.

For developments in intervention policies of the United States in Latin America, see NICARAGUA, SALVADOR, HONDURAS, HAITI, CUBA, and LIBERIA under *History*.

**HOME LOAN BANK SYSTEM.** The organization of this system of banks, as provided by enactment (see *Congress*), started with the President's appointment on August 6 of the members of the Home Loan Bank Board, the system's supervising body. Franklin W. Fort of New Jersey was made chairman of the board; William B. Best of Pennsylvania, Dr. John M. Gries of Ohio, Nathan Adams of Texas, and M. Morton Bodfish of Illinois were named members; the last two were Democrats, the rest Republicans. The stocks of the several Home Loan Banks, 12 in all, were offered in September for subscription by the institutions that were to become affiliated with the system.

Chairman Fort in the meanwhile arranged with the Controller of the Currency, as to the cases of National Banks, and with the Superintendents of Banks in the greater part of the States, as to institutions under State laws, that the receivers of closed banks be instructed to delay proceedings in foreclosure for 60 days, in order that there might be time for the new system to come into operation and make efforts to take up mortgages of homes on which foreclosures impended. The formation of the system did not prevent a widespread prevalence of foreclosure proceedings late in the year.

**FARM BOARD.** The Farm Board was shorn of a

substantial part of its resources by an act of Congress giving part of its holdings of wheat and cotton to be used for the sustenance of the needy, by the Red Cross; the act made no appropriation for the repayment of the value of the goods thus bestowed. The Board did not resume its former aggressive efforts to manipulate the markets for wheat and cotton. It followed out a programme of selling, during the year, 650,000 bales of its cotton holdings for export and sought to sell 15,000,000 bushels of wheat to China, with financing provided by the terms of the Emergency Relief Act, through the Reconstruction Finance Corporation; difficulties in obtaining this credit held back the completion of the sale up to late in December. The Farm Board disposed of a large quantity of wheat to Brazil, taking coffee in barter.

**RECONSTRUCTION FINANCE CORPORATION.** This body (for the creation of which see under *Congress*) was not strictly speaking a part of the Administration, but a separate Government-owned corporation, functioning independently of the Administration's control save as affected by the *ex-officio* element in the membership of its board of directors. It was organized on February 2, with Charles G. Dawes as its president and Eugene Meyer, governor of the Federal Reserve Board, as chairman of its board. Its four appointed directors were, in addition to General Dawes, Harvey C. Couch of Arkansas, Jesse H. Jones of Texas, and Wilson McCarthy of Utah. *Ex-officio* directors were Secretary of the Treasury Mellon (Under-Secretary Mills as alternate), Eugene Meyer, and Farm Loan Commissioner Paul Bestor. Later, under the provisions of the Emergency Relief Act, Bestor and Meyer were dropped from the directorate, Atlee Pomerene of Ohio was appointed director and chairman of the Board, and Gardner Cowles of Iowa was made a director. The President's choice, late in July, of Pomerene for chairman placed a prominent Democrat in the chief position and gave the Democrats four of the board's seven places, thus putting the Corporation chiefly in Democratic control. General Dawes resigned from the Corporation on June 6 to head a banking institution in Chicago, the Central Republic Bank and Trust Company to which the Corporation shortly afterward, at the end of June, authorized loans totaling \$90,000,000. He was succeeded by Charles A. Miller of New York, who became president of the Corporation in August.

Early in its proceedings the Corporation created regional committees to collaborate with it, particularly in the matter of assisting the smaller banks. It promptly began to draw on the Treasury, both against its debt obligations and by selling blocks of its authorized capital stock. By June 30 it had made or authorized 5084 loans to 4196 institutions, and to a total of \$1,054,814,486, of which \$805,150,007 had actually been paid out and \$76,448,199 had been repaid. Of the total of loans authorized, \$642,789,313 was to some 3600 banks; to railroads and railroad receivers, \$213,882,724; to insurance companies, \$63,465,500; to building and loan associations, \$52,484,923.

While it was not necessary under the law that the Corporation sell its own paper to the Treasury, no effort was made to dispose of it otherwise. The Treasury took all its tendered debentures and paid for them in cash raised by the sale of direct short or medium-term paper of the

United States. The Emergency Relief Act greatly increased the authorized debt of the Corporation in July and likewise the scope of its duties to lend to divers borrowers. In conformity with that act the Corporation began in August to submit to the clerks of Congress monthly reports including lists of borrowers, not retroactive from the date of the act. The Clerk of the House published the first of these lists in August. In September, he held back from publication for a time the second list, on representations from Mr. Pomerene that the previous publication had done harm to banks disclosed as borrowers; but the list was made public October 7. As a whole, the loans to banks helped to bring about, during the first half of the year, a great reduction in the current number of bank suspensions, month by month.

In lending to railroads the Corporation acted only after the Interstate Commerce Commission had approved the companies' applications. The Commission proved a severe censor. It conditioned a loan to the St. Louis and San Francisco system on bondholders consenting to take income bonds in place of certain fixed return bonds. It scaled down the request of the New York, Chicago and St. Louis for \$20,000,000 to meet an issue of notes maturing on October 1 to one-fourth of that amount, to be granted only on condition that the note holders consent to extend the remainder of the debt; there resulted on October 1 a default of principal, the necessary number of consents not forthcoming, and on October 3, receivership proceedings were started. The Commission, moreover, opposed grants of loans to railroads for the repayment of money that they had borrowed from banks, holding that the banks should in such cases extend. The Corporation itself, in dealing with loans to States in the latter part of the year, followed the principle that a State must have exhausted its own resources for aiding its destitute. The greater part of the loan sought by Pennsylvania was accordingly refused in September, despite Governor Pinchot's protest to the President. On the other hand, efforts were made to induce railroads to borrow money for new equipment or for improvements that would generate employment in the country.

One of the effects of the Corporation's activity was the gradual retirement of the National Credit Corporation from the field of lending to banks. This agency, a private corporation formed among the banks at the suggestion of President Hoover in October, 1931, had lent some \$143,000,000 to 560 banks up to the end of January; by the middle of April it had reduced its total to about \$80,000,000, and ceased to be an active lender.

**THE TREASURY.** About the time of the organization of the Reconstruction Finance Corporation Andrew W. Mellon, who had been Secretary of the Treasury in four successive Administrations, resigned the post, and was appointed Ambassador to Great Britain. Under-Secretary Ogden L. Mills was appointed to succeed him as Secretary. Mr. Mills carried on the policy of Mr. Mellon, in meeting current deficits by issues of Federal obligations of short or medium term, and in renewing the demand for taxes sufficient to balance the budget, with the exception of the yearly statutory charge for the retirement of bonds. The great and frequent issues of Federal debt, needful to meet the demands of the Reconstruction Finance Corpora-

tion, were helped at first to find a market by the systematic purchase of Federal securities at \$100,000,000 weekly by the Federal Reserve Banks. About the middle of the year banks generally became buyers and it grew easy to dispose of new Federal issues at low rates of interest, for terms up to a year or more. The result was that the holdings of Federal securities, among the reporting member banks of the Federal Reserve system, increased by \$771,000,000 between July 6 and the end of September, banks tending to put a great part of their assets into this form of investment.

**Deficit.** For the fiscal year ended on June 30 the Treasury showed a deficit of \$2,885,000,000, as stated by Secretary Mills on July 1. See PUBLIC FINANCE.

Secretary Mills, in his annual report, published December 7, accordingly reduced the Treasury's estimate of revenue for the fiscal year 1933 to \$2,624,000,000, from \$3,098,000,000 as fixed in May. The Treasury's deficit at the close of the fiscal year, without allowance for possible further fiscal legislation, was forecast as approximately \$1,146,000,000 plus \$425,569,000 of statutory expenditure for the retirement of public debt, and on the supposition that some \$268,594,000 due on foreign-government debts were paid in full.

For the fiscal year 1934, total revenues were estimated as \$2,949,000,000 on the basis of existing legislation and taking for granted full payment of some \$328,743,000 to come due in that year on foreign-government debts. Consequently, on the presumption that the Federal tax on sales of gasoline be prolonged through the year, by enactment, and that economics recommended in the President's budget message be effected, a deficit of some \$170,000,000, exclusive of statutory debt retirement to an approximate \$534,000,000, was forecast. The report, however, hedged on estimates, declaring them "still qualified by major uncertainties . . . primarily because there is little to indicate the rate at which recovery will take place."

**POST OFFICE.** For the fiscal year ended June 30, 1932, the postal deficit greatly exceeded that of any other recent year. Its size was due to lower postal revenues, offset only in small part by reduced expenditure. Expenditure for the fiscal year was \$793,722,534 (1932), as against \$802,529,573 (1931); revenue fell to \$588,171,923 (1932), from \$656,463,383 (1931); the consequent gross deficiency rose to \$205,550,611 (1932), from \$146,066,190 (1931). It was partly made up of non-remunerative items, chiefly subsidies to shipping and aviation; net of these charges, the yearly deficiency was \$152,246,188 (1932), as against \$98,018,882 (1931). A reduction of the postal service's working week for employees, to 44 hours, from 48, which took effect at the start of the fiscal year, operated against greater reduction of expenditure. The legislative economies and postage increases of 1932 came too late to affect the results for the fiscal year, but a smaller deficiency for the fiscal year 1933 was expected.

**VETERANS' ADMINISTRATION.** During the fiscal year ended June 30, 1932, according to the yearly report, there occurred a material increase in the number of all persons receiving from this branch of the Administration either pensions or other direct money benefits. The total of such recipients, 1,598,080 at the end of the fiscal year, was

248,268 higher than a year before and 519,036 higher than at the close of the fiscal year 1930. Among them were 1,145,116 receiving such benefits by reason of the World War; this element constituted 72 per cent of the total for all wars, as of June 30, 1932, as against 56 per cent for June 30, 1930. The report drew attention to the possibility of further heavy costs to the Government from those claiming benefits under present acts and recommended extensive review of the programme of veterans' relief.

Apart from those receiving monetary benefits, the number of veterans receiving care at Federal expense in hospitals was much affected by additional admissions of those suffering from disabilities not connected with service under the flag. While the proportion of such admissions for the whole period since their authorization in 1924 approximated 60 per cent of all admissions, the proportion for the fiscal year ended June 30, 1932, was 79 per cent.

While the pension system had not been applied specifically to cover service in the World War, payments on account of pensions continued on a great scale. The total paid since 1790 attained \$8,636,487,623, of which more than \$7,500,000,000 had been paid on account of the Civil War. There were on the pension lists at the end of the fiscal year six widows and one daughter of men who had served in the War of 1812; 31,072 Civil War veterans, as against 39,426 on June 30, 1931; 478 Mexican War widows; 196,541 veterans and 36,802 veterans' widows or children of the Spanish-American War. Disability compensation was being paid to 328,658 World War veterans; disbursements thereby were \$189,540,380 for the year; 97,448 veterans' dependents received \$36,715,575 compensation.

**INTERSTATE COMMERCE COMMISSION.** The Commission was required to pass on the applications of distressed railroad companies for loans from the *Reconstruction Finance Corporation* (q.v. under UNITED STATES), and adopted a policy calculated to keep such loans, where required to meet the companies' junior maturities, to the minimum, even to the point of requiring concessions from the creditors in such cases as that of the St. Louis and San Francisco, and the New York, Chicago, and St. Louis. The Commission took no active part in the negotiations of the companies, collectively, with their unionized workers for wage reductions, which resulted in a general reduction of such wages by 10 per cent for one year from February 1, later extended for 9 months more, by further agreement in December.

**Eastern Consolidations Approved.** The Commission rendered a decision on July 21 (Commissioners Eastman and McManamy dissenting) approving with few exceptions the details of plan favored by the chief companies interested, for the consolidation of the railroads of the North Central and Northeastern sections, as far west as Chicago, and southward to the Ohio River, into four systems, to be dominated respectively by the New York Central, the Pennsylvania, the Baltimore and Ohio, and the Chesapeake and Ohio. The plan looked to the Pennsylvania's divesting itself of its holdings in New England. It was permissive, and left some important issues as to details to be settled by negotiation among the four dominant companies; furthermore, it left for future determination many matters affecting necessary financing and

the satisfaction of holders of securities in the lines to be absorbed. About 300 lines were affected.

#### CONGRESS

**SEVENTY-SECOND CONGRESS, FIRST SESSION.** The session, which had been interrupted for the year-end holiday, was resumed on January 4. It continued through July 16. During the intervening time it passed measures of great financial import. These were chiefly of an emergency character and followed the general policy of rendering the credit of the Federal Treasury and of the Federal Reserve banking system available to governmental and private enterprises in the United States that had been impeded by economic depression. To this end the Reconstruction Finance Corporation was created and, before the close of the session, its functions were enlarged, that it might act as the Federal intermediary in furnishing loans to distressed banks, railroads, State and local public works, State undertakings for the relief of the destitute, and to some types of companies unable to obtain proper credit from usual sources. The Federal Reserve Banks were permitted to increase the lawful proportion of their circulation to their gold holdings to such a degree as to render it possible to augment the circulation of the Federal Reserve notes by a maximum of some \$3,000,000,000 on the basis of the gold coverage held at the time. A revenue act greatly increasing and broadening the sources of taxation was passed. An economy measure was enacted, giving partial effect to the Administration's demands for retrenchment in the budget.

*Reconstruction Finance Corporation.* In financial scope the foremost of these measures was the Emergency Financing Facilities Act, creating the Reconstruction Finance Corporation. President Hoover sent a message to Congress on January 4 urging speed in the creation of this credit agency and of other expedients for economic relief that had been earlier recommended in his annual message of Dec. 7, 1931. The Senate's committee on banking and currency reported its bill to create the Corporation on the 6th; the House committee on banking and currency reported a similar bill on the 9th. Both measures were modeled on the outline of the President's recommendations. They were somewhat modified by amendments in the course of passage. Each house carried its measure promptly to passage, with relatively little debate, and passed it by a heavy majority of both parties: the Senate on January 11 by 63 votes to 8; the House of Representatives on January 15, by 335 to 55. Discrepancies in the two bills were few; they were removed by a conference committee. This committee removed a provision of the House that the notes to be issued by the Corporation be re-discountable by the Federal Reserve Banks; it accepted a Senate provision that \$50,000,000 of the amount to be raised by the Corporation should be made available to the Secretary of Agriculture, with which to make loans to farmers for the production of crops in 1932.

The bill, as finally signed by the President on January 21, created as a Federal body corporate the Reconstruction Finance Corporation; authorized it to issue \$500,000,000 of capital stock, all to be taken by the Federal Treasury; vested the management of the Corporation in seven directors, respectively the Secretary of the Treasury, the Governor of the Federal Reserve Board,

the Farm Loan Commissioner, and four Presidential appointees, not over four of the entire number to be of one political party; the appointee directors were to serve for terms of two years. The corporation was to exist for 10 years unless previously terminated by statute; it was empowered to lend on security to banks, savings banks, trust companies, building and loan associations, insurance companies, mortgage loan companies, credit unions, Federal land banks, joint-stock land banks, agricultural and livestock credit corporations, and, upon assets, to closed banks (the last to net over \$200,000,000 in all); also, with the approval of the Interstate Commerce Commission, to railroad companies and railroad receivers. In order to obtain funds for such purposes the Corporation was empowered to issue its obligations to the proportion of thrice the amount of its capital (i.e. to \$1,500,000,000). These were to bear the guarantee of the United States, and as an alternative to their public sale, the Secretary of the Treasury was empowered, in his discretion, to purchase them. Loans made by the Corporation were to run for not more than three years, but were to be renewable if the Corporation so chose. Provision was made for the Treasury's completing the liquidation of the Corporation after 10 years had passed.

*Emergency Relief Act.* Later in the session the demand became widespread that the Federal Government should do for State and local governments, for the relief of individual distress, for the stimulation of employment by credit for public and other construction, what it had done through the Reconstruction Finance Corporation for banks and railroads. This led to the enactment of the Emergency Relief measure, which greatly enlarged the functions of the Corporation and provided in all \$2,122,224,000, partly for direct expenditure on Federal public works but chiefly for loans through the Corporation. Before agreement on this measure was reached there occurred, between the Administration group and the Opposition, led by Speaker Garner of the House, the most serious conflict of views that the session produced.

President Hoover, in a conference with the Democratic and Republican leaders of the Senate, was reported to have proposed on May 12 legislation embodying his ideas for this great expansion of Federal aid. His reported plan was to authorize the Corporation to issue an additional \$1,500,000,000 of its obligations, and to lend of the proceeds \$300,000,000 to States for measures of relief, \$40,000,000 to help move agricultural exports and \$1,160,000,000 to diversify private and public enterprises. Eugene Meyer, who had become chairman of the Corporation, was credited with inspiring the President to favor the granting of loans by the Corporation to the large group of business corporations that could not obtain credit through ordinary banking channels. The idea was unpopular in Congress, which reflected a popular feeling that in the distribution of Federal credit, business and finance had gained precedence over the distressed individual. Senator Wagner, Democrat, of New York, sponsored a bill that would provide for lending to States \$300,000,000 to be applied to purposes of relief, for \$500,000,000 to be spent on public works, and for \$1,500,000,000 to be lent for self-liquidating projects and agricultural exports. This bill was introduced in the

**UNITED STATES**

Senate on May 25, with strong Democratic support. It was opposed by Secretary of the Treasury Mills, appearing before the Senate committee on banking and currency on June 2, on the ground that experience in undertaking great schemes of public works under special budgets in adverse times had proved this course unwise in other countries.

The House in the meantime considered yet another plan, embodied in a bill sponsored by Speaker Garner. This measure provided \$100,000,000 for direct Federal relief of the destitute, to be placed at the dispensation of the President; for a large programme of Federal public building; and for extensive lending to limited-dividend corporations, with which to erect housing. The House passed its measure on June 7. The Senate in turn passed the Wagner bill on June 23, without roll call and after decisively defeating a neutralizing amendment of Moses (Administration Republican) of New Hampshire. The two measures were reconciled in conference; the resulting bill provided \$2,100,000,000, as follows: For loans from the Reconstruction Finance Corporation to private and public enterprises, \$1,500,000,000; for Federal public works, to be financed by bond issues, \$300,000,000; for direct loans to the States on the basis of population, \$200,000,000; for distribution by the President on the basis of need, \$100,000,000. The President, calling the legislative leaders to the White House on July 5, reiterated the Administration's objections to the bill and sought to stop its passage. He failed to win the Democrats to his view and on the following day he issued a public statement, declaring in particular that a feature of the bill providing for loans to individuals, partnerships, corporations, States, and municipalities would make the Reconstruction Finance Corporation "the most gigantic banking and pawnbroking business in all history," that the bill "threatened the credit of the United States," and that the proposed "direct charitable gifts" of \$100,000,000 should not be made a responsibility of the President. Keen opposition sentiment was aroused. The conference bill was quickly passed on July 7 by the House, the vote being 202 (including 35 Republicans) for and 157 against; and on July 9 in the Senate, by 43 votes to 31, Republican Senators to the number of 14 supporting the measure.

The President promptly vetoed the bill on July 11. His veto message stated his foremost objection to be the extension of authority to the Reconstruction Finance Corporation to make loans to "individuals, trusts, partnerships, estates, corporations," etc., for what he termed "any conceivable purpose, on any conceivable security." As in his annual message of Dec. 9, 1931, he had himself proposed that the Corporation "make temporary advances upon proper securities to establish industries, railways, and financial institutions," to help "protect the credit structure and stimulate employment," his subsequent opposition was much attacked; but, Congress could not muster the strength against him to pass its bill over his veto. The two houses promptly voted altered measures from which the chief points of the President's objection had been removed. These bills were altered into conformity by conference. The resulting measure was passed by the House on July 15, by 296 votes to 48, and immediately after by the Senate. The

President signed it on July 21, notwithstanding his still holding minor objections to it.

The Emergency Relief Act, as thus enacted, provided that the Reconstruction Finance Corporation might make loans, to the total of \$300,000,000, at 3 per cent, to the several States and Territories, repayable with specified exceptions after 3 years, from the borrowers' annual Federal road apportionments; such loans to be made in the proportion of not more than 15 per cent of the total to any one borrower, and used for the purpose of furnishing relief or work to the needy. The act further empowered the Corporation to lend to States, or to their political subdivisions, or to public agencies or corporations, in order to help finance self-liquidating projects; to lend to private corporations for the construction of bridges, docks, and the like, of self-liquidating character; to corporations of legally limited return, for providing cheap housing; to borrowers seeking to sell agricultural surpluses in foreign markets; to "bona-fide institutions" organized under State or Federal laws, for the carrying and orderly marketing of crops and live stock. The total of the obligations that the Corporation might itself issue was raised, for these purposes, to 6½ times its capital stock, i.e., to \$3,300,000,000, or by \$1,800,000,000 above the original limit. It was required that the Corporation submit monthly to the chief officers of the two houses of Congress a report of operations, including a statement listing borrowers by name, with respective sums borrowed; this provision implied the right of either House to publish such lists, as actually the Clerk of the House proceeded to do in August. The act made no provision for general lending by the Corporation to business, but it permitted the Federal Reserve Board, "in unusual and exigent circumstances," to let any Federal Reserve Bank directly discount the paper of an individual partnership or corporation, if secured to its satisfaction. The directorate of the Corporation was altered by removing the Governor of the Federal Reserve Board and the Farm Loan Commissioner as *ex-officio* members and filling the places with additional appointee members.

Apart from these provisions for Federal lending, the act provided a total of \$322,224,000 from the Treasury to be expended in the construction of a list of authorized public works, wherein the chief item was \$120,000,000 for the Federal-aid highway programmes.

**Home Loan Bank Act.** The effort to combine the tender of financial aid with the stimulation of enterprise was extended into the field of home-mortgage loans by the passage of an act to create Federal Home Loan Banks. This act in its essentials carried out one of the proposals of Federal relief that the President had launched in the preceding autumn. Introduced in its original form in both houses as the Watson-Luce bill, the measure had the support of realty interests and of a considerable group that complained of the inability to borrow on mortgage. Couzens of Michigan, in the Senate, championed the sentiment that the measure must give assistance to actual mortgagors unable to renew and should not merely promote the issue of mortgages to the erectors of new homes. He moved for amending the measure in such fashion as to place the central control of the financing of home loans in the hands of the Reconstruction Finance Corporation. The Senate defeated his

amendment by 47 to 22 on July 12, and adopted the measure in the form providing for the creation of a separate system of home loan banks. The House had previously voted the measure (April 19) without material change. The Senate, however, did materially amend the measure by linking to it a measure introduced by Glass of Virginia, which was in the nature of a "rider," having to do with the National banks and not directly with the Home Loan Bank system; this amendment gave permission to National banks for the period of three years to issue their circulating notes upon the security of any outstanding bonds of the United States bearing interest at not over 3½ per cent, in the general manner that applied to notes issued under the old bonds bearing the circulation privilege. It was roughly estimated that this amendment created a potential bank-note inflation of about \$1,000,000,000. The measure was advocated frankly as designed to increase the volume of currency. Despite some hesitation over the currency rider, the President signed the measure on July 22.

As enacted, it provided home loan banks, not less than 8 nor more than 12, to be supervised by a Home Loan Board. Building and loan associations, savings banks and the like were to be permitted to become members of the system thus created, by affiliation with one of the Home Loan banks, each upon subscription of at least 1 per cent of the amount of its own holdings of loans on homes. Each home loan bank was to have authority to advance money to members and to non-members of the system, upon the security of home mortgages. The Secretary of the Treasury was directed to subscribe, on behalf of the United States, to any part of the stock of a home loan bank not subscribed by member banks, up to an aggregate maximum of \$125,000,000, and this amount was to be made available to the Treasury from proceeds of its subscriptions to the Reconstruction Finance Corporation's capital and notes. In addition to their capital the home loan banks were granted the power to borrow on bonds and debentures to be secured by eligible obligations of the institutions that had borrowed from them.

Thus they were to be enabled to lend to home-mortgage holding institutions against the latter's holdings and so to supply additional money for further home mortgages, to a total not specified. They were limited to lending on mortgages of an original term of not over 15 years, secured on realty of the value of not over \$20,000, and were further limited as to the percentage of the outstanding mortgage principal (not over 60 in any case) and to the percentage of the value of the real-estate security (not over 40 in most-favored cases) which their loans must not surpass.

**Revenue Act.** The exceedingly unfavorable position of the Treasury, of which the revenues were running to approximately half of expenditure, obliged Under-Secretary of the Treasury Mills to submit on February 9 to the House of Representatives' committee on ways and means the need of providing \$1,241,000,000 of new revenue. A revenue bill had been under consideration since the early part of the session. The Mills declaration rendered it requisite for Congress to find taxes to produce some \$455,000,000 more than had originally been estimated needful. This necessity brought about a ransacking

of the field of taxation, with particular attention to a sales tax.

Crisp (Democrat) of Georgia, acting chairman of the committee, introduced in the House on March 7 a measure representing the consensus of the Administration and of the Democratic leaders. It provided heavy increases in the income tax on persons in the lower income groups, in part indirectly by the reduction of exempt income; on the higher incomes, through greater surtaxes; and on corporations. It raised the tax on estates, taxed personal gifts, above a cumulative limit of \$100,000, with the exception of benevolent donations as listed, and provided a number of new miscellaneous taxes. Its salient feature, however, was a manufacturers' sales tax, imposing a payment to the Government in the proportion of 2¼ per cent on the price of sales of goods produced by manufacturers or other producers, with certain exceptions. These exceptions were chiefly of articles for export or further manufacture and of farm products. An equalizing tax at the same rate was to be laid on goods imported into the country. Manufacturers were to be placed under license, whereby compulsion to pay the tax was to be made operative.

Though the sales tax had been widely advocated by the Hearst press and by some other groups and could not be said to have come as a surprise, it roused a storm of opposition. Speaker Garner had expressed the intention that the House should pass the measure within a week. Opposition to it outside the House, however, was so promptly reflected within that this proved impossible. By March 19 the "sales tax revolt" had become violent in both party groups, the majority adverse to the scheme were mowing down the sales tax provisions one after another in the piecemeal consideration of the measure, and Crisp was compelled to plead on the floor for a respite in order that the members might "cool off and think." Five days later, none the less, the House rejected, by 223 votes to 153, the whole sales tax, upon which the framers of the revenue measure had depended to provide \$460,000,000 a year of the required total. Only 45 Democrats and 108 Republicans voted to support the sales tax, the rest totally disregarding their party leaders.

President Hoover sought to meet the collapse of the sales tax proposal by issuing a public statement on March 25, insisting that the budget must be balanced, and that this "must in the main be accomplished by an increase in taxation." What had at first been a revolt against the sales tax now took the form of what was currently called a movement to "soak the rich." Proposals designed to raise needed revenue regardless of their effect on large fortunes and the security of private capital found favor. An amendment to the bill, offered by La Guardia of New York, proposed that the tax on transfers of stock be raised to one-fourth of 1 per cent of the sale price in general and to one-half of 1 per cent in the case of short sales. Swing of California offered an amendment to raise the maximum surtaxes on personal incomes to 65 per cent, as against the ways and means committee's maximum of 40 per cent. The committee itself, following Speaker Garner's dictum that any tax would be better than no tax, brought forward an increase in the ordinary rate of first-class postage to three cents an ounce, from two cents. It also resuscitated the sales tax fragmentarily to

the extent of proposing imposts on sales of gasoline, matches, automobiles, furs, jewelry, beverages, etc., and on the rent of safe-deposit boxes. The Swing amendment to raise surtaxes was defeated, as was the proposal to legalize and tax beer containing alcohol up to the proportion of 2½ per cent. The revenue bill, shorn of the sales tax but containing the substitute amendments, was finally passed by the House on April 1 and sent to the Senate. The Treasury estimated it as likely to fall short by some \$88,000,000 of furnishing enough new revenue to meet the Government's needs for the ensuing fiscal year.

The finance committee of the Senate proceeded to prepare a measure differing in many and important respects. It was guided in part by a communication of Mr. Mills, who had succeeded Mr. Mellon as Secretary of the Treasury. In this letter Mr. Mills declared that he had sought to follow a suggestion of Senator Harrison to take the House bill, preserve "as many of its provisions as possible," and "eliminate the most objectionable ones." While the measure was in committee Long of Louisiana, echoing the anti-plutocratic bent of the House, offered a resolution on April 29 to instruct the committee to model the bill to prevent any person from receiving more than \$1,000,000 a year in income or more than \$5,000,000 in inheritance. Opposed by the Democratic leader, Robinson of Arkansas, Long dramatically resigned his committee appointments. The finance committee took a moderate bent, removing from the bill the LaGuardia tax on stock sales and substituting one at the flat rate of four cents a share. It included in the bill duties on imports of lumber, coal, mineral oil and copper, sought for protective reasons by domestic producers. It set higher rates of taxation on personal incomes both great and small, and put the rate for corporations at 14 per cent. It abandoned some of the manufacturers' excises of the House bill but added others of its own. As to checks, estate taxes, and first-class postage, it followed the House bill. Its measure was reported on May 9 and was declared to be designed to raise \$1,030,000,000. A Democratic minority of five of the committee reported adversely to the tariff features of the bill. The Senate's consideration of the bill was prolonged by a filibuster conducted by Long of Louisiana, by efforts of Tydings of Maryland to effect an amendment to permit 2.75 per cent beer, and by disputes over tariff features.

In voting on the provisions of the bill individually and on proposed amendments the Senate made few sweeping changes. It adopted provisions for tariff duties on imports of lumber, coal, oil, and copper, by votes of Republicans reinforced by more than a dozen Democrats. It rejected an amendment embodying the old plan of export debentures, brought forward as a counter move by the group that regarded higher tariffs as prejudicial to farming interests. It reinstated a number of the special excises that the Senate's committee had removed from the bill of the House. It defeated the proposal to legalize and tax 2½ per cent beer. Walsh of Massachusetts introduced an amendment for a sales tax such as had failed in the House, but LaFollette of Wisconsin and others of the anticapitalistic group threatened this proposal with a filibuster that would indefinitely delay the whole measure. President Hoover was impelled, by the resulting

situation, to visit the Senate Chamber in person on June 1, to declare that "an emergency had developed in the last few days" in the "continued downward movement of our economic life," which had been accelerated because of delay with the Federal financial programme; he urged immediate action in the Senate. Promptly following his behest the Senate, dropping the issue of the sales tax, voted its tax measure on the same day by 72 votes to 11.

A conference committee hastily reconciled the measures of House and Senate, without reinstating the more radical features of the House's bill. The House passed the resulting measure on June 4 without record vote and with little debate. The Senate gave the measure final passage on June 6, by a vote of 46 to 35, the majority vote including 16 Democrats. The President signed the measure on the same day. For provisions of the Revenue Act see TAXATION.

The measure was estimated by the Treasury to produce \$1,118,500,000 a year. Of this, \$178,000,000 was increase in individual and \$41,000,000 in corporate income taxes; a provision in the individual income tax law limited security losses to such amount as would offset security gains, and this provision was expected to improve revenue by \$80,000,000. Changes in the income tax on corporations were to add revenue of \$41,000,000. The excises on certain manufactures were to yield \$450,500,000, of which the tax on gasoline was to provide \$150,000,000, that on brewers' wort \$82,000,000, that on electric energy \$39,000,000, those on lubricating oils and tires \$33,000,000 each, and that on automobiles \$32,000,000. The tax on checks was to bring \$78,000,000, that on admissions \$42,000,000 of new money, that on telephone, telegraph, and cable messages, \$22,500,000, that on stock sales \$20,000,000, additional. A rise of one cent in the postage rate by the ounce for first-class matter was included in the act, though not strictly speaking a tax; it was to produce \$160,000,000. The estimates of yields, while official, were by no means accepted universally as sure guides when they were issued. The tariff duty on copper caused the prompt withdrawal from the copper producers' foreign selling agency of the chief American companies operating foreign copper mines.

*Democratic Tariff Bill.* The House on January 9 and the Senate on April 1 each passed a tariff bill. Both bills were distinctly Democratic measures strongly opposed by the bulk of the Republicans. The adjusted measure as shaped by conference was finally passed at the end of April. It was not essentially a bill to lay duties. Its foremost feature was that undoing the existing arrangement to provide a flexible tariff system; the bill removed from the President much of the power to initiate tariff changes through the Tariff Commission and rendered Congress the arbiter of the commission's changes in duties. The President vetoed the measure on May 11. The House voted thereafter for its passage over the veto, but by too narrow a majority for the requisite two-thirds. The main feature of the bill and also another of its provisions, that for an international conference, were embodied in the Democratic platform later on.

*Economy Act.* An omnibus measure to effect Federal economies in the expenditure of the departments was enacted and was signed by the President on June 30. It provided for economies

to the estimated total of some \$150,000,000 a year. Its principal clause imposed on the Federal employees "furloughs" without pay, to the extent of one-twelfth of their working year, which were compulsory. Employees receiving less than \$1000 a year were exempted from the furlough, as were certain employees in essential posts. A saving of about \$100,000,000 a year from this source was expected. The act also limited annual leaves with pay, over-time pay, traveling allowances and other occasions of expenditure; checked the filling of vacancies in Federal employment; provided for reorganization of the Shipping Board on a less expensive scheme; and required compulsory retirement for age in many cases. The President, moreover, was authorized to consolidate governmental bureaus, with a view to saving, by executive order; but such order was rendered subject to legislation endorsement before it might become effective.

Like other measures dealing with the financial exigencies of the time, this one aroused serious conflict in its course to passage. The original intent in both houses of Congress was to deal with the President's recommendation of economies through legislation by making cuts in the supply bills severally. The Administration later urged that the work be done by means of a measure dealing with the employees of the Government in general. The House created a select committee on economies, which brought out a bill on April 24, mainly conforming with the President's known desires. This bill, which was to save some \$263,000,000 a year, was torn to pieces in committee of the whole, and its remnant was passed on May 3, carrying only some \$38,000,000 of economies. It then went to the Senate, where with bipartisan backing it was built up again sufficiently to slash expenditure by some \$238,000,000, largely by the expedient of a direct Federal Salary cut of 10 per cent. After receiving the bill from committee the Senate substituted the "furlough" plan for the direct pay cut, and passed its bill. The measure eventually enacted was a compromise between Senate and House. President Hoover, during the progress of the economy measure, repeatedly addressed messages to Congress on the subject and conferred with those guiding the legislation.

**Banking Legislation.** Apart from the Reconstruction Finance Corporation measure, the Emergency Relief Act, and the Home Loan Bank Act, separately treated above, Congress dealt with a number of measures that sought to improve conditions in or through the banking system. The most far-reaching of these, the Glass banking bill, undertook an extensive revision of the Federal Reserve banking system with a view to obviating defects or weaknesses that had developed in the course of two years of business depression; after occupying the attention of the Senate for some time and being tentatively amended in many respects, the Glass bill gave way early in June to appropriation bills of a pressing nature, as the new fiscal year approached; it remained unfinished business of the Senate when the session closed.

A measure to permit of the expansion of credit in the Federal Reserve system, the Glass-Steagall Act (not to be confused with the Glass banking bill) became a law. Its passage was actuated by an alarming emigration of monetary gold from the country that had set in late in 1931. A clause of the act permitted Federal Reserve Banks,

with the approval of the Federal Reserve Board, until March 3, 1933, to issue Federal Reserve notes against direct obligations of the United States lodged as collateral for such issues. The effect of this provision was to render it possible for the Federal Reserve system to pledge Government bonds and issue paper currency against them, instead of issuing it against gold; thus keeping gold unpledged and maintaining a large margin of free gold, so as to enable it to keep well above the required percentage of gold reserve to currency and to deposits respectively. The act also permitted any Federal Reserve bank, with the consent of the Federal Reserve Board, to make advances to any group of five or more banks within its district, if these were for the most part independently controlled, upon the security of their promissory notes, rendering each liable only in its own proportion; the recipient groups were to have freedom, within limits, to distribute the proceeds of such advances among themselves. Further, it was made possible, in "exigent circumstances," for a small member bank lacking resources to present for rediscount, to obtain from "any Federal Reserve Bank" an advance on the borrowing bank's promissory note, secured "to the satisfaction" of the lender; it being provided that the proceeding was subject to approval of the Federal Reserve Board and that it might be employed only until March 3, 1933.

There was enacted and signed on January 23 by the President a measure amending the Farm Loan Act so as to increase the capital stock of the Federal Land Banks by a maximum further aggregate of \$125,000,000 to be subscribed by the Treasury; this step to increase the resources of the land banks for lending to farmers conformed with President Hoover's previously declared programme of economic restoration.

Another banking measure, the Goldsborough bill, was passed by the House on May 2, by the heavy majority of 289 votes to 60, its supporters numbering 165 Democrats, 123 Republicans and one Farmer-Laborite. This measure was frankly inflationary and designed to use the Federal Reserve system as the Federal implement for price-lifting. It directed the Federal Reserve Board, the Federal Reserve Banks, and the Secretary of the Treasury to "make effective" the "policy of the United States" that the purchasing power of the dollar, as indicated by the average level of commodity prices over the period from 1921 to 1929, be "restored and maintained" (*sic*) through control of the volume of credit and currency. The bill was widely condemned, but not universally. It had the support of Irving Fisher, who spoke on its behalf at committee hearings, and of Senator Borah. In the Senate the bill remained in committee; the committee on banking and currency brought out in its stead the Glass bill to increase the currency by issue of bank notes, which later became law in its main features, as part of the Home Loan Bank Act (see above).

A monetary measure of Pittman of Nevada, introduced in the Senate, was favorably reported by the committee on banking and currency late in the session; it provided for purchase, by the Treasury, of 5,000,000 ounces of silver a month and for the issue of silver certificates in payment. It was designed to remedy the slump in the price of silver; it remained on the calendar at the end of the session.

**Agricultural Legislation.** Apart from Federal

credit for agriculture provided in the establishment of the Reconstruction Finance Corporation, and the amendment of the Farm Loan Act (for both of which see above) other measures affecting agriculture were taken. By a joint resolution signed by the President on March 8, 40,000,000 bushels of the wheat, held by the Farm Board or its subsidiaries, were made available for donation, through the Red Cross, to the needy throughout the nation. The "wheat dole" as its opponents called it tended to reduce the held surplus of domestic wheat but at the same time to fill an actual wheat demand that might otherwise have been met by the sale of farmers' or other privately held wheat. A similar dispensation of cotton was provided. A bill to abolish the Farm Board failed of passage in the House. In the Senate a measure was introduced by Wheeler (Democrat) of Montana to create a separate Farmers' Reconstruction Finance Corporation, but the bill did not progress. A minor farm-loan measure was passed, authorizing the establishment of a \$10,000,000 revolving fund for loans to agricultural credit corporations.

*"Lame Duck" Amendment.* Senator Norris of Nebraska finally won the passage through both houses of a resolution, voted in successive sessions of the Senate seven times but always previously failing of passage through the House, to amend the Constitution so as to change the dates for the inauguration of the President and for the next meeting of Congress after an election. The resolution proposed an amendment providing that the terms of President and Vice President end at noon on January 20 instead of March 4 of the same year; that the terms of Senators and Representatives similarly end on January 3; that the required yearly meeting of Congress begin on January 3, unless it should appoint a different day; that the terms of the President and Vice President commence on January 20; these provisions to take effect on November 30 of the year after that of the amendment's ratification. It was further provided that if the President elect die the Vice President elect become President; that if a President be not chosen before time of inauguration the Vice President elect act as President "until a President has qualified"; that where neither President elect nor Vice President elect has qualified, Congress may "by law" declare who shall act as President or the manner in which a qualified person shall be selected. Ratification by legislatures in three-fourths of the States within seven years was made a condition of the adoption of the amendment. The resolution, as its colloquial name implied, had for its chief purpose to do away with the anomaly of the "short session" following an election, a session in which legislation was frequently undertaken by a Congress many of whose members had shortly before been voted out of their seats.

*Anti-Injunction Act.* The Senate passed a measure of Norris of Nebraska limiting the powers of the Federal courts in labor disputes. The House then passed a closely similar bill of LaGuardia of New York. Norris thereupon withdrew his measure, to make way for the bill from the House. The Senate then passed the House bill with amendments in accordance with its own bill. The difference was adjusted in conference and the measure duly passed finally and signed. It forbade issuance of Federal injunctions in labor troubles save on evidence produced before the Court to the effect that irrep-

arable damage to persons or property might ensue in the absence of the injunction; jury trials were to be granted to persons accused of violating such injunctions. The bearing of the act was largely against the practice of suing out injunctions against persons seeking to induce those to join strikes who had bound themselves to employers by contracts, a practice in which the allegation of malicious mischief to the detriment of contract was apt to be cited. Its constitutionality in parts was questioned by Attorney General Mitchell in an opinion rendered about the time of its signing.

Another labor measure, designed to extend and reinforce the application of the Bacon-Davis Act of 1931 requiring the payment of wages at the prevailing rate for work on Federal public buildings, was passed, but the President vetoed it on the recommendation of Secretary of Labor Doak.

*Legislation Affecting Veterans.* Agitation for the payment immediately of the full ultimate value of the bonus certificates of the veterans of the World War was renewed and came to a head in the spring. Representative Patman of Texas introduced a bill providing that the Veterans' Administration make this full payment, deducting what the veteran had previously borrowed and the interest thereon accrued; that, further, the Treasury issue currency notes in sufficient amount to make such payment, issuing also, in like amount,  $3\frac{1}{2}$  per cent bonds to be sold when the Federal Reserve Board judged proper, thus bringing in currency to the Treasury, with which to replace the currency notes issued for the bonus payments. The bill was strongly opposed as placing an obligation of some \$2,000,000,000 on an overburdened Treasury and as generating fiat currency. None the less, many Representatives supported it, feeling their chances of reelection in the autumn insecure if they should antagonize the veterans in their districts. The "Bonus Army," a gathering of veterans in distress that had found their way to Washington from many parts of the country, appeared in the Capitol and augmented the pressure on Representatives. The bill was passed on June 15, by a vote of 209 to 170. The group favoring it numbered 152 Democrats, 56 Republicans and the one Farmer-Labor member. Opposed were 50 Democrats and 126 Republicans, omitting count of pairs. The bill went to the Senate, where it was decisively defeated on the following day by 62 votes to 18. The opposition to it had the support of the President, who issued on March 29 a public statement declaring that the proposed payment would undermine Federal credit and undo efforts to balance the budget.

A measure was enacted to reduce the rate of interest charged by the government upon veterans' loans on their bonus certificates to  $3\frac{1}{2}$  per cent, from  $4\frac{1}{2}$ , and to permit veterans to borrow on certificates without waiting for two years from the time of issue as had previously been required. Although spokesmen for the Administration had condemned the measure as contrary to the President's financial policy he signed it on July 21. A bill to admit to veterans' hospitals and soldiers' homes civilians who had been connected with the quartermaster service in the war with Spain, the Philippine insurrection or the expedition to China was twice, in slightly different forms, sent to the President and was twice vetoed. Efforts were made in the Senate, in connection with the programme of

legislative economies, to reduce the expenditures upon veterans by some \$49,000,000, but the reductions were rejected by the Senate on June 7.

In the first week of July, when the Administration was making efforts to disperse the "Bonus Army" then assembled in Washington (see pages 805-6 under *Administration*), President Hoover asked Congress to appropriate money to pay for the removal of veterans to their homes. A measure was passed providing that cost of transportation, plus subsistence at 75 cents a day, be advanced to veterans to pay for their return trips, and that the money be deducted from ultimate payments on their bonus certificates.

*Other Activities.* Former Senator Heflin's contest against Senator-elect John H. Bankhead, for one of the Alabama seats, was decided in favor of Bankhead by a vote of 64 to 18 on April 28. The House reversed the apparent election of a Republican from the eighth Illinois district and accorded the seat to Stanley H. Kunz, a Democrat.

The Senate committee on banking and currency carried on a protracted investigation of speculative dealings in securities and of alleged abuses in bankers' sales of foreign bonds to American investors. See *FINANCIAL REVIEW*.

*Appropriations.* As summarized by chairman Jones of the Senate's committee on appropriations at the end of the session, the appropriations made in the session, exclusive of permanent appropriations and without deduction for expected savings of \$150,000,000 through the economy act, totaled \$4,459,651,103, as against budgetary estimates that had totaled \$4,643,945,197. Of the total appropriated, \$148,932,703 applied to the then current fiscal year 1932, and took the form of deficiency appropriations. The special appropriation acts accounted for \$1,164,945,500; they included \$500,000,000 for the Reconstruction Finance Corporation's capital stock, \$322,224,000 for emergency construction and relief, \$125,000,000 for stock of Federal Land Banks, and \$203,925,000 for veterans' adjusted compensation, etc. The regular annual appropriations included: agricultural, \$175,671,665; independent offices, \$982,446,041; naval, \$317,593,591; War Department, \$396,078,513 (of which \$106,578,489 was non-military); Treasury, \$250,308,158; postal, \$805,939,675 (subject to the usual subsequent reduction by reason of the postal receipts).

Senator McKellar, Democrat, of Tennessee, computed the appropriations as attaining \$9,306,819,627. He reached this figure by adding to the figures given above other sums, for the disbursement of which Congress had given its authorization. The chief of these was \$3,300,000,000 which the Reconstruction Finance Corporation might call upon the Treasury to supply, against the Corporation's obligations. Other items were the \$246,000,000 required to meet the gap caused by the moratorium on payments from foreign governments, \$125,250,000 that might be paid for obligations of the Home Loan Bank system, and \$40,000,000 granted in the gift of wheat and cotton to the Red Cross. Such items, though perhaps not technically appropriations, affected the government's finances, directly or potentially.

*Adjournment.* The session adjourned on the night of July 16. It had been compelled to continue throughout the period of the National party conventions. The dragging of the session was due in part to the breakdown of Democratic

coöperation with President Hoover, particularly over the Emergency Relief measure; it was due, further, to protracted dispute between the Houses over this measure, and to members' preoccupation with the parties' National Conventions.

**SEVENTY-SECOND CONGRESS, SECOND SESSION.** The Congress convened on December 5 in regular second session. It did not take the usual year-end recess of 10 days.

*Constitution of the Houses.* As affected by the election, the composition of the Senate for the convening of Congress in December was calculated as 48 Republicans, 47 Democrats and one Farmer-Laborite. However, Davis of Pennsylvania abstained from attendance, owing to his being under indictment for connection with a lottery, and Schuyler of Colorado, though understood to have been elected to serve out the remainder of the Congress in place of Waterman (deceased), was not accredited for some days, owing to delay in certain official election returns in his State, so that these two Republican members were lacking at the start of the session. Governor Russell of Georgia, who had been elected to the Senate, did not qualify, but the Democratic interim appointee, Cohen, continued to sit until the end of the year. There were thus, after the seating of Schuyler, 47 Republican Senators of unchallenged qualification, 47 Democrats and 1 Farmer-Labor Senator. The Senate remained under Republican organization.

The House convened with five vacancies, of which two occurred through the resignations of Tilson (Rep.) of Connecticut and Crisp (Dem.) of Georgia. Of the 430 members, 220 were Democrats, 209 Republicans and one Farmer-Laborite.

*Effort to Repeal Prohibition.* The Democratic majority made an attempt on the opening day of the session to rush through the House a joint resolution proposing the repeal of the Eighteenth Amendment of the Constitution without condition save that of ratification by conventions in three-fourths of the States within seven years. The resolution, being offered by Speaker Garner, Rainey of Illinois, Democratic leader, moved for an immediate vote, under the suspension of the rules. The resolution, offered at 12.37 p.m., was granted only 20 minutes' debate on each side, and a roll call was ordered at 1.45. Of 416 votes cast, 272 were in favor of the resolution and 144 against it. Two other members in favor and one opposed were recorded as "paired." The resolution was accordingly lost, the ayes lacking 16 votes of the necessary total to overcome, by the Constitutional 2 to 1, the vote of the 144 nays. As only 11 of the qualified members failed to vote or pair, prospects for later passage of the resolution became restricted to the chance of converting or eliminating some negative votes. As to parties the vote was: in favor, 168 Democrats and 103 Republicans; against, 44 Democrats and 100 Republicans. The Democrats thus favored the resolution by nearly 4 to 1, while the Republicans gave it a scanty majority of 3. The resolution was offered as conforming with the promise of the Democratic platform and was opposed by dry Republicans as clashing with their own platform pledge to keep out the saloon. See *PROHIBITION*.

*The Annual Message.* President Hoover's annual message was read on December 6. It expressed the view that the economic troubles of the country in 1932 were "due to the European collapse" and declared that "measures enacted

and policies adopted undoubtedly saved the country from economic disaster." It recommended great reductions of Federal expenditure for the fiscal year 1934, below that for 1933; these were to take the form of executive consolidations of Federal bureaus, a reduction, temporary, for one year, of 11 per cent in all Federal pay above \$1000 a year, the limiting of public works to those covered by appropriations already made, and eliminations, later to be outlined, of "certain payments in the veterans' services." The "complete reorganization at once of our banking system" was urged as needful. As the means to balance the budget there was recommended a sales tax on manufacturers, "to cover practically all manufactures at a uniform rate, except necessary food and possibly some grades of clothing." Economic coöperation with other governments, "vigorous and whole-souled," was represented as needful. It was stated, however, that debtor governments had been informed that the suspension of the payments of December 15 on account of war debts was not approved; but that the President had stated that he would recommend to Congress methods to overcome "temporary exchange difficulties" attending the payments, where necessary. No allusion was made to the declaration of Oct. 25, 1931, in which President Hoover had "recognized that prior to the expiration of the Hoover year of postponement some agreement . . . may be necessary." Further effort toward international agreement as to disarmament was urged.

*The Budget Message.* In his budget message, read on December 7, President Hoover proposed reducing the impending deficit for the fiscal year 1934 by measures of the most widespread retrenchment in Federal expenditure. These were designed to effect a gross reduction of some \$830,000,000 in expenditure, in part offset by "unavoidable" increases, chiefly in public-debt service and postal deficit and aggregating \$250,000,000, the net projected reduction thus being about \$580,000,000. The consequent total of Federal expenditures, including provision for estimated postal deficiency, was to be \$3,636,578,600. Receipts from existing revenue sources were estimated to total \$2,949,162,713. The consequent excess of expenditures was put at \$844,809,412; and exclusive of debt retirements, at \$307,192,187.

To cope with the estimated deficit, the President recommended that the Federal tax on gasoline be kept in effect for another fiscal year, until June 30, 1934, thus to yield revenue of \$137,000,000, and that a general, uniform excise tax of 2¼ per cent on manufactured articles, food excepted, be enacted, to yield \$355,000,000.

The recommended economies cut into Federal salaries, relief of veterans, and the rate of expenditure for public works. Beside continuing the existing curtailment of 8¼ per cent in Federal pay, offset by furlough, Congress was asked to effect a further cut of 11 per cent in all Federal salaries, excepting in each case an initial \$1000. With regard to public works, it was recommended in particular that Congress make no further appropriation for Federal aid to State highway-building, in excess of the moderate remainder (\$51,660,000) of amounts authorized under the Federal-aid programme soon to expire.

*Beer Bill.* The House, having failed at the outset to vote repeal of the Eighteenth Amendment, renewed the effort to take action in accord with

what was regarded as a nation-wide popular vote against prohibition. The Collier bill, to modify the Volstead Act by legalizing the manufacture and sale of beer containing up to 3.2 per cent (by weight) of alcohol, was passed on December 21 by 230 to 165. The Senate, however, on the 23d, rejected a motion to take up consideration of this bill.

*Philippine Independence.* The Hare bill, to provide for the gradual acquisition of political independence by the Philippine Islands, had been sent by the House to the Senate in the previous session. The Senate's committee on Territories and insular affairs substituted its own measure, the Hawes-Cutting bill. Against the sense of the committee, the Senate amended this measure, after it was taken up in December, by removing provision for a Philippine plebiscite on independence and substituting the provision of a popular vote in the adoption of a Philippine constitution, which was to be drawn up in the Islands. The Senate passed the measure on December 17, without record vote, and sent it to conference for reconciliation with the House's measure.

The resulting bill was passed by the Senate on the 22d and by the House on the 29th, going thence to the President. See PHILIPPINES under *History*.

#### JUDICIARY

**SUPREME COURT.** Justice Oliver Wendell Holmes resigned from the Supreme Court on January 12, at the age of 90 years, on account of impaired health. Benjamin N. Cardozo, Chief Judge of the New York State Court of Appeals, was nominated Associate Justice by the President on February 15, to fill the vacancy and his appointment was confirmed by the Senate on February 24. See LAW IN 1932.

**FEDERAL PROSECUTIONS.** The Department of Justice instituted a prosecution, for violation of the Sherman and Clayton anti-trust acts, against the International Business Machines Corporation and Remington-Rand, Inc., two large concerns engaged through subsidiaries in the renting of tabulating machines. The Federal prosecution of Alphonse Capone, Chicago's so-called "Public Enemy Number One," for irregularities in his income-tax returns, prevailed against his appeal, which the Supreme Court refused to entertain, and the prison sentence upon Capone became effective. Another anti-trust suit was that against the Sugar Institute, a producers' body accused of practices in restraint of trade. Trial began before Judge Mack in the Southern District of New York on February 9 and continued till September 21, when the testimony ended and recess was taken to permit counsel to prepare briefs. Proceeding against the radio combination ended November 21 in a consent decree of Federal District Judge Nields of Delaware that General Electric and Westinghouse Electric dispose of their stock in the Radio Corporation.

**SUPREME COURT BUILDING.** On October 13 President Hoover laid the cornerstone for a \$10,000,000 Supreme Court Building on Capitol Hill, to be built of white marble to house the court, which had sat for many years in the Capitol.

#### NATIONAL ELECTION

**PRIMARY CAMPAIGN.** In the Republican party no considerable opposition developed, during the

season of the Presidential-preference primaries among the States, to the renomination of President Hoover. Senator France of Maryland was brought forward in a number of States as an uncompromising advocate of the repeal of the Eighteenth Amendment. He claimed in May that he had the votes of 231 of the delegates to the forthcoming Republican National Convention. But the States generally, and more particularly those nominating delegates by State party conventions, instructed for Hoover; and the Maryland Republican convention itself, on May 26, voted down the France repeal plank and instructed delegates for Hoover, thus virtually eliminating France. A number of the States, notably Vermont and Oregon, gave Republican support to planks for repeal. The LaFollette organization in Wisconsin were unable to prevent the selection of Hoover delegates in the Republican primary of April 5.

The Democratic pre-convention contest was more spirited. Alfred E. Smith formally announced on February 7 his willingness again to become the Democratic Presidential nominee, and followed this announcement with a number of speeches of political tenor in the course of the spring. In these speeches he urged, among other measures for the curing of economic ills, a plan for reducing the war debts owed the Treasury by foreign governments in consideration of these governments admitting into their territories greater imports from the United States. He put himself directly in opposition to Franklin D. Roosevelt by a speech of April 13 in which he declared that he would fight any "demagogic appeal" to the voter, the reference being by implication to Governor Roosevelt, who had shortly before made a reference to the neglect of the "forgotten man."

Franklin Delano Roosevelt, Governor of New York State, became the most conspicuous of the Democratic Presidential possibilities long before the Democratic Convention. Prior to the beginning of the year an organized move had been in operation to win him the support of the party in a great number of States. He delivered several addresses of national application in the course of the spring; notably, on April 7, over a coast-to-coast radio broadcast provided by the Democratic National Committee, he criticized the Administration for giving Federal assistance to the greater economic units while neglecting small and inconspicuous units, indispensable because of their aggregate mass, the "infantry of our economic army," and he declared for putting faith "once more in the forgotten man." Speaking in St. Paul on April 18, he expanded this view, thus joining issue with Alfred E. Smith, who had referred by implication to the "forgotten man" speech as demagogic. On May 22, at Atlanta, he further challenged the conservative Democratic element in an address in which he declared that "in the future we are going to think less about the producer and more about the consumer. Do what we may to inject life into our ailing economic order, we cannot make it endure for long unless we can bring about a more equitable distribution of the national income."

A third prominent candidate for the nomination was John Nance Garner of Texas, Speaker of the House, who had the support of his own State, of the Hearst newspapers and of William G. McAdoo and his group of Democrats in California.

The State primaries and conventions brought Smith the support, pledged or firm, of the National Convention delegates of Massachusetts, New Jersey, Connecticut, and Rhode Island; he won also the adherence, uncommitted, of the greater part of the New York delegation. A number of favorite sons gained the delegations of important States. It resulted that the Roosevelt delegates, before the convention, made a majority, but less than the two-thirds required by the ancient Democratic rule to effect a nomination.

**NATIONAL CONVENTIONS. Republican.** The Republican National Convention convened in Chicago on June 14 and closed on the night of June 16. It afforded one spirited conflict, that between the supporters of the President's views with regard to the Eighteenth Amendment and the advocates of outright repeal. The latter brought about a vote in the early morning of the 16th on a proposal to substitute Senator Bingham's repeal resolution for the plank favored by the Administration. The repealists were defeated, scoring 472 votes to 681 opposed.

**Republican Platform.** The platform characterized President Hoover as "a leader, wise, courageous, patient, understanding, resourceful" and detailed what were represented as the successes of his programme in dealing with depression. The party pledged itself to continue to uphold the gold standard; declared the need for revision of the banking laws; favored an international monetary conference to consider silver, international exchange, and commodity prices; declared that the Government should do "everything possible" to halt the tendency away from home ownership; defended the tariff act of 1930 as giving the farmers' products equal protection with those of industry "so far as legislation can do so"; praised "many achievements of merit" of the Farm Board; undertook "to support any plan that will help to balance production against demand and thereby raise agricultural prices," provided it were "economically sound and workable"; pledged a reconsideration of tax systems, Federal, State, and local, so as to reduce unjust burdens; declared the tariff "particularly essential to-day" because of depreciated foreign currencies; proposed study of existing veterans' legislation with a view to effecting economies "without departing from our purpose to provide on a sound basis full and adequate relief for our service-disabled men, their widows and orphans"; upheld the most-favored-nation clause for commercial treaties; favored American participation in international conferences in cases of violation of the Paris Peace Pact; declared for entering the jurisdiction of the World Court; endorsed the principle of the shorter working week and day; urged the granting of authority to the Federal Power Commission to regulate rates for electric current crossing State lines; pledged efforts to secure the early completion of the St. Lawrence deep waterway; declared prohibition not a partisan question, and stated that no public official or member of the party need be held to any particular view on it; favored a new amendment, which while preserving "gains already made" should "allow States to deal with the problem as their citizens may determine," yet should protect those States where prohibition was retained and should prevent the return of the saloon.

The prohibition plank as outlined above was reported to have been prepared in advance of

THE DEMOCRATIC NATIONAL CONVENTION AT THE CHICAGO STADIUM

the convention and under the eye of President Hoover. A plank declared to be apocryphal in the sense that it had never come before the convention later appeared in the platform as issued by the National Committee; it indorsed the development of inland waterways and was of particular interest to the Mississippi Valley.

*Candidates.* Herbert Hoover was nominated for President on June 16, at the first ballot, by 1126½ votes out of the Convention's 1154. The scattering minority vote went to France, Coolidge, Dawes, Blaine, and Wadsworth. Charles Curtis of Kansas was renominated for Vice President.

*Democratic Convention.* The Democratic delegates convened in Chicago on June 27 and adjourned on July 2. The manager of the Roosevelt campaign, James A. Farley, had prepared a motion that the convention abolish the rule requiring a vote of two-thirds of the delegates to nominate—a change that, if adopted, would have brought an immediate nomination for Governor Roosevelt. Some of the State delegations in favor of Roosevelt revolted against this plan, Iowa, North Carolina, Alabama, and Mississippi, voting it down in caucuses. The plan to alter the rule was then dropped on the request of Governor Roosevelt through Farley. The convention seated Roosevelt delegations in deciding contests in Minnesota, where primaries in June had nominated a State ticket favorable to the National candidacy of Alfred E. Smith, and had thus gone counter to the earlier State convention's selection of a Roosevelt delegation; and in Louisiana, where Senator Huey P. Long headed a delegation in favor of Roosevelt.

*Democratic Platform.* The platform, as adopted, contained some 1400 words, and was highly concise in comparison with the generality of party platforms. The plank on prohibition was its most conspicuous feature. This plank "favored the repeal of the Eighteenth Amendment," demanded that Congress "immediately propose" to that end a new amendment to be acted on by conventions in the States, urged that the States enact measures against the return of the saloon and for State control of the liquor traffic, demanded that the Federal Government "enable" prohibition States to protect themselves against importation of liquor, and favored, pending repeal, immediate legalization of beer and other beverages of constitutionally permissible alcoholic content, to provide "proper and needed revenue."

The platform was declared "a covenant with the people." It advocated Federal economy to save "not less than 25 per cent of the cost of Federal government"; taxes raised on the principle of ability to pay; a "sound currency" (without specification of the gold standard); an international monetary conference to consider silver's rehabilitation; a "competitive" tariff for revenue; a fact-finding tariff commission free of executive interference; tariff reciprocity; an international conference to restore trade; Federal credit to States to relieve the unemployed; help for farm credit, particularly for the redemption of foreclosed farms; enactment of "every constitutional measure" to help farmers get prices above cost of production; revised anti-trust laws, for the better protection of labor, and small producers and distributors; divers Federal measures to regulate sellers of securities to the public and utilities operating across State

lines; severance of commercial banks' subsidiaries dealing in securities; generous treatment of veterans having sustained disabilities "from actual service in time of war"; adherence to the World Court; provision for conferences to make the Pact of Paris effective; independence for the Philippines; "ultimate" Statehood for Porto Rico. The platform opposed cancellation of foreign governments' debts to the Treasury; utterances of "high public officials" to influence stock-exchange prices; "improvident subsidies to favored interests"; the State Department's "passing on" offerings of foreign securities; and the "prohibitive rates," destructive to trade, of the Hawley-Smoot Tariff Act.

*Democratic Candidates.* Franklin D. Roosevelt of New York was chosen as Democratic candidate for President; for Vice President, John Nance Garner of Texas. Roosevelt was nominated on the fourth ballot, by 945 votes as against 180½ for Alfred E. Smith and a scattering for minor candidates, in a total of 1154. The first three ballots had threatened a deadlock. They were taken in a night session that lasted till 9 a.m. on July 1. Smith held upward of 190 votes throughout, Garner more than 90, Ritchie of Maryland over 21, and a numerous scattering of other candidates at least 145 on each ballot. The chance that Smith might block the Roosevelt nomination and effect the choice of a compromise candidate was eliminated when the California delegation, responsive to W. G. McAdoo and William R. Hearst, switched its vote at the fourth ballot, on the evening of July 1, from Garner to Roosevelt. Garner at the same time released the delegates of his own State, Texas, who also passed to the Roosevelt column. The Smith delegates held out, but almost all the scattering vote shifted to Roosevelt. Garner's withdrawal was rewarded with the Vice-Presidential nomination. Governor Roosevelt, upon news of his nomination, flew from Albany to the convention and made his address of acceptance on its final day, thus breaking the precedent of waiting for a formal notification.

*Minor Parties.* The Socialist party held a convention at Milwaukee, ending on May 24, and nominated Norman Thomas for President and James Maurer for Vice President. The Prohibition Party, at Indianapolis on July 7, nominated for President William D. Upshaw of Georgia; for Vice President, Frank S. Regan of Illinois.

**THE HOOVER CAMPAIGN.** President Hoover was formally notified of his nomination on August 11, in a public meeting at Constitution Hall, in Washington. His speech of acceptance reviewed the Administration's policy toward the depression, a policy characterized as "the most gigantic programme of economic defense and counter-attack ever evolved in the history of our Republic"; the Government was represented as using its reserve powers "for the protection of citizens and local governments by support to our institutions against forces beyond their control." The President declared himself "squarely for the protective tariff" without, however, specifying the Act of 1930; and against the cancellation of war debts, but receptive to the idea of remitting part of any particular annual payment in return for the debtors' taking more of American exports. He upheld the Republican plank on prohibition as "insisting that this submission shall propose a constructive and not

a destructive change." He warned against "hazardous experimentation" in meeting the difficulties of the hour.

*October Speaking Tours.* It was the original intent that the President should stay at Washington through the campaign. In its earlier part Secretary of the Treasury Mills and Secretary of War Hurley were the chief of the Administration's itinerant spokesmen. The phenomenon of a Democratic victory in the Maine election early in September, coupled with signs of a Democratic swing attendant upon the Western trip of Governor Roosevelt shortly after, led Mr. Hoover to make a speaking trip early in October, as far west as Iowa. The main address in the course of this tour, made at Des Moines on October 4, was largely a defense of Republican economic policies, particularly the tariff and the financial dispensations of the President's relief programme, as benefiting all, the farmers included, by saving the financial and price structure. The address contained one passage that, because of its peculiar nature, attracted more attention than all the rest. In depicting the alarms of the situation from which the country had been saved, Mr. Hoover declared that at one moment "the Secretary of the Treasury informed me that unless we could put into effect a remedy, we could not hold to the gold standard but two weeks longer." The statement was promptly controverted by Senator Glass of Virginia, who declared in a public telegraphic statement of October 7 that at no time of the spring or summer had members of the Administration expressed the slightest concern of the sort in communications with the legislative leaders. Glass later, in a speech broadcast from Washington on November 1, asserted the President's utterance about the gold standard to be denied by "authentic facts and figures." Secretary Mills, in a reply to Glass on the same night, failed to corroborate definitely the President's utterance.

On October 23 Mr. Hoover, in another speaking tour, declared at Detroit that economic recovery had been delayed for four months by "fear of the Democrats," and cited the attempted excesses of the Democratic majority in Congress. At New York on October 31 he predicted that if the Democrats were to put their tariff policies into effect "grass would grow in the streets of 100 cities and weeds overrun the fields of millions of farms." In its general tone through October the campaigning of the President leant to an effort to impress the country with alarm at the prospect of a Democratic administration. Markets for commodities and securities rather generally moved downward in October, in conformity with what his opponents called the President's "fear campaign." Owen D. Young, on the Democratic side, in an address delivered on November 3 at New York, attacked what he termed the Republican "campaign of threats." At Springfield, Ill., on November 4, Mr. Hoover likened the existing National crisis to that in the administration of Lincoln and intimated that now again the prospect of salvation lay in a Republican victory.

**GOVERNOR ROOSEVELT'S CAMPAIGN.** Duties connected with the proceedings concerning Mayor Walker of New York City not only kept Governor Roosevelt busy in his official capacity at Albany for the greater part of August and early September but brought upon him the factional opposition of the Tammany organization, threat-

ening him with the loss of the State at election. He nevertheless made addresses over the radio, in which (July 30) he condemned the Administration's handling of the deficit as "inflation which has weakened public confidence in our credit both at home and abroad"; and at Columbus, Ohio, (August 20) he opposed the President's acceptance speech with an attack on Republican rule, which he charged with "Grundism" in tariff-making and with having caused the crash of 1929 by encouraging overspeculation, overproduction, and false economic policies.

*September Speaking Tour.* The termination of the Walker hearings enabled Governor Roosevelt to start on September 12 a speaking tour of nearly three weeks via Kansas and the Mountain States, along the Pacific Coast, and back by Iowa, Wisconsin, Chicago, and Detroit. More than a dozen addresses were delivered. The speeches detailed the candidate's views serially. At Topeka (September 14) he proposed in general terms plans for restoring farm prosperity; at Denver (15th) he declared for liberalism in the Democratic party; at Salt Lake City (17th) he urged reforms in the Nation's railroad policy; at Butte (19th) he condemned failure to call a silver conference; at Seattle (20th) he advocated reciprocity or barter in tariff policy; at Portland (21st) he laid out a plan for Federal control over utilities, and declared for replacing cost of reproduction with prudent investment as the basis in rate-making; at San Francisco (23d) he spoke for repeal of prohibition; at McCook, Nebraska (28th) he expressed accord with the principles of the Progressive Senator Norris, who had declared for him and who greeted him there; at Sioux City (29th) he urged tariff reciprocity as a means to save the farmer.

*Later Speeches.* After President Hoover had reversed his original campaign policy by undertaking speaking tours, beginning with the Des Moines address of October 4 and continuing with denunciations of the Democratic campaign, Governor Roosevelt shifted from the exposition of his general views and plans to controversy over the Administration's record and Mr. Hoover's successive attacks. In a speaking tour of eight days, starting October 18, he covered western New York, the Ohio-Pennsylvania-West-Virginia steel and coal region, Indiana, central Illinois, Missouri, and several Southern States. At Pittsburgh he declared himself as to immediate cash payment of the bonus, on which he had been challenged by the Administration speakers; he reiterated on this point a published declaration that he had made in the journals of April 23, to the effect that he did not see how a government running behind \$2,000,000,000 annually "could consider anticipation of bonus payments until it had balanced the budget." He attacked the Administration as having been inept in laying out its financial course, extravagant, and secretive as to heavy deficits when they were in prospect. At Indianapolis he declared that Republican intimations of ruin in case of Democratic victory were "dangling the ghost of panic before our eyes." At Baltimore on October 25 he arraigned Republican control as having destroyed prosperity at home and abroad by encouraging improvident lending to foreigners, thus financing exportation only temporarily, and by the imposition of the tariff of 1930, by

which "our doors were closed to our principal European purchasers."

*Position of Alfred E. Smith.* Defeated for the Democratic nomination, Smith shunned Roosevelt at Chicago and abstained thereafter from any word in favor of Roosevelt for nearly three months. The two met, however, at the New York State Democratic convention at Albany on October 4 and publicly displayed friendliness. Thereafter Smith toured through New England and New Jersey as one of the Democratic speakers, being received with particular warmth by his Boston admirers. Finally, Roosevelt and Smith appeared together as speakers in Brooklyn on November 4 and in New York on November 5.

*Occurrences During the Campaign.* At Portland, Ore., on September 15 the annual convention of the American Legion voted a resolution demanding immediate full payment of the soldiers' bonus; it was declared in some quarters that this move had been brought about by the adverse reaction, among the membership, to the treatment of the "bonus army" in Washington on July 28. The convention also voted censure of Secretary of War Hurley, not however, for calling out the troops on that occasion, but for having circularized the convention with copies of his findings against the character of the expelled group.

Several developments during the campaign worked to spread early the impression that the Republican National ticket would lose. One of these was the September election in Maine, where a normally heavy Republican majority was overthrown. Another was the nation-wide "straw ballot" taken by the *Literary Digest*, which owing to the accuracy of its indications in 1928, was widely credited and discussed; it indicated majorities for the Democratic candidate in many normally Republican States and areas. The unofficial but nevertheless credited betting odds quoted on the result of the election in Wall Street on November 4 were 4 to 1 offered on Roosevelt and 1 to 5 offered on Hoover. See **PRESIDENTIAL POLL.**

**THE VOTE.** Franklin D. Roosevelt was elected President, defeating Herbert Hoover by a plurality of 7,054,520 in the popular vote of the States as a whole, and winning the electoral vote of all but six States. The electoral votes thus assured to Roosevelt totaled 472 as against 59 for Hoover. The total of electoral votes indicated for Roosevelt was the greatest numerically for any Presidential candidate in the Nation's history and the greatest proportionately since 1864. The six States rendering popular majorities for Hoover were Maine, New Hampshire, Vermont, Connecticut, Pennsylvania, and Delaware. Among States where the popular vote went heavily in favor of the Democratic National ticket were Hoover's home State of California, the normally Republican industrial States of Illinois, Ohio, and Michigan and such traditionally Republican agricultural States as Indiana, Iowa, and Minnesota.

The complete vote for the major parties, as certified by State officials and compiled by the Associated Press, is given in the next column.

Norman Thomas, Socialist candidate for President, according to the same tabulation, received 881,951 votes; William Z. Foster, Communist, 102,785; William D. Upshaw, Prohibitionist, 77,528; W. H. Harvey, Liberty party, 53,446;

Verne L. Reynolds, Socialist-Labor party, 34,034.

*Vote for Congress.* Democrats secured majorities in both houses of the Seventy-third Congress. The composition of the Senate after Mar. 4, 1933, as altered by the election, was: 59 Democrats, 36 Republicans, 1 Farmer-Labor member. The initial composition of the Senate for the Seventy-second Congress had been 47 Democrats, 48 Republicans and 1 Farmer-Laborite. The Democratic candidates therefore gained from the Republicans 12 Senate seats as compared with the result in 1930. Of 32 seats filled on November 8 for the ensuing full Senatorial term, 17 were filled by reelection; thus were reelected 11 Democrats and 6 Republicans. To the remaining 15 full-term seats were elected 15 new Democratic Senators. Of these, 3 were elected to succeed Democratic incumbents, while 12 replaced Republicans. Among the Republicans displaced in seeking reelection were some of the most conspicuous figures in the Senate, notably Smoot of Utah, Oddie of Nevada, Moses of New Hampshire, Bingham of Connecticut, and Blaine of Wisconsin. Two seats for remainders of unexpired terms in the Senate of the Seventy-third Congress were also filled, one in Georgia and the other in New Jersey, but without change of partisan tenure.

The balance of party power in the remaining session of the Senate of the Seventy-second Congress was determined by the election in Colorado

of a Republican, Carl C. Schuyler, by a close vote, to fill the unexpired term of the late Senator Waterman, ending with March 4, 1933. This left the party composition of the Senate unaltered for the existing Congress: Republicans 48; Democrats 47; Farmer-Labor 1.

The election made a sweeping change in the composition of the House of Representatives. There were elected to the Seventy-third Congress 313 Democrats, as compared with 219 elected in 1930 to the Seventy-second; and 111 Republicans, as compared with 214. The representation of Farmer-Labor members rose to 4. The partisan overturn in the House, though numerically more striking than that in the Senate, eliminated fewer conspicuous veteran Republican leaders.

**UNITED STATES MILITARY ACADEMY.** A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1932, the total number of cadets was 1299. There were 219 members on the faculty. The academy is a component part of the Regular Army of the United States and is maintained solely by appropriations from the War Department, which in 1932 amounted to \$2,666,683 for salaries and maintenance of public works. The library contained over 110,000 volumes. Superintendent, Maj. Gen. Wm. D. Connor, U. S. A.

**UNITED STATES NAVAL ACADEMY.** A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1932-33 was 1786. The faculty numbered 240. The library contained 76,000 volumes. Midshipmen, after graduation, are commissioned as ensigns in the U. S. Navy. Superintendent, Rear Admiral Thomas C. Hart, U.S.N.

**UNITED STATES OF EUROPE.** Aristide Briand's project of May 1, 1930, for a European political union was shelved in 1931. Soundings taken of European opinion revealed that the project was impracticable, in view of the strength of political and economic nationalism. Accordingly, the Commission of Inquiry for European Union was transformed into an agency for the promotion of economic, rather than political, collaboration among the European nations (see 1930 and 1931 YEAR BOOKS).

During 1932 two ambitious, but largely futile, efforts were made to break the vicious circle of import quotas, embargoes, exchange restrictions, and transfer moratoria which was strangling the economic life of Eastern and Central Europe. The first of these—the Tardieu plan for a Danubian federation—had no direct connection with the Commission of Inquiry for European Union. The second—the Stresa Conference—submitted recommendations to the Commission for further action. Independent efforts to promote regional economic coöperation in Eastern Europe were made by the Financial Committee of the League of Nations and by members of the Balkan Conference at the annual meeting in Bucharest in October. It was the consensus that the ultimate aim of an economic federation of European states could best be served by preliminary efforts to establish regional collaboration.

**THE DANUBIAN FEDERATION.** The Tardieu plan, formally announced before the Finance Commission of the French Chamber of Deputies on March 1, was elaborated upon at a conference between Premier Tardieu and Prime Minister MacDonald

in London on April 4. Supported by France and Great Britain, it met the open opposition of Germany and Italy at a four-power conference held in London April 6-8 and consequently was dropped. The plan provided for the revival of the former Austro-Hungarian customs union by the inclusion of Czechoslovakia, Austria, Hungary, Rumania, and Yugoslavia in a tariff union. Each of these countries was to reduce its tariffs, as applied to the others, by at least 10 per cent. They were to abolish all quotas, exchange restrictions and other devices obstructing their mutual trade. The other European countries were invited to participate in the plan by (1) renouncing their rights to most-favored-nation tariff treatment by the Danubian countries, (2) giving unilateral preference to agricultural exports from Danubia, and (3) by advancing a \$40,000,000 loan—guaranteed by the French, British, German, and Italian governments—to meet the immediate emergency confronting the Danubian countries.

**STRESA CONFERENCE.** The discussion of means to prevent the economic collapse of Central Europe was again revived at the Lausanne Conference (see REPARATIONS AND WAR DEBTS). The powers there represented convoked a special conference to study the situation. This conference met at Stresa, Italy, from September 5 to 20, with 80 delegates from 15 nations in attendance. The countries represented were Austria, Belgium, Great Britain, Bulgaria, Czechoslovakia, France, Germany, Greece, Hungary, Italy, the Netherlands, Poland, Rumania, Switzerland, and Yugoslavia.

The conference failed to adopt a proposal for the creation of a special loan fund to enable Central European countries to balance their budgets, stabilize their currencies, and pay their foreign debts. Great Britain and several other countries declined to contribute toward such a loan. A scheme was elaborated to stimulate grain exports through the distribution of preferences from a fund of 75,000,000 Swiss gold francs (about \$14,475,000), to be contributed annually by states adhering to the agreement. The plan provided for the establishment of an administrative committee to determine the sums to be allotted to each grain exporting country. The committee was to administer the fund so as to allow an effective preference of two gold francs per quintal (38.60 cents per 220.46 pounds) of wheat and 1½ francs (28.95 cents) per quintal of barley and corn. States contributing to the fund were to receive tariff preferences and other concessions from the grain exporting states.

This project for the "revalorization" of grain prices and recommendations for eliminating financial impediments to trade were submitted to the Commission of Inquiry for European Union, which met in Geneva toward the end of September. During these discussions the plan for revalorization of cereal prices was opposed by Maxim Litvinov, Soviet Foreign Minister, and by the representatives of most of the Northern European countries. At the request of the Greek delegate, tobacco was included in the revalorization plan. Subject to three reservations, the Commission of Inquiry then adopted a draft resolution whereby the Commission would notify the League Council and the Preparatory Committee for the World Economic Conference of the conclusions reached at Stresa. The Council was asked

to elaborate, with experts, a basis of monetary normalization and to examine the revalorization plan. No further action was reported on the Stresa proposals during the remainder of the year. They were scheduled, however, to come before the World Economic Conference in 1933.

**THE BALKAN CONFERENCE.** The third unofficial conference of representatives of the Balkan states was held in Bucharest, Rumania, October 22-25. Delegates from Turkey, Rumania, Bulgaria, Yugoslavia, Greece, and Albania were present. The chief questions discussed were a Balkan non-aggression agreement, a convention for the settlement of disputes by mediation and conciliation, and a proposal for the establishment of a commission to study the minorities question. A tentative agreement on all three questions was reached by all the delegations, except the Bulgarians. The latter left the conference on October 25 when the other delegations rejected the Bulgarian request for a settlement of the minorities question before commencing debate on the other issues. The conference also discussed plans for standardizing Balkan currencies and postal regulations. A customs union including Rumania, Yugoslavia, Czechoslovakia, Bulgaria, Turkey, and Greece was also considered.

See FRANCE, GERMANY, ITALY, GREAT BRITAIN, AUSTRIA, HUNGARY, and other European countries under *History*; also PEACE, INTERNATIONALISM, LEAGUE OF NATIONS.

**UNITED TEXTILE WORKERS.** See LABOR, AMERICAN FEDERATION OF; STRIKES AND LOCKOUTS.

**UNIVERSAL CHRISTIAN COUNCIL.** See INTERNATIONALISM.

**UNIVERSALISTS.** A religious denomination, existing chiefly in the United States, Canada, Japan, and Korea, which holds as part of its doctrine the universal fatherhood of God and the final harmony of all souls with God. In 1932 there were 28 State conventions and two State conferences. The number of churches was 580; ministers in fellowship, including lay licenses, 529; church members, 47,647; and Sunday schools, 395. The denominational periodical, the *Christian Leader*, is published weekly. Victor A. Friend of Melrose, Mass., was president of the general convention in 1932. Headquarters, 176 Newbury Street, Boston.

**UNIVERSITIES AND COLLEGES.** ATTENDANCE. During the early part of this year there was much discussion regarding the effects that the economic depression would have upon the enrollments in universities, colleges, and professional schools. Within the institutions themselves there was much pessimism. The reports of enrollments in summer schools were far from encouraging. In 1931, the total enrollment in summer schools in the United States was 422,754. This was an increase of 5253 over 1930. In 1932, the enrollment was 358,131. This is a decrease of 64,623, or slightly over 15 per cent. This is the first decrease in summer school enrollment.

On December 10, *School and Society* published the statistics on registration in American universities and colleges in 1932. This report was furnished by Dr. Raymond Walters, president of the University of Cincinnati.

The registration for 1932 shows a decrease of 4½ per cent in the number of full-time students, and 7 per cent in grand total enrollment, as compared with 1931. Full-time enrollments are shown in the table in the adjoining column.

Classification	No.	1932	1931
Universities, public . . . . .	51	86,590	195,288
Universities, private . . . . .	46	159,057	166,825
Colleges . . . . .	274	140,689	145,623
Technical institutions . . . . .	59	71,954	77,414
Total . . . . .	480	558,290	584,650

The five universities having the largest enrollments of full time students are California, 19,282; Columbia, 14,229; New York University, 12,069; Minnesota, 11,708; and Illinois, 10,579.

The five universities having the largest enrollments of resident students are New York University, 27,905; Columbia, 27,682; College of the City of New York, 24,698; California, 22,867; and Minnesota, 16,770.

The largest woman's college is Hunter, with 4416 students. The largest engineering and chemistry enrollment is at the Massachusetts Institute of Technology with 2343 students. Harvard has the largest law school enrollment, 1509. The largest dental school is at Temple, with 509 students. Teachers College of Columbia University, with an enrollment of 5210, is the largest teachers' college. Boston University has the largest number of divinity students, 249. Syracuse University has the largest Forestry School, with 406 students. The University of Pennsylvania has the largest number of students enrolled in Commerce and Finance, 1979.

**GIFTS AND BEQUESTS.** During 1932 there were some outstanding gifts to colleges and universities. Among those of \$100,000 or over announced during the year are the following: The American School, Chicago, announced a gift of \$300,000 from R. T. Miller, Jr., for a student loan fund. The University of Arkansas will receive the residue of the estate of the late Biscoe Hindman, estimated at \$800,000. The Carnegie Corporation made a grant of \$100,000 to Atlanta University for a professorship in its graduate department of business administration to aid in training Negroes for business careers. Bates College received a bequest of \$150,000 by the will of the late Daniel Pingree. The Polytechnic Institute of Brooklyn received \$250,000 as its share in the residuary estate of the late Dr. William H. Nichols. By the will of the late Mrs. Ella M. Burke, the Cleveland School of Art received a bequest of \$650,000. A trust fund of \$100,000 was received by Harvard University by the will of the late Mrs. Caroline E. Peabody. The Massachusetts Institute of Technology reported gifts and legacies totaling \$1,781,473. New York University received \$3,670,401 as its share in the estate of the late Dr. William H. Nichols.

The University of Pennsylvania received \$100,000 by the will of Mrs. Frederick Courtland Penfield. The Philadelphia School of Design for Women will receive the income from a trust fund of \$3,000,000 left by Mr. Joseph Moore. Princeton University received a bequest of \$150,000 by the will of the late Arthur Hawley Scribner payable at the death of Mrs. Scribner. The University of Rochester received an amount estimated at \$20,000,000 by the will of Mr. George Eastman. Smith College will receive \$100,000 from the estate of the late Mrs. Annie Swan Coburn. St. Paul's School at Concord, New Hampshire, received a bequest of \$250,000 by the will of the late Alexander Smith Cochran.

Vanderbilt University received a grant of \$250,000 from the Rockefeller Foundation and

\$50,000 from the General Education Board for the benefit of the School of Medicine. Williams College will receive \$454,603 from the estate of William Ellis Carnochan. Yale University received a bequest of \$100,000 by the will of the late Margaret S. Bedell. The president's report for the year ending June 30, 1932, showed gifts and contributions totaling \$1,532,619.

**EDUCATIONAL FOUNDATIONS.** The growth in the number and importance of foundations has been truly remarkable. *School and Society* published a study by Palmer O. Johnson of the University of Minnesota, showing the extent of benefactions by five of the older and more prominent foundations from 1923 to 1929, inclusive. The foundations were the General Education Board; the Carnegie Corporation of New York; the Rockefeller Foundation; the Commonwealth Fund; and the Laura Spelman Rockefeller Memorial, which was consolidated with the Rockefeller Foundation in 1929.

In 1923 these five organizations reported grants totaling \$11,178,433. For the next two years the grants were approximately three million dollars less. In 1926 the total was \$14,170,488.23. This increased to \$26,703,804.18 in 1927, dropped to \$16,281,275.97 in 1928 and reached \$27,522,788.50 in 1929. The total for these years was \$112,031,306.22, of which \$102,808,256.22, or 91.7 per cent, was given to private institutions, and the remainder, \$9,223,050 was given to public institutions.

The following institutions are arranged in order of the amount authorized to each:

University of Chicago . . . . .	\$21,255,500.00
Vanderbilt University . . . . .	11,610,992.64
Yale University . . . . .	10,718,950.00
Cornell University, including New York Hospital . . . . .	9,179,000.00
Columbia University \$2,238,683.34 }	8,187,838.84
Teachers College . . 4,899,150.00 }	
Johns Hopkins University . . . . .	5,916,740.00
Harvard University . . . . .	5,218,828.83
Washington University, Mo. . . . .	4,306,500.00
Princeton University . . . . .	3,487,150.00
California Institute of Technology . . .	3,390,416.67

**The Carnegie Corporation.** The Carnegie Corporation reported funds on September 30, 1932, amounting to \$145,393,110.08, and current and contingent liabilities amounting to \$17,500,253.84. The net income for the year was \$6,419,836.81. Of this amount, \$1,305,279.17 was set aside for various funds, and donations authorized for \$4,163,065.75. This left a balance of \$95,491.89.

The appropriations authorized were as follows: library interests, \$873,100; adult education, \$368,500; the arts, \$664,750; research studies and publications, \$770,675; and general, \$2,579,082.42. This included endowments in educational institutions, \$1,128,000, and varied interests in colleges and universities, \$367,000.

**Commonwealth Fund Fellows.** Twenty-five British students were awarded Commonwealth Fund fellowships for study in American colleges and universities and travel during the next two years. These men and women were chosen by a British committee of award after personal interviews.

**General Education Board.** The following summary of the report of the General Education Board appeared in *School and Society*, Nov. 5, 1932:

Appropriations of \$9,162,722, including \$5,139,485 for Negroes, and \$3,647,621 for whites, were made by the General Education Board in the fiscal year ended on June 30, 1931, according to the report of that institution for 1930-1931.

The extent to which the General Education Board has increased its bond holdings is shown by the report which lists the total investments at \$77,472,832, including \$34,154,605 in bonds, an increase of \$7,556,149, and \$43,318,227 in stocks.

Since the General Education Board was founded in 1902 by Mr. John D. Rockefeller, it has made total appropriations of \$221,778,087, of which \$123,213,819 was appropriated from principal and \$98,564,268 from income.

The total appropriations since the foundation of the General Education Board represent \$185,122,940 for white and \$30,898,419 for Negroes. Of the total amount appropriated for white institutions, \$164,075,183 has been paid, and of the total appropriations for Negro institutions \$21,617,448 has been paid. A total amount of \$190,922,411 has been paid out of the appropriations granted in the lifetime of the institution.

The General Education Board has increased its bond investments from approximately 28 per cent of its total investments in 1929, to 38 per cent in 1930, and 44 per cent in 1931. The largest single bond holding is \$3,500,000 of the United States Fourth Liberty 4½s maturing from 1933 to 1938.

The General Education Board reported income of \$4,251,783 received in the year ended on June 30, 1931, which together with undistributed income on hand as of that date of \$13,032,232, and refunds on account of payments made in previous years of \$5890, brought the total amount available for disbursement up to \$17,289,906.

**John Simon Guggenheim Memorial Fellowships.** The trustees of the John Simon Guggenheim Foundation announced 57 fellowships for 1932-33. Of these 42 were granted to scholars and artists from the United States and 15 to scholars from Latin America. All of those appointed in Latin America will study in the United States. Ten fellows from the United States will study and work in the Latin American countries. The others will go to Europe.

**The Milbank Memorial Fund.** The report of the president of the Milbank Memorial Fund for the year 1931 shows grants totaling \$843,337. Since its establishment twenty-seven years ago the fund has appropriated \$8,987,575 for public health, social service, and education. A total of 147 projects have been aided.

The report states that the fund has shifted "from experiments in applying commonly accepted procedures, as in the New York health demonstrations, to experiments with new or improved public health administrative methods."

**The Rockefeller Foundation.** During 1931 this foundation appropriated a total of \$18,737,967.90. The Rockefeller Foundation's interests lie in five fields: the humanities, public health, medical science, social science, and natural sciences.

**CHANGES IN ORGANIZATION.** Reports published by various institutions indicate a tendency to merge various institutions within the State so as to consolidate administration matters and often to specialize the work within the particular institution. The character of such mergers is shown in the consolidation that has taken place in North Carolina.

The general plan of organization as reported in *School and Society*, Oct. 15, 1932, "provides that a university system composed of three branches, the branch at Greensboro to contain a junior college, a senior college, and units of the summer school and extension division, while the branch at Raleigh would be composed only of a junior college. At Chapel Hill, under this plan, would be located a junior college, senior college, and schools of Engineering, Commerce, Public Wel-

fare, Graduate Studies, Agriculture, and Forestry, Industries, Law, Medicine, Pharmacy, Graduate Library Science, Fine Arts, Home Economics, and units of the Summer School and Extension Division."

The executive committee of the trustees recommended that in addition to a president for the Greater University there be a vice president for each of the three units.

The State of Oregon consolidated the University of Oregon, the Oregon State College, and the normal schools. They elected a president of the State institutions for higher learning.

Efforts to reorganize higher education are not limited to administration matters. The college at Bennington, Vt., opened in the fall of 1932. This institution will attempt to conduct undergraduate work in a very different manner from that in use in other institutions. Points, courses, and ordinary credits will have little place in this college.

A New College was opened at Teachers College, Columbia University. The purpose of this college is to train teachers and school workers. The academic work is managed much more informally than is usual. It is claimed that graduation from this institution will not be based upon points and credits, but upon the ability which the student displays.

Various matters have seemed to call particular attention to the Institute for Advanced Study, the institution of which Dr. Abraham Flexner is the director. Dr. Flexner has been so critical of existing institutions that curiosity has been aroused regarding his own. Further interest has been aroused by the announcement that Prof. Albert Einstein, of Berlin, has accepted an appointment as Professor of Mathematical and Theoretical Physics. He will begin his work in the autumn of 1933 and be in residence at the Institute annually from October 1 to April 15. The Institute will open in the fall of 1933 in Princeton, N. J.

**COLLEGE PRESIDENTS.** Among the college presidents announced during the year are the following: Dr. Paul E. Titworth was elected president of Alfred University. Mr. Stanley King was elected president of Amherst College. Dr. Walter Scott Athearn was inaugurated president of Butler University. Dr. Howard Rufus Omwake was installed as president of Catawba College. Dr. Aymer Jay Hamilton was inaugurated president of State Teachers College at Chico, Calif. Dr. Raymond Walters was elected president of the University of Cincinnati. Dr. Edward Moseley Gwathmey was elected president of Converse College, Spartanburg, South Carolina.

Dr. Parke R. Kolbe was elected president of Drexel Institute. Dr. John Scholte Nollen was installed as president of Grinnell College. Dr. Harry W. McPherson was elected president of Illinois Wesleyan University. The Reverend Dr. Clyde Alvin Lynch was elected president of Lebanon Valley College. The Reverend Albert J. Dorger was appointed principal of Loyola University. Dr. Frank L. Babbott, Jr., was installed as president of Long Island College of Medicine.

Brother A. Patrick was appointed president of Manhattan College, New York City. Mr. W. F. Conn was elected president of Marion College. Dr. Hugh P. Baker was elected president of the Massachusetts State College at Amherst. Mr. Jay William Crofoot was installed as president of Milton College. Dr. Robert N. Montgomery was

elected president of Muskingum College, New Concord, Ohio. Dr. E. Guy Cutshall was elected president of Nebraska Wesleyan University.

Dr. J. W. Kerr was elected chancellor of the State Institutions for Higher Education in Oregon. Professor W. A. Lewis was elected president of Rio Grande College, Ohio. Dr. Robert C. Clothier was elected president of Rutgers University. Mr. M. F. Whittaker was elected president of South Carolina Agricultural and Mechanical College. The Reverend Stanley E. Grannum was elected president of Samuel Houston College, Texas. Mr. Douglas Huntley Gordon was installed as president of St. John's College, Annapolis, Maryland. Dr. Bradford Knapp was made president of Texas Technological College at Lubbock. Dr. John Feter Hurt was elected president of Union University, Tennessee. The Reverend A. H. Peotker, S.J., was appointed president of the University of Detroit. Mr. Walter C. Tredtin was elected president of the University of Dayton. Dr. Leonard Theodore Baker was elected president of the University of South Carolina.

The Reverend Edward V. Stanford was elected president of Villanova College. Dr. Ralph C. Hutchinson was elected president of Washington and Jefferson College. Dr. Dice Robins Anderson was installed as president of Wesleyan College, Macon, Ga. Mr. Charles H. Wesley was elected president of Wilberforce University. Dr. Aquila Webb was installed as president of Washington College at Johnson City, Tennessee. The Robert Ferguson Galbreath was installed as the eighth president of Westminster College. Dr. Walter L. Collins was installed president of Wilmington College, Ohio.

**FOREIGN-STUDENT RULING.** On Sept. 1, 1932, the Secretary of Labor issued a regulation that prohibited foreign students from obtaining employment in the United States. These regulations caused great excitement in educational circles and were generally condemned. Many students who were here from foreign lands had suffered serious losses through unfavorable exchange and they were compelled to support themselves in part at least by such work as they could obtain.

**SCHOLARSHIPS AND FELLOWSHIPS.** The Office of Education has issued a bulletin which lists the scholarships and fellowships now offered at 402 colleges and universities. It is estimated that there are more than 50,000 fellowships and scholarships available annually in the United States. The total money value of such grants is estimated at \$10,000,000.

**UPPER VOLTA.** See FRENCH WEST AFRICA.

**URAL AREA.** See SIBERIA.

**URIBURU, GEN. JOSÉ FRANCISCO.** An Argentine soldier and provisional president, died in Paris, France, Apr. 29, 1932. He was born in Salta, Argentina, July 20, 1868, attended the Military College in Buenos Aires, and received his army commission in 1888. He subsequently went to Germany to study the Prussian military organization and on his return directed, as inspector-general, the reorganization of the army along German lines. He served also as a member of the Argentine-Chilean boundary commission of 1902 and as military attaché in Madrid, Berlin, and London. He became provisional president of the Argentine republic in September, 1930, following a popular uprising against the government of President Irigoyen. His provisional gov-

ernment resigned on Feb. 20, 1932. See ARGENTINA under *History*.

**URUGUAY**, ū'rōō-gwā or ōō'rōō-gwī'. A republic on the southeast coast of South America, bounded by Brazil on the north and Argentina on the west. Capital, Montevideo.

**AREA AND POPULATION.** Uruguay's area of 72,172 square miles makes it the smallest state in South America. The population on Jan. 1, 1932, was estimated at 1,937,707, as compared with 1,903,083 a year earlier. For the period 1927 to 1931, births averaged 44,706 and deaths 19,769 annually, the average excess of births being 24,937. The average birth rate per 1000 inhabitants was 24.3 and the death rate 10.8. Immigrants arriving during 1931 numbered 12,715 (18,116 in 1930), of whom 3392 were from Spain, 1671 from Poland, and 1324 from Italy. The estimated population of Montevideo on June 30, 1932, was 655,599. Paysandú (37,000 in 1930), Salto (35,000), Mercedes (30,000), and Minas (28,000) were the other chief cities.

**PRODUCTION.** Of the area of Uruguay, about 60 per cent is devoted to stock raising, about 20 per cent to mixed stock and crop farms and ranches, and 7 per cent primarily to crop raising. The value of the chief crops in 1929-30 was: wheat, \$13,099,000; corn, \$2,298,000; linseed, \$5,170,000. Production of the principal crops in the 1931-32 season was: wheat, 11,259,000 bushels; barley, 148,000 bushels; oats, 3,111,000 bushels; corn, 5,759,000 bushels; and linseed, 4,841,000 bushels. Potatoes, beans, and alfalfa are other crops. Livestock in 1931 included 7,372,000 cattle, 15,406,000 sheep, and about 309,000 swine. Animals slaughtered by the frigorificos in 1931 were: cattle, 1,102,400 (1,310,400 in 1930); sheep, 1,955,500 (2,725,000 in 1930); swine, 72,900 (61,500 in 1930). Shipments of frozen and chilled beef, mutton, and canned meat declined 26 per cent in volume and 52 per cent in value in 1931, due to the poor export demand and low prices. The 1931-32 wool clip was estimated at about 100,000,000 pounds, against 149,000,000 pounds in 1930-31.

**COMMERCE.** The dollar value of 1931 imports declined by 41 per cent and that of exports by 50 per cent, as compared with 1930. The value of imports in 1931 (unrevised) was 81,982,000 pesos (\$45,385,000), as against 89,546,000 pesos (\$76,884,000) in 1930, while the value of exports was 78,242,000 pesos (\$43,315,000), compared with 100,864,000 pesos (\$86,612,000) in 1930. In 1932, imports declined 40 per cent in dollar value and exports 30 per cent, as compared with 1931.

**FINANCE.** The fiscal year ended June 30, 1931, closed with a budget deficit of 7,431,000 pesos, with expenditures totaling 63,167,000 pesos and revenues 55,736,000 pesos. This compared with 1929-30 revenues of 58,916,880 pesos and expenditures of 59,702,624 pesos. The budget voted for 1931-32 estimated revenues at 58,803,962 pesos and expenditures at 59,799,915 pesos, plus 800,000 pesos for losses in exchange operations. The final 1931-32 deficit was reported at about 4,570,000 pesos. The budget for 1932-33, while adopted by the lower chamber, was still awaiting action of the Senate at the end of 1932.

The financial situation of the Treasury became increasingly critical during 1931 and 1932. On Jan. 20, 1932, a law was passed authorizing a moratorium on amortization payments on the foreign debt and toward the end of the year the moratorium was applied to sinking fund pay-

ments on the national internal debt also. Interest payments were continued to the end of 1932. The national debt on June 30, 1932, stood at 247,789,000 pesos, of which 141,670,000 pesos represented external obligations, 101,139,000 pesos internal obligations, and 4,980,000 pesos the so-called international debt. The Uruguayan peso (\$1.0147 at par) declined to an average of \$0.8586 in 1930, \$0.5536 in 1931, and about \$0.475 in 1932.

**COMMUNICATIONS.** Railways in 1931 operated 1663 miles of line, of which 1440 miles were owned or controlled by the Central Uruguay Railway. A new line from Trienta y Tres, Uruguay, to Rio Branco, Brazil, was under construction in 1932. There were 22,487 miles of highway in 1930, of which 709 miles were macadam.

**GOVERNMENT.** The Constitution of 1919 vests executive power in the President, elected for four years by direct popular vote, and a national administrative council of nine members, elected for six years. Legislative power rests in a parliament of two houses, the Chamber of Representatives of 123 members, elected by universal male and female suffrage, and the Senate of 19 members, chosen by an electoral college which is elected by popular vote. President in 1932, Dr. Gabriel Terra (Batllista Colorado party), who assumed office Mar. 1, 1931.

**HISTORY.** From an economic and commercial standpoint, the year 1932 was one of the worst experienced by Uruguay since the beginning of the century. Exports declined 30 per cent in value and imports 40 per cent, as compared with 1931. Crops were badly damaged by swarms of locusts, disease was prevalent among cattle and sheep, and domestic industries were badly handicapped by the diminished purchasing power of the people and the high cost of imported material. The meat industry was threatened by the Ottawa treaties under which Great Britain arranged to give preferences to meat imports from the Dominions. There was a large budget deficit and a heavy floating debt, which the Minister of Finance sought to cover by an issue of 15,000,000 pesos of internal bonds. Sinking fund payments on the foreign debt were suspended in February and at the end of the year the National Council of Administration was being urged to declare a moratorium on all internal and external debts and impose an internal tax of 1 per cent on all government securities. The Uruguayan peso was held pegged at about \$0.475 (United States currency) during most of the year.

Despite the scourge of the depression, there were no important disorders. During February 7-9, the government took steps to frustrate a Communist conspiracy, which was followed by a general strike of skilled labor (February 11-13). The strike was likewise a failure. On February 8 President Terra asked the National Administrative Council for extraordinary powers to cope with the Communist conspiracy. Following the collapse of the uprising, some 200 soldiers were discharged.

President Terra during the year led a strong agitation for reorganization of Uruguay's unusual governmental system. Objecting to the division of executive responsibility between the President and the National Administrative Council, he demanded that either the presidency or the council should be abolished. The issue was injected into the election of three members of the National Administrative Council and six

Senators on November 26. Antagonists of the commission form of government urged citizens to show their disapproval of the system by abstaining from voting. The election was unusually quiet. It was estimated that only 103,000 votes were cast, as compared with 308,000 cast in the Congressional elections of 1931. A rigid immigration law, effective for the year ending Aug. 30, 1933, was enacted during 1932.

In the field of foreign relations, the year was marked by the severance and resumption of diplomatic relations between Argentina and Uruguay (see ARGENTINA under *History*). A draft treaty on navigation and commerce was signed between Uruguay and Brazil on January 3; it facilitated shipments of livestock and other products between Uruguay and the Brazilian state of Rio Grande do Sul. Negotiations for the joint regulation of the meat export trade were carried on among Uruguay, Argentina, and Brazil during the year. By resolution of the Governing Board of the Pan American Union, adopted May 4, 1932, the Seventh International Conference of American States (Pan American Conference), scheduled to meet in Montevideo in December, 1932, was postponed to December, 1933. "In view of the frankly Pan American orientation of Uruguayan foreign policy," President Terra decreed the organization of a special Pan American section in the Ministry of Foreign Affairs.

**UTAH. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 507,847, as against 449,396 in 1920. Salt Lake City, the capital, had (1930) 140,267 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay . . . . .	1932	720,000	1,342,000*	\$7,427,000
	1931	676,000	900,000*	9,492,000
Wheat . . . . .	1932	260,000	5,332,000	2,133,000
	1931	257,000	4,291,000	2,231,000
Sugar beets . .	1932	57,000	822,000*	(*)
	1931	49,000	505,000*	2,940,000
Potatoes . . .	1932	15,000	2,250,000	810,000
	1931	15,000	1,950,000	956,000

**MINERAL PRODUCTION.** As estimated by the Federal Bureau of Mines the total value of the mines' production, for 1932, of ores of the metals gold, silver, copper, lead, and zinc was \$14,167,603, as against \$28,970,974 for 1931. The mines' production of copper was particularly curtailed, to about 65,906,000 pounds for 1932 from some 151,000,000 pounds (1931), and from 180,526,423 (1930); and owing to persistent decline of average price, the value of the output of copper fell to some \$4,020,266 (1932) from \$13,762,522 (1931). Production of silver was reduced to some 6,979,500 ounces (1932), from 8,290,966 ounces (1931); by value more sharply to some \$1,968,219 (1932), from \$2,404,380 (1931). That of lead, to some 122,487,000 pounds (1932), from 158,423,453 pounds (1931); by value to some \$3,429,636 (1932) from \$5,861,668 (1931). That of zinc, to some \$1,802,650 by value (1932) from \$2,834,081 (1931). Even the production of gold, as stated by the Bureau of the Mint, fell to 183,462 ounces (1931), from 208,936 (1930); by value, to \$3,792,500 (1931), from \$4,319,100 (1930); and, as estimated for 1932, to \$2,946,832.

There were mined 3,330,000 short tons of coal

(estimated, 1931), as against 4,257,541, by value \$10,515,000, for 1930. The total value of the State's mineral product, for 1930, was \$64,224,307; for 1929, \$115,131,131.

**FINANCE.** State expenditures in the year ended June 30, 1931, were \$14,111,112 (of which \$5,204,780 was for highways). Revenues were \$13,437,634. Funded debt outstanding on June 30, 1931, totaled \$10,635,000, of which \$7,260,000 was for highways. Net of sinking-fund assets, the debt was \$4,982,363.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2196.12

**EDUCATION.** Confronted with generally reduced revenues for the public schools, superintendents at their annual convention decided on maintaining existing salaries for teachers as long as the means would permit and on subsequently discussing with local authorities the means of keeping the schools open.

For the academic year 1931-1932 the number of persons of school age in the State was reckoned as 148,349. There were enrolled in the public schools 140,749 pupils. Of these, 88,466 were in common schools or elementary grades and 29,449 were in high schools. Expenditures for public-school education during the academic year 1931-1932 (the latest for which the figure had been reported) totaled \$10,673,026. Salaries of teachers, by the year, averaged \$1465 for positions in high schools, and \$1074 for elementary positions; those of principals averaged \$1946.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion, approximately, of 11 to 8. For President, the officially reported totals were: Roosevelt (Dem.), 116,750; Hoover (Rep.), 84,775. A striking overturn occurred in the defeat of U. S. Sen. Reed Smoot (Rep.), an incumbent finishing his thirtieth consecutive year of service, long the guiding spirit of Republican tariff legislation; Dr. Elbert D. Thomas (Dem.), was elected to succeed him. Henry H. Blood (Dem.), was elected Governor, defeating William W. Seegmiller (Rep.). Democrats were elected to both the seats of the State in the House of Representatives.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, George H. Dern; Secretary of State, Milton H. Welling; State Auditor, Ivor Ajax; Treasurer, A. E. Christensen; Attorney-General, George P. Parker; Superintendent of Public Instruction, C. N. Jensen.

**Supreme Court:** Chief Justice, James W. Cherry; Associate Justices, Daniel N. Straup, Elias Hansen, William H. Folland, Ephraim Hansen.

**UTAH, UNIVERSITY OF.** A State institution of higher education in Salt Lake City, founded in 1850. The total enrollment for the autumn of 1932 was 3176. The faculty numbered 184. The income for 1931-32 was \$866,830. The Union building, opened Nov. 25, 1931, was erected by students, alumni, and friends of the university; it cost \$400,000. President, George Thomas, Ph.D.

**UZBEKISTAN.** See SOVIET CENTRAL ASIA.

**VANDERBILT UNIVERSITY.** A non-sectarian institution of higher learning for men and women in Nashville, Tenn. The enrollment for the autumn term of 1932 was 1330. The faculty numbered 372. The annual income was \$1,478,765. Chancellor, James Hampton Kirkland, LL.D., D.C.L., Ph.D.

**VAN DYKE, JOHN CHARLES.** An American art critic, died in New York City Dec. 5, 1932. He was born in New Brunswick, N. J., Apr. 21, 1856, and attended Columbia College. He was admitted to the bar in 1877 but the following year abandoned this profession on his appointment as librarian of the Sage Library in New Brunswick. His interest in art led him to spend his summers studying the works in the great European galleries, and during 1883-84 he edited the *Studio* and during 1887-88 the *Art Review*. In 1889 he became professor of the history of art at Rutgers University. Van Dyke's many publications on art subjects were distinguished by a lucid style and sound criticism, particularly from a technical viewpoint. Among these are: *Principle of Art* (1887); *How to Judge a Picture* (1888); *Serious Art in America* (1890); *Art for Art's Sake* (1893); *History of Painting* (1894); *The Meaning of Pictures* (1903); *Studies in Pictures* (1907); *What is Art?* (1910); *Rembrandt and His School* (1923); and *The Rembrandt Drawings and Etchings* (1927). The latter two books created a sensation, for in them he endeavored to prove that only about 50 of the 800 pictures ascribed to Rembrandt are genuine; the remainder, according to his theory, were by pupils or imitators of Rembrandt. His most important work was *New Guides to Old Masters* (12 vols., 1914-24), a series of critical guide books to the great European galleries.

**VAN ROOY, van rôë, ANTON.** A Dutch dramatic bass singer, died in Munich, Germany, Nov. 28, 1932. He was born in Rotterdam, Jan. 12, 1870. Most of his vocal training was received under Stockhausen in Frankfort-on-Main. For a time he devoted himself entirely to the concert platform and won fame as a lieder singer and in oratorio. The strong dramatic quality of his voice led Frau Wagner to offer him the rôle of Wotan at the Bayreuth festival of 1897. The following year he made his first appearances in Berlin, London, and New York. He continued to appear at the Metropolitan Opera in New York until 1908, after which he was a member of the Frankfort-on-Main opera company.

**VAN ROSSUM, WILLEM MARIUS, Cardinal.** A Dutch prelate of the Roman Catholic Church, died in Maastricht, Aug. 30, 1932. He was born in Zwolle, Sept. 3, 1854, studied at Culemburg, and entered the Redemptorist Order in 1873, being ordained a priest six years later. In 1896 Pope Leo XIII called him to Rome as a consultant of the Congregation of the Holy Office. He later became consultant-general of the Redemptorist Order. In 1911 he was made a Cardinal Bishop by Pius X, and in 1918 was appointed prefect of the Congregation de Propaganda Fide, receiving at the same time from Benedict XV the title of archbishop.

**VASSAR COLLEGE.** A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y., founded in 1861. The enrollment for the autumn of 1932 was 1205. The faculty in 1931-32 had 162 members. The endowment amounted to \$7,000,000; the income from funds was approximately \$425,000. President, Henry Noble MacCracken, Ph.D., L.H.D., LL.D.

**VATICAN CITY.** A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) treaty of Feb. 11, 1929. Ruler in 1932, Pope Pius XI (Achilles Ratti).

Vatican City comprises 108.7 acres, including St. Peter's Square, and has its own coinage, import duties, railway station, postal facilities, telegraph, radio-telegraph, and radio. On Apr. 15, 1932, there were 1006 inhabitants, including 846 Italians and 120 Swiss. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers, delegating the latter to a governor. A special tribunal exercises the judicial power on behalf of the Pope, but appeals may be carried to the *Sacra Romana Rota* and to the Supreme Tribunal of the *Segnatura*. With the exception of St. Peter's Square, the territory is policed by a Papal Gendarmerie of 120 persons. The chief officials of the Vatican City in 1932 were Marchese C. Serafini, the Governor, and Cardinal Pacelli, Cardinal Secretary of State, who conducted the foreign relations.

**HISTORY.** After three years of experience in governing Vatican City, Pope Pius on Dec. 13, 1932, appointed a commission, headed by his nephew, Count Franco Ratti, to reorganize the governmental system. On October 6, the Pope appointed a commission to draft a civil code for use in the Vatican courts in place of canon law. Two conventions signed by representatives of the Vatican City and of the Italian Government on Sept. 6, 1932, exempted nearly 2000 Italians attached to the Vatican staff from military service and regularized the past civil acts of Roman Catholic orders which disregarded Italian civil and commercial law. On Feb. 13, 1932, an unexploded bomb was found near the central altar of St. Peter's Cathedral. See ROMAN CATHOLIC CHURCH; ITALY, SPAIN, MEXICO, POLAND, and MALTA under *History*.

**VEGETABLES.** See HORTICULTURE.

**VENEZUELA, ven'ê-zwê'lâ; Amer. Sp. pron., vâ'nâ-swâ'lâ.** A republic on the north coast of South America, bordering the Caribbean Sea. Capital, Carâcas.

**AREA AND POPULATION.** The area of Venezuela is calculated at 352,143 square miles and the estimated population in 1931 was 3,226,000, compared with 3,026,878 in 1926. For the period 1927 to 1931, births averaged 91,007 and deaths 49,929 annually. Immigrants for the same period averaged 20,323 annually and emigrants 18,714. The estimated population of Carâcas in 1931 was 140,275 (135,253 in 1926), and that of the other leading towns at the census of 1926 was: Maracaibo, 74,767; Valencia, 36,804; Barquisimeto, 23,109.

**PRODUCTION.** Venezuela is predominantly agricultural, the chief crops being coffee and cacao. Mining, livestock raising, pearl fishing, and manufacturing are secondary industries. Coffee production in 1931 was estimated at 144,617,000 pounds and exports at 118,164,000 pounds, of which, according to United States statistics, 56,385,000 pounds valued at \$7,350,000 were imported into the United States. The 1930 exports were 103,940,000 pounds (142,197,000 pounds in 1929). The 1931 cacao crop of about 46,750,000 pounds was normal and practically all of it was exported; exports to the United States were 17,469,000 pounds, valued at \$1,582,000 (15,638,000 pounds, valued at \$1,813,000, in 1930). Sugar production was estimated at 18,000 long tons in 1931-32 (20,000 in 1930-31); tobacco, about 3,500,000 to 4,000,000 pounds annually. Cotton, corn, beans, and wheat are produced.

There were 108 oil companies registered in Venezuela in 1931. The 1931 petroleum produc-

tion was 118,770,000 barrels (136,669,000 barrels in 1930); gold, 55,946 troy ounces in 1930; copper, 544 metric tons in 1931 (3294 tons in 1930); asphalt, 54,332 metric tons in 1929. Petroleum production is the only large-scale manufacturing industry.

**COMMERCE.** For the fiscal year ended June 30, 1931, imports were valued at \$56,068,820 (\$77,455,414 in 1929-30) and exports at \$139,419,236 (\$143,306,727 in 1929-30). United States statistics for the calendar year 1932 showed imports from Venezuela of \$20,293,648 (\$26,844,756 in 1931) and exports to Venezuela of \$10,235,371 (\$15,045,147 in 1931). In the calendar year 1930, the latest year for which Venezuelan statistics were available, the United States furnished 51.1 per cent of the total imports and took directly 23.8 per cent of the exports, besides much Venezuelan petroleum taken indirectly. Of total 1930 exports valued at \$144,111,000, petroleum accounted for \$116,222,000, coffee for \$12,860,000, gold for \$5,134,000, and cacao for \$3,256,000.

**FINANCE.** For the fiscal year ended June 30, 1933, the budget estimates were 150,000,000 bolivars (about \$28,950,000 at par) and 142,963,513 bolivars (about \$27,591,000), for revenues and expenditures, respectively. This compared with the 1931-32 estimates of 150,000,000 bolivars and 144,800,000 bolivars (\$26,946,400), respectively. Actual revenues in the calendar year 1931 were 188,932,746 bolivars and expenditures were 172,398,887 bolivars, leaving a surplus of 16,533,859 bolivars, as contrasted with the deficit of 81,261,955 bolivars reported for 1930, when revenues were 243,660,000 bolivars and expenditures 324,922,000 bolivars. The internal public debt on Dec. 31, 1931, amounted to 24,572,460 bolivars, as against 20,487,742 bolivars on Dec. 31, 1930. The external debt was retired in 1930. The bolivar (par value, \$0.193) exchanged at \$0.189 in 1930 and at \$0.1704 in 1931.

**COMMUNICATIONS.** Venezuelan railways in 1931 extended 746 miles, of which 519 miles were privately owned, 68 miles government owned, and 159 miles industrial railways. In 1931 the railways carried 2,887,600 passengers, 411,287 tons of freight, and reported gross receipts of \$2,505,000. There were 5282 miles of motor highways on Dec. 31, 1931, including 233 miles of concrete. Wireless stations were installed at Maracay, Maturin, and Puerto Cabello in 1931. A total of 2175 vessels, of 4,107,000 net registered tons, entered the ports during 1930. Telephone communication between the United States and Venezuela was inaugurated Dec. 19, 1932.

**GOVERNMENT.** Under Constitutional amendments passed by Congress in 1929, the executive power is vested in the President, elected by Congress for seven years, in conjunction with the Commander-in-Chief of the Army and the Cabinet Ministers. The actual ruler in 1932 was Gen. Juan Vicente Gómez, who established himself as dictator in 1908. There is a Congress of two chambers, with very limited powers.

**HISTORY.** When Gen. Juan Vicente Gomez in December, 1932, rounded out the 24th year of his dictatorship, Venezuela had the distinction of working on a budget that was normally balanced without the aid of income taxes or loans. There was no foreign debt and the government's internal obligations were approximately one-third of the Treasury surplus. No public debt had been contracted since 1908. Venezuela was the only South American country which had passed through the

world depression without experiencing serious internal disorders or foreign wars. On October 8, Venezuela's highest court upheld the validity of oil concessions held by the Caribbean Petroleum Company and the Venezuelan Oil Company, subsidiaries of the Royal Dutch Shell. Some of the acreage had been claimed by rival oil interests.

**VERMONT.** **POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 359,611, as against 352,428 in 1920. Burlington, the most populous city, had (1930) 24,789 inhabitants; Montpelier, the capital, 7837.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1932	922,000	1,110,000 *	\$10,857,000
	1931	913,000	1,218,000 *	11,556,000
Potatoes ...	1932	16,000	2,320,000	1,067,000
	1931	17,000	2,550,000	1,224,000
Corn ... ..	1932	64,000	2,624,000	1,102,000
	1931	64,000	2,944,000	1,560,000
Oats .....	1932	62,000	2,046,000	655,000
	1931	61,000	1,952,000	761,000

\* Tons.

**MINERAL PRODUCTION.** Widespread curtailment of building activity, which set in in 1930, affected the important Vermont industries producing stone and slate. The quantity of stone quarried fell to 286,490 short tons for 1930 (the latest year covered by the figures of the Bureau of Mines), from 367,240 for 1929; by value, to \$7,983,160 (1930), from \$9,435,680 (1929). The total value of the State's mineral product, duplications eliminated, was \$11,637,393 for 1930; for 1929, 14,602,589.

**FINANCE.** State expenditures in the year ended June 30, 1931 were \$10,935,066 (of which \$6,136,382 was for highways). Revenues were \$10,277,606. Funded debt outstanding on June 30, 1931, totaled \$9,182,032, both gross and net of sinking-fund assets. On an assessed valuation of \$334,371,646 the State levied in the year ad valorem taxes of \$1,214,032.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 1050.74. About 5 miles had been abandoned in 1930.

**EDUCATION.** A requirement for four preparatory years of college or normal school was reported to have been set up for the certification of public-school superintendents; it specifically included 18 hours of professional education. The State normal school at Castleton offered a third-year course of study. Enrollment in normal school was limited to such graduates of the high schools as had stood in the upper half of their graduating classes with regard to proficiency, and as met requirements with regard to health and personality; a quota was fixed for the number admissible. For the academic year 1931-1932 the number of persons of school age in the State was reckoned as 78,296. There were enrolled in the public schools 66,259 pupils. Of these, 53,613 were in common schools or elementary grades, and 12,646 in high schools. A slight drop in the former number, as compared with the total for the year before, was more than offset by a rise in the latter number. The year's expenditures for public-school education totaled \$5,037,733. Salaries of teachers, by the week, averaged \$21.06 for the rural schools, \$28.34 for graded schools, and \$37.87 for the high schools.

**POLITICAL AND OTHER EVENTS.** The State party conventions, both Republican and Democratic, declared themselves on May 18 in favor of the resubmission or repeal of the Eighteenth Amendment. Economic conditions in Vermont during the year were less adverse than in most parts of the Union and the financial position of the State government was well maintained.

**ELECTIONS.** The popular vote of November 8 was cast for the Republican National ticket in the proportion, far below normal, of about 7 to 5. For President the officially reported totals were: Hoover (Rep.), 78,984; Roosevelt (Dem.), 56,266. U. S. Sen. Porter H. Dale (Rep.), was reelected, defeating Fred C. Martin (Dem.). Ernest W. Gibson (Rep.), was reelected to the State's seat in the House of Representatives. Gov. Stanley C. Wilson (Rep.), was reelected, defeating James P. Leamy (Dem.), and the rest of the Republican State ticket was victorious.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Stanley C. Wilson; Lieutenant-Governor, Benjamin Williams; Secretary of State, Rawson C. Myrick; Treasurer, Thomas H. Cave; Auditor, Benjamin Gates; Attorney-General, Lawrence C. Jones, Commissioner of Education, Francis Bailey.

**Supreme Court:** Chief Justice, George M. Powers. Associate Justices, Leighton P. Slack, Sherman R. Moulton, Frank D. Thompson, Warner A. Graham.

**VERMONT, UNIVERSITY OF.** An endowed institution of higher education in Burlington, Vt., receiving some State aid. The 1932 autumn enrollment was 1183. The faculty numbered 200. The income for the year was \$817,162. President, Guy W. Bailey, LL.D.

**VETERANS' ADMINISTRATION.** See UNITED STATES under *Administration*.

**VETERINARY MEDICINE.** In the field of comparative medicine the year 1932 was marked by the appearance of foot-and-mouth disease within the United States for the tenth time and its complete eradication within the record period of ten days. The United States remained the only major livestock country completely free from this serious disease. The country continued free from the invasion from abroad of any of the other dreaded diseases of livestock.

**FOOT-AND-MOUTH DISEASE.** Another outbreak of foot-and-mouth disease, the tenth to have occurred in the United States, appeared in Orange County, Calif. April 23 on a ranch where 4000 hogs were being fed garbage. A rigid quarantine was at once imposed followed on April 28 by a definite diagnosis. On April 30 the disease appeared on a hog ranch in Los Angeles County a few miles from the originally infected herd. On May 7 a third centre of infection was discovered in San Bernardino County, also on a hog ranch. The rigid quarantine placed at once upon discovery of the disease followed by slaughter and burial of the infected herds and disinfection of the premises resulted in the complete elimination of the disease in the short space of ten days. This sets a new record in the eradication of the disease in the United States, in which the Federal and State officials coöperated. The source of the infection was not determined since no garbage is permitted to land from foreign vessels. The eradication required the slaughter of 18,747 swine, 46 cattle, and 24 goats belonging to 37 different owners. The appraised value of the livestock and property destroyed was \$205,-

279.46 borne in equal amounts by the Federal and State governments.

**LIVESTOCK TUBERCULOSIS ERADICATION.** A substantial progress was made in the eradication of bovine tuberculosis. Two States were added to the list of six on the honor roll as practically free from the disease, Idaho in June and North Dakota in August. This means that eight States have reduced bovine tuberculosis within their borders to a point where at least 99.5 per cent of all their cattle are free from it. The other six are North Carolina, Maine, Michigan, Indiana, Wisconsin, and Ohio. At the end of the year Nevada was closing in on the disease with all but two counties free. The year's activities consisted largely in testing cattle under the area plan. During the fiscal year ended June 30, 13,443,557 cattle in 1,139,119 herds were tested and 1.9 per cent reacted. At the close of the year 1746 counties and the District of Columbia had engaged in area eradication work, an increase of 169 counties or approximately 11 per cent. The sixth survey, made to determine the extent of bovine tuberculosis by counties in the United States, completed June 1, indicated that the approximate degree of disease among cattle had been reduced to 1.4 per cent as compared with 4.0 per cent in 1922 when the first survey was made.

**TICK FEVER AND CATTLE TICK ERADICATION.** With the release on December 5 of 20,290 square miles of territory in Arkansas, Florida, and Texas, Arkansas became the twelfth State to be released from tick quarantine. The areas remaining under Federal quarantine for tick fever in cattle in continental United States now is confined to parts of Florida, Louisiana, and Texas. Of the area originally tick infested and quarantined, 88 per cent has been freed from the pest by systematic eradication. During the year part of one parish in Louisiana was requarantined.

**ANAPLASMOSIS IN CATTLE.** The disease of cattle known as anaplasmosis was found to be transmitted by the Rocky Mountain spotted fever tick in addition to the species noted in the 1931 YEAR BOOK. It has now been established that the infection may be transmitted from larva to nymph and from nymph to adult in all three of the three host tick transmitters, but passes through the egg of none of these. On the other hand it must pass through the egg, i.e. be hereditarily transmitted, by the common cattle tick, a one host species which leaves the host only as an adult.

**INFECTIOUS ABORTION.** The year added new knowledge of infectious abortion to that previously gained. A study of the eye and skin as channels through which the infection may be carried strengthened the belief that these routes may be important under natural conditions of exposure. Further studies of the possible transfer of infection from swine to cattle and from cattle to swine indicate that under natural conditions cattle rarely become infected with the swine type of *Brucella abortus* and that swine practically never become infected with the bovine type. The association of the causative organism with hygroma of the knee and with bursitis of cattle and with a general clinical disease of the horse was reported. It was determined that abortion infection and tuberculosis in the same individual may be a rather common occurrence in areas where bovine tuberculosis has not as yet been eradicated. Further evidence was obtained that the bovine and swine types of the organism

are destroyed by the usual pasteurization temperature when the work is carefully conducted. The occurrence of the infection in buffaloes and elk in the Yellowstone National Park was reported. Additional reports were made of successful eradication of the disease from dairy herds in several States through frequent application of the agglutination test and permanent segregation of positive-reacting animals. It was determined in Wisconsin that an unheated 1 to 150 dilution of lye made by adding one 13-ounce can of high-test lye to 15 gallons of water almost instantly destroys the causative organism of infectious abortion as well as all other Gram-negative non-sporulating rod bacteria at a cost of one cent per gallon. It was found that whitewash when freshly made from quick-lime is a very efficient germicide against these same organisms.

**DOURINE ERADICATION.** In the dourine eradication work, activities centered principally on the San Carlos Indian Reservation in Arizona, where an extensive eradication campaign was conducted. More than 11 per cent of the horses and mules tested gave positive reactions.

**CANINE DISTEMPER.** The research of two men working together in England, P. P. Laidlaw and G. W. Dunkin, who discovered the causative filterable virus of distemper several years ago, has gone far to make possible the control of this disease of young dogs which each year causes many a heartache through the loss of canine friends. These workers have shown that the dog may be protected against the disease by vaccination with a living virus, the immunity obtained being solid, long lasting, and firm against various strains of the infection. In the later work a distemper antiserum has been found of very great value if used within seven days of the onset of symptoms.

**PULLORUM DISEASE OF THE FOWL.** The control and eradication work with bacillary white diarrhea of chicks, which also affects grown fowl, and is now generally known as pullorum disease, was continued. Much of the large loss of chicks formerly suffered is now being prevented through the elimination of infected breeders. The official pullorum disease workers of the New England States, which States were pioneers in the eradication work, joined by those from other Northeastern States and the Province of Ontario, 15 in all, reported at their fifth annual conference that during the season of 1931-1932, 1,937,382 fowls in 4208 flocks had been officially tested with an average reaction for all of only 4 per cent. In 7 of the States the reacting fowls numbered less than 3 per cent and in 4 of those longest engaged in the work the reactors numbered less than 1 per cent. In a comparison made of the tube and rapid tests of the blood for the presence of the infection the results obtained were in favor of the tube test although all were found useful. When the tube test was applied by inexperienced or inefficient operators, there was an error of about 10 per cent. Further reports were made of the occurrence of the disease in poults, the mortality in a flock of 300 in Pennsylvania having been 20 per cent. In Missouri the pullorum organism was discovered to cause a disease of the leg joints of baby chicks.

**PARASITES OF LIVESTOCK.** An advance was made in knowledge of the transmission of animal parasites, in the development of practical control measures, and in the treatment of livestock

for their removal. The appearance of a serious Old World subcutaneous parasite of man and beast, the Guinea or Medina worm, *Dracunculus medinensis*, in the United States was reported, it having been taken from a silver-black fox in Iowa. This parasite has been for centuries a serious problem in man and livestock in certain parts of the Old World. A study conducted in Louisiana indicated that colic in horses and mules may be practically eliminated from the average farm in the State by semiannual treatment for parasite control. In experimental work with the horse normal butylidene chloride was found to be highly effective for the removal of blood sucking strongyles, large intestinal round worms and certain stomach worms and pinworms.

**VIADUCTS.** See BRIDGES.

**VICTORIA.** A State of the Australian Commonwealth, occupying the southeastern part of the island continent, bounded on the north by New South Wales, and west by South Australia. Area, 87,884 square miles; estimated population on Mar. 31, 1932 was 1,804,584 compared with 1,531,280 for the census of 1921. The estimated populations of the chief cities, on Jan. 1, 1931, were Melbourne, the capital, 1,014,600; Geelong, 43,400; Ballarat 42,050; Bendigo, 33,690. On Jan. 1, 1932 Melbourne had an estimated population of 1,030,750.

The estimated value of production for 1929-30 totaled £90,593,185, distributed as follows: Agricultural, £8,985,524; pastoral and dairying, £23,135,434; mining, £1,833,246; forest £1,704,614; manufacturing (value added in process of), £49,403,185; miscellaneous £5,531,182. The final estimate of the wheat crop for 1931-32 was 41,955,856 bushels from 3,565,872 acres. Oats, barley, potatoes, hay, wine grapes, currants, and raisins are other leading crops.

The value of direct overseas imports for 1931-32 was £16,043,420 (£20,305,201 for 1930-31); of overseas exports, £27,636,798 (£26,476,819 for 1930-31). State revenue in 1930-31 was £25,575,504 (£27,323,842 in 1929-30); expenditure, £28,029,702 (£28,496,712 in 1929-30). Expenditure charged to the loan fund in 1930-31 was £4,047,728 and the net State debt on June 30, 1931 was £165,962,606.

Lieutenant-Governor in 1932, Sir W. H. Irvine. Premier and Treasurer, Sir Stanley Argyle. See AUSTRALIA under History.

**VILNA (WILNO).** See POLAND and LITHUANIA under Area and Population, History.

**VIRGINIA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,421,851, as against 2,309,187 in 1920. Richmond, the capital, had (1930) 182,929 inhabitants; Norfolk, 129,710.

**AGRICULTURE.** The table on page 832 shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** Of coal, furnishing annually about half by value of the mineral product, the quantity mined fell to an estimated total of 9,650,000 short tons (1931), from 10,907,377 (1930). The coal mined in 1930 attained the value of \$17,520,000. The total value of the State's mineral product, duplications eliminated and coke excepted, was \$34,602,749 for 1930; for 1929, \$39,752,683.

**FINANCE.** State expenditures in the year ended June 30, 1931, were \$48,666,350 (of which \$20,323,778 was for highways). Revenues were \$45,920,643. Funded debt outstanding on June 30,

Crop	Year	Acres	Prod. Bu.	Value
Corn	1932	1,466,000	26,388,000	\$10,819,000
	1931	1,527,000	48,061,000	18,947,000
Hay	1932	851,000	777,000 <sup>a</sup>	7,987,000

	1931	38,000	4,750,000	2,898,000

<sup>a</sup> Tons. <sup>b</sup> Pounds. <sup>c</sup> Bales

1931, totaled \$27,589,073, of which \$6,428,000 was for highways. Net of sinking-fund assets, the debt was \$25,334,912.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 4491.75. In the year previous, 25.55 miles of line had been abandoned; 1.71 miles brought into operation.

**EDUCATION.** It was reported that a majority of the teachers were participating in 1932 in applying the State's three-year programme for the revision of the curriculum, and that good results were accruing. For the academic year ending in 1932, there was a moderate increase in enrollment of pupils, entirely in the secondary grades, and some diminution in current expenditure and capital outlay for the public schools as a whole. There were enrolled in the public schools 582,982 pupils. Of these, 509,080 were in common schools and elementary grades; in high schools, 73,902. The year's expenditures for public-school education were: for operation, \$20,072,235; for capital outlay and debt service, \$4,130,085. Salaries of teachers, by the year, averaged \$877, as against \$909 for the year before.

**LEGISLATION.** A regular biennial session of the General Assembly was held, adjourning on March 22. It passed a budget carrying \$85,000,000 for the ensuing two years. It passed an act designed to improve the revenue from the gasoline tax, by providing against the illicit sale of untaxed gasoline. The unextinguished remainder of the State's 3 per cent bond issue of 1882, amounting to \$2,447,970, was refunded. As to local taxation, the authority was given to counties and cities to tax realty, tangible personal property, and merchants' capital, respectively, at different rates. The counties were relieved of the expense of the system of county roads, which the State took over, as a "secondary" State road system, taking likewise from the counties the proceeds of the sales tax on gasoline, which had gone to the counties that they might meet the expense of these roads. A new motor code was enacted. The State's prohibition law was liberalized in some respects. In the penal field the system of allowing one-third of prisoners' time of service to be commuted for good behavior was altered so as to render those imprisoned for felony eligible to "half-time off," with the exception of those under life sentence; a saving of nearly \$100,000 a year in State prison expenses was to be effected thereby. The Federal "lame duck" Amendment to the Constitution was

ratified by the State, in advance of formal notice submitting it for ratification, Virginia being the first State to ratify.

**POLITICAL AND OTHER EVENTS.** The State act dividing Virginia into nine districts, in place of ten, for the election of Federal Representatives, was contested on the ground that the new 7th District, composed of almost the entirety of the old 7th and 10th Districts, was disproportionately large. The State Court of Appeals declared the redistricting act void, as failing to meet a requirement of the State constitution which called for equal representation. In consequence of this decision it was necessary to elect all Representatives in November by vote of the whole State. The State joined in an effort of the Appalachian Power Company to obtain a Federal injunction restraining the Federal Power Commission from interfering with its project of hydroelectric development on the New River, contended to be non-navigable and not in the commission's control. The State was forced to economize in governmental expenditure, and Governor Pollard by his own act reduced his salary 10 per cent for one year. Application was made to the Reconstruction Finance Corporation for a loan of some \$3,750,000 for the aid of State projects of construction. A restoration of colonial buildings at Williamsburg was effected, through the financial aid of the Rockefellers, and restored buildings, including the Raleigh Tavern, were opened in September. The Richmond Battlefields Park, a gift from citizens of Richmond to the State, was dedicated at Frazier's Farm on June 22, with an attendance of about 1000 Confederate veterans.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket by more than 2 to 1. An entirely Democratic delegation of nine members, all actual incumbents but one, were elected Representatives, to the Seventy-third Congress; all were elected at large. For President, the popular vote was: Roosevelt (Dem.), 203,980; Hoover (Rep.), 89,637.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, John Garland Pollard; Lieutenant-Governor, James H. Price; Secretary of the Commonwealth, Peter Saunders; State Treasurer, John M. Purcell; Auditor of Public Accounts, T. Coleman Andrews; Attorney-General, John R. Saunders; Superintendent of Public Instruction, Dr. Sidney B. Hall; Commissioner of Agriculture, George W. Koener.

**Supreme Court of Appeals:** President, Preston W. Campbell; Associate Justices, Louis E. Epes, H. W. Holt, E. W. Hudgins, H. B. Gregory, George L. Browning, Joseph W. Chinn.

**VIRGINIA UNIVERSITY OF.** A nonsectarian institution of higher education in Charlottesville, Va., founded in 1819. The enrollment for the autumn session of 1932 amounted to 2488. For the summer session of 1932 there was an enrollment of 2020. The faculty numbered 148. The productive endowment of the university amounted to \$10,000,000; the annual State appropriation was \$452,747; and the total annual income for 1931-32 was \$2,146,000. The library contained 200,644 volumes. There was completed and dedicated in October, 1932, the Clark Memorial Law Building, the gift of William Andrews Clark, Jr., '99, of Los Angeles, Calif. Acting president, John Lloyd Newcomb. See also **PUBLIC AFFAIRS, INSTITUTE OF.**

**VIRGIN ISLANDS.** A territory of the United States comprising a group of 50 small islands, situated about 60 miles east of Puerto Rico in the Caribbean Sea. The same name is applied to a small group of islands included in the British colony of the Leeward Islands (q.v.). The Virgin Islands of the United States consist of the islands of St. Thomas (area, 28 square miles; population, 9834 at the 1930 census), St. Croix (area, 84 square miles; population, 11,413); and St. John (area, 20 square miles; population, 705), together with many smaller islands and cays. Total area, 132 square miles; total population, 22,012. Negroes comprised 78 per cent of the population, whites 9 per cent, and persons of mixed blood 12 per cent. Capital, St. Thomas (population, 7036) on the island of St. Thomas.

**PRODUCTION, ETC.** Sugar cane growing and cattle raising are the principal occupations on St. Croix. Sugar produced in 1932 totaled 4288 tons.

Trade is chiefly with the United States. In the 1931-32 fiscal year imports were valued at \$1,415,915 (\$1,796,420 in 1930-31), and exports at \$458,694 (\$656,522 in 1930-31). The U. S. Government contributed \$643,300 toward governmental expenses of the island for the 1931-32 fiscal year. For the municipality of St. Thomas

and St. John, local revenues were \$101,400 and expenditures \$215,205; for the municipality of St. Croix, revenues were \$80,736 and expenditures \$198,166.

**GOVERNMENT.** Administration of the islands was transferred from the Navy to the Interior Department effective Feb. 27, 1931, and a civil régime established. Governor in 1932, Paul M. Pearson; Lieutenant-Governor, in charge of St. Croix, Lawrence N. Cramer.

A hurricane swept the harbor of St. Thomas on Sept. 26, 1932, causing 15 deaths and damage estimated at \$200,000. The drafting of an organic act for the Virgin Islands was in preparation in the insular affairs committees of the Senate and the House at Washington. A draft act, prepared at the instance of Governor Pearson, with the Puerto Rican act as a model, was submitted to the committees by the Governor. On Nov. 28, 1932, the committees were notified in a note signed by members of the islands' Colonial Councils that the draft act was not satisfactory to the Virgin Islanders.

**VITAL STATISTICS.** In the death registration area of the United States, the death rate in 1931 showed a marked decline in comparison with the previous year, according to the U. S. Bureau

## DEATHS AND DEATH RATES IN THE UNITED STATES REGISTRATION AREA, 1931-1930

Cause of death	Number		Rate per 100,000 estimated population	
	1931	1930	1931	1930
Total deaths (all causes) . . . . .	1,322,587	1,343,356	1,107.5	1,133.1
Typhoid and paratyphoid fever . . . . .	5,382	5,098	4.5	4.8
Smallpox . . . . .	95	165	0.1	0.1
Measles . . . . .	3,576	3,820	3.0	3.2
Scarlet fever . . . . .	2,650	2,279	2.2	1.9
Whooping-cough . . . . .	4,619	5,707	3.9	4.8
Diphtheria . . . . .	5,788	5,822	4.8	4.9
Influenza . . . . .	31,701	25,068	26.5	19.5
Dysentery . . . . .	2,441	3,356	2.0	2.8
Erysipelas . . . . .	2,275	2,508	1.9	2.1
Acute polyomyelitis and acute poliomyelitis . . . . .	2,096	1,370	1.8	1.2
Lethargic or epidemic encephalitis . . . . .	972	1,062	0.8	0.9
Epidemic cerebrospinal meningitis . . . . .	2,832	4,211	2.4	3.6
Tuberculosis (all forms) . . . . .	81,395	84,741	68.2	71.5
Of the respiratory system . . . . .	72,515	75,120	60.7	63.4
Syphilis . . . . .	16,454	16,676	13.8	14.1
Malaria . . . . .	2,536	3,403	2.1	2.9
Cancer and other malignant tumors . . . . .	118,141	115,265	98.9	97.2
Rheumatism and gout . . . . .	4,133	4,493	3.5	3.8
Diabetes mellitus . . . . .	24,331	22,528	20.4	19.6
Pellagra . . . . .	5,090	6,333	4.3	5.3
Pernicious anemia . . . . .	3,734	3,908	3.1	3.3
Alcoholism (acute or chronic) . . . . .	3,933	4,158	3.3	3.5
Meningitis (nonepidemic) . . . . .	2,782	3,043	2.3	2.6
Cerebral hemorrhage, embolism, thrombosis and softening . . . . .	99,376	100,646	83.2	84.9
Hemiplegia, other paralysis, cause not specified . . . . .	4,035	4,671	3.4	3.9
Diseases of the heart . . . . .	253,985	253,084	212.7	213.5
Diseases of the arteries, atheroma, aneurysm, etc. . . . .	24,498	25,446	20.5	21.5
Bronchitis . . . . .	4,586	4,992	3.8	4.2
Pneumonia (all forms) . . . . .	96,973	98,657	81.2	83.2
Respiratory diseases other than bronchitis and pneumonia (all forms) . . . . .	9,415	9,588	7.9	8.1
Ulcer of the stomach and duodenum . . . . .	7,259	7,380	6.1	6.2
Diarrhea and enteritis . . . . .	20,813	31,192	17.4	26.3
Appendicitis . . . . .	18,113	18,100	15.2	15.3
Hernia, intestinal obstruction . . . . .	12,539	12,176	10.5	10.3
Cirrhosis of the liver . . . . .	8,851	8,583	7.4	7.2
Nephritis . . . . .	104,119	107,619	87.2	90.8
Puerperal septicemia . . . . .	5,445	5,439	4.6	4.6
Puerperal causes other than puerperal septicemia . . . . .	8,794	9,726	7.4	8.2
Congenital malformations and diseases of early infancy . . . . .	67,436	72,246	56.5	60.9
Suicide . . . . .	20,088	18,551	16.8	15.6
Homicide . . . . .	11,160	10,617	9.3	9.0
Accidental and unspecified external causes . . . . .	100,183	95,527	83.8	80.6
Burns (conflagration excepted) . . . . .	5,893	6,523	4.9	5.5
Accidental drowning . . . . .	7,545	7,450	6.3	6.3
Accidental shooting . . . . .	3,041	3,120	2.5	2.6
Accidental falls . . . . .	20,356	20,030	17.0	16.9
Excessive heat (burns excepted) . . . . .	2,768	1,487	2.3	1.3
Other external causes . . . . .	60,530	56,917	50.7	48.0
All other defined causes . . . . .	95,546	100,655	80.0	84.9
Unknown or ill-defined causes . . . . .	22,517	24,864	18.9	21.0

of the Census. Deaths from all causes showed a total of 1,322,587, or a death rate of 1107.5 per 100,000 population, as compared with 1,343,356 deaths in 1930, or a death rate of 1133.1. The five leading causes of death, as in 1930, were diseases of the heart, cancer, nephritis, cerebral hemorrhage, and the pneumonias, and as in previous years these five causes accounted for more than half of all deaths.

According to comparative annual statistics of the Metropolitan Life Insurance Company, based on some sixteen and a half million industrial policy holders, mortality from diseases of the heart and from cancer is steadily rising, although, with respect to diseases of the heart, the Company's statistical department reports that "the rate is declining at the younger ages. This means that such items as school medical inspection, industrial hygiene, and other preventive measures are bearing fruit; for, while heart conditions usually cause death late in life, they often begin in childhood or adolescence."

The principal causes of death and the total deaths with death rates for the years 1930 and 1931 in the registration area of the United States, as compiled by the Bureau of the Census, are shown in the table on page 833.

**VITAMINS.** Important advances in knowledge of the chemical nature of at least three vitamins were made during the year. Vitamin A was isolated in such a state of purity as to leave only slight doubts as to its chemical composition. The isolation of vitamin B ( $B_1$ ) in pure crystalline form was reported and generally accepted. The identity of vitamin C with a definite chemical compound hexuronic acid was announced practically simultaneously in this country and England, with later confirmatory evidence from various laboratories. The international standards for vitamins A, B ( $B_1$ ), and D, as announced in the previous report, became available in this country toward the end of the year and were distributed to qualified laboratories by the U. S. Department of Agriculture.

**VITAMIN A.** To Karrer and his associates at the University of Zurich, Switzerland, belongs the credit for first establishing the chemical structure of vitamin A. Interest in the relationship between carotene and vitamin A, as noted in the 1931 report, led to renewed activity in studies of the chemical nature of carotene and of the most active concentrates of vitamin A that could be prepared. Two isomeric carotenes,  $\alpha$ - and  $\beta$ -carotene, were isolated practically simultaneously by Karrer and his associates (*Helv. Chim. Acta*, vol. 14, p. 614) and by Kuhn and Lederer (*Ber. Chem. Ges.*, vol. 64, p. 1349). These differed only slightly in structure and both had biological properties corresponding to vitamin A.

The discovery by Karrer that halibut and mackerel liver oils were very much richer in vitamin A than cod-liver oil made it possible to obtain (*Helv. Chim. Acta*, vol. 14, pp. 1036, 1040, 1431) exceedingly rich concentrates of the vitamin in quantities large enough to subject to elaborate purification and analysis.

Meantime extensive investigations on the chemical nature of vitamin A in progress for several years in the laboratories of Heilbron and his associates at the University of Liverpool and Drummond and his associates at University College, London, had been following somewhat the same course. In a joint paper from the two laboratories (*Biochem. J.*, vol. 26, p. 1178) the formula

for vitamin A proposed by Karrer was confirmed by experimental evidence showing that the richest products obtained were qualitatively and quantitatively indistinguishable from those of Karrer and his associates.

Another problem which received attention during the year was the extent to which vitamin A acts as an anti-infective agent. Further studies of tissues of experimental animals (rats and mice) in various stages of vitamin A deficiency (*Arch. Path.*, vol. 13, p. 756; *Lancet*, 1932, ii, p. 614; *Arch. Néerland. Physiol.*, vol. 17, p. 578) strengthened the opinion that the primary effect of vitamin A deficiency is the damage to the epithelial cells in the mucous membranes in various parts of the body and that infections are secondary to the breaking down of these cells, having their origin in the diseased tissues which can no longer resist invasion of organisms.

The question was approached from an entirely new angle through determinations of the vitamin A content of human livers obtained on autopsy and classified according to the post-mortem findings concerning the cause of death. Studies along this line were reported almost simultaneously by Wolff in Holland and Moore in England (*Lancet*, 1932, ii, pp. 617, 669).

Encouraging results were obtained by Ellison (*Brit. Med. J.*, no. 3745, p. 708) in the treatment of measles in children under 5 years of age with massive doses of a cod-liver oil concentrate. Although there was no evidence of protection against infection of the middle ear or skin complications so often accompanying measles, there was a significant decrease in deaths from pneumonia.

Demonstrations on a fairly large scale of the beneficial effects of cod-liver oil in a group of industrial workers was reported by Holmes and his associates (*J. Indus. Hyg.*, vol. 14, p. 207; *Ind. Eng. Chem.*, vol. 24, p. 1058). In the first of these demonstrations daily supplements of one pint of milk and one tablespoonful of cod-liver oil were taken for one year by 45, and two years by 18 underweight young women workers with resulting increase in body weight and efficiency and decrease in absence from employment on account of illness. The second demonstration covered a much shorter period, with a larger number of workers, both men and women, and with cod-liver oil as the only supplement. During the four months of the experiment there was a marked reduction in colds and in absence from work in the group receiving the cod-liver oil.

To the laboratory and clinical evidence of the value of vitamin A in maintaining a healthy condition of the epithelial tissues and thus preventing secondary infections might be added the testimonials of a rapidly increasing number of people who have noted a lessened tendency to colds and respiratory infections and an increased feeling of well-being during the winter months coincident with the systematic taking of some form of vitamin A concentrate.

**VITAMIN B ( $B_1$ ).** Early in the year Windaus and associates of the University of Göttingen (*Z. Physiol. Chem.*, vol. 204, p. 123) made the important announcement that by applying the well-known method of Jansen and Donath to yeast they had succeeded in obtaining vitamin B in the form of crystalline salts—picrolonate and chloride—containing sulphur as a constituent of the vitamin itself. The average curative dose for pigeons of the vitamin in the form of the chloride

was 0.0024 mg. daily, an activity much higher than hitherto reported. This paper was soon followed by another from the same laboratory (*Chem. Z.*, vol. 56, p. 166) in which particular emphasis was given to the sulphur content of the purified crystals. In further confirmation it was noted that the Jansen-Donath crystalline vitamin B concentrate from rice polishings had also been found to contain sulphur. Failure to recognize sulphur previously was attributed to the readiness with which it is split off from the molecule by the action of oxidizing agents or alkalis. The well-known instability of vitamin B in alkaline medium was attributed to the labile sulphur grouping. Still further confirmation of the presence of sulphur in vitamin B came from the Japanese investigator Ohdake (*Bul. Agr. Chem. Soc. Japan*, vol. 8, p. 11) who not only prepared a number of crystalline salts of the vitamin, but also claimed to have obtained it as a free base in which form it was soluble in water, alcohol, methyl alcohol, and acetone but insoluble in ether and benzene. Sulphur was present in both the free base and the salts. At about the same time Van Veen in Batavia (*Z. Physiol. Chem.*, vol. 208, p. 125) reported that he had also found sulphur in a crystalline concentrate of vitamin B.

Even more convincing evidence that sulphur is a part of the vitamin B molecule was reported by Kinnerley *et al.* (*J. Physiol.*, vol. 76, p. 17P) who detected its presence at a stage in the concentration of the vitamin from yeast before the introduction of hydrogen sulphide in one of the customary steps of the procedure.

VITAMIN G (B<sub>2</sub>). Although the relationship of this vitamin to the prevention and cure of pellagra has not been accepted without reservation, two investigations published during the year on the relation of food supply and dietary practices to pellagra incidence tended to support the dietary deficiency theory. One of these studies was conducted by Stiebeling and Munsell of the U. S. Bureau of Home Economics (*U. S. Dept. Agr. Bul.*, 333, p. 36) among 73 South Carolina farm families and the other by Sandels and Grady (*Arch. Int. Med.*, vol. 50, p. 362) among a smaller group of families in Florida. Among the foods used with success in lowering the incidence of pellagra in the first study were dry skim milk, evaporated milk, wheat germ, canned tomatoes, pork, and dried yeast. Milk, meat, and vegetables were more abundant in the diet of a group of families in which there was no pellagra than in a group in which one or more members of every family was afflicted. In the Florida study, the most significant difference in the diet was a greater consumption of milk and succulent vegetables, with some indication of a more liberal consumption of eggs, cheese, and fruits, by the nonpellagrous than the pellagrous families.

VITAMIN C. The widely noted press reports early in the year announcing the identification by Rygh and his associates of narcotine as the precursor of vitamin C in plant materials were followed by the scientific reports of the investigations leading to this conclusion (*Z. Physiol. Chem.*, vol. 204, pp. 105, 114), and later by papers from many laboratories reporting complete failure to verify these findings. Among those refuting Rygh's hypothesis of a relationship between narcotine or its derivatives and vitamin C were Dalmar and Moll (*Z. Physiol. Chem.*, vol. 209, p. 211) and Ott and Packendorff (*Z. Physiol.*

*Chem.*, vol. 210, p. 94) in Germany, and Grant, Smith, and Zilva (*Biochem. J.*, vol. 26, p. 1628) and Harris, Mills, and Innes (*Lancet*, 1932, ii, p. 325) in England.

Meantime it was announced practically simultaneously by Svirbely and Szent-Györgyi (*Nature*, vol. 129, pp. 576, 690) in Hungary and King and Waugh (*Science*, vol. 75, p. 357) in this country that vitamin C is probably identical with a highly reactive carbohydrate isolated in 1928 by Szent-Györgyi from ox suprarenal glands and later from plant materials and designated by him as a hexuronic acid. Svirbely and Szent-Györgyi found that guinea pigs were completely protected from scurvy by 1-mg. daily doses of a crystalline preparation of this hexuronic acid and King and Waugh reported that a crystalline concentrate which they had prepared from lemon juice corresponded in chemical properties with the hexuronic acid and protected guinea pigs against scurvy in doses of 0.5 mg. daily.

These preliminary announcements were followed by more complete reports from both laboratories. Waugh and King (*J. Biol. Chem.*, vol. 97, p. 325) summarized their evidence on the identity of their vitamin C concentrate with hexuronic acid.

Svirbely and Szent-Györgyi (*Biochem. J.*, vol. 26, p. 865) emphasized the strongly reducing properties of hexuronic acid and the fact that it can be oxidized reversibly and irreversibly and called attention to a series of papers by Tillmans and associates (*Z. Untersuch. Lebensmit.*, vol. 63, pp. 1, 241, 267, 276) in which so close a parallelism was shown between the reducing capacity and vitamin C content of many plant materials as to lead to the conclusion that the reducing factor and vitamin C were identical. In later papers from Tillmans' laboratory (*Biochem. Z.*, vol. 250, p. 312; *Z. Untersuch. Lebensmit.*, vol. 64, p. 11) belief was expressed in the identity of the reducing factor and hexuronic acid.

Further confirmation of the identity of hexuronic acid with vitamin C was contributed by Harris, Mills, and Innes (*Lancet*, 1932, ii, p. 235) and by Waugh and King (*Science*, vol. 76, p. 630) in biological tests of the antiscorbutic activity of hexuronic acid prepared in different ways from suprarenal glands. Zilva, whose extensive investigations on the chemical nature of vitamin C had led him to conclude that the reducing factor in plant tissues and vitamin C are not identical, challenged, however, not only Tillmans' conclusions (*Biochem. J.*, vol. 26, p. 1624), but also those of Svirbely and Szent-Györgyi (*Nature*, vol. 129, p. 943) and Rygh and his associates (*Biochem. J.*, vol. 26, p. 1628).

VITAMIN D. In an address delivered at the 1932 meeting of the American Public Health Association, Hess (*Am. J. Pub. Health*, vol. 22, p. 1215) called attention to the fact that in rickets, contrary to most diseases, "we are burdened with such a multiplicity of preventive agents that we find ourselves at a loss to decide which one to select. We have at our disposal direct irradiation with ultra-violet rays, cod-liver oil or its concentrates, viosterol, activated milk, and still others.

As noted in the section on FOODS AND NUTRITION, the enrichment of milk in vitamin D received much attention during the year. The method involving the feeding of irradiated yeast to cows was used to an increasing extent on numerous farms, mostly of the certified variety, in various sections of the United States. According to

Hess, the method is hardly applicable for the general supply of large cities which require many thousands of farms to meet their demands. With improvements in methods of irradiation, such as developed by Supplee and associates (*J. Biol. Chem.*, vols. 94, p. 749; 95, p. 687), it is now possible to increase the antirachitic potency of milk about 12 times by direct irradiation without imparting any disagreeable taste or odor to the milk. This method has the advantage of being applicable to large quantities at a central station, perhaps at the same time the milk is subjected to pasteurization. Although early attempts to increase the vitamin D potency of milk by direct irradiation of the cows were not very successful, Mitchell and his associates (*Am. J. Pub. Health*, vol. 22, p. 1221) reported excellent results in preliminary clinical tests with such milk and suggested that the method might be particularly suitable for use in small herds providing milk for infant feeding.

The most recent method of enriching milk and other foods in vitamin D is the outcome of the development by Zucker of a method of preparing a vitamin D concentrate from cod-liver oil free from the disagreeable taste and odor of the original oil. As announced in *Science* (vol. 77, p. 19), the process has been patented by the Board of University Patents of Columbia University and the right to manufacture and sell the concentrate has been obtained by the National Oil Products Co.

With an increasing number of vitamin D-enriched foods on the market, the question has been raised as to possible harm from indiscriminate consumption of such foods. It is well-known from laboratory experiments that excessive doses of vitamin D are harmful, but it was at first considered that the difference between ordinary and harmful dosage was so great as to make the likelihood of danger from excess exceedingly remote. Hess and Lewis (*J. Am. Med. Assoc'n*, vol. 99, p. 647) expressed the opinion that while the control of the potency of vitamin D enriched foods probably will be within therapeutic bounds unless some error occurs in the course of preparation, "it may be questioned whether federal license and supervision should be required before such antirachitic foods are allowed to be marketed." Concerning the therapeutic use of irradiated ergosterol, "Viosterol," Harris (*Lancet*, 1932, i, p. 1031) stated that clinical experience showed that for human beings the toxic dose is not far removed from the optimal (not "minimal") curative dose and emphasized the necessity of adhering strictly to the correct dosage. From the clinical data of various investigators, Lewis estimated the optimal prophylactic dose for rickets to be 0.5 mg. and curative dose 1 mg. of irradiated ergosterol daily. Since the lower dosage is equivalent in vitamin D potency to about 7 teaspoonfuls of cod-liver oil, there is apparently no danger of excessive vitamin D in cod-liver oil treatment.

**WALCOTT, HENRY PICKERING.** An American surgeon and public health official, died in Cambridge, Mass., Nov. 11, 1932. He was born in Salem, Mass., Dec. 23, 1838, and was graduated from Harvard College in 1858. He studied medicine at Harvard and Bowdoin College, receiving

the M.D. degree from the latter in 1861. After serving as a surgeon in the Civil War he studied for two years at the Universities of Vienna and Berlin. He practiced in Cambridge from 1867 to 1881 and then embarked on his career of public service, acting as health officer of the Massachusetts State Board of Health, Lunacy, and Charity until 1885 and as chairman of the Massachusetts State Board of Health until 1914. Under his leadership there were prepared the plans for a metropolitan sewerage system adopted by the Massachusetts Legislature in 1889 and the plans for a metropolitan water supply system for Boston and its suburbs adopted in 1895. After his retirement he served as chairman of the Metropolitan Water and Sewerage Board until its abolition in 1919. He was elected an overseer of Harvard College in 1887 and a member of the board of president and fellows in 1890, holding the latter office until 1927. He was acting president of the university in 1900 and again in 1905.

**WALES.** See GREAT BRITAIN.

**WALKER, JAMES J.** See NEW YORK under Political and Other Events.

**WALLACE, CHARLES WILLIAM.** An American Shakespearean scholar, died in Wichita Falls, Texas, Aug. 7, 1932. He was born in Hopkins, Mo., Feb. 6, 1865, and was graduated from the Western Normal College, Shenandoah, Iowa, in 1885 and from the University of Nebraska in 1898. In 1900 he became a member of the English faculty at the University of Nebraska, being advanced to associate professor on receiving the Ph.D. degree from the University of Freiburg in 1906. After 1910 he was professor of English dramatic literature, specializing in Shakespearean and Tudor-Stuart drama. He carried on extended researches in this field in European archives, recording his investigations of more than 5,000,000 original records in numerous articles and books.

**WALLACE, EDGAR.** A British author, died in Beverly Hills, Calif., Feb. 10, 1932. Born in Greenwich, England, Apr. 1, 1875, he was adopted in infancy by a Billingsgate fish porter and was brought up on the East Side of London. He attended a London board school but was obliged to leave at the age of 10 to earn his own living, being successively a newsboy, factory hand, printer's "devil," and builder's "cad." He enlisted with the Royal West Kent Regiment but later transferred to the Medical Corps, with which he served six years. During the Boer War he was successively a war correspondent for *Reuter's*, the *Daily News*, and the *Daily Mail*. His career as a novelist began with the publication in 1906 of *The Four Just Men*. Thereafter he wrote some 150 novels, 20 plays, and several thousand short stories and articles. His forte was tales of mystery and adventure, which at the peak of his popularity sold at the rate of 5,000,000 copies yearly.

**WALLAS, GRAHAM.** A British economist, died in London Aug. 10, 1932. Born in Sunderland May 31, 1858, he attended Corpus Christi College, Oxford. In 1895 he was appointed lecturer at the London School of Economics, and from 1914 to 1923 held the chair of political science at London University. A member of the Fabian Society from 1886 to 1904, he published one of the *Fabian Essays* (1889). His other writings include: *Life of Francois Place* (1897); *Human Nature in Politics* (1908, Ger. trans., 1911); *The Great Society* (1914); *Our Social Heritage* (1921); and *The Art of Thought* (1926).

**WAR, OUTLAWRY OF.** See **ARBITRATION, INTERNATIONAL; PEACE.**

**WARBURG, PAUL MORITZ.** An American financier, died in New York City, Jan. 24, 1932. He was born in Hamburg, Germany, Aug. 10, 1868, and attended the Realgymnasium there. He studied two years in France and two years in England, traveled extensively, and in 1894 became a member of his father's Hamburg banking house, M. M. Warburg & Co. In 1902 he became a partner in Kuhn, Loeb & Co., New York. He was a leader in the agitation for a central banking system for the United States, and was appointed by President Wilson to the newly created Federal Reserve Board in 1914. He served on the latter until 1918. During the World War he was a member of the United States section of the International High Commission. In 1921 he founded the International Acceptance Bank, Inc. At the time of his death he was chairman of the board of this bank and also of the Bank of Manhattan Trust Co. and the International Manhattan Co.

**WAR CLAIMS.** See **ARBITRATION, INTERNATIONAL.**

**WARD, HERBERT DICKINSON.** An American author, died in Portsmouth, N. H., June 18, 1932. He was born in Waltham, Mass., June 30, 1861, and was graduated from Amherst College in 1884. He wrote extensively for newspapers and periodicals and was for some years editor of the *Youth's Companion*.

**WAR DEBTS.** See **REPARATIONS AND WAR DEBTS, UNITED STATES.**

**WASHBURN COLLEGE.** A coeducational institution in Topeka, Kan. The enrollment for the autumn session of 1932 was 841. There were 76 faculty members. The endowment amounted to \$1,302,044, and the income for the year was \$222,253. President, Philip C. King. A.M., B.D.

**WASHINGTON.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,503,396, as against 1,356,621 in 1920. Seattle had (1930) 365,583 inhabitants; Spokane, 115,514; Tacoma, 106,817. Olympia, the capital, 11,733.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1932	879,000	1,757,000*	\$12,602,000
	1931	878,000	1,774,000*	15,288,000
Wheat ....	1932	2,298,000	44,903,000	16,614,000
	1931	2,357,000	40,843,000	15,112,000
Oats .....	1932	166,000	8,300,000	2,075,000
	1931	158,000	7,742,000	2,013,000
Potatoes ..	1932	40,000	6,400,000	2,432,000
	1931	44,000	6,820,000	3,274,000
Apples ..	1932	...	28,980,000	15,070,000
	1931	...	31,400,000	21,980,000
Corn ...	1932	38,000	1,292,000	517,000
	1931	37,000	1,369,000	767,000
Hops ...	1932	2,500	4,500,000*	810,000
	1931	2,200	3,872,000*	542,000
Barley ..	1932	64,000	1,920,000	634,000
	1931	59,000	1,770,000	620,000

\* Tons. \* Pounds.

**MINERAL PRODUCTION.** The leading feature in the State's mineral industry continued to be the mining of coal; but the production of coal was somewhat sharply reduced, to 1,810,000 short tons (1931, estimated), from 2,301,928 (1930); the product of 1930 had a total value of \$7,439,000. The total value of the State's mineral product was \$20,075,844 for 1930; for 1929,

\$22,435,359. The value of production of gold, silver, copper, lead, and (principally) zinc was \$297,543 (estimated) for 1932; for 1931, \$565,498.

**FINANCE.** State expenditures in the year ended Mar. 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$24,302,503 (of which \$9,052,913 was for local education); for interest on debt, \$707,000; for permanent improvements, \$14,451,475; total, \$39,460,978 (of which \$16,619,598 was for highways, \$3,839,851 being for maintenance and \$12,779,747 for construction). Revenues were \$39,737,018. Of these, property and special taxes furnished 37.9 per cent; departmental earnings and compensation to the State for officers' services, 5.9; sale of licenses, 44.0 (in which was included a gasoline sale tax that produced \$7,538,114). Funded debt outstanding on Mar. 31, 1931, totaled \$13,000,000. Net of sinking-fund assets, the debt was \$10,799,289. On an assessed valuation of \$1,265,649,130 the State levied in the year ad-valorem taxes of \$13,690,525.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 5523.61. In the year previous, 18.3 miles of line had been abandoned.

**EDUCATION.** Provision was made, by the adoption at the general election in November, of a State income tax, for the shifting of some of the burden of supporting schools, through a reduction of the property tax. The number of persons of school age in the State was reported in 1932 as 434,778. In the academic year 1931-1932 there were enrolled in the public schools 346,993 pupils. Of these, 251,261 were in elementary schools; in high schools, 95,732. Expenditure of the year for public-school education was: current, \$26,377,735; total, inclusive of outlay and debt service, \$30,432,384. Salaries of teachers averaged \$1573 a year.

**POLITICAL AND OTHER EVENTS.** U. S. Sen. Wesley L. Jones having died on November 19, shortly after his defeat for reelection (see *Elections*, below), Governor Hartley appointed Maj. E. S. Grammer of Seattle, a Republican, to serve out Senator Jones's unexpired term, ending on Mar. 4, 1933.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the approximate proportion of 5 to 3. For Presidential electors, the officially reported totals were: Roosevelt (Dem.), 353,250; Hoover (Rep.), 208,645. U. S. Sen. Wesley L. Jones (Rep.), failed of reelection, Homer T. Bone (Dem.), being elected Senator. Democrats were elected to all six places in the State's delegation of Representatives to the Seventy-third Congress. Clarence D. Martin (Dem.) was elected Governor, defeating John A. Gellatly (Rep.). A proposal put before the voters by the initiative, that the State law for the enforcement of prohibition be repealed, was carried by popular vote. Another initiated proposal, for a State income tax at rates ranging from 1 to 7 per cent, was likewise adopted.

**OFFICERS.** The chief officers of the State, serving in 1932, were; Governor, Roland H. Hartley; Lieutenant-Governor, John A. Gellatly; Secretary of State, J. Grant Hinkle; Auditor, C. W. Clausen; Treasurer, Charles W. Hinton; Attorney-General, John H. Dunbar; Superintendent of Public Instruction, N. D. Showalter.

*Supreme Court:* Chief Justice, Warren W. Tolman; Associate Justices, John R. Mitchell, John F. Main, Emmett N. Parker, O. R. Holcomb, Walter B. Beals, W. J. Millard, William J. Steinert, Bruce Blake.

**WASHINGTON, THE STATE COLLEGE OF.** A coeducational institution for higher learning in Pullman, Wash., founded in 1890 by an act of the State Legislature. The enrollment for the autumn of 1932 was 2802. The summer session had an attendance of 860. There were 332 faculty members. The land grant endowment amounted to \$3,195,141. The income for the year, including appropriations made by the State Legislature (millage tax) and income from land grant and Federal funds, students fees, etc., amounted to \$1,619,955. The library contained 225,000 volumes. President, Ernest O. Holland, Ph.D.

**WASHINGTON, UNIVERSITY OF.** A State institution of higher education in Seattle, Wash., founded in 1861. The enrollment for the autumn term of 1932 was 6339. The faculty numbered 401 members. The income from all sources for the scholastic year 1931-32 was \$2,763,340. A new law building costing \$400,000 was to be opened for use January, 1933. President, M. Lyle Spencer, Ph.D.

**WASHINGTON AND JEFFERSON COLLEGE.** An institution for the higher education of men in Washington, Pa. Enrollment for the fall semester of 1932-33 totaled 450 undergraduates and 27 graduate students. The 1932 summer season enrollment was 129. The faculty numbered 28. The productive funds of the college amounted to \$1,338,061, and the income from all sources was approximately \$190,000. The library contained 45,580 volumes. President, Ralph Cooper Hutchison, Ph.D., D.D.

**WASHINGTON AND LEE UNIVERSITY.** A nonsectarian institution for the higher education of men in Lexington, Va., founded in 1749. The enrollment for the autumn of 1932 was 823. There were 54 members on the faculty. The productive funds of the university amounted to \$1,496,673, and the income for the year was \$329,471. President, Francis Pendleton Gaines, Ph.D., Litt.D., LL.D.

**WASHINGTON BICENTENNIAL.** The celebration honoring George Washington on the Two Hundredth Anniversary of his birth was carried out under government supervision during a nine month period, from February 22, until Thanksgiving Day, Nov. 24, 1932.

The United States George Washington Bicentennial Commission was organized to plan and direct this great celebration. The following made up the membership of this Commission: The President of the United States; the Vice President; the Speaker of the House of Representatives; Senators Simeon D. Fess of Ohio, Arthur Capper of Kansas, Carter Glass of Virginia, and Millard E. Tydings of Maryland; Congressmen Willis C. Hawley of Oregon, John Q. Tilson of Connecticut, Joseph W. Byrne of Tennessee, and R. Walton Moore of Virginia. Prof. Albert Bushnell Hart was Historian of the Commission, and the Hon. Sol Bloom, member of Congress from New York, was the Director.

This Commission, early in its planning, decided against having a celebration in the nature of a world's fair, geographically centralized in one important city. It was felt that George Washington belonged to the Nation as a whole, and that it would be fitting to have a nation-

wide celebration to honor his memory. It was felt further that every man, woman, and child in America should be given an opportunity to participate in this great tribute to America's greatest Son.

Acting with this thought in mind, the United States George Washington Bicentennial Commission organized coöperating Commissions in every State in the Union, and in every Territorial Possession of the United States. Committees were also created in practically every city and town in the country. Besides special committees were organized among the schools, churches, fraternal organizations and civic bodies. When the celebration ended on Nov. 24, 1932, there were actively engaged 43,000 State, city, and town committees, and approximately 700,000 committees representing special groups of people, making a total of about 750,000 separate and distinct bicentennial committees coöperating with the United States Commission in carrying out its plans and projects. The United States George Washington Bicentennial Commission kept in constant touch with these coöperating committees, aiding them in every possible way to make their local celebrations successful. The Commission coöperated in presenting plays and pageants, it sent out historical literature of every description; and it distributed music and pictures to help create enthusiasm in the celebration.

At the peak of the activities of the United States Commission, in February, 1932, approximately 10,000 letters per day were received; and in response to these letters the Commission distributed to all parts of the United States and the world more than 12,000,000 copies of its various pamphlets. The pamphlets contained historical data on every conceivable subject relating to the life and times of George Washington. They were published and distributed by the United States Commission absolutely free of charge.

Because of the assistance rendered by the United States Commission, approximately 1,500,000 separate and distinct Bicentennial programmes and commemorative exercises were held in all parts of the world during the Bicentennial celebration period.

The Commission conducted a nation-wide contest on the life of George Washington among the schools and colleges in declamation, essay, and oratory. More than 2,000,000 boys and girls of grade schools, high schools, and institutions of higher learning participated in these contests. The Commission furnished to each classroom of America a large size lithograph copy of the Gilbert Stuart Athenæum portrait of George Washington.

It is estimated that more than 30,000,000 George Washington memorial trees were planted during the period. Special exercises of this type were held in all corners of the world. The U. S. Bicentennial Commission presented 30 nationwide Bicentennial radio programmes. Besides these, thousands of local programmes were carried over the air.

As a governmental feature of the celebration a Bicentennial quarter was minted and put into circulation. This was the first time that a special coin was issued by our government. The government also minted a special medal, replicas of which were awarded for meritorious services in connection with the Bicentennial celebration.

With the coöperation of the Commission the

Post Office issued a series of 12 Bicentennial commemorative stamps, each stamp bearing a likeness of George Washington at different periods of his life. The government authorized the publication of the definitive writing of George Washington. Dr. John C. Fitzpatrick, one of the foremost living authorities on the life of George Washington, was delegated to edit these volumes, eight of which were completed by the end of the year. Some 25 volumes will be required for this work.

The Bicentennial Commission prepared special pageants and plays; it collected colonial music; it published a special George Washington Atlas, prepared by Col. Lawrence Martin, showing the places where Washington visited during his life time; and it published in braille a number of these pamphlets so that the blind of America could participate in the celebration. Practically all of the famous original paintings of George Washington were collected and exhibited at the Corcoran Gallery of Art in the City of Washington during the celebration. This exhibit was viewed by hundreds of thousands of people.

*Special Celebrations in the United States.* Wakefield, the birthplace of George Washington, was restored and turned over to the United States government as a National Shrine. The United States Government completed a beautiful highway from Washington direct to Mount Vernon. This highway, the George Washington Memorial Highway, is one of the most beautiful highways in the world. The greatest suspension bridge in the world spanning the Hudson River and connecting New Jersey and New York was named the George Washington Bridge, as a feature of the Bicentennial celebration. See CELEBRATIONS.

*Foreign Celebrations.* Although foreign governments were not invited officially to participate in the Bicentennial Celebration, events honoring George Washington on the two hundredth anniversary of his birth were held in 78 countries of the world during the period of the Celebration. The interest manifested abroad was remarkable and showed the great esteem in which George Washington was held outside of the United States. Thousands of special programmes were held abroad, a few of which were highly important.

In Turin, Italy, a new bridge was named after George Washington with appropriate exercises. The 15 American residents in Saigon, French Indo-China, raised \$500 to pay for a statue of George Washington. In Florence, Italy, a beautiful avenue was re-named George Washington avenue and a beautiful monument erected. In Poland hundreds of Bicentennial events took place and the government issued a special postage stamp commemorating the Bicentennial.

In Haiti, February 22d was declared a national holiday. In Stuttgart, Germany, \$10,000 was raised to establish an American Library in that city as a tribute to George Washington. Twenty-six foreign cities have named streets, parks, and highways for George Washington during the Bicentennial period.

**WASHINGTON UNIVERSITY.** A nonsectarian institution of higher learning for men and women in St. Louis, Mo., founded in 1853. The enrollment on Nov. 1, 1932, was 6942. The faculty for 1932-33 numbered 610. The income for the year was \$2,785,772. Chancellor, George R. Throop, Ph.D., LL.D.

**WATER POWER.** Hydro-electric plants during 1932 supplied a greater proportion of the utility power in the United States than in any previous year; it was over 40 per cent of the total, or approximately 34 billion kilowatt-hours. This was despite the fact that water-power construction was greatly curtailed during the year, but several large projects had been put into operation during the preceding year and this capacity was available through the extensive interconnection of utility systems. Hydro capacity that went into service during 1932 totaled about 300,000 horse power, of which two additional 42,500-horse power units in the Safe Harbor plant on the Susquehanna River and two 21,000-horse power units in the new Rock Island Development on the Columbia River are outstanding. The former are automatically adjusted Kaplan-blade turbines and the latter have manually adjusted blades of the propeller type, adjustment being possible while the turbines are in operation.

Work was actively pushed during the year on the Hoover Dam on the Colorado River. Four 50-foot diameter diversion tunnels have been completed and the cofferdams are now being constructed. Contracts have been let for the penstocks and bids are out for the turbines. Four of these will be of 115,000 horse power and two of 55,000 horse power. The former will represent the highest capacity water wheels in the world. The ultimate capacity of the project, as at present planned, will be 1,845,000 horse power.

After 11 years of negotiation the St. Lawrence Treaty was signed on July 18 last. This provides for a deep waterway of 27 feet from the Great Lakes through the St. Lawrence and will also make possible the development of five million horse power of which two million is in the International section. The estimated cost is between \$800,000,000 and \$900,000,000, or about three times the cost of the Panama Canal. The power along the International section is to be developed at two sites. See CANADA under *History*.

Abroad, the first units of the huge hydro development of the Soviet government on the Dnieper River went into operation during the early fall. See UNION OF SOVIET SOCIALIST REPUBLICS

In Canada the first four 50,000-horse power units of the Beauharnois Development were put in service during October. This project is planned for an ultimate capacity of two million horse power, involving a deep waterway canal on the St. Lawrence.

During 1932 hydraulic laboratory facilities were greatly extended. The National Hydraulic Laboratory at Washington, D. C., was placed in service as was also Canada's National Research Laboratory at Ottawa, and hydraulic laboratories at several of the universities. Extensive studies on the subject of cavitation are being carried on at several of the laboratories as well as at plants employing propeller-type turbines.

The Federal Power Commission in its annual report strongly urged that it be given jurisdiction over the issuance of securities involving hydro projects for which it has issued licenses, particularly where the interstate transmission of the power is out of the jurisdiction of the State utility commissions.

Since the Federal Water Power Act became effective in 1920 the installed hydro capacity in the United States has more than doubled; that

is, it has increased from 7,800,000 horse power in 1920 to 15,850,000 horse power in 1932. The growth in Canada during the same period has been from 2,515,000 to 7,035,000 horse power.

**WATER SUPPLY.** Progress on several great water supply projects—the Hetch-Hetchy for San Francisco, the Los Angeles-Colorado River Aqueduct, the Ware and Swift River extensions to the Boston Supply—have been noted under the several headings of AQUEDUCTS, DAMS, or TUNNELS. Indeed the major problems of these new supplies or extensions to existing supplies, are the construction difficulties of dams or aqueduct lines. See WATERWORKS AND WATER TREATMENT.

**WATERWAYS.** See CANALS.

**WATERWORKS AND WATER TREATMENT.** By far the largest project of waterworks construction in progress in the world is one for an additional supply for *Los Angeles* and 12 other communities organized as the Metropolitan Water District of Southern California. The combined population of the district is 1,666,000. A bond issue of \$220,000,000 to finance the project was authorized in September, 1931, by a vote of 5 to 1. This was followed in November by a taxpayers' suit, designed to invalidate the bonds. The bonds were upheld successively by a lower court, the California Supreme Court and the Supreme Court of the District of Columbia, the latter in November, 1932. Meanwhile plans and specifications were prepared and bids advertised for the first major unit of the project, the San Jacinto tunnel, 12.7 miles long, lined with concrete. The contract for this tunnel was let on December 12 for \$7,331,815. About the same time the Reconstruction Finance Corporation (see UNITED STATES) agreed to take \$2,016,000 of bonds of the district. The aqueduct will be 240 miles long, and extend from the Colorado River, 18 miles above Parker, Ariz., to a large terminal storage reservoir east of Los Angeles. Conduits will lead from this reservoir to the 13 cities comprising the district. Reservoirs will be provided along the conduits. A diversion dam 72 ft. high will provide a reservoir on the Colorado which will clarify the muddy water of the stream, stabilize the quantity of water available and make possible 80,000 kw. (maximum) of electric energy for pumping the water. Water will have to be pumped, by successive lifts along the aqueduct, a total of 1583 ft. The main aqueduct will have a capacity of 1500 sec.-ft. (970,000,000 gallons per day). It will be in tunnel for 85 miles; cut-and-cover, 55 miles; lined canal, 75 miles; concrete pipe, 25 miles; through reservoirs, 1.5 miles. (For further description and map, see *Engineering News-Record*, June 16, 1932.) See AQUEDUCTS.

The last part of the second deep tunnel to carry water for *New York* from the Hill View Reservoir, near Yonkers, beneath the boroughs of the Bronx, Queens, and Brooklyn to Fort Hamilton Park, was holed through early in the year. The tunnel is from 400 to 700 ft. beneath the surface. The contract price for the work is \$43,000,000. Studies for several filtration plants to treat the entire water supply of *Chicago* were continued. Tentative plans include four pumping stations and filtration plants on the lake shore, from which water would be pumped by high-lift pumps. (See *Engineering News-Record*, Aug. 4, 1932.)

**WEATHER.** See METEOROLOGY.

**WEBSTER, HENRY KITCHELL.** An American novelist, died Dec. 8, 1932, in Evanston, Ill., where he was born Sept. 7, 1875. He was graduated from Hamilton College in 1897. After acting as instructor in rhetoric in Union College for a year he returned to Evanston and collaborated with Samuel Merwin in writing a series of business romances. His later novels, some of which enjoyed a wide popularity, include: *The Girl in the Other Seat* (1911); *The Ghost Girl* (1913); *The Butterfly* (1914); *The Real Adventure* (1916); *The Painted Scene* (1916); *The Thoroughbred* (1917); *An American Family* (1918).

**WEEVIL.** See ENTOMOLOGY, ECONOMIC; COTTON.

**WELFARE WORK. EXPENDITURES FOR RELIEF PURPOSES.** Beginning with January, the Federal Children's Bureau undertook the compilation of expenditures for purposes of relief made by public and private bodies for most of the large urban communities of the country. Before the middle of 1932 it was receiving cooperation from more than 900 private agencies and divisions of public departments in at least 120 cities with more than 50,000 population; the aggregate population of these communities was in excess of 38,000,000 or 55 per cent of the total urban dwellers of the country. These compilations showed that relief agencies were dispensing between \$20,000,000 and \$25,000,000 monthly and were reaching fully 1,000,000 families every month. So, in January, 1932, the number of agencies reporting was 917, the number of cities was 124, and the amount of money relief disbursed either outright or in forms of made-work was \$22,302,792, as compared with \$14,097,399 for the same agencies in January, 1931. The relief bill mounted as the winter progressed, for in February, 1932, 976 agencies and divisions of public departments in 123 cities had disbursed \$25,277,952 as compared with \$15,001,186 in February, 1931. In March, 1932, 988 agencies and public departments in 124 cities had expended \$28,274,678; in April, 964 agencies in 125 cities had expended \$23,649,269; in May, 928 agencies in 126 cities had expended \$22,310,417; in June, 991 agencies in 126 cities had expended \$22,960,285; in July, 976 agencies in 125 cities had expended \$21,760,238; in August, 960 agencies in 125 cities had expended \$22,448,743, as compared with \$11,087,793 in August, 1931. It became increasingly apparent that public agencies, despite the heroic efforts of private charity to handle the situation, were increasingly being called upon to furnish the lion's share of the funds necessary. Thus, in February, 1932, \$16,362,941, or 65 per cent of total relief expended, was derived from public sources. Fourteen per cent of all the money expended in the month was made up of wage or made-work relief; 37 per cent was general and veterans' relief; and 14 per cent was special allowances (mothers' aid, old age and aid to the blind). The average grant per family per month during the first seven months of 1932, on the basis of these figures, was in the neighborhood of \$20. The tables on page 841 indicate the number of families reached and the character of the administrative agencies, for July and August, 1932, and August, 1931.

The Children's Bureau was also making an effort to ascertain the number of homeless and transient persons who were receiving attention. From 67 cities for the month of March, the last month of the 1931-32 winter season, it learned

TABLE I—AMOUNTS EXPENDED FOR DIFFERENT TYPES OF RELIEF BY 960 AGENCIES OR DIVISIONS OF DEPARTMENTS IN 125 CITIES AND CITY AREAS IN AUGUST, 1932, AND COMPARISON WITH JULY, 1932, AND AUGUST, 1931

Type of relief and administrative agency	Number of reports	Amounts expended			Per cent increase (+) or decrease (—)	
		August, 1931	July, 1932	August, 1932	July, 1932 to Aug., 1932	August, 1931 to Aug., 1932

Work relief .....	103	1,920,583	3,439,872	3,600,995	+ 4.7	+ 87.5
Public departments .....	59	1,784,426	2,620,836	2,785,014	+ 6.3	+ 60.6
Private agencies .....	44	186,457	819,036	815,981	— 0.4	+ 337.6

that a total of 1,458,102 meals had been served to transient and homeless persons, while the number of night's lodgings furnished aggregated 486,405. The average daily number of meals served in March was 47,036 as compared with 51,502 for the month preceding, and 28,944 for March, 1931, while the daily average of night's lodgings furnished was 15,690 in March as compared with 16,782 for the month preceding, and 10,547 for March, 1931. By the summer of 1932, the number of meals and night's lodgings furnished had, of course, decreased. In July, 1932, the daily average of night's lodgings furnished was 8588 compared, however, with 4379 in July, 1931; and the daily average of meals was 28,131 in July, 1932, as compared with 11,809 in July, 1931.

THE BUSINESS OF PHILANTHROPY. The charitable trust in the United States has grown so quiet-

ly that the average American is unaware of its enormous proportions. It is astounding to note, according to the Cambridge Associates, Inc., of Boston, that there are 197 such charitable trusts or foundations in the country, which, taken together, constituted the seventh largest business in the United States in point of funds administered. In most cases the funds were being preserved intact, presumably for the purpose of deriving fixed income to furnish salaries and administrative costs. In the single year 1931, these 197 foundations disbursed a total of \$45,488,805.

#### WELLAND CANAL. See CANALS.

WELLESLEY COLLEGE. A nonsectarian institution for the higher education of women in Wellesley, Mass. The enrollment for the academic year 1932-33 was 1530. The teaching staff numbered 173. The current income for the year 1931-32 was \$1,234,984. A new coöperative dormitory

TABLE II—FAMILIES AIDED BY 748 AGENCIES OR DIVISIONS OF DEPARTMENTS IN 125 CITIES AND CITY AREAS IN AUGUST, 1932, AND COMPARISON WITH JULY, 1932, AND AUGUST, 1931

Type of relief and administrative agency	Number of reports	Number of families aided			Per cent increase (+) or decrease (—)	
		August, 1931	July, 1932	August, 1932	July, 1932 to Aug., 1932	August, 1931 to Aug., 1932

was to be occupied in January, 1933. President, Ellen Fitz Pendleton, Litt.D., LL.D.

**WELLS COLLEGE.** An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1932 was 240. The faculty numbered 43 members. The endowment amounted to \$1,500,000, and the income for the year from invested funds, tuition, etc., was \$350,000. There were approximately 72,000 volumes in the library. A new administration building, containing offices, classrooms, departmental rooms, psychological laboratories, and a convocation hall, was under construction during 1932; the total cost was about \$500,000. President, Kerr Duncan Macmillan, S.T.D.

**WESLEYAN METHODIST CHURCH.** See METHODISTS.

**WESLEYAN UNIVERSITY.** An institution for the higher education of men in Middletown, Conn., founded in 1831. The 1932 autumn enrollment was 641. The faculty for 1932-33 numbered 74. The productive funds of the university for 1932 were \$5,108,722, and the income for the year was \$732,145. President, James L. McConaughy, Ph.D.

**WESTERN AUSTRALIA.** A state of the Australian Commonwealth, occupying the western third of the continent. Area, 975,920 square miles; population, estimated at 421,562 (exclusive of full-blooded aborigines) on Mar. 31, 1932, as compared with 332,732 at the census of 1921. Full-blooded aborigines were estimated at 23,119 on June 30, 1931. Perth, the capital, had 209,729 inhabitants on Jan. 1, 1932. Administrator in 1932, J. A. Northmore, appointed June 9, 1931. Premier and Treasurer, Sir James Mitchell. See AUSTRALIA.

**WESTERN RESERVE UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Cleveland, O., chartered in 1826. The enrollment for the autumn of 1932 in the regular day curricula was 4159, including Adelbert College, for men, 1076; Flora Stone Mather College, for women, 833; Cleveland College, 213. The enrollment in Cleveland College, the evening school of the university, was 2286 and the enrollment in the courses for teachers in service was 918. The faculty numbered 629. The endowment amounted to \$11,878,005 and the income for the year was \$2,511,701. President, Robert E. Vinson, D.D., LL.D., L.H.D.

**WESTERN SAMOA.** See SAMOA, WESTERN.

**WEST POINT.** See UNITED STATES MILITARY ACADEMY.

**WEST VIRGINIA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,729,205, as against 1,463,701 in 1920. Wheeling had (1930) 61,659 inhabitants; Huntington, 75,572; Charleston, the capital, 60,408.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** Production of bituminous coal in the State declined, for 1931, somewhat less sharply as to quantity than did that of Pennsylvania bituminous fields, but somewhat sharper decline occurred in the average price for coal shipments. There were mined in 1931 101,473,172 net tons of coal, as against 121,472,638 in 1930. The value of coal produced was \$132,762,000 for 1931 as against \$181,722,000 for 1930. The number of the coal mines' employees was reduced by not quite 8 per cent, to 97,787

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1932	625,000	562,000*	\$5,666,000
	1931	654,000	556,000*	8,122,000
Corn	1932	446,000	11,150,000	5,018,000
	1931	446,000	12,934,000	6,467,000
Apples	1932	.....	4,917,000	2,950,000
	1931	.....	12,954,000	5,700,000
Potatoes	1932	41,000	3,608,000	2,381,000
	1931	40,000	3,200,000	2,592,000
Oats	1932	188,000	3,036,000	972,000
	1931	148,000	3,552,000	1,814,000
Wheat	1932	116,000	1,276,000	727,000
	1931	113,000	2,373,000	1,448,000

\* Tons.

(1931), from 105,988 (1930). The average number of days of work to the coal-mine employee declined to 176 (1931) from 204 (1930). By quantity the output of coke fell to 1,378,666 short tons (1931) from 1,901,161 (1930); by value, to \$3,204,644 (1931) from \$5,061,759 (1930).

Natural gas was produced in 1930, the latest year for which data were available, to the quantity of 144,180,000 M cubic feet, as against 167,333,000 M for 1929; the values of these products were \$66,553,000 (1930) and \$73,793,000 (1929). Much gasoline was extracted from natural gas: in 1930, 63,328,000 gallons, by value \$4,151,000; the quantity extracted in 1931 was 52,844,000 gallons. The clay products of the State attained the value of \$15,954,195 for 1930, as against \$20,490,255 for 1929. There continued a large industry in the production of pig iron from extraneous ores; the output of pig iron fell, however, to 593,831 long tons (1931) from 704,054 (1930). The quantity of petroleum produced in the State fell to 4,472,000 barrels (1931) from 5,071,000 (1930); the value, more sharply, to \$7,070,000 (1931) from \$11,820,000 (1930). Producers' sales of lime declined to an estimated 152,000 short tons (1931) from 228,230 (1930); by value, to \$883,000 (estimated 1931) from \$1,394,075 (1930). The total value of the mineral product of the State, duplications eliminated, was \$290,118,914 for 1930; for 1929, \$346,504,746.

**FINANCE.** State expenditures in the year ended June 30, 1931, were \$37,920,511 (of which \$17,883,923 was for highways). Revenues were \$24,543,030. Funded debt outstanding on June 30, 1931, totaled \$86,375,800, of which \$81,085,000 was for highways. Net of sinking-fund assets, the debt was \$82,352,904.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 4125.10. In the year previous, 106.33 miles had been put in operation; 27.14 miles abandoned.

**EDUCATION.** A movement, dictated by demands for reduction of expenditure in the schools, was made early in the year to cut the school year to six months, from eight, to lower the basic teaching salary and to diminish distribution from the State's equalization fund. The proposals failed of enactment in the Legislature.

**POLITICAL AND OTHER EVENTS.** A new State Capitol, costing \$10,000,000, was dedicated at Charleston in June. It had been built to take the place of that destroyed by fire in 1921, and was completed early in 1932.

**ELECTIONS.** The vote of November 8 was cast for the Democratic National ticket in the proportion of nearly 5 to 4. The popular vote for President was: Roosevelt (Dem.), 405,124; Hoover (Rep.), 330,731. Six Democrats were elected as the State's Representatives in the Seventy-third Congress; by this overturn the Republicans lost

four seats. A sweeping Democratic success was scored with regard to the State offices. H. G. Kump (Dem.), was elected Governor, defeating Thomas C. Townsend (Rep.), and other State offices passed into Democratic hands. Control of both houses of the Legislature was assured to the Democrats for the first time subsequent to the session of 1893.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, William G. Conley; Secretary of State, George W. Sharp; Treasurer, W. S. Johnson; Auditor, Edgar C. Lawson; Attorney-General, Howard B. Lee; Superintendent of Free Schools, W. C. Cook; Commissioner of Agriculture, Howard M. Gore.

**Supreme Court of Appeals:** President, Frank Lively; Associate Judges, John H. Hatcher, Homer B. Woods, Raymond Maxwell.

**WEST VIRGINIA UNIVERSITY.** An institution for the higher education of men and women in Morgantown, W. Va., founded in 1867. In the autumn of 1932 the enrollment was 2509. The faculty numbered more than 250. President, John Roscoe Turner, Ph.D.

**WHEAT.** The world's wheat situation in 1932 continued to be affected by a poor demand in the importing countries and the consequent low level of world shipments as compared with previous years. The total production for the year of 38 countries reporting to the International Institute of Agriculture, not including Argentina and the Soviet Republics, was estimated at 3,361,127,000 bushels, or slightly above their production in 1931 and 2.3 per cent greater than the average annual yield for the five years 1926-1930. The exportable supplies for the commercial year 1932-1933 were estimated at 1,260,000,000 bushels and the requirements of importing countries at 630,000,000 bushels. In the preceding season 804,000,000 bushels entered into the international trade and of this quantity Europe took 600,000,000 bushels. The crops of the leading countries not including the United States were reported as follows: Canada 431,200,000 bushels, India 336,971,000 bushels, France 331,357,000 bushels, Italy 276,127,000 bushels, and Australia 200,000,000 bushels. The Soviet Republics reported an average annual yield of 840,238,000 bushels and Argentina of 251,255,000 bushels for the five years 1926-1930. The Argentine crop of 1931-1932 was 225,922,000 bushels.

The total wheat production of the United States according to estimates published by the Department of Agriculture was 726,831,000 bushels harvested on 55,177,000 acres, the average yield per acre being 13.2 bushels. In 1931 the total production was 900,219,000 bushels, the area 55,344,000 acres and the average yield per acre 16.3 bushels.

The production of winter wheat in 38 producing States was estimated at 462,151,000 bushels compared with 787,393,000 bushels in 1931, and with an average production of 549,000,000 bushels for the five years 1924 to 1928 inclusive. The acreage harvested in 1932 was reported as 33,656,000 acres, or nearly 20 per cent below the area harvested in 1931 and 6.6 per cent less than the average of the five year period.

The 1932 production of spring wheat, not including durum wheat, in 25 reporting States was estimated at 224,812,000 bushels as compared with 92,114,000 bushels in 1931. The area harvested, 17,658,000 acres, was 6,631,000 acres or 60 per cent greater than the acreage harvested in 1931 when a large acreage was abandoned. The

average yield per acre of 12.7 bushels was 4.3 bushels above the acre yield of the year before.

The durum wheat crop of 1932 was placed at 39,868,000 bushels compared with 20,712,000 bushels in 1931.

During the fiscal year ended June 30, 1932, the United States exported 96,521,000 bushels of wheat, 8,357,000 barrels of flour, and 1,613,000 pounds of breakfast foods and other wheat products for table use. The imports included 12,885,000 bushels of grain, 53,000 pounds of flour, and 159,000 long tons of bran, shorts and other by-products and feeds of wheat of which 87,000 long tons was withdrawn from bonded mills. On Nov. 3, 1932, December futures on the Chicago Board of Trade were quoted as low as 41 $\frac{1}{2}$  cents per bushel, the lowest recorded since 1843 when wheat sold on that market for 30 cents per bushel.

**WHITEHILL, CLARENCE (EUGENE).** An American dramatic baritone, died in New York City, Dec. 18, 1932. He was born in Marengo, Iowa, Nov. 5, 1871. After completing his high school education he went to Chicago where he was employed by the Wells Fargo Express Co. and was engaged as soloist in various church choirs. In 1896, after receiving preliminary lessons with L. A. Phelps of Chicago, he went to Paris where he prepared himself for the stage under Giraudet and Sbriglia. He made his debut as Friar Lawrence in Gounod's *Romeo and Juliet* at the Théâtre de la Monnaie, Brussels, in 1899. His success led to his engagement the following year at the Opéra Comique in Paris, and in 1901 at the Metropolitan Opera House in New York City under Grau & Savage. He enlarged his repertoire through further study of the German operas with Stockhausen in Frankfurt-on-Main, and in 1903 was engaged as leading baritone with the Cologne Stadttheatre. While in Germany he studied the great Wagnerian rôles (Wotan, Amfortas, Hans Sachs, Telramund) under Cosima Wagner and appeared with marked success at the Bayreuth and Munich festivals. He appeared also during 1905-09 at Covent Garden, London. On his return to the United States in 1909 he was engaged for two seasons by the Metropolitan Opera Co. and for four seasons by the Chicago Opera Co. He resumed his connection with the Metropolitan Opera Co. in 1916, and until his resignation in 1932 was one of its most noted Wagnerian interpreters.

**WHITE HOUSE CONFERENCE ON CHILD HEALTH.** See CHILD LABOR; CHILD WELFARE.

**WHITNEY MUSEUM.** See ART EXHIBITIONS.

**WHOOPING COUGH.** See MEDICINE AND SURGERY.

**WIGGINS, (J.) CARLETON.** An American landscape painter, died in Old Lyme, Conn., June 11, 1932. He was born in Turners, Orange Co., N. Y., Mar. 4, 1848, and studied in New York at the National Academy of Design and with George Inness, and in Paris. His paintings were executed in broad, flowing lines, with rich, low-toned color scheme. Good examples are: "A Holstein Bull" (Metropolitan Museum of Art, New York); "Cattle in Pond," "Morning on the Hills," and "Sheep and Landscape" (Brooklyn Museum); "Lake and Mountains" and "Moonrise on the Lake" (Art Institute, Chicago). He was elected an Associate of the National Academy of Design in 1892 and an Academician in 1906.

**WILCZYNSKI, ERNEST JULIUS.** An American mathematician, died in Denver, Colo., Sept. 14, 1932. He was born in Hamburg, Germany, Nov. 13, 1876, but was brought to the United States in childhood, his family settling in Chicago. At the age of 17, however, he returned to Germany and studied at the University of Berlin where he received the Ph.D. degree in 1897. The following year he was appointed assistant professor of mathematics at the University of California. During 1903-05 he was again in Europe as a research associate of the Carnegie Institution of Washington. In 1907 he was called to the University of Illinois as associate professor of mathematics. After 1910 he was a member of the mathematics faculty of the University of Chicago, first as associate professor (1910-14), and then professor (1914-26). He was made professor emeritus in 1926. His principal interest was projective differential geometry, the theory of which, as he formulated it, showed great originality and was further developed by other mathematicians.

**WILDMAN, EDWIN.** An American editor and author, died in New York City Nov. 3, 1932. He was born in Corning, N. Y., May 9, 1867, and attended the General Wesleyan Seminary, Phillips Exeter Academy, and Harvard University. From 1891 to 1896 he was editor and proprietor of the *Elmira* (N. Y.) *Echoes*. He then became a writer and Philippine war correspondent for *Leslie's Weekly*. In 1900, following his appointment as vice and deputy consul-general at Hong Kong, China, he was made special commissioner for the Hearst papers with the allied troops which went to the relief of the legations besieged in Peking during the Boxer Rebellion. He was a special correspondent for the *New York World* during 1903-04 and edited the magazine, *Mainly About People in America*, during 1906-07. Later he became president of the *Wildman Magazine* and *News Service*, editor of the *Forum* (acting also as president during 1908-20 and as vice-president during 1921-23), and president of Edwin Wildman, Inc. During the World War he was in charge of the paper-saving campaign of the War Industries Board. He was also publicity manager for the Republican National Committee during the Hughes, Harding, and Coolidge campaigns.

**WILCOCKS, SIR WILLIAM.** A British engineer, died in Cairo, Egypt, July 28, 1932. Born in 1852, he attended the Thomason Civil Engineering College, Roorkee, India, and was connected with the irrigation department of the Indian Public Works from 1872 to 1883. He was then transferred to Egypt where he later became director-general of reservoirs with the Egyptian Public Works. In 1898 he projected and designed the Aswan Dam and Assuit Barrage across the Nile River. In 1911 he was connected with the irrigation works of the Turkish government in Mesopotamia and devised the Hindiya Barrage whereby the waters of the Euphrates River were diverted for irrigation purposes. After the War he returned to India, where previous to his death he was interested in modernizing the ancient irrigation facilities of Bengal.

**WILLIAM AND MARY, COLLEGE OF.** An institution for the higher education of men and women in Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1932 was 1535, of whom 753 were men and 782 women. The 1932 summer session had an attendance of 772 stu-

dents, of whom 274 were men and 498 women. The faculty numbered 75. The endowment amounted to \$800,000, and the income for the year 1931-32 was \$1,193,705. The library contained 79,870 volumes. President, Julian Alvin Carroll Chandler, Ph.D.

**WILLIAMS, JOHN SHARP.** An American lawyer and legislator, died near Denton, Miss., Sept. 28, 1932. He was born in Memphis, Tenn., July 30, 1854, and attended the Kentucky Military Institute and the Universities of the South, Virginia, and Heidelberg. Admitted to the Tennessee bar in 1877, he practiced after 1878 in Yazoo City, Miss., where during his early career he was associated with D. R. Barnett. He engaged also on an extensive scale in cotton planting. In 1892 he was elected representative to Congress from the fifth Mississippi district, and continued to represent that district until 1902, when he was elected from the eighth Mississippi district. In the House he had a distinguished career both as a parliamentarian and as a minority leader of the Democrats from 1903 to 1909. He served as temporary chairman of the Democratic national convention in 1904. On his election to the Senate in 1910 he promptly became one of the leaders of the Democratic party and during President Wilson's administrations was one of his few consistent supporters. He served as a member of the foreign relations committee and of the finance committee which reported the tariff bill of 1913, and acquired a reputation as the ablest political philosopher in the Senate. He was reelected in 1916 for the term ending Mar. 4, 1923. In 1912 he gave a series of lectures at Columbia University, which were published as *The Permanent Influence of Thomas Jefferson on American Institutions* (1913).

**WILLIAMS COLLEGE.** A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1932 totaled 772. There were 81 members on the faculty. The income for the year ending June 30, 1932, was \$810,945. President, Harry Augustus Garfield, LL.D. See **POLITICS, INSTITUTE OF.**

**WILSON, HENRY LANE.** An American lawyer and diplomat, died in Indianapolis, Ind., Dec. 22, 1932. He was born in Crawfordsville, Ind., Nov. 3, 1856, and was graduated from Wabash College in 1879. After acting as editor of the *Lafayette* (Ind.) *Journal* during 1882-85 he removed to Spokane, Wash., where he was engaged in the practice of law and in banking until 1896. From 1897 to 1905 he was Minister to Chile, where he distinguished himself in improving relations between that country and the United States and in preventing a war with Argentina. As Ambassador to Mexico from 1910 to 1913 he had charge of American interests during the turbulent period marking the close of the Diaz régime and the whole Madero administration. His resignation was requested, however, on account of a clash with President Wilson over the recognition of Huerta by the United States. Later he criticized the administration's Mexican policy in *Diplomatic Episodes* (1927).

**WINDWARD ISLANDS.** A group of British possessions in the West Indies, comprising Grenada, St. Lucia, and St. Vincent, together with the Grenadines (which are one-half under Grenada and one-half under St. Vincent); forming the eastern limit of the Caribbean Sea between Martinique and Trinidad. Each of the islands is under its own government, but they are united

for certain common purposes and have a court of appeals. Governor and Commander-in-Chief in 1932, Sir Thomas Vans Best. See **BRITISH WEST INDIES**; **GRENADA**; **ST. LUCIA**; and **ST. VINCENT**.

**WINSLOW**, REAR ADMIRAL CAMERON MCRAE, U. S. N. An American naval officer, died in Boston, Mass., Jan. 2, 1932. He was born in Washington, D. C., July 29, 1854, and was graduated from the U. S. Naval Academy in 1875. During the Spanish-American War he served on the *Nashville* and was advanced five numbers in rank for his extraordinary heroism under fire when he commanded the volunteer expedition that attempted to cut, off Cienfuegos, the three cables between Cuba and Europe.

Promoted to the rank of rear admiral in 1911, he was appointed commander of the second division of the Atlantic Fleet, later assuming command of the third and first divisions. He was stationed at the Naval War College at Newport, R. I., during 1914-15 and served also as commander of the first special service squadron organized for duty in Mexican and Central American waters. Previous to his retirement in 1916 he was commander-in-chief of the Pacific Fleet.

**WINTER OLYMPICS**. See **OLYMPIC GAMES**.

**WISCONSIN**. **POPULATION**. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,939,006, as against 2,632,067 in 1920. Milwaukee, the most populous city, had (1930) 578,249 inhabitants; Madison, the capital, 57,899.

**AGRICULTURE**. The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu.	Value
Hay . . .	1932	3,262,000	4,072,000 <sup>a</sup>	\$38,306,000
	1931	3,495,000	4,148,000 <sup>a</sup>	44,978,000
	1932	2,184,000	80,808,000	21,010,000
Corn . . .	1931	2,080,000	58,240,000	24,461,000
	1932	2,538,000	88,655,000	16,844,000
	1931	2,459,000	68,852,000	18,590,000
Potatoes .	1932	260,000	22,620,000	5,203,000
	1931	268,000	24,924,000	8,723,000
	1932	768,000	23,040,000	6,912,000
Barley . . .	1931	731,000	19,006,000	8,173,000
	1932	28,000	36,176,000 <sup>b</sup>	1,556,000
	1931	40,000	48,800,000 <sup>b</sup>	2,635,000
Rye . . . .	1932	236,000	2,832,000	878,000
	1931	175,000	2,188,000	853,000
Wheat . . .	1932	106,000	2,032,000	996,000
	1931	88,000	1,544,000	880,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MINERAL PRODUCTION**. The chief mineral industry of the State, the quarrying of stone, yielded 3,370,750 short tons for 1930, as against 4,004,200 for 1929; by value, \$5,100,266 for 1930 and \$6,166,708 for 1929. Wisconsin was the leading State of the Union in the production of fuel briquets, furnishing for 1930 more than half of the domestic production thereof. The State's output of briquets for 1931, to the quantity of 564,621 short tons for 1930 and 729,159 for 1929, and to the value of \$4,640,722 for 1930 and \$5,949,852 for 1929, was not stated in the Federal Bureau of Mines' tabulation for 1931, but the total production for the Union in 1931 fell short by more than 30 per cent of that for 1930. The total value of the mineral product of the State, duplications eliminated and briquets omitted, was \$17,711,394 for 1930; for 1929, \$24,222,229.

**FINANCE**. State expenditures in the year ended June 30, 1931, were \$57,721,644 (of which \$23,333,845 was for highways). Revenues were \$63,

019,743. Funded debt outstanding on June 30, 1931, totaled \$1,263,700, both gross and net of sinking-fund assets.

**TRANSPORTATION**. The total number of miles of railroad line under operation on Jan. 1, 1932, was 7210.1. In the previous year, 78.03 miles of line had been abandoned.

**EDUCATION**. An agency of the Wisconsin Teachers' Association, the Teachers' Training Council, took a step toward setting levels for teaching, by preparing a programme of educational philosophy and teaching practice, designed to render teachers conscious of the objectives of their work. The number of persons of school age in the State was reckoned as 886,860. There were enrolled in the public schools 548,386 pupils. Of these, 427,291 were in common schools or elementary grades and 121,095 in high schools. The year's expenditures for public-school education totaled \$70,180,513. Salaries of teachers averaged about \$1400, by the year, or some \$50 less than the average for the academic year 1929-1930.

**LEGISLATION**. A special session of the State Legislature was held in January, adjourning on February 5. It passed a measure providing \$8,000,000 for the relief of the needy unemployed. New districts for the election of Federal Representatives were created, 10 in number, in place of the existing 11, in conformity with the Federal reapportionment of 1930. By the terms of the Groves act, a system of compulsory insurance against unemployment was established, coming into effect in January of 1933. See **UNEMPLOYMENT**. A surtax at the rate of 100 per cent of the normal tax on incomes of 1931 was imposed to raise money for the purpose of relief. A special tax on chain stores, for the duration of two years, was laid.

**POLITICAL AND OTHER EVENTS**. The State Public Service Commission set a precedent in the regulation of public utilities for the benefit of their customers by ordering on July 15 that seven companies cease paying dividends upon common stock, on the ground that dividends would drain off companies' resources to the detriment of the consumers. The commission also ordered a reduction of 12½ per cent in the rates of the Wisconsin Telephone Company, by a temporary order, on the ground that the service was of reduced worth to families of impaired income. The State passed through the winter and spring without experiencing the epidemic of bank suspensions common in other parts of the Union. Its success in escaping bank troubles was attributed to the creation by Governor LaFollette of a special banking commission of 15 members, which enlisted the cooperation of depositors in embarrassed banks and thus obtained from depositors grants of time for the banks' repayment of sums due them. Daniel W. Hoan, Socialist Mayor of Milwaukee for 16 years, received a renomination in March. At the State primaries on September 20, ex-Gov. Walter J. Kohler, a conservative, won the Republican nomination for Governor, defeating LaFollette; for the Republican Senatorial nomination, John B. Chapple defeated Sen. John J. Blaine.

**ELECTIONS**. The popular vote of November 8 was cast for the Democratic National ticket by about 2 to 1. For President the officially reported totals were: Roosevelt (Dem.), 707,410; Hoover (Rep.), 347,741. F. Ryan Duffy (Dem.), was elected United States Senator, defeating

John B. Chapple (Rep.). Five Republicans and five Democrats were reported to have been elected Representatives to the Seventy-third Congress. A. G. Schmedeman (Dem.), Mayor of Madison, was elected Governor, defeating Walter J. Kohler (Rep.). The LaFollette group's lack of interest in the conservative Republicans who had won the chief nominations at the primaries had an adverse effect on the Republican vote in the State.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Philip F. LaFollette; Lieutenant-Governor, Henry A. Huber; Secretary of State, Theodore Dammann; Treasurer, Solomon Levitan; Attorney-General, John W. Reynolds; State Superintendent of Schools, John Callahan.

**Supreme Court:** Chief Justice, Marvin B. Rosenberry; Associate Justices, Walter C. Owen, Chester A. Fowler, Oscar M. Fritz, Edward T. Fairchild, John D. Wickham, George B. Nelson.

**WISCONSIN, THE UNIVERSITY OF.** A State institution of higher education in Madison, founded in 1848. The enrollment for the autumn term of 1932 was 7833, distributed as follows: Letters and science, 4496; engineering, 1001; agriculture, including home economics, 770; law, 318; medicine, 312; nursing, 126; library school, 42; school of education, 768. In the 1932 summer session the enrollment totaled 3760. The faculty numbered 1328. The endowment as of June 30, 1932, was \$1,365,930, while the net income for 1931-32 was \$8,882,150. Gifts received during the fiscal year amounted to \$179,839. The library contained approximately 899,000 volumes and 422,000 pamphlets. President, Glenn Frank, Litt.D., L.H.D., LL.D.

**WITWATERSRAND.** See SOUTH AFRICA, under *Production*.

**WOLF, MAX FRANZ JOSEPH CORNELIUS.** A German astronomer, died Oct. 3, 1932, in Heidelberg where he was born June 21, 1863. He attended the Universities of Heidelberg and Strassburg, and at Heidelberg rose from instructor in 1890 to professor of astronomy in 1893 and professor of astrophysics and geophysics in 1902. He was also director after 1893 of the Königstuhl Observatory, with which there was affiliated in 1909 the astronomical institute of the Baden State Observatory. His first important discovery was in 1884 of a periodical comet, with a course of seven years, which was named after him. He was especially known for the development of spectrum analysis and of celestial photography which enabled him to discover more than 200 planetoids. The first photographic planetoid was found by him in 1891 and was named Brucia in honor of Katharine W. Bruce, a contributor to the Heidelberg Observatory. Brucia received the number 323 in the list of planetoids.

**WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL.** An all-partisan and all-sectarian movement which has as its purpose the protection of the home through the abolition of the liquor traffic. It is comprised of 10,000 local unions with an approximate membership of 600,000, and is organized in every State, territory, and dependency of the United States. President in 1932-33, Mrs. Ella A. Boole. A legislative headquarters is maintained at the Hotel Driscoll, Washington, D. C.; national headquarters, administrative offices, and a publishing house are in Evanston, Ill. See PROHIBITION.

**WOMEN IN INDUSTRY. STATUS OF UNEMPLOYED WOMEN.** The Women's Bureau, in making an analysis of the occupational status of women from 1910 to 1930, based upon census returns, reported the following interesting changes. First, the total number of employed women increased between 1920 and 1930 from 8,549,511 to 10,752,116, an increase of 25.8 per cent. In 1920, women were 20.5 per cent of all employed persons; in 1930, they were 22 per cent, having comprised 30.5 per cent of the increase between 1920 and 1930 in total persons at work. Women were 47 per cent of the total in professional service in 1920 and 47 per cent of the increase between 1920 and 1930. In clerical work they were 46 per cent of the total in 1920 and 62 per cent of the increase between 1920 and 1930; in the residual public service group, they constituted 1.4 per cent of the total in 1920 and 5.9 per cent of the increase between 1920 and 1930; in agriculture they were 10 per cent of the total in 1920 and 89 per cent of the decrease; in the extraction of minerals, they were 0.3 per cent of the total in 1920 and 2 per cent of the decrease; and in manufacturing and mechanical industries, they were 15 per cent of the total in 1920, but lost 44,000, though men gained 1,333,000 between 1920 and 1930. However, when the figures of the manufacturing and mechanical group are scrutinized closely, there actually appears an increase of about 85,000 women in factories and a decrease of about 129,000 women in occupations not in factories. In 1930, there were practically 78,000 fewer dressmakers and seamstresses, 30,000 fewer milliners and millinery dealers and 10,000 fewer tailoresses. Another interesting contrast is in the group of manufacturers and managers, officials, foremen, etc., in factories, which had an increase of 16.6 per cent in the number of men between 1920 and 1930 but of only 2.7 per cent in the number of women. The figures showed that in 1930, women had 1700 fewer forewomen in overseers' jobs, undoubtedly one of the effects of mechanization. Several of the manufacturing groups showed interesting variations. Thus, cigars and tobacco, in 1930, lost 24 per cent of its women and 40 per cent of its men; iron and steel and other metals lost 8.8 per cent of their men and 0.8 per cent of their women; the leather industry lost 36,000 men and took on more than 8000 women; the textile group lost more than 19,000 women and took on nearly 15,000 men; rayon, in 1930, employed 14,000 men and 11,000 women whereas, in 1920, the industry was so small that it was not classified separately. The gain of 291,000 women in trade was made up of 195,000 saleswomen, 31,000 retail dealers, 22,000 real estate agents and officials, 9000 insurance agents, managers, and officials, and many smaller increases. There were 7000 fewer clerks in stores. The more than half a million increase in the professional group includes 219,000 school teachers and 145,000 trained nurses. The 565,000 increase in clerical occupations includes 210,000 stenographers and typists, 202,000 clerks, and 120,000 bookkeepers and cashiers. Lastly, the important group, domestic and personal service, which declined between 1910 and 1920 by 344,000 women, increased in the next decade by nearly a million women, the figure being 993,569. This increase was made up of 115,000 waitresses, 102,000 cooks, and 520,000 other servants, while smaller numbers were the 80,000 laundry operatives, the

80,000 hairdressers and manicurists, the 32,000 housekeepers and stewards, the 24,000 restaurant, café, and lunch room keepers, the 17,000 workers in cleaning, dyeing, and pressing shops, and the 16,000 charwomen and cleaners. Like the decline in importance of dressmaking and millinery, there was a decrease in number of laundresses not in laundries of 29,000. A preliminary examination of the trends over two census periods, the 20 years 1910 to 1930, indicates that in round numbers women's employment increased as follows: In clerical work, by 1,398,000; in professional, by 792,000; in domestic and personal, by 649,000; in trade, by 490,000; in transportation, by 163,000; in manufacturing and mechanical, by 66,000; and in public service not elsewhere classified, by 15,000. Only in agriculture has there been a decrease of any importance, and there 897,000 fewer women were reported in 1930 than in 1910.

**WOMEN'S BUREAU.** See WOMEN IN INDUSTRY.

**WOMEN'S CLUBS, GENERAL FEDERATION OF.** An organization founded in 1889 and chartered by act of Congress in 1901 for "the promotion of movements looking toward the betterment of life." In 1932 the General Federation was composed of approximately 14,600 clubs in the United States and 70 clubs outside the United States; affiliated with it were 15 national and international organizations. The official publication is *The Clubwoman GFWO*. At the June, 1932, convention in Seattle, Wash., Mrs. Grace Morrison Poole was elected President for the ensuing triennial period. Headquarters are at 1734 N Street, N. W., Washington, D. C.

**WOOD.** See FORESTRY.

**WOOL.** It was expected that world wool production in 1932 would show no marked decrease as compared with production during the last few years, despite unfavorable market conditions which have existed. Preliminary estimates, by the Bureau of Agricultural Economics of the U. S. Department of Agriculture, placed the total production in nineteen countries at 2,793,000,000 lbs. in 1932, a decrease of only 14,000,000 lbs. from the record clip of 1931. These nineteen countries supply about 80 per cent of the world clip, exclusive of Russia and China. Fairly heavy decreases in the United States and New Zealand, and slight decreases in Argentina and the Union of South Africa were almost balanced by increases in Australia and the United Kingdom.

Fleece weights in the United States were generally less than in 1931, but with an increase in the number of sheep of about 200,000 head the estimated amount of wool shorn in 1932 was 342,386,000 lbs. as compared with a wool clip of 369,477,000 lbs. in 1931.

Wool imports of the United States were greatly reduced, there being but 14,375,000 lbs. of combing and clothing, and 40,935,000 lbs. of carpet wool imported during 1932 as contrasted with 37,298,000 lbs. and 120,502,000 lbs., the respective amounts of combing and clothing, and carpet wools, imported in 1931. Supplies of unsold combing and clothing wool held by dealers in the principal wool centres, and by the National Wool Marketing Corporation, as reported to the Boston Wool Trade Association, were about 42,000,000 lbs. smaller on Oct. 15, 1932 than at the same date a year earlier.

**WORCESTER POLYTECHNIC INSTITUTE.** A non-sectarian institution for the tech-

nical education of men in Worcester, Mass., founded in 1865. The enrollment for the autumn semester of 1932 totaled 657. The faculty numbered 74. The productive funds of the institute amounted to \$3,178,758, and the income for the year was \$338,867. There were 23,500 volumes in the library. President, Ralph Earle, D.Sc., D.Eng., LL.D., Rear Admiral, U.S.N., ret.

#### WORKERS IN THE UNITED STATES.

See STATISTICS.

**WORKMEN'S COMPENSATION.** COMPENSATION LEGISLATION IN 1932. In 1932, of the 44 States having workmen's compensation laws, but seven convened in regular session during the year and of these, only four acted on the subject. These four were Massachusetts, New York, New Jersey, and Virginia. Six Canadian legislatures also passed laws relating to workmen's compensation, namely, Alberta, British Columbia, Manitoba, Ontario, Nova Scotia, and New Brunswick. Three acts were passed in *Massachusetts*. One of these provided that more than one agent might be designated to carry out the provisions of the law regarding public employees. Another related to the effect of certain agreements of parties in workmen's compensation cases on the finality of subsequent findings of the board. The third permitted the court to order a case removed to the county court in which the injury occurred. In *New Jersey* the laws enacted also related to minor matters. The legislature repealed an act adopted in 1931 regarding the procedure in appeal cases. The definition of employee was made to exclude persons engaged in the sale of newspapers or acting as distributors. In *New York* a measure was passed whose purpose was to assure employees on construction work that their employers were covered by compensation insurance. The law was also made to include private chauffeurs in New York City and volunteer firemen in counties and municipalities. Another law provided that compensation was to be a lien on the assets of employers, subject, however, to claims on unpaid wages and prior recorded liens. Another enactment liberalized the law in regard to the position of employees totally disabled by two separate accidents. In *Virginia* the workmen's compensation law was amended to exclude horticultural laborers, to increase from \$4500 to \$5000 total amount payable in partial disability cases, and to clarify third party suits.

**ACCIDENTS.** The annual statistical computation of the National Safety Council indicated that in the United States during 1931 accidents were responsible for approximately 97,000 deaths and 9,403,000 non-fatal injuries. The Council estimated that the total cost, including wage loss, medical expense, and overhead insurance of these deaths and injuries amounted to \$2,308,000,000. This was a 2.2 per cent reduction of the number of deaths from the figures of the United States Bureau of the Census for 1930, which had reported these as being 99,300. The Council estimated that the number of deaths attributable to industrial accidents was 17,000, to motor vehicle accidents 33,500, to other public accidents was 20,000, and to home accidents 29,000. In view of the fact that 2500 deaths to persons gainfully employed were also included in the figures for motor vehicle deaths the total eliminates this 2500 as a duplication. Comparison with the 1930 figures shows reductions of 2000 industrial fatalities and 1000 home fatali-

ties, but an increase of about 600 in motor vehicle fatalities. The Bureau of Labor Statistics points out that the accidental death rate in the United States is the highest in the world, having been 80.6 accidental deaths per 100,000 population in 1930 as compared with 24.5 in Denmark (1929), 42.6 in England and Wales (1930), 43.3 in Germany (1929), 54.0 in France (1929), and 63.0 in Canada (1930).

Figures compiled by the Bureau of Labor Statistics for accidents in manufacturing industries from 1926 to 1930 showed that the average frequency rate in all industries for wage earners only dropped from 24.16 in 1926 to 23.08 in 1930. The average severity rate increased from 2.62 in 1926 to 2.82 in 1930.

In New York, for the year ending June 30, 1930, total accidents numbered 109,848, of which 1348, or 1.2 per cent, were fatal and permanent total disability cases. Of this total 8.31 per cent were due to the handling of objects and tools, 24.78 were due to falls suffered by workers, 16.62 per cent were due to mechanical appliances, 24.63 per cent were a result of vehicles, 9.49 per cent were due to falling objects, 12.16 per cent were due to dangerous and harmful substances, 0.67 per cent were because of slipping on and striking objects, and 3.34 per cent were due to other causes.

**UNITED STATES EMPLOYEES.** For the calendar year 1930 the United States Employees' Compensation Commission reported 26,069 new injuries, an increase of 1.48 per cent over the number reported during 1929. The number of claims on account of death or loss of wages was reduced from 9337 in the earlier year to 9283 in 1930. On Dec. 31, 1930, there were 731 cases on the docket, in which compensation was being paid for permanent total disability and for 1134 cases of permanent partial disability. Approximately 30 per cent of the first group and more than 25 per cent of the second were receiving compensation for injuries of more than 10 years duration. Total payments up to Dec. 31, 1930 in these cases amounted to \$3,543,880 for compensation and \$924,303 for medical costs in the total cases and \$2,788,050 for compensation and \$444,175 for medical costs in the partial cases. The board estimated that the total cost would be approximately \$20,000,000 for the total cases and more than \$9,000,000 exclusive of future medical expense for the partial cases. As a result of the act approved Mar. 4, 1927, the United States Employees' Compensation Commission also supervised compensation payments made to longshoremen and harbor workers. During the fiscal year ending June 30, 1931, the Commission received reports of 156 fatal and 28,705 non-fatal injuries, a total of 28,861 cases or 27.6 per cent less than the number reported for the fiscal year. At the close of the fiscal year there were 291 fatal cases on the dockets in which \$508,863 had been paid as compensation and the estimated future cost was \$1,690,813; and 2104 non-fatal cases in which payments of \$1,438,999 had been made as compensation and the estimated future cost was \$1,718,421. Payments for medical care were not included.

**NEW YORK.** In 1931 the number of compensated cases closed in this State was 98,424 and the amount of compensation granted was \$33,702,525. This was an average of \$342 per case. The cost of medical and hospital service, not included in the compensation awards, was esti-

ated by the State Department of Labor to be between \$8,000,000 and \$10,000,000. Actually a total of 419,072 injuries were reported during the year and a total of 188,887 cases were closed.

#### NUMBER OF COMPENSATED CASES CLOSED IN NEW YORK AND COMPENSATION AWARDED, BY EXTENT OF DISABILITY, 1931

Extent of disability	Number of cases	Number of weeks' compensation awarded	Amount of compensation
Death .....	1,177	.....	\$ 7,282,761*
Permanent total .....	68	.....	970,804*
Permanent partial .....	19,805	857,148	15,515,293
Temporary .....	77,374	561,945	9,983,667
Total .....	98,424	1,419,093	33,702,525

\* Estimated present values.

**NEW JERSEY.** In the calendar year 1930 there occurred in the State of New Jersey 27,583 compensated industrial injuries for which there was paid out in compensation \$8,999,784. Of the total number of injuries, 357 were fatal and permanent total disability cases, 8718 were permanent partial disability cases, and 18,508 were temporary disability cases.

**PENNSYLVANIA.** In 1931 there occurred in this State a total of 1485 fatal and 109,976 non-fatal injuries as compared with 1752 fatal and 142,917 non-fatal injuries during 1930, or decreases of 15.2 per cent and 23.1 per cent respectively. The State Department of Labor and Industry pointed out that this remarkable decrease in large measure was due to the continuance of the economic depression though it believed that accident prevention work was also a factor.

**CALIFORNIA.** On June 30, 1930, the State compensation insurance fund of California was covering approximately 30,000 employers, this being one-third of the insurance coverage written in the State.

#### EXPERIENCE OF CALIFORNIA COMPENSATION INSURANCE FUND, 1924 TO 1929

Year	Premiums written	Dividends declared	Total assets
1924 .....	5,807,777	1,649,260	6,517,543
1925 .....	5,811,317	1,664,214	6,779,838
1926 .....	6,012,443	1,694,172	6,900,494
1927 .....	6,471,635	1,821,278	6,911,830
1928 .....	7,008,920	1,764,272	7,382,739
1929 .....	7,654,803	1,794,126	7,979,306

In 1930, 293,821 industrial injuries were reported to the State commission of which 89,949 were compensable. In the latter group 713 were fatal injuries, 941 were permanent injuries, and 88,295 were temporary injuries.

**WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES.** See INTERNATIONALISM.

**WORLD CONFERENCE FOR INTERNATIONAL PEACE THROUGH RELIGION.** See INTERNATIONALISM.

**WORLD COURT.** **POLISH NATIONALS AND THE FREE CITY OF DANZIG.** On Feb. 4, 1932, the Permanent Court of International Justice delivered the Advisory Opinion for which it had been asked by the Council of the League on the following points:

1. Is the question of the treatment of Polish nationals and other persons of Polish origin or speech in the territory of the Free City of Danzig to be decided solely by reference to Article 104 (5) of the Treaty of Versailles

and Article 33, paragraph 1, of the Convention of Paris (and any other treaty provisions in force which may be applicable), or also by reference to the Constitution of the Free City; and is the Polish Government accordingly entitled to submit to the organs of the League of Nations, by the method provided for in Article 103 of the Treaty of Versailles and Article 39 of the Convention of Paris, disputes concerning the application to the above-mentioned persons of the provisions of the Danzig Constitution and other laws of Danzig?

2. What is the exact interpretation of Article 104 (5) of the Treaty of Versailles and of Article 33, paragraph 1, of the Convention of Paris, and, if the reply to question (1) is in the affirmative, of the relevant provisions of the Constitution of the Free City?

The Court's reply to the first of these questions was in the negative. In answer to the second, it explained its interpretation of Article 104 (5) of the Treaty of Versailles and of Article 33 (1) of the Convention of Paris in detail: this interpretation differing from those suggested by the two interested Governments, but it was believed to be nearer to the view of the Free City. As a whole the Opinion was adopted by nine votes to four. It appears, however, from the dissenting opinion signed by the minority (MM. Guerrero, Rostworowski, Fromageot, Urutia) that the Court unanimously approved the reply to the first question, and that the divergence of views was confined to the second.

The Court considered that the two parts of the question constituted only one question, namely, whether the Polish Government was entitled to resort to the procedure provided for in Article 103 of the Treaty of Versailles and Article 39 of the Convention of Paris—that is to the jurisdiction of the High Commissioner of the League of Nations at Danzig—in disputes concerning the application to Polish nationals of the laws of Danzig.

The Court considered that the application of the Danzig Constitution may result in the breach of an international obligation incumbent on Danzig toward Poland and that, in such case, Poland may resort to the international procedure provided for in Article 39. On the basis of the circumstances attendant on the establishment of the Free City, the Court declared that Article 104 of the Treaty of Versailles contains a mandate given to the Principal Powers to negotiate a convention between Poland and Danzig, designed to fulfill certain objects specified in the Treaty, which Convention was to secure to Poland the advantages guaranteed her by the Treaty.

The object of paragraph 5 of Article 104 is to prevent any discrimination to the detriment of Polish nationals. The Court considered that the clause is intended to prohibit any discrimination on the ground of the Polish character of the persons in question. Observing that in this connection the question had been raised whether the Articles of the Treaty of Versailles concerning Danzig had become binding on the Free City, the Court said that the contents of Article 104 (5) of the Treaty have undoubtedly become a rule of law binding on the Free City in relation to Poland, but only because they have been reproduced in the Convention of Paris. Moreover, this provision is only enforceable in respect of Danzig in that it is an authentic expression of the mandate conferred on the Principal Powers.

Proceeding to the interpretation of Article 33 of the Convention, the Court took the view that Danzig, by accepting the article in question, assumed two undertakings: to apply to minorities in her territory the system laid down for

minorities in Poland; and also to prevent any discrimination to the detriment of Polish nationals by reason of their Polish character. The latter undertaking, which according to the Court is new, may be considered as a guarantee also to grant to Polish nationals any rights, more extensive than those ensuing from the minority system, which the Free City may accord to minorities or foreigners not belonging to a minority in her territory.

Finally the Court observed on the one hand, that the minority system, as always only represents the minimum guarantees imposed on the State concerned, which remains at liberty to grant more extensive rights, and, on the other hand, that the free and secure access to the sea guaranteed to Poland by provisions of the Convention of Paris, other than Article 33, is irreconcilable with a system under which the territory of Danzig would be closed to Poles (see *DANZIG under History*).

**MEMEL CONTROVERSY.** In the Memel controversy (see *MEMEL; LITHUANIA*) the German government promptly requested the League Council to protect the Memel Statute. On Apr. 11, 1932, Great Britain, France, Italy, and Japan, as guarantors of this Statute, brought suit against Lithuania before the Permanent Court in accordance with Article 17 of the Statute. The World Court took jurisdiction and handed down a decision on August 11 and while it was primarily favorable to Lithuania, it was believed that it would improve Lithuanian-German relations by clarifying and defining the rights of Lithuania in Memel. The Court ruled by 10 votes to five:

1. That the Governor of Memel was entitled, for the protection of the interests of the Territory, to dismiss the President of the local Directorate but that such dismissal did not involve the other members of the Directorate.

2. That Herr Boettcher had violated the Memel Statute in negotiating in Berlin concerning the foreign affairs of Memel, which are reserved exclusively to the Lithuanian government.

3. That the Governor was not justified in dissolving the Memel Diet after his appointment of a new Directorate before the latter had been accorded a vote of confidence.

**FRANCE AND SWITZERLAND.** The thirteen-year-old dispute between France and Switzerland over the free zone of Upper Savoy and the district of Gex near Geneva was ended on June 7, 1932, when the Court delivered a six-to-five verdict in favor of Switzerland. The court decided that the free zones, which had been created in 1815 and 1816, and were abolished in 1923 by France, should be maintained. Accordingly, France will have to withdraw its customs lines by Jan. 1, 1934 in conformity with the provisions of 116 years ago.

**UNITED STATES AND THE WORLD COURT.** No action was taken by the United States Senate on the ratification of the protocols to the Court statutes. Nevertheless following hearings in the House Foreign Affairs Committee, on the Linthicum resolution authorizing an appropriation of \$53,000 for the expenses of the World Court, the Senate Foreign Relations Committee, by a vote of 11 to 9, adopted on May 12, 1932, a report favoring ratification of the World Court protocols. This action was taken, however, only after the committee had amended the original Walsh resolution of ratification by adopting two resolutions, one sponsored by Senator Vandenberg and the other by Senator Moses.

The Vandenberg resolution repeated two reservations made by the Senate in 1926, providing that recourse to the Court can be had only by agreement "through general or special treaties," and that in joining the court the United States shall not be required to depart from its "traditional policy of not . . . entangling itself in the political questions of policy or internal administration of any foreign state. . . ." The Moses amendment provided that the adherence of the United States to the World Court shall not become effective until the other governments have accepted, by an exchange of notes, the Senate's original fifth reservation, providing that the Court shall not entertain the request for an advisory opinion touching any dispute or question in which the United States claims an interest.

Although the Vandenberg amendments are unobjectionable, the Moses amendment seemed likely to be opposed by friends of the Court. Of the 55 governments belonging to the Court 53 had already accepted the Root protocol of 1929 as adequately covering the original Senate reservation concerning advisory opinions. The Walsh resolution proposes that the United States ratify the Root protocol. Nevertheless, according to the Moses amendment, the 55 governments members of the Court must first formally accept not the Root protocol, but the original reservation.

Secretary Stimson, in reply to a request by the Foreign Relations Committee for his opinion as to whether the first protocol fully accepts the five reservations contained in the Senate resolution of 1926, addressed a letter to Mr. Borah on March 22, in which he stated emphatically that he was in complete agreement with the view of Elihu Root, the author of the protocol, that the interest of the United States is protected. See LAW IN 1932.

**WORLD'S FAIR.** See CENTURY OF PROGRESS INTERNATIONAL EXPOSITION.

**WORLD LEAGUE AGAINST ALCOHOLISM.** The official league membership in 1932 comprised 61 national temperance organizations in 35 of the leading countries of the world. The work is carried on by executive, legal, publicity, and service departments, with offices in Westerville, Ohio; the research department in New York City; the Scientific Temperance Federation in Boston; and the Intercollegiate Prohibition Association in Washington. A branch office is maintained in London, England. In 1932 the presidents of the league were: Robert Hercod, Lausanne, Switzerland; Lief Jones, London, England; and Howard H. Russell, Westerville, O. The general secretary was Ernest H. Cherrington.

**WRECKS.** See SAFETY AT SEA.

**WREN, SIR CHRISTOPHER,** TERCENTENARY OF DEATH. See CELEBRATIONS.

**WRESTLING.** After almost two years of unprecedented prosperity, professional wrestling declined in public interest in the latter part of 1932. At the close of 1932 there were still three "champions of the world." Ed Strangler Lewis was recognized as such by the New York State Commission; Henri De Glane was considered champion in Canada; and Jim London, burly Greek, was the king outside of New York. London was the recognized champion in New York until the last day of October, after which date the Commission refused to recognize him because he had failed to accept Lewis' suc-

cive challenges. The Commission ruled that Lewis would be considered champion if he wrestled worthy opponents. He thereupon threw Jack Sherry, and later won again when Ray Steele was disqualified at Madison Square Garden for punching Lewis.

Amateur wrestling reached a new level in the United States in the Olympic year, the Americans winning three Olympic championships. The national A.A.U. championships were held in the new Madison Square Garden Bowl in Long Island City in June. Louis Conti won the 115-pound championship, and Joe Sapora of the New York Athletic Club repeated his 1931 triumph in the 125-pound class. Joe Fickel of Kansas State College took the laurels in the 135-pound class and Jen Bishop of Manheim, Pa., won at 145 pounds. Jack Vanbeber of the Los Angeles A.C. repeated in the 165-pound class. Joe Schutt won at 175 pounds, and the heavyweight title went to Louis Hammack of the United States Army.

Lehigh retained its title in the Eastern intercollegiate championships, winning for the fourth time in five years. Syracuse and Cornell tied for second place.

Indiana University captured the National Collegiate A.A. title, succeeding Oklahoma A. and M. to the championship—which the latter had won four successive years. Eddie Belshaw, of Indiana University, winner of the 135-pound class, was awarded the N.C.A.A. cup for the outstanding wrestler.

**WURTS, ALEXANDER JAY.** An American electrical engineer, died in Pittsburgh, Pa., Jan. 21, 1932. He was born in Carbondale, Pa., Mar. 3, 1862, and was graduated from the Sheffield Scientific School at Yale University in 1883 and from the Stevens Institute of Technology in 1884. In 1905 he was made professor of applied electricity and head of the electrical department at the Carnegie Technical School, later the Carnegie Institute of Technology. After 1921 he was professor of engineering research at that institution. For his invention of lightning arresters he was awarded the John Scott medal by the Franklin Institute in 1894. He was also the discoverer of five non-arcing metals.

**WÜRTEMBERG.** See GERMANY.

**WYOMING. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 225,565, as against 194,402 in 1920. Cheyenne, the capital, had (1930) 17,361 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1932	1,105,000	1,201,000*	\$7,164,000
	1931	1,029,000	920,000*	8,491,000
Sugar beets	1932	40,000	512,000*	(b)
	1931	49,000	552,000*	3,158,000
Potatoes	1932	83,000	1,650,000	495,000
	1931	31,000	2,945,000	1,443,000
Wheat	1932	232,000	2,442,000	659,000
	1931	240,000	2,192,000	964,000
Corn	1932	213,000	2,024,000	526,000
	1931	190,000	1,900,000	874,000
Barley	1932	127,000	2,413,000	603,000
	1931	98,000	1,715,000	686,000

\* Tons. † Not available.

**MINERAL PRODUCTION.** The production of petroleum declined further, to 14,834,000 barrels (1931), from 17,868,000 (1930); in value by one-half, to \$11,120,000 (1921), from \$22,350,-

000 (1930). That of coal, to 5,006,000 short tons (estimated, 1931), from 6,088,133 (1930); it also declined in value from the \$15,133,000 of 1930. The output of natural gas was 43,219,000 M cubic feet for 1930 (the latest year in the Federal Bureau of Mines' tabulation) as against 44,648,000 M for 1929; by value, \$4,277,000 for 1930 and \$3,850,000 for 1929. Production of gasoline from natural gas was well sustained at 51,523,000 gallons (1931) as against 51,132,000 (1930); the yearly value, not stated for 1931, was \$3,338,000 for 1930. The total value of the State's entire mineral product was \$46,735,184 for 1930; for 1929, \$51,237,407.

**FINANCE.** State expenditure for the fiscal year ended Sept. 30, 1931, totaled \$10,877,876. Payments for operation and maintenance of the general departments were \$5,626,709 (including \$1,376,514 apportioned for education); for interest on the State debt, \$113,921; and for permanent improvements, \$5,137,246. Total revenue receipts were \$10,487,372. The net State indebtedness on Sept. 30, 1931, was \$4,216,356.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2037.06. During the year previous, 4.44 miles of line had been put in operation; 3.12 miles abandoned.

**EDUCATION.** The number of the State's inhabitants of school age was reported as being 70,862 on Apr. 1, 1930. In the academic year 1931-1932 there were enrolled in the public schools 56,670 pupils. Of these, 14,309 were in the rural schools. As to grade, 43,188 were in the elementary group and 13,482 in high schools. Expenditure for public-school education totaled \$5,660,450 for the year. The teachers employed numbered 2907. Their annual salaries averaged \$1292.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion of 4 to 3 approximately. For President the totals as officially reported were: Roosevelt (Dem.), 54,370; Hoover (Rep.), 39,583. Leslie A. Miller (Dem.), was reported to have been elected Governor for the unexpired remainder of the term of the late Governor Emerson, lasting until January, 1935, and to have defeated Harry R. Weston (Rep.). Vincent Carter (Rep.) was reelected Representative to the Seventy-third Congress. The popular vote approved a proposal that the State petition Congress to repeal the Eighteenth Amendment.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor (acting, to fill vacancy until the inauguration, on Jan. 1, 1933, of an elected successor to the late Governor Emerson), A. M. Clark, who was also Secretary of State; Treasurer, H. R. Weston; Auditor, Roscoe Alcorn; Attorney-General, James A. Greenwood; Superintendent of Public Instruction, Katharine A. Morton.

**Supreme Court:** Chief Justice, Ralph Kimball; Associate Justices, Fred H. Blume, W. A. Riner.

**WYOMING, UNIVERSITY OF.** A State institution of higher education in Laramie, founded in 1886. The enrollment for the autumn term of 1932 was 1402. The faculty numbered 209. The income for the year from State and local funds was \$1,245,429, and from Federal and State grants for agricultural extension, \$132,659. President, Arthur Griswold Crane, Ph.D.

**YACHTING.** In the face of economic depression, yachting in 1932 enjoyed a really remark-

able season, and the lack of larger craft under sail was amply made up for by the amazing number of smaller boats constantly sailing in competition. It was a Bermuda race year and the race from Montauk Point, L. I., to St. David's Head will long be remembered for the records established and for the exciting incidents attendant. Twenty-seven boats started in the race over the wind-swept ocean and twenty-one of them followed Frank Paine's big sloop *Highland Light* into Bermuda. *Highland Light*, although she lost the race on corrected time to smaller yachts, thrashed the 620 miles in less than three days. Robert L. Gale's schooner *Malabar X*, which John Alden sailed, won on corrected time when she finished only four hours behind *Highland Light*, and just ahead of the second and third place winners, Henry Moras's *Grenadier* and Bill Macmillan's *Water Gypsy*. *Dorade*, Olin Stephens's famous yawl which won the trans-Atlantic race and the Fastnet race in 1931, won in Class B.

In international races, the United States won handily. Four American 6-meter yachts, *Jill*, *Nancy*, *Luce*, and *Bob-Kat II*, were sent to English waters and captured the British-American cup series on the Solent. *Jill* later was taken to Scotland where she recaptured the Seawanhaka Cup, by winning three straight races from the *Maida* of Scotland. The Rochester Yacht Club's *Conewago* took three out of four races to defend successfully the Canada's Cup, prize trophy of fresh water yachting, from the Canadian challenger, *Invader II*.

**YAKUTSK REPUBLIC.** See SIBERIA.

**YALE UNIVERSITY.** A nonsectarian institution of higher education in New Haven, Conn., founded in 1701. The enrollment for the autumn of 1932 was 5631. Of those working for degrees or certificates, 882 were in the graduate school, 1556 in Yale College, 430 in the Sheffield Scientific School, and 201 in the School of Engineering. The faculty numbered 1492.

The total endowment amounted to \$95,328,170, and the income for the year was \$7,706,467. The permanent endowment funds were increased by \$1,532,619 during the year, and \$8,336,793 was received for buildings and income for special purposes. The university completed and occupied during the year the dormitory section of Calhoun College, the Payne Whitney Gymnasium, the Hall of Graduate Studies, the Sterling Divinity Quadrangle, and the Sheffield Administration buildings, Sheffield Hall, Sterling Tower, and Strathcona Hall. President, James Rowland Angell, Ph.D., Litt.D., LL.D.

**YANAON.** See FRENCH INDIA.

**YAP.** See CAROLINE ISLANDS.

**YARROW, SIR ALFRED (FERNANDEZ).** A British marine engineer and shipbuilder, died in London, Jan. 24, 1932. Born Jan. 13, 1842, he attended University College School, London, and in 1861 commenced his engineering career in Poplar where he was apprenticed to a firm of marine engineers. Later he founded there the firm of Yarrow & Co., Ltd., which in 1906 was removed to Scotstown on the Clyde. Yarrow & Co. became a pioneer in the design and construction of ships. Sir Alfred invented the Yarrow boiler, which has been adopted by the majority of the navies in the world. He was created a baronet in 1916.

**YEMEN.** See ARABIA.

**YESHIVA COLLEGE.** A college of liberal arts and science for men, under Jewish auspices, in New York City. The enrollment for the autumn of 1932 totaled 588. The faculty numbered 74. The income for the year was \$170,000. President, Bernard Revel.

**YI (YEHONALA).** Dowager Empress of China, widow of the Manchu Emperor Kwang-sü, died in Peiping Feb. 5, 1932, aged 76. A member of the Manchu family named Hweicheng, she was a daughter of the Duke Knei Hsiang and the favorite niece of the Great Empress Dowager Tze-Hsi, who during her three regencies held absolute power for almost half a century. In 1889 Yi was married to Kwang-sü, who had been selected as Emperor by Tze-Hsi on the death of her son, Emperor Tung-chih, in 1875. Kwang-sü was permitted to assume the reins of government shortly after his marriage, but he was dominated by the Tze-Hsi. The Emperor died Nov. 14, 1908, and the Great Empress Dowager the following day. Kwang-sü's widow continued to live in the Forbidden City until 1924, when she was driven out by hostile forces.

**YOUNG, JOHN WESLEY.** An American mathematician, died in Hanover, N. H., Feb. 17, 1932. He was born in Columbus, O., Nov. 17, 1879, and was graduated from Ohio State University in 1899 and with the Ph.D. degree from Cornell University in 1904. After teaching at Northwestern and Princeton universities he was appointed in 1908 assistant professor of mathematics at the University of Illinois and in 1910 professor and head of the department of mathematics at the University of Kansas. In 1911 he was called to Dartmouth College, where he remained until his death.

**YOUNG MEN'S CHRISTIAN ASSOCIATION.** An educational, social, physical, and spiritual movement for men and boys, which originated in London in 1844 under the leadership of George Williams. In 1932 there were in 54 countries of the world 10,651 local associations, unions, or fellowships with a membership of 1,606,376. These associations employed 6516 officers and owned and occupied 2272 buildings, the net property value of which was \$208,384,093. The largest number of Y.M.C.A.'s were found in Germany, where there were more than 3600 associations. The United States, however, had the largest membership (847,155) and the largest number of Y.M.C.A. buildings, representing a net property value of \$208,692,300. Local associations numbered 1191, with 4002 employed officers and 79,353 directors and committee men.

The general board of the associations in the United States is the National Council of the Young Men's Christian Associations, with headquarters at 347 Madison Avenue, New York City. The Rev. George B. Cutten, president of Colgate University, was president in 1932; John E. Manley, the general secretary-elect, was to take office Jan. 1, 1933. The National Council is one of 36 national movements of federated local associations which constitute the World Alliance of Young Men's Christian Associations, with headquarters at 2 Rue de Montchoisy, Geneva, Switzerland. Dr. John R. Mott, of New York City, was president in 1932; W. W. Gethman, of Geneva, was general secretary.

**YOUNG PLAN.** See GERMANY; REPARATIONS AND WAR DEBTS.

**YOUNG WOMEN'S CHRISTIAN ASSOCIATION.** The national Young Women's Chris-

tian Association is made up of affiliated local associations. Its legislative body is the biennial convention to which are accredited delegates from all the local associations. The last convention was held in Minneapolis, Minn., May 5-11, 1932. The active body of the national organization is the National Board of the Young Women's Christian Associations. To it is entrusted the work of the national body during the interim of conventions. In 1932 there were about 1100 associations in the United States. Of these, 260 were in cities, 136 in towns, and 48 in rural districts, while 605 were student associations on college and university campuses. There were also 64 branches for colored girls and women and 56 International Institutes or centres for work among foreign-born girls and women. The total Y.W.C.A. membership in the United States was 613,957, of whom about 100,000 were student members.

The value of real estate owned by the Y.W.C.A. in the United States was \$79,100,545. There were 2989 professional workers employed in the movement, of whom 2782 were in local work, 148 were on the national staff, and 59 were American secretaries serving in foreign countries. Working as volunteers, as Board and committee members, and as advisers in local associations were more than 62,000 women. The National Board received in 1931 from contribution sources and quota payments, \$904,305; from income on endowment, \$248,493; and from income-producing sources, \$787,753. Gross expenditures were \$2,037,148. The endowment fund as of Dec. 31, 1931, amounted to \$4,634,181; the approximate cost value of the National Board's property was given as \$4,352,590.

The officers of the National Board are: Mrs. Frederic M. Paist, Wayne, Pa., president; Mrs. Robert E. Speer, New York City, honorary president; Mrs. John French, Greenwich, Conn., first vice-president; Mrs. Harold Hatch, New York City, second vice-president; Mrs. Arthur Curtiss James, New York City, third vice-president; Mrs. E. C. Carter, New York City, chairman, executive committee; Miss Margaret T. Applegarth, New York City, secretary; Mrs. Samuel Murtland, New York City, treasurer; Miss May B. Van Arsdale, New York City, assistant treasurer. Headquarters are at 600 Lexington Avenue, New York City, with Miss Anna V. Rice as general secretary and Miss Emma P. Hirth, associate secretary.

**YUGOSLAVIA.** A Balkan state formerly known as the *Kingdom of the Serbs, Croats, and Slovenes*. Bounded by the Adriatic Sea on the west, its land frontiers are contentious with those of Italy, Austria, Hungary, Rumania, Bulgaria, Greece, and Albania. Capital, Belgrade; reigning sovereign in 1932, King Alexander I.

**AREA AND POPULATION.** With an area of 96,010 square miles, Yugoslavia had a population at the census of 1931 of 13,913,918 (6,894,561 males and 7,036,357 females), as compared with 12,017,323 at the census of 1921. The density was 145 per square mile. The population of the chief cities in 1931, with 1921 figures in parentheses, was: Belgrade (Beograd), 241,542 (111,740); Zagreb (Agram), 185,581 (108,338); Subotica, 100,058 (101,857); Sarajevo, 78,182 (66,317); Skoplje, 64,807 (41,066); Novi Sad, 63,966 (39,147); Ljubljana, 59,768 (53,306).

**PRODUCTION.** Approximately 85 per cent of the population are engaged in agriculture. Manufac-

turing, lumbering, and cattle raising are other important occupations. Arable land in 1930 totaled 17,486,000 acres, or 28 per cent of the total area; orchards, shrubs, and bushes, 1,396,000 acres; meadow and pasture, 14,617,000 acres; forests, 18,624,000 acres. An effort to stabilize grain prices, inaugurated by the government in 1931, was abandoned in March, 1932. The 1932 crops, in 1000 bushels, were: corn, 177,948; wheat, 53,438; oats, 18,545; barley, 17,982; and rye, 8350.

The value of mineral production in 1930 was \$33,500,000 (\$35,686,000 in 1929.) The 1931 output, in metric tons, included, lignite, 4,945,000; smelter copper, 24,301; smelter lead, 7931; smelter zinc, 4463; bauxite, 62,018; and iron ore, 133,111. There are large undeveloped mineral resources. Industrial enterprises in 1932, exclusive of those based on agriculture, numbered about 2500, with an annual production valued at about \$150,000,000. In addition, the annual production of household industries was about \$60,000,000.

COMMERCE. Imports for consumption in 1931 were valued at \$84,965,000, as compared with \$123,194,000 in 1930, a decrease of 31 per cent. Exports were valued at \$84,977,000, as against \$120,007,000 in 1930, a 29 per cent decline. The 1931 export balance of \$12,000 contrasted with an excess of imports amounting to \$3,187,000 in 1930. In 1932, imports totaled 2,776,200,000 dinars (\$48,861,120 at par) and exports 3,055,500,000 dinars (\$53,776,800).

FINANCE. Budget estimates for the fiscal year ended Mar. 31, 1932, balanced at 13,210,000,000 dinars (about \$232,000,000). According to preliminary returns, closed accounts showed an actual deficit of about 210,000,000 dinars (\$3,712,800 at the 1931 exchange rate). The budget for 1932-33, as passed by Parliament, balanced at 11,323,200,000 dinars; revenues up to the end of 1932 were below the budget estimates and another deficit was anticipated. The chief expenditure items for the year were: War and Navy, 2,132,293,863 dinars; State debts, 1,558,711,039 dinars; pensions and invalid relief, 873,158,755 dinars; education, 815,228,649 dinars. The foreign debt at the end of 1932, including war debts, was equivalent to \$619,362,538 and the internal debt to \$80,672,221. For the default on service of part of the foreign debt in 1932, see *History*. The unit of currency is the dinar, stabilized on June 28, 1931, at \$0.01761 U. S. currency. The exchange value declined from an average of \$0.01768 in 1931 to \$0.0135 for November, 1932.

COMMUNICATIONS. Yugoslav railways, practically all of which are under state administration, reported 6296 miles of line in 1930 (5680 miles in 1928). In 1930, the railways carried 47,643,000 passengers and 21,683,000 metric tons of freight, earning gross receipts equivalent to \$47,000,000 at par. At the beginning of 1932 there were 24,695 miles of highways, roads, and paved streets.

GOVERNMENT. According to the Constitution proclaimed Sept. 3, 1931, Yugoslavia is a hereditary and constitutional monarchy, in which legislative power is exercised conjointly by the King and the National Congress (*Skupshtina*) and executive power by the King through his responsible ministers. The National Congress consists of the Senate of 120 members, half of whom are appointed by the King and half

elected, and the Chamber of Deputies of 305 members elected by universal suffrage for four years. The term of Senators is six years. The King was empowered to dissolve the Congress at will and to issue emergency decrees without parliamentary sanction. Political parties based on racial, rather than national, interests and sports organizations such as the *sokols* were prohibited. At the elections to the Chamber of Deputies held Nov. 8, 1931, only one list, that of the National party, was presented to the voters. Premier at the beginning of 1932, Gen. Pera Zivkovitch (National party), heading a cabinet composed of seven Serbs, four Croats, and two Slovenes.

## HISTORY

INTERNAL DEVELOPMENTS. The end of 1932 found the dictatorship established by King Alexander on Jan. 4, 1929, on the verge of collapse. Half-hearted steps to terminate it were taken during the year, but efforts at liquidation appeared slowed by the fear that the dynasty would be swept away along with the dictatorship. The four-year attempt to unite the diverse elements of the nation by force and repression had proved a complete failure. At the end of the year, only the conflicting interests of the various national groups and the fear of Italy made possible the maintenance of a unitary state.

The movement for the establishment of a federal state, in which Serbs, Croats, Slovenes and other minority groups would exercise substantial autonomy, made great headway during 1932. Among the Serbs, as well as among the other groups, there was a growing demand for the restoration of representative government. This political unrest was evidenced by a series of demonstrations, riots, and disorders. In January, following student riots at Zagreb and other university towns and outbreaks among Bosnian and Dalmatian peasants, the Zivkovitch Cabinet was reorganized. The new list consisted of Parliamentary deputies, with the exception of the Ministers of Finance and War. The new ministry was not accepted as representative, however, because of the Opposition boycott of the elections of 1931 and popular dissatisfaction with the Constitution put into effect by royal decree in September, 1931 (see 1931 YEAR BOOK). On April 4, General Zivkovitch, who had served as Premier since the establishment of the dictatorship, resigned with his entire cabinet.

A new ministry was formed the same day by Dr. Voyislav Marinkovitch, who served as Premier and Foreign Minister. Most of the other members were holdovers. The Marinkovitch Cabinet held power only until June 29, when it resigned because of disagreement over policy. On July 2 Dr. Milan Srskitch, former Minister of Interior, formed a new cabinet including nine Serbs, four Croats, and three Slovenes. The new Premier had been a leading supporter of the dictatorship and his ministry seemed to represent a shift to the Right. A reorganization of the Srskitch Ministry became necessary on November 3. His new ministry was regarded as a stop-gap affair; it was still in existence at the end of the year.

Meanwhile there had been a steady growth of unrest and of defiance toward the régime, accompanied by terrorist attacks upon Croatian nationalist leaders. On May 30 the King's palace and five other points in Belgrade were bombed.

In the autumn, armed bands of Croat nationalists took to the mountains and waged a guerrilla warfare against the Serbian authorities. Dr. Pernar, former Assistant Secretary of State, and seven other Croat leaders were arrested October 8 on charges of conducting propaganda against the state. The Croatian insurrection reached such proportions that several thousand extra troops were sent into the Lika region and the Adriatic coast was blockaded to prevent the receipt of arms and ammunition. Government sources reported that the guerrillas had been suppressed by the end of October.

The Croat leaders in November discussed with representatives of other Opposition parties the principles which should underlie a new Yugoslav Constitution. On November 14, the executive committee of the Peasant-Democrat coalition issued a bold defiance of the dictatorship, declaring that Serbian hegemony, through violence and inefficiency, had virtually ruined all the territories north of the Save and Drina Rivers.

Communist agitation added to the unrest among the peasants produced by the increasingly acute economic situation. During 1932, foreign trade continued to decline, import restrictions became more drastic, internal financial reverses added to the difficulty of meeting government payrolls, industry showed a decided recession, and the farmers were discouraged by a poor wheat crop. On Nov. 1, 1932, Yugoslavia defaulted on its 8 per cent and 7 per cent dollar bonds due in 1962 and on October 1 coupons of the Yugoslav State Mortgage Bank dollar bonds due 1957 were paid only in part. Non-payment was attributed to exchange difficulties. On November 17, Professor Davitscho and 15 Bosnian intellectuals received prison sentences ranging from six months to five years for spreading Communist propaganda.

**EXTERNAL RELATIONS.** In its foreign relations, Yugoslavia was no more fortunate than in its internal policies. In December, hostility between Yugoslavia and Italy was aroused by a series of incidents in Dalmatia, including the destruction by Yugoslavs at Trau of a number of carved stone Lions of Saint Mark, historical evidence that the town once belonged to Venice. This incident followed charges by the English journalist, Wickham Steed, that Italy, Germany, and Hungary had formed a secret alliance with the aim of dividing Yugoslavia and Rumania. Later Paris reports of a projected customs union between Italy and Albania caused great excitement in Belgrade. It was widely feared that the tension between Yugoslavia and Italy might lead to another European war (see ITALY and FRANCE under History).

The drive for revision of the peace treaties caused the Foreign Ministers of the Little Entente—Yugoslavia, Rumania, and Czechoslovakia—to confer at Belgrade December 18 and 19. They announced the appointment of a permanent council, consisting of the three Foreign Ministers, to meet three times a year, and of a permanent secretariat.

Renewed activity of Bulgarian revolutionaries in raiding the Yugoslav frontier during November led to the cancellation by Yugoslavia on December 5 of the Pirot agreement of 1930. See RUMANIA, CZECHOSLOVAKIA, UNITED STATES OF EUROPE.

**YUKON, yoo'kón.** A territory of the Dominion of Canada; bounded on the west by Alaska,

south by British Columbia, north by the Arctic Ocean, and east by the District of Mackenzie. Yukon was constituted a separate political unit in 1898. Area, 207,075 square miles; population (1931 census), 4230 compared with 4157 in 1921. Dawson, the capital and largest town, had 819 inhabitants (1931 census). Mining of gold, copper, silver, lead, and coal is the principal industry, the total mineral production being valued at \$2,141,986 for 1931, of which gold production was valued at \$654,895. Revenue for 1930-31 was \$254,015; expenditure, \$262,409. At the head of the government is a gold commissioner and a territorial council of three elected members. Yukon is represented by one member in the House of Commons at Ottawa. Gold Commissioner in 1932, G. I. MacLean.

**ZANZIBAR PROTECTORATE.** A British protectorate off the coast of Tanganyika in East Africa, consisting of the islands of Zanzibar, Pemba, and adjacent smaller islands. The area of the island of Zanzibar is 640 square miles and that of Pemba 380 square miles. Their respective populations (1931 census) were 137,741 and 97,687 including 278 Europeans, chiefly English, 14,000 British Indian subjects, and 33,400 Arabs. Zanzibar, the capital, had 45,270 inhabitants in 1931.

**ZIEGFELD, FLORENZ.** An American theatrical producer, died in Hollywood, Calif., July 22, 1932. He was born in Chicago, Mar. 21, 1869, and at the age of 23 entered the theatrical business. During the World's Columbian Exposition in 1892 he brought military bands from Europe for that enterprise and managed the Chicago Trocadero. He then became manager and lessee of theatres in New York and Boston. From 1907 to 1927, and again in 1930, he produced the *Ziegfeld Follies*, that became the last word in extravaganza in their "glorification of the American girl." In 1914 Ziegfeld married Billie Burke, the actress.

**ZINC.** A preliminary estimate of the production of zinc throughout the world in 1932, as made by the American Bureau of Metal Statistics, placed it at 871,321 short tons with a daily average of 2381 tons as against 1,116,273 tons in 1931 and averaging 3086 tons daily. Of the total amount, 213,247 tons, or almost one fourth, were produced in the United States (300,738 tons in 1931); Belgium was second with 109,104 tons (152,602 in 1931); followed by Poland with 98,020 tons (143,960 in 1931); Canada, 85,870 tons; Australia, 85,842 tons; France, 53,133 tons; Germany, 46,248 tons; Mexico, 33,454 tons; Italy, 18,300 tons; Netherlands, 17,222 tons; and Spain, 10,475 tons.

The output of primary metallic zinc from domestic ores in 1932, amounted to 221,866 short tons, valued at \$13,312,000, a decrease of 29 per cent from the 291,997 tons produced in 1931. No zinc was produced from foreign ores in either year. In addition to the output of primary zinc, about 15,000 tons of redistilled secondary zinc was produced, as compared with 21,625 tons in 1931. Thus the total supply of distilled and electrolytic zinc in 1932 was about 220,000 tons, composed of 45,000 tons of high grade, 13,000 tons of intermediate, 66,000 tons of select and brass special, and 98,000 tons of prime western zinc. Of the total output of primary material in 1932, 23,208 tons was electrolytic zinc.

The average monthly price of prime western zinc at St. Louis was 3.02 cents a pound in January. From this figure the average declined to

2.53 cents a pound in May, the lowest monthly average for the year, fluctuated for the next three months and then rose rapidly to 3.30 cents a pound in September, the highest monthly average for the year. From this level the price receded to close the year at 3.125 cents.

**ZIONISM.** See PALESTINE; JEWS.

**ZONING.** See CITY AND REGIONAL PLANNING.

**ZOOLOGY.** As has been the custom in recent years the various Biological Societies of the country met in affiliation with the American Association for the Advancement of Science at its annual meeting held during the Christmas holidays, the American Society of Zoologists meeting from Dec. 28-30. The 1932 meetings were held at Atlantic City, N. J. A newly formed Genetics Society of America has taken the place of the genetics section of the Botany and Zoology Societies. International Congresses held during the year were the Eugenics in New York City and the Genetics in Ithaca, both in August. The latter under the presidency of T. H. Morgan covered the whole field of plant and animal genetics. An International Congress of Entomology was held in Paris in July, the occasion being the centennial of the Paris Society of Entomologists.

The Templeton Crocker Expedition of the California Academy of Sciences spent from March to September in zoological and botanical investigations from San Francisco to the Galapagos Islands. Their report (*Science* 76, p. 375), showed extensive collections in a number of groups the most important being the fishes. What may be classed as a zoological expedition was a descent by Beebe in his bathysphere (see YEAR BOOK for 1930), to a depth of 2200 feet. He reported (*Science* 76, p. 344), that below 1700 feet no trace of light could be detected by either the spectroscope or photometer. Between 1700 and 2200 feet there was a surprising abundance of fish and crustacea, many of both kinds being visible by their own lights. The Marshal Field Expedition to China reported (*Science* 76, p. 340), a successful completion of two years' work in China and the collection of a large number of mammals, birds, fishes, and reptiles.

**GENERAL.** That inbreeding *per se* results in degeneracy of the race is denied by most students of heredity. Eaton (*Jour. Exp. Zool.* 63, p. 261), reported on the results of inbreeding in five lines of guinea pigs for twenty-five years. A decline was noted in all measures of vigor, that of fertility being greatest and growth the least; but, since a parallel decline appeared in the control series, it must be attributed to other causes than inbreeding. At the rate of decline noted the inbred stock would last for 55 years while the control would become extinct in 49.5 years.

Pearl (*Jour. Exp. Zool.*, 63, p. 57), continued his experiments on the influence of crowding on the birth rate, using the fruit fly as a test. Above a certain degree of density the rate of egg production decreases with the increase of population. Pearl showed that this change conforms to the mathematical equation which relates the mean free paths of molecules to density in a gas, and his conclusion was that crowding in large part affects the rate of egg laying because collisions and general mechanical interference of the flies with one another upset their normal physiological rhythms.

**SEX DETERMINATION.** The work done immediately after the discovery of the sex or X chromosome seemed to prove that this chromosome alone

is the sex determiner, but later investigations indicate that the process is not so simple as this, the X chromosome seeming to be the determiner under normal conditions but its influence may be affected or overthrown by interfering factors. Witschi, speaking at a symposium on the Biology of Sex at the December 1931 meeting of the Am. Soc. of Naturalists (*Am. Nat.*, 66, p. 108), stated that he found in amphibians a female determining gene in the X chromosome but that male determiners lie in the autosomes. A chromosomal mechanism distributes these in such a fashion that one half of the zygotes receive more male and one half more female determiners. In the amphibia the medullary cords of the gonads give rise to the spermatogonia and the cortex to the ova. Male and female determiners control the activation of these two parts of the gonad and the sex is determined by the more potent one.

**GENETICS.** In his address as President of the International Genetics Congress held at Ithaca in August, T. H. Morgan (*Science*, 76, p. 261), called attention to the fact that although we date the beginning of our modern study of heredity at the rediscovery of Mendel's work in 1900, Mendel had been preceded by about a century of experimentation in plant and animal hybridization, in which some of the mendelian results were foreshadowed. In the work of the last 30 years, Mendel's law of independent assortment has been shown to apply only if the genes are equal in number to the chromosomes. Its place must be taken by the concepts of "linkage" which locates many genes on a single chromosome; and of "crossing over" which is the mutual interchange of single genes or of gene groups between the two members of a pair of homologous chromosomes. There is cytological evidence that blocks of genes cross over in this fashion. It has also been shown that the frequency of crossing over may be very different in different parts of the same chromosome. Chromosomes may be broken into fragments by external agencies such as X-rays and the broken pieces reunite with other, even non-homologous chromosomes. Polyploidy, or the doubling of the number of chromosomes is at present an obscure phenomenon, but is of great interest because of the possible relation to the origin of new structures.

**EUGENICS.** As a Vice-Presidential address before the International Congress of Eugenics held in New York City in August, H. F. Osborn spoke on "Birth Selection versus Birth Control" (*Science*, 76, p. 173). He defined Birth Selection as positive eugenics which encourages the multiplication of the fittest and is in direct line with the natural selection work of Darwin and Spencer, while according to his definition Birth Control is negative eugenics having as its object a decrease in the number of the unfit. He argued that the agitation for birth control with its advocacy of contraceptive technique tends to a decrease in the fittest as well as in the unfit and thus defeats its own object which is to raise the level of the population. He evidently thought that the use of contraceptives is on the whole, undesirable and that when active measures are called for, sterilization is the better method. No improvement, however, is possible without birth selection. By implication, Osborn criticized the eugenicists who devote their time to considerations concerning the reduction of the numbers of the unfit instead of campaigning for the develop-

ment of a social conscience which shall stimulate the fittest to have larger families.

**EVOLUTION.** In the sixth of a series of papers discussing the causes of Evolution, H. F. Osborn (*Am. Nat.*, 66, p. 1, see YEAR BOOK for 1931) reiterated his belief that Paleontology alone can answer the problem of evolution. Paleontology eliminates all vitalistic theories and establishes a new "tetraplastic" principle of four inseparable factors: (1) physical environment; (2) ontogeny including habit; (3) living environment; (4) germ plasm. This theory discards all of the habit-inheritance of Lamarck as well as Darwin's belief of the origin of adaptations through the survival of fortuitous adaptive variations and establishes a belief in "ariatogenesis" which to the reviewer seems much the same as creative evolution. No fewer than twenty co-operative principles of bio-mechanical adaptation are involved in this process. His conclusion was that while we have discovered these important principles we are "more than ever at a loss to understand the causes of evolution."

**PROTECTIVE MIMICRY.** All expositions of Natural Selection lay much stress on the phenomena of animal coloration especially in those forms where the coloration has some definite relation to the background either as contrasting to or as resembling it. Recently much doubt has been expressed as to whether these phenomena have the protective significance attributed to them by Wallace, and especially by the English Zoölogist Poulton. Brüel (*Biol. Zent.*, 52, p. 13), in a discussion of the evidence concluded that in general it is favorable to the theory that resemblances which certainly exist may have arisen through selection, though he thought no one explanation answers for all cases. In his opinion mimicry is especially apt to occur where main lines of descent have happened to come together. Accidental resemblances arise through separate mutations in each group and thus coöperate to produce mimicry. On the other hand McAtee (*Smith. Misc. Coll.*, 85, No. 7), held that it is extremely doubtful if these phenomena grouped under the heads of protective mimicry, concealing and warning coloration, etc., are really protective to their possessors.

**INSECTA.** Opfinger (*Zeit. f. Wiss. Biol.*, 15, p. 431), experimented to determine whether when a bee has learned to come to a certain place to feed, the visual image which it forms and which it uses in returning to this locality is impressed on the insect while approaching the feeding place; during the feeding act; or the so to speak, final memory of the place which it acquires after feeding and before it flies away. To test this point, the experimenter arranged food over a paper of a certain color, the paper being so situated that it could be slipped out leaving in its place a paper of a different color, and this in turn could in the same fashion be replaced by a third color. As the bee approaches the first paper is in position, as it begins to feed the first paper is removed, so that the color of the second is in front of the insect while feeding and at the instant it finishes the second paper is removed exposing the third, which is in front of the bee during the interval before it takes flight. It was

found that in the recognition of the feeding place as well as in all orientation recognition, the bee reacts to the impressions it got while approaching the food and that later stimuli do not affect its actions. She found that bees learn the structure and form of the feeding place with astonishing rapidity.

Minnich, who has studied the distribution of sensory organs in the bodies of a large number of insects, continued these investigations (*Jour. Exp. Zool.*, 61, p. 375), on the honey bee. His results showed that bees can discriminate between equimolecular solutions of lactose and of sucrose using for this purpose sensory organs which are located on the antennæ and the first pair of legs. To what extent the third pair of legs coöperate in this discrimination was not clear. His summary of the whole subject stated that in bees, butterflies, and flies, contact chemoreceptors can be found on all of the head and thoracic appendages. Anderson (*Jour. Exp. Zool.*, 63, p. 235), tested the sensitivity of butterflies' legs, using the methods developed by Minnich.

**AMPHIBIA.** Adams, Kudor, and Richards (*Jour. Exp. Zool.*, 63, p. 1), reported on the relation between moulting or the casting off of the outer portion of the skin in amphibians and the endocrine secretions of the animals. Removal of the thyroid or pituitary body inhibits moulting, but the process can be restored on an operated animal by administering either thyroid hormone or iodine crystals. Apparently in the normal metabolism the thyroid stores the iodine necessary for regulatory functions, but its release is under the control of the anterior lobe of the pituitary.

**BIRDS.** Bent (*U. S. Nat. Museum Bull.*, 162), published an elaborately illustrated monograph on the "Life Histories of North American Gallinaceous Birds" this being the ninth of a series of these studies which have been published since 1919. Friedmann (*Proc. U. S. Nat. Mus.*, 80, Art. 18), described the Argentine Black Headed Duck as completely parasitic in its egg laying, never building a nest of its own but always using the nest of another bird. This is possibly correlated with the fact that some duck eggs, after a few days of incubation, either store or generate enough heat to carry them through the rest of the process in the absence of the brooding parent. In this species the loss of the nest building instinct is atoned for by these two factors.

**MAMMALS.** Corey (*Jour. Exp. Zool.*, 61, p. 1), after a study of the beginning of respiration in rat fetuses, came to the conclusion that when the allantois separates from the uterine wall the resulting hindrance to respiration is the immediate stimulus for the beginning of the adult respiratory process.

**ZUIDER ZEE.** See NETHERLANDS, THE; RECLAMATION.

**ZULULAND,** 250'160-land. The northeastern portion of the Province of Natal, in the Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles; population, 1921 census, 3985 Europeans and 254,371 non-Europeans. The European population at the 1931 census was 5790.
